

Acerca de este libro

Esta es una copia digital de un libro que, durante generaciones, se ha conservado en las estanterías de una biblioteca, hasta que Google ha decidido escanearlo como parte de un proyecto que pretende que sea posible descubrir en línea libros de todo el mundo.

Ha sobrevivido tantos años como para que los derechos de autor hayan expirado y el libro pase a ser de dominio público. El que un libro sea de dominio público significa que nunca ha estado protegido por derechos de autor, o bien que el período legal de estos derechos ya ha expirado. Es posible que una misma obra sea de dominio público en unos países y, sin embargo, no lo sea en otros. Los libros de dominio público son nuestras puertas hacia el pasado, suponen un patrimonio histórico, cultural y de conocimientos que, a menudo, resulta difícil de descubrir.

Todas las anotaciones, marcas y otras señales en los márgenes que estén presentes en el volumen original aparecerán también en este archivo como testimonio del largo viaje que el libro ha recorrido desde el editor hasta la biblioteca y, finalmente, hasta usted.

Normas de uso

Google se enorgullece de poder colaborar con distintas bibliotecas para digitalizar los materiales de dominio público a fin de hacerlos accesibles a todo el mundo. Los libros de dominio público son patrimonio de todos, nosotros somos sus humildes guardianes. No obstante, se trata de un trabajo caro. Por este motivo, y para poder ofrecer este recurso, hemos tomado medidas para evitar que se produzca un abuso por parte de terceros con fines comerciales, y hemos incluido restricciones técnicas sobre las solicitudes automatizadas.

Asimismo, le pedimos que:

+ *Haga un uso exclusivamente no comercial de estos archivos* Hemos diseñado la Búsqueda de libros de Google para el uso de particulares; como tal, le pedimos que utilice estos archivos con fines personales, y no comerciales.

+ *No envíe solicitudes automatizadas* Por favor, no envíe solicitudes automatizadas de ningún tipo al sistema de Google. Si está llevando a cabo una investigación sobre traducción automática, reconocimiento óptico de caracteres u otros campos para los que resulte útil disfrutar de acceso a una gran cantidad de texto, por favor, envíenos un mensaje. Fomentamos el uso de materiales de dominio público con estos propósitos y seguro que podremos ayudarle.

+ *Conserve la atribución* La filigrana de Google que verá en todos los archivos es fundamental para informar a los usuarios sobre este proyecto y ayudarles a encontrar materiales adicionales en la Búsqueda de libros de Google. Por favor, no la elimine.

+ *Manténgase siempre dentro de la legalidad* Sea cual sea el uso que haga de estos materiales, recuerde que es responsable de asegurarse de que todo lo que hace es legal. No dé por sentado que, por el hecho de que una obra se considere de dominio público para los usuarios de los Estados Unidos, lo será también para los usuarios de otros países. La legislación sobre derechos de autor varía de un país a otro, y no podemos facilitar información sobre si está permitido un uso específico de algún libro. Por favor, no suponga que la aparición de un libro en nuestro programa significa que se puede utilizar de igual manera en todo el mundo. La responsabilidad ante la infracción de los derechos de autor puede ser muy grave.

Acerca de la Búsqueda de libros de Google

El objetivo de Google consiste en organizar información procedente de todo el mundo y hacerla accesible y útil de forma universal. El programa de Búsqueda de libros de Google ayuda a los lectores a descubrir los libros de todo el mundo a la vez que ayuda a autores y editores a llegar a nuevas audiencias. Podrá realizar búsquedas en el texto completo de este libro en la web, en la página `http://books.google.com`

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

From the Westminster Review.

A Popular Life of George Fox, the first of the Quakers. By JOSIAH MARSH. London: Gilpin. 1847.

THERE is no subject perpetually before our eyes more imperfectly understood than Quakerism. There is a prevalent idea, amounting perhaps to a knowledge, that Quakers are a sect addicted to broad-brimmed hats, collarless coats, a peculiar phraseology, silent meetings, and the acquisition of money; propensities which rarely engender any better feeling than contempt: for the man who is too well bred to express it in the same way cherishes the same feeling as the boy who hoots after the drab-garbed Quaker in the street. Nineteen twentieths of our countrymen believe a Quaker to be infinitely inferior to themselves: to the brutal, he is an object of abuse; to the rude, of ridicule; to the supercilious, of contempt; to the kind-hearted, of pity; but all agree in looking down upon him as from some very decided elevation. It is difficult to dissipate feelings which flatter our self-esteem, and whatever places another permanently below us certainly administers to that quality; we are pleased to have an opportunity of despising, and often absolutely plume ourselves on despising, courteously and religiously, kindly and conscientiously.

We are willing to believe that this relative position between the Quaker and the man of the world arises entirely from the fact already adduced, that Quakerism is imperfectly understood: we see the husk, we taste it and find it unpalatable, bitter, chaffy: but so also is the husk of the cocoa-nut, and of fifty other fruits. Now we have no more right to judge the Quaker than the cocoa-nut by its exterior alone; it is not only unfair to the object but unjust towards ourselves. Let us, however, pause for a moment over the husk itself, the quaintness, oddity, perhaps ugliness, of the costume, the mode of address, &c.; it should be distinctly understood, that these peculiarities are not of themselves considered in the light of good deeds, but often serve as a protection against evil deeds. The true Quaker has a decided objection to amalgamate with that world whose fashions and excesses he has conscientiously renounced, and these peculiarities act as a universally accepted apology for his not mingling in scenes in which others can perceive no harm; races, hunting, theatres, balls, concerts, cards, drinking—occupations held to be almost necessary to people of the world, and, to use the most circumspect phraseology, *tolerated* by their religious instructors—are forbidden to the Quaker; from his youth upwards he is taught to avoid them. Abstinence from these indulgences is inculcated with the first lessons of religion; and intellect has no sooner dawned than his moral education begins. This abstinence from occupations common in the world has become so notorious, that the Quaker garb is a sufficient apology for non-indulgence. It would be out of place at all public amusements; in all scenes of riot and intemperance; so that, whatever the inclination, the Quaker, in Quaker garb, dare not mingle in such company. The husk, as we have termed it, worn under parental authority, thus becomes a safeguard and protection to the young—a protection even against inclination; for we are not to suppose the youth of any sect devoid of the taste for amusement which is a characteristic of that period of our existence. In after years, the *man* has often to look back with gratitude on the protecting power of that garb, and those peculiarities, which he felt irksome as a youth; and seeing the service they rendered to himself, he inculcates their observance on his successors, indeed, enforces it, so long as parental authority endures. Thus, however much we may be inclined to dislike or censure these peculiarities, we shall find it difficult to deny their utility; and we shall also find that a portion of our feeling of contempt arose from an insufficiency of our own information. We are ever too ready to smile at what we do not understand; and, in our journey through life, we often feel the smile of scorn dissipated by an enlarged power of comprehension, and succeeded by respect, and perhaps even by admiration. While on the subject of dress, we may further remark that the Quaker garb is professedly a mere retention of the usual costume of that period when Quakers were first associated as a body, and a refusal to comply with the ever-changing vagaries of fashion. So much for the husk. We wish to place it in its true light, and to remove those erroneous impressions which result from mistaking it for the kernel.

Quakerism may be said to date its existence from the preaching of Fox; prior to this some Quaker doctrines had been vaguely promulged, but, under the majestic and energetic mind of Fox, they received form and character; they became distinct and intelligible; so that to him alone must be attributed the establishment of the sect. It will be recollected by all who are conversant with the history of the Reformation, that the participators in that great movement aimed at a far more extensive subversion of the ceremonies of the Romish church than they had the power to achieve; thus we find the more eminent of these reformers inveighing bitterly against certain observances, which, as they said, "plainly savor of popery." Among such objectionable observances are enumerated, "figured music and organs, the forms of sponsors, the use of the cross in baptism, kneeling at the sacrament, sprinkling of infants, bowing at the name of Jesus," &c. But Queen Elizabeth whose memory as a protestant reformer is so highly cherished by the Episcopalian church, insisted on the reintroduction of these observances, and took care that they should be rigidly enforced. The act of conformity was passed in 1554, and by this all the Romish ceremonies which the queen or her advisers were pleased to continue, became law, in opposition to the principles and entire spirit of the Reformation. This of course induced violent discontent; and very

Digitized by Google

many of the true reformers refused to comply, and formed small associations on principles opposed to one or other of the prescribed forms. Hence arose those numerous bodies of dissenters, which, in the time of Charles I., had become so powerful; and which, however they might differ on other points, were unanimously agreed in denying the divine right of bishops, and thus rendered themselves obnoxious to ecclesiastical authorities. But, amidst all the distaste for *certain* forms and ceremonies, no sect ventured to proscribe them *all;* it was left for George Fox to found a religion on the New Testament alone; to dispense with *all* priestcraft and priesthood, with *all* forms and observances and ceremonies, and to declare that worship was a spiritual act between man and his Maker, a tribute to be offered independently of human assistance, and unaccompanied by any human inventions. Our author informs us that—

"No reformer, prior to George Fox, had altogether rejected ceremonies in the performance of public worship, or the observance of any religious rite upon admittance into a community of membership. But he, regarding worship alone in the light of a spiritual act, between the heart of man and his Maker, instituted a worship of silent waiting, and more particularly called upon his followers to rely upon that measure of divine light or grace which it has pleased God to place in the hearts of all men for their edification, guidance, and right understanding of his revealed law, provided they are willing to submit to its silent teachings. He considered that it is only by the free operation of this divine principle that the heart becomes sanctified, and that, by it alone, men can become spiritually baptized into the church of Christ, or can become spiritual partakers of the body and blood of our Saviour. Which inward and spiritual participation is the only true essential of these ceremonies, as practised by most of the Christian churches. Neither had any one, before this, called the attention of mankind so particularly to the marked distinction between the old law of Moses and the new law of the gospel; pointing out that the former, with its ceremonies and ordinances, was expressly given to the Jews; and to them only; and, as St. Paul says, is to be looked upon by us as a schoolmaster to prepare us for the better and more spiritual dispensation, which ended the old law,* and in whose glad tidings the whole Gentile world are made participators as well as the Jews. Nor had any one before endeavored to establish a system of public worship of a nature so entirely spiritual, allowing of no prescribed act, either of prayer or of exhortation. His object was to lead people back to the primitive simplicity and purity of the gospel precepts, to which the superstitious ceremonies of the Romish church were so glaringly opposed; to call them off from all dependence upon outward ceremonies, to that inward and spiritual religion by which alone they can know Christ to be their God and their Saviour; and to convince them that the mere knowledge and belief of what Christ had done and suffered for them when personally upon earth, was not of itself sufficient to obtain this, without a further knowledge, through the Holy Spirit, of his righteous government in their hearts."—p. 10.

Since Christianity was first preached by the immediate followers of Christ, no such doctrine as this had ever been broached. Peter, Mahomet, Luther, Wycliffe, Calvin, Wesley, and the thousand minor powers that have succeeded, all had their ceremonies performed by priests; all looked on the priest as a being whose offices were essential to the safety of the soul. George Fox alone, of all the world, repudiated priesthood and priestcraft, and dared to deny the right of a human mediator between God and man. He acknowledged but one mediator; one whose services were not to be doled out in pittances apportioned to the coin returned. It therefore is not remarkable that the priesthood of whatever denomination should rise as one man against the Quaker, and denounce him from the pulpit as an atheist and a traitor; an enemy alike to religion and to law. Such was the case; and when we remember how vast, how subtle, how ramified, how extended is that power and influence he attacked, we cannot wonder that the Quaker was hunted from place to place like a beast, was torn from his home and family, was thrown into the most filthy dungeons, was flogged, maimed, crippled, and murdered, merely on a false charge of irreligion and disaffection, originating entirely in the vengeance of a priesthood whose offices he declined, and with whose emoluments the spread of such opinions must of necessity interfere. The license for marriage, the marriage form, the churching of women, the sprinkling of infants, the administration of the sacrament, the ceremony of confirmation, the funeral service, the consecration of churches and churchyards, all forms of prayer, written sermons; all were of no avail: churches themselves were superfluous, and the sacredness of any edifice declared a fable. This was atheism and treason in the eyes of the clergy, and of all over whom their influence extended.

The boldness with which Fox preached these doctrines is shown in his own "Journal," but there are other authentic sources of information, which bear ample testimony to the courage he displayed.

"When I heard the bell toll to call the people together in the steeple-house, it struck at my life, for it was like a market bell to gather people together, that the priest might set forth his wares for sale. Oh! the vast sums of money that are got by the trade they make of selling the Scriptures, and by their preaching, from the highest bishop to the lowest priest! What one trade in the world is comparable to it? Notwithstanding the Scriptures were given forth freely, Christ commanded his ministers to preach freely, and the prophets and apostles denounced judgment against all covetous hirelings and diviners for money. But in this free spirit of the Lord Jesus was I sent forth to declare the word of life and reconciliation freely, that all might come to Christ, who gives freely, and renews us into the image of God, which man and woman were in before they fell."—p. 46.

Here we are presented with the origin of the Quaker tenet against a paid clergy of any description; and from the doctrines of their founder the Quakers conceive themselves called upon to protest openly against such a ministration of the gospel, as being contrary to the special injunctions of Christ, and the practices of the apostles and early Christian church. Hence, they refuse to pay all tithes or church demands, patiently submitting to the legal penalties attached to such refusals, and to the rapacity of their enemies, who, in the early periods of the society, carried their plunder to so great an excess as not only to involve many in total ruin, but also to subject them to long and cruel imprisonments, which, in many cases of particular hardship, termi-

* Gal. iii. 24, 25.

nated in death. Hence, in 1662, twenty died in different prisons in London, and seven more after their liberation, from their ill-treatment. In 1664, twenty-five died, and in 1665, fifty-two more. The number which perished in this way, throughout the whole kingdom, amounted to three hundred and sixty-nine.

It would be a subject of interesting inquiry, but foreign to the objects of a literary review, whether the grand features of this mission of George Fox, and the practice of his early followers resulting from it, are not based upon more solid principles of Christianity, and are not more closely allied to its pure spirit, than the world at large generally admit to be essential? Quakerism is grounded on the passage —"that the grace of God which brings salvation had appeared to all men, and that the manifestation of the spirit of God was given to every man to profit withal." Fox maintained, that by a faithful obedience to the inward teachings of this Holy Spirit we become God's people, and by its aid alone acquire a clear understanding of the Scriptures; but which inward monitor, if continually neglected, or, after the example of Felix, dismissed for a more convenient season, will in time be withdrawn, leaving the heart reprobate, and abandoned to its own wicked devices; for God has declared, "my spirit shall not always strive with man." Gen. vii. 3.

This inward principle is the good seed, which, being sown in all soils, flourishes in some, pines away or is choked in others, and in some individuals finds no root at all. Scriptural authority, if to be literally interpreted, is at least in favor of Fox's testimony against all oaths, and warfare, as being antichristian, and in direct opposition to the dictates of Christ, and the practice of the apostles and early church. And further, in accordance with his emulation of the noble and disinterested example of the early Christian pastors, who ministered the word of life without fee or reward; and with his rejection of all outward ceremonies and forms of worship, because they had degenerated into religious rites, and which he considered as so many stumbling-blocks and impediments to that spiritual devotion required of man by his Maker. Again, it would appear to support his great Christian principle, that no system of policy whatever should be founded on expediency; but upon that golden precept of Christ's, "of doing unto others as we would they should do unto us,"—a maxim that if faithfully acted upon would do away at once with all grounds of contention and warfare. The Quakers therefore as a body may be considered universal philanthropists; and in their Christian love and good will to all men they are as much opposed to every measure which is injurious to the free and just rights of man, as they are often the foremost supporters of those devised for his good.

"The mission of G. Fox was no republican doctrine, disguised under the form of theology. It never interfered with the existing powers, whether monarchical or republican, but taught obedience to the magistrate, by enforcing purity of morals. It was a plain, honest, and zealous attempt to clear the gospel from the mist of error and superstition which had long obscured it; to release the minds of the people from the shackles of school-wisdom, and the subtleties of polemical divinity; to hold out to them the true nature of that redemption which it offers to all mankind, a redemption depending upon faith in Christ, repentance from sin, and transformation from the world, but not upon outward rites and ordinances, or creeds drawn up by fallible men. He pleaded alone for religious liberty, for a free toleration of all religious opinions; a principle which in itself involves emancipation of mind, and lays the foundation for the universal and equal rights of all men, the privileged classes as well as those below them; and effectually resists the encroachments of either party upon the just rights of the other, by inculcating the great Christian rule of doing as we would be done by."—p. 48.

The "Journal" of George Fox was pronounced by the late Sir James Mackintosh to be "one of the most extraordinary and instructive documents in the world;" and he adds, that "no man of competent judgment can peruse it without revering the virtue of the writer." To his efforts, single-handed, or nearly so, we may ascribe the establishment and rise of the Quakers, which, as Bancroft in his "History of the United States" declares, is "one of the most remarkable events in the history of man. It marks," says he, "the moment when intellectual freedom was claimed unconditionally by the people as an inalienable birthright. It was the consequence of a great moral warfare against corruption; the aspiration of the human mind after a perfect emancipation from the long reign of bigotry and superstition."

In another passage, Bancroft describes how Fox arrived "at the conclusion that truth is to be sought by listening to the voice of God in the soul. This principle," says he, "contained a moral revolution. It established absolute freedom of mind, treading idolatry under foot, and entered the strongest protest against the forms of a hierarchy. It was the principle for which Socrates died, and Plato suffered; and now that Fox went forth to proclaim it among the people, he was resisted everywhere with vehemence, and priests and professors, magistrates and people, swelled against him like the raging waves of the sea."

It is worthy of remark, that this storm of persecution should have raged most fiercely during the protectorate of Cromwell, a man who has the credit of resisting the influence of priesthood and priestcraft when directed against himself. We are especially told by D'Aubigné, in his "History of the Reformation," that "the rise of plebeian sects, which swarmed in England, was encouraged by the freedom of the popular government under the commonwealth." What this freedom could have been does not appear very obvious; imprisonment in dungeons underground, and beneath other dungeons occupied by felons, and so arranged that the lower dungeon received all the filth from the upper one; pelting with stones and rotten eggs in the pillory; beating with holly-bushes; laceration with pitchforks; threshing with long poles; these are feats, either performed by the executive or sanctioned by the administrators of the common weal. George Fox, however, went on his way whenever he was liberated, renewing, on all occasions, his testimony against a hireling ministry, payment of tithes, swearing, ceremonies and forms; and preaching his favorite doctrine of the divine light of Christ in the soul of man. His sufferings were renewed again and again, often without the slightest provocation, but sometimes from his own intemperate zeal; intemperate, because personal interference with the mode of worship chosen by others is at all times of doubtful propriety, and in many instances concomitant circumstances render it perfectly unjustifiable. But Fox's day was one of all manner of religious excesses. Baptists, Presbyterians, and Independents, were struggling for the mastery, and all striving to

Digitized by Google

possess themselves of some of the emoluments of priestcraft. Wild, bloodthirsty, and persecuting, all seemed to lose sight of the peaceful character of Christianity, and to contend with a fury more allied to the ravings of madmen than the behavior of sincere disciples of a meek and peace-preaching master. All these wrangling dissenters thought it an outward symbol of sanctity to wear their hair closely cropped; but Fox wore his very long, falling gracefully over his shoulders, a practice which obtained generally among his followers, and from a passage in his journal it would appear that he entertained some scruple against its being cut: he wished it to be understood that true religion did not consist in this outward mark, an observation which would lead one to believe that he eschewed rather than aimed at a peculiar assumption of holiness in his appearance or apparel. His long hair gave additional offence to the "crop-ears," or "roundheads" of the day.

The following extracts will give some idea of the treatment which this most sincere and truly pious man was made to suffer, and it will also exhibit his own character in its true light.

"The next morning he was summoned before the magistrates, to whom he gave further offence by declaring to them that the 'fruits of their priests' preaching were void of Christianity, and that, though they were great professors, they were without the possession of that which they professed.' He was, upon this, committed to gaol as a 'heretic, a blasphemer, and a seducer;' and, by order of the magistrates, he was shut up among the lowest class of felons, and the gaolers were encouraged to treat him with the greatest brutality, declaring to him that he should never come out again but to be hanged; and so confident were his enemies in accomplishing his ruin and death, that numbers visited him in prison as a condemned person, who was shortly to be executed."—p. 97.

"At Carlisle he suffered an illegal imprisonment for several months, and at the approaching assizes his enemies made sure of leading him to the gallows; but, not being able to substantiate any legal charge against him, he was never brought up for trial. The high-sheriff, and a company of bitter Scotch priests, were so misled by their rancorous feelings, that they had him guarded by three musqueteers to shoot him upon any pretence of escape. For a time they would suffer no one to have access to him excepting themselves; they sometimes came into his cell as late as the tenth hour; and their deportment was 'exceedingly rude and devilish; they were not fit to speak of the things of God, they were so foul-mouthed; and he grieved to think such people should call themselves ministers of God; but the Lord, by his power, gave them dominion over them all, and let them see both their fruits and their spirits.' During this confinement he was often cruelly beaten with a large cudgel, at the caprice of the under-gaoler; who, entering his cell one day, fell upon him without the shadow of an excuse for such abominable cruelty, and beat him most furiously, calling out all the time, as a pretext, 'Come out of the window,' although George Fox was on the opposite side of the room to it. While he was so beaten, 'he was moved of the Lord to sing psalms, being filled with joy;' upon which the exasperated gaoler brought in a fiddler to annoy him; but while he played George Fox so overpowered him by his singing, 'being moved by the everlasting power of the Lord God,' that they were 'struck and confounded' and went away, leaving him to the unmolested enjoyment of his heartfelt hymns of praise, and rejoicing that he was thus found worthy to suffer for the sake of his great Lord and Master, whose precepts he had thus far totally and faithfully declared, without respect of persons. 'Blessed are ye when men shall revile you, and persecute you, and shall say all manner of evil against you falsely for my sake. Rejoice, and be exceeding glad; for great is your reward in heaven.'—Matt. v. 11, 12.

"In this prison he became acquainted with James Parnell, a youth of only sixteen years, but remarkable for his early piety and religious life. He had been so struck with Fox's preaching and doctrine, that he frequently visited him while in bonds, eagerly seeking instruction; and 'the Lord quickly made him a powerful minister of the word of life, and many were turned to Christ by him.' Travelling soon after into Essex, as an acknowledged minister of the Quakers, he was imprisoned with many others in Colchester castle, and subjected to the cruelty of a merciless gaoler, who was encouraged in his brutality by the magistrates themselves. At this time James Parnell was extremly debilitated by severe indisposition, and was confined in a place called the oven, a large hole in the wall, and so high from the ground that it was only accessible by a short ladder, and a rope, because the ladder was not sufficiently long. From this place he was constrained by the gaoler to come down every day for his food, refusing him the advantage of any assistance which his fellow-prisoners would gladly have rendered him. Climbing up one day to this incommodious dormitory, with his day's provision in one hand, he missed his hold of the rope through weakness, and falling down was so much shaken, that he died very soon afterwards in consequence of his fall. After his death, his persecutors, to cover their own cruelty, wrote a book, stating, 'that he fasted himself to death.' Thus he died a martyr to his religious convictions, about two years after he had joined the Quakers."—p. 98.

"During his confinement with those unfortunate and depraved characters, of both sexes, his sincere piety and kindly feeling, united to his good example, had a great effect upon the minds of his wretched companions; they treated him with respect, and several of them became sincere and true penitents, so powerfully and so feelingly had he laid open to them the profligacy of their evil courses."—p. 100.

"The assizes being now ended, and the prisoners refusing upon principle to pay a fine they considered most illegal, since nothing had been proved against them to justify their apprehension,* much less their imprisonment, and judging from the malice of their enemies that they were not likely to be liberated very soon, demanded a free prison, and told the gaoler they should discontinue to pay him for the hire of his room, for which they had hitherto given him seven shillings a week each person, as well as seven shillings a week for each of their horses. Upon this notification, the gaoler, who was an abandoned character, and had been twice branded with a hot iron as a thief, (as well as his wife and the under gaoler,) shut them up in a foul dungeon, called Doomsdale, which was noisome and pestilential, on account of its being the common sewer of the prison, the floor of which was so thick in mire, that it was over their shoes, and afforded no place where they could either sit or lie down. In this dreadful place they were denied by their exasperated keeper even a little straw or a

* They had been arrested for travelling and preaching by the way.

Digitized by Google

light; but some kindly disposed people of the town hearing of their sad condition brought them both a light and a few handfuls of straw, which they burnt to purify the air. The smoke arising upon this occasion penetrated through the chinks of the floor above, and found its way into the chamber occupied by the under-gaoler and some thieves, who immediately began to revenge themselves, by pouring down upon them through the chinks whatever they could obtain to annoy them, and make their condition still more deplorable; at the same time abusing them with the foulest language. In this place they were sometimes left in want both of food and water, owing to the brutality of the gaoler and his wife; who often abused and beat those who brought them a few necessaries and comforts. The whole particulars of the infamous treatment to which they were subjected, from the misconduct of their unfeeling keepers, are too offensive for recital; and when such abuses no longer exist in our public gaols are best left untold."—p. 131.

Cromwell, who was well acquainted with Fox, both personally and by reputation, was cognizant of all these proceedings; and it certainly seems to us a lasting stigma on his character that he allowed them. On one occasion, after a long interview, when Fox was about to leave, Cromwell seized him by the hand, and said, with tears in his eyes, "Come again to my house; for if thou and I were but an hour a day together we should be nearer one another;" and he ordered that Fox should be conducted to the great hall, to dine with his gentlemen. This honor was, however, flatly refused by the unambitious Quaker: "Tell the protector," said he, "that I will neither eat of his bread nor drink of his drink." When Cromwell received the message he remarked—"Now I see there is a people arisen that I cannot win either with gifts, honors, offices, or places; but all other sects and people I can." This anecdote and subsequent events show the exhibition of friendly feeling towards Fox to have been ostensible only; for he never raised a finger to assist him or to do him justice when so foully ill-used: the anecdote exhibits also the talent of the protector in correctly estimating the hollowness and mercenary spirit of his self-righteous followers. The following short quotations show that Fox himself remonstrated with the protector on the cruel oppression of his persecuted sect:—

"The travellers entering London by Hyde Park, met the protector in his coach, attended by his lifeguard, and surrounded by a great concourse of people. George Fox immediately rode up to the coach side, from whence he would have been repelled by the guards, had not Cromwell caught sight of him and beckoned him to approach. He then rode by the coach side, and spoke to him, 'Declaring,' as he says, 'what the Lord gave me to say to him, of the condition and of the sufferings of Friends in the nation; showing him how contrary this persecution was to Christ and his apostles, and to Christianity.' At the park gate of St. James' they parted, and Cromwell invited him to come to his house."—p. 137.

"In the course of a few days he had an interview with the protector at Whitehall, accompanied by Edward Pyott. George Fox was very urgent on behalf of the Friends, stating how unjustly they were persecuted, and how great were their sufferings throughout his dominions, for conscience' sake alone; he pleaded their right, in common with all peaceable subjects, to Cromwell's protection."—p. 137.

"A report was also spread of his (Cromwell's) intention to assume the crown. George Fox went to him and warned him against accepting it, and also of other dangers—such as his suffering the innocent to be oppressed by the unjust, and that if he did not put a stop to this evil, he would bring shame and ruin upon himself and his posterity. Cromwell appeared to take his advice very well, &c."—p. 163.

"Appeared to take his advice very well;" but his course remained unaltered. The priests of all denominations, and the rabble whom they incited, continued their persecutions; procured the arrest and ill-usage of Fox, and all the leaders of his sect; and Cromwell remained as before a passive if not approving spectator.

Since the publication of Mr. Carlyle's very able "Life of Cromwell" it has become rather a fashion to suppose that powerful man greatly injured by the charge of hypocrisy formerly preferred against him, and to hold him up as a pattern of straightforwardness and sincerity. Now, the elements of straight-forwardness and sincerity do not appear to us to consist in conduct like that of Cromwell, a sovereign prince, towards Fox, a peaceful and inoffensive subject. Sincerity does not, in our view, consist in wringing a man's hand, and, with tears in one's eyes, begging him to come again, when he had just permitted him to suffer the grossest indignities; neither in providing sumptuous dinners for him one day, and seeing him cast into a loathsome dungeon the next without raising so much as a finger to assist him. And be it recollected that dungeons and fair words were continually alternated with some regularity, not merely on one occasion, but times and oft; and the ruler knew the sterling worth of his subject, and lamented that he was not to be bought with a bribe. Let the reader repeat, again and again, Fox's answer to this powerful and crafty potentate—"Tell the protector I will neither eat of his bread nor drink of his drink;" let the reader ask what was Fox's opinion, founded on dear-bought experience, of this sincere and straight-forward monarch. For what crime was Fox imprisoned? Alas! does not the termination of each imprisonment show? We have it recorded again and again—"At length he was freed without a trial, without a hearing, without a charge of any kind being brought against him." We doubt whether the annals of any nation under the sun can produce a match for the unrighteous persecutions borne for conscience' sake under that liberal government, the Commonwealth of England. Immediately before Cromwell's death Fox had a final interview with him, in the capacity of intercessor for the sect which he had founded. What impression he made is unknown; for the protector's days were numbered—he was on the eve of that summons which the weak and the powerful alike obey. We give our author's brief account of the meeting:—

"George Fox went again to see the protector, to try once more how far he could influence him to act with justice and impartiality to all his subjects, and thus put a stop to the sufferings of the injured Friends, who were now unjustly deprived of the liberties and privileges secured to all freemen by the great charter of England. He had often before warned him of his unjust neglect of this portion of his unoffending and innocent subjects, and had told him, that if he persisted in refusing any interference on their behalf, God would soon rend the power out of his hands; and 'that a day of reverse and thick darkness was coming over those high

Digitized by Google

professions, even a day of darkness that should be felt.' Cromwell was at Hampton Court. George Fox says, 'I met him riding in the park, and before I came to him, as he rode at the head of his life-guard, I saw and felt a waft (or apparition) of death go forth against him; and when I came to him he looked like a dead man. After I had laid the sufferings of Friends before him, and had warned him, according as I was moved to speak to him, he bid me come to his house. So I returned to Kingston; and the next day went up to Hampton Court, to speak further with him. But when I came he was sick; and one Harvey, who waited on him, told me the doctors were not willing that I should speak to him. So I passed away, and never saw him more.' "—p. 168.

After the Restoration the persecutions of the Quakers still continued; but, as before, it appears to have proceeded entirely from the Round-heads, especially those who had turned renegades to their old faith, and put on the more fashionable religion established by law, in order to conciliate those in power, and obtain a share of the temporalities of the church.

Fox was arrested at Swarthmore, on a charge of "having great meetings up and down," and was kept a close prisoner in the "dark-house" in Lancaster Castle. He was committed by one Porter, a violent and bitter Round-head, but one who had just renegaded to the faith now uppermost. While in Lancaster Castle numbers of rude people were admitted to see him, merely for the purpose of abusing and insulting him. "One time," he says, "there came two young priests, and very abusive they were; the worst of people could not be worse." But perhaps the climax of abuse came from a woman whom he terms "old Justice Preston's wife, of Howker Hall." She told him his tongue should be cut out, and that he should be hanged; at the same time showing him a gallows, which we may imagine she had brought in her pocket in order to illustrate and point her invective. Having applied for a copy of his *mittimus*, it was refused him; but he appears to have gained a knowledge of its contents by two of his fellow-professors, who had perused it. He owed his liberation on this occasion to the intercession of Margaret Fell, the lady at whose house he was staying, and whom he afterwards married. This excellent person went up to London, and appealed personally to the king on behalf of her ill-used friend. She met with a most gracious reception; and the application resulted in the liberation of Fox. There is in the narrative matter of the highest interest.

"Reverting to Margaret Fell's application to the king, it appeared from the nature of his commitment that the king could not release him; he therefore ordered a writ of habeas-corpus to be issued for his removal to London, in order that his case might be referred to the judges. The trouble now was how to get him removed to town; for if he was only sent under the care of two bailiffs, the charge would be considerable; but to send him under the guard of a troop of horse was quite out of the question; therefore, to save their pockets, the magistrates told him, that 'if he would put in bail that he would be in London by such a day of term, he might go up with some of his friends.' George Fox told them, 'he would neither put in bail, nor give one piece of silver to the gaoler, for he was an innocent man, upon whom they had laid a false charge, and imprisoned wrongfully. Nevertheless, if they would let him go up with one or two of his friends, he would be in London such a day, if the Lord should permit, and would carry up the charge against himself.' So inconsistent was the conduct of his persecutors, that, to save themselves the charge of conveying him up to town under an escort, suitable for the dangerous character they had represented him to be, they liberated him upon his parole, to appear of his own accord, and deliver up his own accusation before the proper authorities in London; by this act tacitly acknowledging the injustice of their own proceedings, and the falsity of their charges against him; because, if they had been true only in part, nothing could justify their setting such a person at large upon parole. Thus he left Lancaster Castle, without the payment of a single fee, travelled at his leisure, visited his friends, and held many great meetings on his journey; committing over and over again the very offences for which he had been imprisoned, and in which offences his persecutors now silently acquiesced, since, by liberating him upon his bare word to surrender himself, they consented to that which they well knew would be his only line of conduct.

"Upon his arrival in London he found a great concourse of people assembled at Charing Cross, to witness the burning of the bowels of the late king's judges, who had been hanged, drawn, and quartered. The next day he went before the Lord Chief Justice Foster, and Judge Mallett, and presenting them his own accusation, they read it through till they came to the words, 'that he and his friends were embroiling the nation in blood,' &c. Upon which they struck their hands upon the table. George Fox told them, 'I am the man whom that charge is against, but I am as innocent of any such thing as a new-born child, and had brought it up myself; and some of my friends came with me, without any guard.' They then observed that he stood with his hat on, and said to him, 'What, do you stand with your hat on?' He replied, 'that he did not stand so in any contempt of them.' In consequence of the king's bench prison being full, Judge Foster asked him, 'Will you appear to-morrow, about ten o'clock, at the king's bench bar in Westminster Hall?' He said, 'Yes, if the Lord give me strength.' Then Judge Foster remarked to the other judge, 'If he says, yes, and promises it, you may take his word;' and then he was dismissed. The next morning, he says, 'I was brought into the middle of the court; and as soon as I came in I was moved to look about, and, turning to the people, said, "Peace be among you;" and the power of the Lord sprung over the court. The charge against me was then read openly. The people were moderate, and the judges cool and loving; and the Lord's mercy was to them.'

"But when they came to that part which said, 'that I and my friends were embroiling the nation in blood, and raising a new war, that I was an enemy to the king, &c.,' they lifted up their hands. Then stretching out my arms, I said, 'I am the man whom that charge is against, but I am as innocent as a child concerning the charge, and have never learned any war-postures; and do ye think that if I and my friends had been such men as the charge declares, that I would have brought it up myself against myself? or that I should have been suffered to come up with only one or two of my friends with me? Had I been such a man as this charge sets forth, I had need to have been guarded up with a troop or two of horse!' Then the judge asked me whether it should be filed, or what I would do with it? I answered, 'Ye are judges, and able I hope

Digitized by Google

to judge in this matter, therefore do ye what ye will with it, I leave it to you.' Then stood up Esquire Marsh, who was of the king's bed-chamber, and told the judges, 'It was the king's pleasure that I should be set at liberty, seeing no accuser came up against me.' They then asked me, 'whether I would put it to the king and council?' I said, 'Yes, with a good will.' The writ of habeas-corpus and the mittimus were thereupon sent to the king."—p. 185.

The king, being satisfied of his innocence, commanded his secretary to send the following order to Judge Mallet for his release :—

"It is his Majesty's pleasure, that you give order for releasing and setting at full liberty the person of George Fox, late a prisoner in Lancaster gaol, and commanded hither by an habeas-corpus. And this signification of his Majesty's pleasure shall be your sufficient warrant. Dated at Whitehall, the 24th of October, 1660."

"EDWARD NICHOLAS.

"For Sir Thomas Mallet, Knight,

"One of the justices of the king's bench."—p. 187.

It seems impossible in this case to avoid a comparison between the gay, volatile, and licentious Charles, and the rigid, austere, and sanctimonious Cromwell, a comparison which certainly results to the prejudice of the latter; not that we would palliate the excesses of Charles, or blame the austerity of Cromwell; but merely observe that the simple aim at justice, the germ of that first Christian principle of doing as we would be done by, *may* exist amid all manner of indulgence and excess, though it *must* expire when religion is made the bone of contention for ascetics and bigots to snarl and quarrel over. The feeling of the monarch in both cases was shared by those in authority under him.

Cromwell owed no less to his tact than to his sterling talent;—brave, cool, far-sighted, and fitted to command, he might have made an efficient leader and ruler under any circumstances; but he had the tact to mount that religious night-mare with which the nation was then oppressed; to ride it not only with invincible courage and consummate skill, but to ride it as a hobby of his own, and to sit identified with the creature, as man and horse are combined in the centaur; for from the moment he was in the saddle no one could distinguish the horse from the rider. Charles was a Roman Catholic in heart, although, yielding to that love of indolence for which his reign was so preëminently distinguished, he professed acquiescence in the supremacy of the established church. He well knew that this was the readiest way of retaining that sceptre which he had seen forcibly wrested from his father's grasp, and which might, at a moment's notice, be required at his hand. He took no kind of interest in the religious squabbles of the day; and no greater mistake could have been made, than that of those factious round-heads who, renegading to Episcopalianism, persecuted their brother dissenters, in the vain hope of ingratiating themselves with this ease-loving monarch. Charles was not deficient in personal courage; sufficient evidence on this point had been given years previously, at Worcester; but the desire of peaceably enjoying those luxuries and immoralities to which his inclinations led, and of which his position gave him the key, rendered him in every respect the very antipodes of his predecessor. Thus would he eschew as wearisome those very squabbles which his predecessor would take under his own peculiar care, to foment, inflame, discourage, or quash, as might be most expedient.

In 1663, Fox once more visited his excellent friend at Swarthmore. As soon as his arrival was known among his old Presbyterian enemies, a meeting was called, and it was resolved again to put him under arrest. It was, however, difficult to decide what charge was to be preferred against him—the old one, of holding "large meetings," would scarcely be sufficient, seeing that he had been liberated from his imprisonment on that charge, by the king himself, and *that* most unconditionally, and was allowed to go wherever he pleased, and to hold meetings large or small without let or hindrance. It however happened that about this time there was a great talk of a projected rising in the north, and Fox, ever on the alert in the cause of peace and good-will, had issued an address to the poorer country people, cautioning them against taking any part in the affair, and pointing out not only its unlawfulness, but the certain ruin that it would bring on themselves. This truly benevolent and patriotic document was agreed on as the ground of arrest—by what ingenious perversion we have never learned—but for this was he thrown into prison and subjected to a series of persecutions and cruelties, the history of which might equal the choicest records of the Inquisition. During this persecution, he underwent several mock examinations and trials, the recital of which has been graphically given by himself, and sets forth in so lucid a manner the character of the man, and the nature of the persecution, that we shall make no apology for extracting it at considerable length from the pages of his historian. At the first examination, one of the magistrates was a Roman Catholic, and he began by accusing George Fox of denying God, the church, and the faith. The following colloquy resulted.

"G. Fox. 'Nay, I own God, and the true church, and the true faith. But what church dost thou own?'

"George Fox was aware of his religion, and Middleton, feeling irritated by this retort, turned round angrily, and said, 'You are a rebel and a traitor.'

"George Fox. 'To whom dost thou speak, or whom dost thou call rebel?'

"Middleton was now so enraged, that it was some time before he could find utterance, but at last he said, 'he spoke it to him.'

"G. Fox, striking his hand upon the table, 'I have suffered more in the royal cause than twenty like thee, or any that are here; for I have been cast into Derby prison for six months together, and have suffered much because I would not take up arms against the late king, before Worcester fight. I have been sent up prisoner out of my own county, by Colonel Hacker, to Oliver Cromwell, as a plotter to bring in King Charles, in the year 1654; and I have nothing but love and good-will to the king, and desire the eternal good and welfare of him and all his subjects.'

"Justice Middleton. 'Did you ever hear the like?'

"G. Fox. 'Nay, ye may hear it again if ye will. For ye talk of the king, a company of you; but where were ye in Oliver's days? and what did ye do for him? I have more love to the king, for his eternal good and welfare, than any of you have.'

"Justice Middleton. 'Bring the book, and put the oaths of allegiance and supremacy to him.'

"This was the usual snare to entrap the Quakers when other charges against them failed. George Fox shrewdly asked him, 'Whether he had taken

Digitized by Google

the oath of supremacy, who was a Catholic and a swearer! as for us, we cannot swear at all, because Christ and his apostles have forbidden it.' This pointed query for the present warded off the blow, the oaths were dispensed with, and he was dismissed upon his bare promise to appear at the next Lancaster session."—p. 220.

And he kept his word. He presented himself at the winter assizes held at Lancaster. When called for, he entered, as usual, with his hat on, a matter in which he was very particular, never removing it on any occasion for the purpose of paying respect to men. The court invariably objected to a proceeding so entirely at variance with custom.

"Chairman. 'Do you know where you are?'

"G. Fox. 'Yes, I do; but it may be my hat offends you. That is a low thing, that is not the honor that I give to magistrates, for the true honor is from above; which I have received, and I hope it is not the hat which ye look upon to be the honor.'

"Chairman. 'We look for the hat too. Wherein do you show your respect to magistrates, if you do not put off your hat?'

"G. Fox. 'In coming when they call me.'

"An officer of the court was then ordered to take off his hat; and he was questioned again about the plot already alluded to; but finding they had no grounds on which to substantiate this charge against him, they tendered to him the oaths of allegiance and supremacy; and one of the justices asked him, 'Whether he held it was unlawful to swear?' an unwarrantable question, because the act imposed either banishment or a heavy fine upon any who declared it to be unlawful.

"G. Fox. 'In the time of the law amongst the Jews, before Christ came, the law commanded them to swear; but Christ, who doth fulfil the law in his gospel-time, commands, "Swear not at all," and the apostle James forbids swearing, even to them that were Jews, and who had the law of God.'

"He then produced the paper which he had written, and distributed it as a testimony against plots, and requested that it might be read out in open court, as it would show, of itself, whether it contained anything of a treasonable nature. This proposition was rejected, and he was not permitted to make any other defence, but was committed to prison for refusing to swear. And addressing the court, he said, 'All people take notice that I suffer for the doctrine of Christ, and for obedience to his command.'"—p. 221.

The gaol at Lancaster was literally crammed with Quakers, principally poor laboring men and small farmers, who had refused to pay tithes. Many of them had been zealous royalists, and, before their adoption of the peaceable doctrines of Quakerism, had fought and bled for the late king, and had remained true to him to the last. Their persecutors were fierce round-heads, who had opposed them in former days, and who were overjoyed in the opportunity of wreaking their vengeance on them now, under the apparent sanction of the law. Many of these poor people died in prison. But we must proceed with the trials of Fox.

"1664. The assizes for this year commenced on the 14th of March, and G. Fox, who had lain in prison ever since the last quarter-sessions, held upon the 12th of January, was now brought up before Judge Twisden: his own account is as follows: 'When I was set at the bar, I said, "Peace be amongst you all."'

"Judge, looking at him. 'What! do you come into court with your hat on?' Upon which the gaoler then took it off.

"G. Fox. 'The hat is not the honor that comes from God.'

"Judge. 'Will you take the oath of allegiance, George Fox?'

"G. Fox. 'I never took any oath in my life, nor any covenant or engagement.'

"Judge. 'Well, will you swear or no?'

"G. Fox. 'I am a Christian, and Christ commands me "not to swear;" so does the apostle James; and whether I should obey God or man, do thou judge.'

"Judge. 'I ask you again, whether you will swear or no?'

"G. Fox. 'I am neither Turk, Jew, nor Heathen, but a Christian, and should show forth Christianity. Dost thou not know that Christians, in the primitive times, under the persecutions, and some also of the martyrs in Queen Mary's days, refused swearing, because Christ and his apostles had forbidden it? Ye have had experience enough, how many have first sworn for the king, and then against him. But as for me I have never taken an oath in my life. My allegiance does not lie in swearing, but in truth and faithfulness; for I honor all men, much more the king. But Christ, who is the Great Prophet, the King of kings, the Saviour and Judge of the world, saith, "I must not swear." Now, whether must I obey, Christ or thee? For it is tenderness of conscience, and in obedience to the command of Christ, that I do not swear; and we have the word of the king for tender consciences.* Dost thou own the king?'

"Judge. 'I do own the king.'

"G. Fox. 'Why then dost thou not observe his declaration from Breda, and his promises made since he came to England, "that no man should be called in question for matters of religion so long as he lived peaceably?" If thou ownest the king, why dost thou call me in question, and put me upon taking an oath, which is a matter of religion, seeing thou or none else can charge me with unpeaceable living?'

"Judge, irritated, and looking at him. 'Sirrah! will you swear?'

"G. Fox. 'I am none of thy sirrahs, I am a Christian; and for thee, an old man and a judge, to sit there and give nicknames to prisoners, it does not become either thy gray hairs or thy office.'

"Judge. 'Well, I am a Christian, too.'

"G. Fox. 'Then do Christian works.'

"Judge. 'Sirrah! thou thinkest to frighten me with thy words.' Then checking himself, and looking aside, he said, 'Hark! I am using the word sirrah again,' and so checked himself.

"G. Fox. 'I spoke to thee in love; for that language did not become thee, a judge. Thou oughtest to instruct a prisoner in the law, if he were ignorant and out of the way.'

"Judge. 'And I speak in love to thee too.'

"G. Fox. 'But love gives no nick-names.'

"Judge. 'Well, George Fox, say whether thou wilt take the oath, yea, or nay?'

"G. Fox. 'I say as I said before, "whether ought I to obey God or man, judge thou?" If I could take any oath at all, I could take this; for I do not deny some oaths only, or on some occasions, but all oaths, according to Christ's doctrine, who hath commanded his followers, "Not to swear at

*Charles II. had pledged his word to the Quakers, that they should not be molested for their peculiar scruples, provided their conduct was peaceable.

Digitized by Google

all." Now, if thou, or any of you, or any of your ministers or priests here, will prove that ever Christ or his apostles, after they had forbidden all swearing, commanded Christians to swear, then I will swear.'

"Several priests were there, but none of them offered to speak.

"Judge. 'I am a servant of the king, and the king sent me not to dispute with you, but to put the law into execution; therefore tender him the oath of allegiance.'

"G. Fox. 'If thou love the king, why dost thou break his word, and not keep his declarations and speeches, wherein he promised liberty to tender consciences? I am a man of tender conscience, and in obedience to Christ's command, I cannot swear.'

"Judge. 'Then you will not swear; take him away, gaoler.'

"G. Fox. 'It is for Christ's sake that I cannot swear, and for obedience to his command I suffer; and so the Lord forgive you all.'

"He was now reconducted to prison, and on the 16th of March, two days afterwards, was again called into court.

"The judge asked him, 'whether he would traverse, stand mute, or submit.' He desired he might have liberty to traverse the indictment, and try it.

"Judge. 'Take him away, I will have nothing to do with him, take him away.'

"G. Fox. 'Well, live in the fear of God, and do justice.'

"Judge. 'Why, have I not done you justice?'

"G. Fox. 'That which thou hast done hath been against the command of Christ.' Upon this he was again consigned to prison to await the next assizes."—p. 223.

Fox appears to have felt himself much aggrieved by the word "sirrah," used on this occasion; so much so indeed that shortly afterwards he wrote and published a paper on the subject, addressed to "all judges whatsoever," and showing that the use of such epithets was not in accordance with the usages of Heathens, Jews, or Christians. He cites a number of instances in support of this assertion.

"The next Lancaster assizes were held in the month of June, in the same year, and the same judges, Twisden and Turner, came the circuit; but this time Judge Turner sat on the crown-bench, where George Fox was brought before him. He says, 'Before I was called to the bar, I was put among murderers and felons for about the space of two hours, the people, the justices, and judge, also gazing upon me. After they had tried several others they called me to the bar, and impanelled a jury; then the judge asked the justices "whether they had tendered me the oath at the sessions?" They said, "they had." Then he bid, "give them the book," that they might be sworn they had tendered me the oath at the sessions. They said, "they had." The judge bid them again "take the book and swear they had tendered the oath according to the indictment." Some of the justices refused to be sworn; but the judge said, he would have it done to take away all occasion of exception. When the jury were sworn, and the justices had sworn, "that they tendered me the oath according to the indictment," the judge asked me "whether I had not refused the oath at the last assizes?"'

"G. Fox. 'I never took an oath in my life, and Christ, the Saviour and Judge of the world, saith, "Swear not at all."'

"Judge (not heeding the answer.) 'I ask whether or no you did not refuse the oath at the last assizes?'

"G. Fox. 'The words that I then spoke to them were, "that if they would prove, either judge, justice, priest, or teacher, that after Christ and the apostles had forbidden swearing they commanded that Christians should swear, I would swear."'

"Judge. 'I am not at this time to dispute whether it is lawful to swear, but to inquire whether you have refused to take the oath or no?'

"G. Fox. 'Those things mentioned in the oath, as plotting against the king, and owning the pope's, or any other foreign power, I utterly deny.'

"Judge. 'Well, you say well in that, but did you deny to take the oath? What say you?'

"G. Fox. 'What wouldst thou have me to say? for I have told thee before what I did say.'

"Judge. 'Would you have these men to swear that you have taken an oath?'

"G. Fox. 'Wouldest thou have these men to swear that I had refused the oath?' At which the court burst out into laughter. 'I was grieved,' he says, 'to see so much lightness in the court, where such solemn matters were handled, and therefore asked him, "If this court was a play-house?" Where is gravity and sobriety? for this behavior does not become you.'

"The clerk then read the indictment, and I told the judge, 'I had something to speak to it, for I had informed myself of the errors that were in it.' He told me, 'he would hear afterwards any reasons that I could allege why he should not give judgment.' Then I spoke to the jury, and told them, they could not bring me in guilty, according to that indictment, for the indictment was wrong laid, and had many gross errors in it.

"Judge. 'You must not speak to the jury, but I will speak to them; you have denied to take the oath at the last assizes, and I can tender the oath to any man now, and premunire him for not taking it, and the jury must bring you in guilty, seeing you refused to take the oath.'

"G. Fox. 'What do ye with a form? you may throw away your form then.' To the jury.—'It lies upon your consciences, as ye would answer it to the Lord God before his judgment-seat.' Then the judge spoke again to the jury, and I called to him 'to do me justice.' The jury brought me in guilty. Whereupon I told them, 'that both the justices and they had forsworn themselves, and therefore they had small cause to laugh as they did a little before.' Oh, the envy, rage, and malice, that appeared against me, and the lightness; but the Lord confounded them, and they were wonderfully stopped. So they set me aside, and called up Margaret Fell."—p. 227.

We learn that Fox on this occasion very properly complained of the badness of his prison; and in consequence several of the justices visited it; but the floor was in such a bad state, and the room itself so completely open to wind and rain, that they were almost afraid to enter. All of them declared that it was "a most shameful place," and a better was promised. It is needless to say the promise was never fulfilled.

"The following day he was again brought up in company with his old friend and present fellow-sufferer, Margaret Fell, who employing counsel to plead the errors of her indictment, the judge allowed them. George Fox was then called upon, but declined the assistance of any pleader. His narrative of the proceedings continues thus:—

Digitized by Google

"Judge. 'What have you to say why I should not pass sentence upon you?'

"G. Fox. 'I am no lawyer; but I have much to say if thou wilt have patience to hear.' At that he laughed, and others also laughed; and he said, 'Come, what have you to say?' and turning to the court, 'He can say nothing.'

"G. Fox. 'Yes; I have much to say, have but patience to hear me. Should the oath be tendered to the king's subjects, or to the subjects of another realm?'

"Judge. 'To the subjects of this realm.'

"G. Fox. 'Look into the indictment; ye may see ye have left out the word subject; so, not having named me in the indictment as a subject, ye cannot premunire me for not taking the oath.'

"Then they looked over the statute and the indictment, and saw it was so; and the judge confessed it was an error.

"G. Fox. 'I have something else to stop judgment—look what day the indictment says the oath was tendered to me, at the sessions there.'

"They looked, and said, 'It was on the 11th day of January.'

"G. Fox. 'What day of the week was the sessions held on?'

"'On a Tuesday,' was the reply of some one in court.

"G. Fox. 'Look to your almanacs and see whether there were held any sessions at Lancaster on the 11th day of January, so called?' So they looked, and found that the 11th day was Monday, and that the sessions were held on the Tuesday, the 12th day of the month. 'Look, now, ye have indicted me for refusing the oath in the quarter-sessions, held at Lancaster on the 11th day of January last, and the justices have sworn that they tendered me the oath in open sessions here on that day, and the jury upon their oaths have found me guilty thereupon; and yet ye see there was no session held in Lancaster that day.'

"Judge (to cover the matter) asked, 'Whether the sessions did not begin on the 11th day?' Some one in court answered, 'No; the sessions held but one day, and that was the 12th.'

"Judge. 'This is a great mistake and error.'

"Some of the justices were in a great rage at this, and stamped and said, 'Who hath done this? Somebody hath done this on purpose;' and a great heat was amongst them.

"G. Fox. 'Are not the justices here that have sworn to this indictment forsworn men in the face of the country? But this is not all; I have more yet to offer why sentence should not be given against me. In what year of the king was the last assize holden, which happened in the month of March last?'

"Judge. 'It was in the sixteenth year of the king.'

"G. Fox. 'The indictment lays it in the fifteenth year.'

"They looked and found it so, which was also acknowledged to be another error. Then he says, they were all in a fret again, and could not tell what to say; for the judge had sworn the officers of the court that the oath was tendered to me at the assize mentioned in the indictment.

"G. Fox. 'Now, is not the court here forsworn also, who have sworn that the oath was tendered to me at the assize holden here in the fifteenth year of the king, when it was in his sixteenth year, and so they have sworn a year false?'

"The judge then bid them look whether Margaret Fell's indictment was the same, but found it not so.

"G. Fox. 'I have yet more to offer to stop sentence; ought all the oath to be put in the indictment or not?'

"Judge. 'Yes, it ought to be all put in.'

"G. Fox. 'Then compare the indictment with the oath, and there thou mayst see these words (or by any authority derived, or pretended to be derived from him, or his fee) left out of the indictment, which is a principal part of the oath; and in another place the words (heirs and successors) are left out.'

"The judge acknowledged these also to be great errors.

"G. Fox. 'But I have something further to allege.'

"Judge. 'Nay, I have enough, you need say no more.'

"G. Fox. 'If thou hast enough, I desire nothing but law and justice at thy hands; for I don't look for mercy.'

"Judge. 'You must have justice, and you shall have law.'

"G. Fox. 'Am I at liberty, and free from all that ever hath been done against me in this matter?'

"Judge. 'Yes, you are free from all that hath been done against you.' But starting up in a rage, he exclaimed, 'I can put the oath to any man here, and I will tender you the oath again.'

"G. Fox. 'Thou hadst example enough yesterday of swearing, and false swearing, both in the justices and jury; for I saw before mine eyes that both justices and jury had forsworn themselves.'

"Judge. 'Will you take the oath?'

"G. Fox. 'Do me justice for my false imprisonment all this while; for what have I been imprisoned so long for? I ought to be set at liberty.'

"Judge. 'You are at liberty, but I will put the oath to you again.'

"G. Fox then turned about and said, 'All people, take notice, this is a snare, for I ought to be set free from the gaoler and from this court.'

"Judge. 'Give him the book.'

"'Then,' he continues, 'the power of darkness rose in them like a mountain, and the clerk lifted up a book to me. I stood still, and said, "If it be a Bible give it me into my hand." "Yes, yes," said both judge and justices, "give it him into his hand." So I took it, and looked into it, and said, "I see it is a Bible; I am glad of it."'

"'The judge caused the jury to be called, and they stood by; for after they had brought in their former verdict, he would not discharge them, though they desired it; but told them "he could not dismiss them yet, he should have business for them, therefore they must attend, and be ready when they were called." When he said so I felt his intent, that if I was freed he would come on again. So I looked him in the face, and the witness of God started up in him, and made him blush when he looked at me again; for he saw that I had discovered him. Nevertheless, hardening himself, he caused the oath to be read to me, the jury standing by. When it was read, he asked me "whether I would take the oath or not?"'

"G. Fox. 'Ye have given me a book here to kiss, and to swear on; and this book, which ye have given me to kiss, says, "Kiss the Son," and the Son says in this book, "Swear not at all," and so says the apostle James. I say as the book says, yet ye imprison me. How chance ye do not imprison the book for saying so? How comes it that

Digitized by Google

the book is at liberty amongst you which bids me not swear; and yet ye imprison me for doing as the book bids me?'

"'I was speaking this to them, and held up the Bible open in my hand to show them the place where Christ forbade swearing. They plucked the book out of my hand, and the judge said. "Nay, but we will imprison George Fox."'

"'Yet this got about all over the country, as a by-word, "That they gave me a book to swear on that commanded me not to swear at all, and the Bible was at liberty, and I in prison for doing what the Bible said."'

"The judge still urged him to swear, and G. Fox said, 'I never took oath, covenant, or engagement in my life; but my yea and nay was more binding in me than an oath was to many others; for had they not had experience how little men regarded an oath! and how they had sworn one way and then another? and how the justices and court had forsworn themselves now? I was a man of a tender conscience, and if they had any sense of a tender conscience they would consider, that it was in obedience to Christ's command that I could not swear. But if any one of you can convince me, that, after Christ and the apostles had commanded me not to swear, they altered that command, and commanded Christians to swear, ye shall see I will swear. There being many priests in the court, I said, "If ye cannot do it, let your priests stand up and do it." But not one of the priests made answer.'

"Judge. 'Oh! all the world cannot convince you.'

"G. Fox. 'No; how is it likely the world should convince me? The whole world lies in wickedness. Bring out your spiritual men, as ye call them, to convince me.'

"Both the sheriff and the judge said, 'The angels swore in the Revelations.'

"G. Fox. 'When God bringeth his first-begotten into the world, he saith, "Let all the angels of God worship him;" and the Son saith, "Swear not at all."'

"Judge. 'Nay, I will not dispute.'

"G. Fox, to the jury. 'It is for Christ's sake that I cannot swear, and therefore I warn you not to act contrary to the light of God in your consciences; for before his judgment-seat you must all be brought. As for plots, and persecutions for religion, and popery, I deny them in my heart; for I am a Christian, and shall show forth Christianity among you this day. It is for Christ I stand.' More words I had both with the judge and jury, before the gaoler took me away.

"In the afternoon he was brought up again, and placed among the thieves for a considerable time, where he stood with his hat on till the gaoler took it off. The jury having found this new indictment against him, 'for not taking the oath,' he was then called to the bar.

"Judge. 'What can you say for yourself?'

"G. Fox. 'I request the indictment to be read; for I cannot answer to that which I have not heard.'

"The clerk then read it, and, as he read it, the judge said, 'Take heed it be not false again;' but he read it in such a manner that George Fox could hardly understand what he read.

"When he had done, the judge said, 'What do you say to the indictment?'

"G. Fox. 'At once hearing so large a writing read, and that at such a distance that I could not distinctly hear all the parts of it, I cannot tell what to say; but if thou wilt let me have a copy of it, and give me time to consider of it, I will answer it.'

"This put them to a little stand; but, after a while, the judge asked, 'What time I would have?'

"G. Fox. 'Till the next assize.'

"Judge. 'But what plea will you now make? Are you guilty or not guilty?'

"G. Fox. 'I am not guilty at all of denying to swear obstinately and wilfully; and as for those things mentioned in the oath, as Jesuitical plots, and foreign powers, I utterly deny them in my heart. If I could take any oath, I could take this; but I never took any oath in my life.'

"Judge. 'You say well; but the king is sworn, the parliament is sworn, I am sworn, and the justices are sworn, and the law is preserved by oaths.'

"G. Fox. 'Ye have had sufficient experience of men's swearing, and thou hast seen how the justices and jury had sworn wrong the other day; and if thou hadst read, in the *Book of Martyrs*, how many of them had refused to swear, both in the time of the ten persecutions and in Bishop Bonner's days, thou mightest see, that to deny swearing in obedience to Christ's command was no new thing.'

"Judge. 'I wish the laws were otherwise.'

"G. Fox. 'Our yea is yea, and our nay is nay; and if we transgress our yea or nay, let us suffer as they do or should do, that swear falsely. This we have offered to the king, and the king said "it was reasonable."'

"Instead of obtaining his liberty by this clear exposure of the palpably gross errors of his indictment, he was reconducted to prison, there to be immured till the ensuing assizes; and in order to make his case still harder, his sufferings were increased tenfold, by a second interference of Colonel Kirby, who gave particular orders to the gaoler 'to keep him close, and suffer no flesh alive to come at him, for he was not fit to be discoursed with by men.' In consequence of this order, he was removed into an upper chamber in an old and ruinous tower of the castle, so much more dilapidated than his former abode, that he was constantly exposed to the inclemencies of the weather, and often had the greatest difficulty to preserve his bed and clothing (which was always damp and cold) from being wet through. He was also so much distressed by smoke, which penetrated into his room from other fires in the prison, that at times he was nearly suffocated by it, and often could scarcely discern the light of a candle from its density. In this inhuman place he was doomed to pass the whole winter (which was unusually long and severe) for no crime; and was at last so much affected by a continued exposure to the cold and wet, and the constant inhaling of such an impure atmosphere, that he was reduced to a state of great suffering: his body became swollen, and his limbs so benumbed, that he could with difficulty use them."—p. 229.

After fifteen months' close imprisonment at Lancaster, Fox was removed to Scarborough, where he was confined twelve months, and this, it will be recollected, without any act that would constitute a misdemeanor in the eye of the law; without any proper charge being substantiated against him; without any fair committal; without being found guilty, by a jury, of any crime; but merely because it was the pleasure of a party to persecute and oppress him, partly from direct malice, and partly from the mistaken idea that they were currying favor with those in power. At last Fox appealed to the king himself, stating full particulars of his treatment, and relating the whole transactions from

Digitized by Google

beginning to end. His innocence, and the motives of his persecutors, were at once obvious to Charles, who immediately ordered his release. From the complete success of the previous application to the king on his account, it is remarkable that Fox should not have written earlier; for he seems at all times to have had a kind and Christian feeling towards his sovereign, and to have expected justice at his hands.

We cannot resist the temptation, in this place, of calling the reader's attention to the leading subject discussed between Fox and his judges—the taking of an oath. Of the value of such an oath nothing can possibly speak more decidedly than the fact that magistrates and jury, on the occasion in question, deliberately swore to false statements—not knowing them to be false, certainly, but not caring to inquire or know whether they were true: certain statements, technically false, are laid before them, and to the truth of these they unhesitatingly swear, *as a matter of course*. It is not for us to enforce the unlawfulness of swearing, in a religious sense, as pointed out by Fox, and as still maintained by the entire Quaker body; we object to it as tending to narrow the foundations of moral obligation; and we regard the maintenance of the law on this subject at the present day, and the refusal to receive any evidence except on oath, however contrary to the conscientious feelings of the witness, as a relic of barbarism which we shall rejoice to see destroyed. Quakers and Moravians, by their successful appeals to parliament, are exempt from a compulsory disobedience to a divine command; but all others are compelled to disobey, or to have their evidence refused as unworthy of credit. We are well aware that a difference of opinion obtains as to the precise meaning of the words, "Swear not at all,"—whether they refer to profane or judicial swearing; but, in the absence of any evidence that Christ referred exclusively to either kind of oath, those can hardly err who conscientiously take the words as written, without attempting any explanation; and surely to such, whether Catholic, Protestant, or Dissenter, the right should be given to take the affirmation instead of the oath. We would not enjoin on any the observance of a command to which they can conscientiously assign some other meaning than the words appear to convey; but those who take the more obvious reading of the passage ought not to rest until they are freed from a compulsory violation of the dictates of conscience. On moral grounds we cannot understand how any man who views this subject with unsophisticated eyes can take a view different from our own. There lives not the man whose oath corroborates his assertion. If a man is determined to lie he will swear to a lie. Our courts of justice daily give us examples of witnesses who swear to speak the *whole* truth, and yet go into the witness-box determined to suppress such *part* of the truth as shall weaken the cause of the party who has subpœnaed them: a signal proof that the bad man is not bound by an oath; and every one knows that the good man requires no oath to induce him to speak the truth.

Whatever opinions may be held by the world concerning the Quakers of the present day, and whatever judgment the Quakers may deserve at our hands, there can be no doubt that Fox and his followers were imbued with the spirit of Christianity; that they were clear-headed, single-minded men, who preached the gospel in all sincerity, influenced solely by the idea that such preaching was required at their hands; that they were simply yielding to that inward spiritual light spoken of by St. John as "the light which lighteth every man that cometh into the world." This light they regard as greater than the Scripture itself, because the source whence those Scriptures flowed; and the influence of this inward light is a fundamental doctrine of Quakerism.

It must, however, be observed, that the belief in this inward light is *professed* also by every sect of Christians; but Quakers seem to stand out from the rest in having *real faith* in its existence. Did not this difference exist we should not find theological disputants alluding in derision to the Quaker terms of being "guided by the inward light," or being "moved by the Holy Spirit." Much misapprehension has occurred as to the Trinitarian views of the society from the fact that the term Trinity is rarely if ever used in the sermons or works of their teachers. This omission appears not to result from any disbelief in the celebrated and elaborately discussed verse in St. John,* which is taken as the authority for the doctrine; for concerning this verse, all Quaker writers agree in considering it explanatory of the entire spirit of the New Testament. The question of its authenticity is not discussed, because if it be a true explanation or summary of a doctrine already received as truth, it matters but little whether the explanation were given with the text, or subsequently. They assert that the word Trinity is not of Scripture origin, and therefore has no divine authority for its use. The charge that the Quakers doubted or denied the divinity of Christ was met by Penn, Barclay, and all the more able writers of the sect. No sect is less liable to such a charge, and there is none which makes implicit faith in Christ a more constant and important theme of exhortation.

A few words as to the mode in which Mr. Marsh has acquitted himself of his task. It was no ordinary undertaking to compile such a life of Fox as should be readable to the public. What had previously been written concerning this remarkable man appears to have been designed more for the use of the society itself than for the world at large; and is rendered so prolix, if we may use the term, by detailed accounts of meetings, that many who began the task of perusal in the spirit of fair inquiry, would relinquish it from a distaste to the almost unintelligible repetitions. Mr. Marsh's volume is the reverse of prolix; it has no repetitions to render it distasteful, and gives just so much of the history of Fox as is essential to the understanding and just appreciation of his character. He represents Fox as a man of inflexible integrity, of invincible courage, of perfect sincerity, of indomitable perseverance, of real piety, and of unquestionable loyalty; an unflinching friend, a forgiving enemy, a true subject, and above all, a perfect Christian. Imagination, in all its vagaries, has rarely succeeded in drawing so spotless a character. There is one point, and only one, in which we would venture to differ from our author, and that is the tone in which he speaks of the Romish church; the frequent allusion to the members of this church, as "papists," is uncalled for; it answers no good purpose, and must be offensive to many. Mr. Marsh is, we believe, a member of the Church of England; he writes with perfect candor of Quakerism; why should he seek to disparage a faith so much more nearly allied to his own, and one which at the present moment seems spreading her arms to receive his own, through the friendly portals of Puseyism?

* John v. 7.

Digitized by Google

From Chambers' Journal.

THE PRINCE.

EXACTLY one hundred years ago, there arrived in the town of Rochelle in France a young man, apparently under twenty, of very elegant appearance, but simple and unpretending manners. He was attended, rather than accompanied, by an elderly gray-headed man, who seemed to be neither a domestic nor a parent, but who regarded him with all the respect of the one, and all the careful fondness of the other. The youth, indeed, appeared to require a certain watchful attendance, although surrounded, as one might have imagined, by some prestige which precluded familiarity; for, notwithstanding the cool, quiet air supposed to distinguish the great, he was thoughtless and capricious in no ordinary degree, giving way habitually, and without the slightest consideration, to the whim of the moment. Both were plainly dressed. They neither courted nor shunned observation; and the only singularity which distinguished them from ordinary travellers, was their declining to take up their abode in the inn, even for the short period they intended to remain. They at once furnished an apartment for themselves at a private house, though by no means on an extravagant scale—the whole expense amounting only to £20; and there they resided together, without making a single acquaintance, very rarely stirring abroad, and living chiefly on shell-fish, but more especially fresh-water crabs—a circumstance that excited some notice, from these delicacies being scarce and dear at Rochelle.

It appeared to be their business here to find a passage for the younger of the two to some foreign country; but in consequence of the hot war with England, vessels did not sail so frequently as usual, and they were for some time disappointed. At length an occasion offered. A small merchantman was about to sail for Martinique; and this appearing to be as good a theatre as any for the study of the world, it was determined that the youth should embrace the opportunity, and sally forth on his course of adventures. The moment of embarkation had nearly arrived, and he was in close conversation with his elderly companion, when the lady of the house inquired what he intended to do with his furniture.

"What do you say?" said the young man absently. "Oh, the furniture! Keep it," continued he, with a courteous smile, "for a remembrance of me." The lady looked at the other in surprise, but the transaction appeared to make no impression upon him of any kind; and when the interruption was over, he resumed the conversation without remark. This would not, perhaps, have appeared extraordinary in very wealthy people; but the fact was certain, that the youth's funds, on embarking for the West Indies, hardly amounted to more than the value he thus heedlessly gave away; and the two strangers vanished from Rochelle, the one by sea, and the other by land, leaving behind them a grand enigma for the ingenuity of the townspeople.

The youth's reputation in all probability had got on board before him; although the elderly traveller, in recommending him to the captain, could not be prevailed upon to say more than that he was a person of distinction, whose friends would one day show their gratitude for any services that were rendered him. This, however, was sufficient to insure his being treated with respect; and indeed the dignified manner of the youthful voyager would have extorted respect of itself. In his person he was neither handsome nor tall; his features were common, though sufficiently agreeable; he was of the middle stature; and, in short, he had nothing whatever to distinguish him, but a certain air of high life, and a singularly white and delicate skin, as if he had never, since his birth, been permitted to be visited too roughly even by the winds of heaven.

An incident occurred during the voyage which warmed the respect of the crew into affection. On an alarm of the approach of English cruisers, almost all got into the shallop, to creep along the coast close in-shore; and so suddenly was the step taken, that no provisions were thought of. The result was extreme hunger in the boat; which was generously relieved by their passenger, who bought a stock of refreshments from one of the native craft and distributed them, share and share alike, to all on board. When they returned to the ship, the youth was seized with an illness; and it was remarked, with more of interest than displeasure, that a certain degree of haughtiness mingled with the courtesy with which he received the anxious attentions that were pressed upon him from all quarters. His situation required care and tenderness, but he seemed to shrink from familiarity; till at length the necessities of his condition led him to select, as his attendant, a young man only a few years older than himself. To this person, whose name was Rhodez, and who was of a respectable family and liberal education, he gradually became attached, and at length bestowed upon him even some portion of his confidence.

Rhodez reported that the stranger was the Count de Tarnaud, the son of a field-marshal; but this was by no means so lofty a dignity as to account for the respect of the confidant, which seemed to increase every day. In fact, the avowal of his rank only made the mystery more dense; till all speculations were at length ended for the time by the appearance of the port of Martinique, blocked up by English cruisers. Under these circumstances, as it was impossible to save ship or cargo, the vessel was abandoned, and all on board took to their boats, and landed on the island in safety, but in total destitution. The count bore his misfortune very coolly, perhaps merely regarding it as one of the adventures he had come to seek; and, followed by Rhodez, went straight to the most respectable house he could find. Here he was received with much kindness by an officer called Duval Ferrol, whose attentions, he accepted as a common matter of course; replying slightly and vaguely to his questions, and making himself as comfortable as possible. The host received but small enlightenment from Rhodez, who told all the little the reader already knows, but appeared either unable to proceed further, or terrified to do so; and the real mystery thus came to be thickened with all kinds of conjectures and exaggerations, each more absurd than the last.

The commandant of the port at length thought it high time for him to enter upon the scene, and, by way of putting beyond all doubt the real rank of the stranger, offered him the use of his house and table. This the count accepted with much satisfaction; and, always accompanied by Rhodez, as a sort of gentleman attendant, or humble friend, removed at once to the residence of the commandant. It happened on the first day that, when all were sitting down to dinner, he found that he had forgotten his handkerchief, on which Rhodez immediately got up and brought it to him. This incident made the company stare at each other with unspeakable perplexity; for at the time of which we write, a white

Digitized by Google

man waiting upon a white man, in the West Indies, was entirely unheard of. That Rhodez, who knew the customs of the place well, would submit to this dishonor in any ordinary case, was not to be supposed; and again the question recurred, who was this pretended count?

In the middle of dinner the commandant received a note from Duval Ferrol, the count's former host, containing these words: "You wish for information relative to the French passenger who lodged with me some days: his signature will furnish more than I am able to give. I enclose you a letter I have just received from him." The letter contained merely some common words of thanks, written in a schoolboy hand, and in a very bad style; but it was signed "Est," not Tarnaud. What could this mean? The commandant secretly despatched a friend to consult some persons better acquainted with the aristocracy than himself; and by the aid of an almanac, these gentlemen at length appeared to master the difficulty. The mysterious stranger could be no other than Hercules Renaud d'Est, hereditary prince of Modena, and brother of the Duchess de Penthièvre!

Although this, for the present, was only a conjecture, it so happened that they had the means of verifying it; for there were two persons among them (one a brother-in-law of the commandant) who knew the prince by sight. In the evening, therefore—for they would not intrude earlier upon the dinner party—they all repaired to the commandant's house; and there his brother-in-law had no sooner cast his eyes upon the illustrious guest, than he pronounced him to be the duke. Even this, however, would not have been conclusive testimony, for the witness was reported to be so much averse to speaking truth, that he never did so, even when drunk; but he was supported by the other officer, and the affair was decided. By and by a flourish of bugles was heard without, and the brother-in-law and his friends, who had been pushing the decanters about the whole afternoon, while waiting till it should be time for the visit, drank, with loud cheers, to the health of Hercules Renaud d'Est, hereditary Prince of Modena. The stranger was confounded by this scene. He had probably signed "Est" inadvertently, and the unexpected consequences filled him for a time with vexation and haughty displeasure.

The blockade of the English became in the mean time more and more strict, till it threatened at length to produce actual starvation. Supplies could be obtained only from Curaçoa and St. Eustatia, and these, at the best, would have been scanty and expensive, even if they had not to pass through the hands of men who took the opportunity of preying upon the public misery. The chief of the monopolists was the governor of the Windward Islands himself, the Marquis de Caylus, who resided at Martinique, and the derangement of whose private affairs had led to this contravention of his official duty. The discontent of the inhabitants became alarming; and as famine approached nearer and nearer, it assumed the aspect almost of insurrection. The presence of a reigning prince at this juncture was opportune; and the commandant, who hated the governor, intreated him to consecrate the cause of the people by becoming the head of the party. Our young paladin, we have seen, was humane, generous, thoughtless of consequences; and he was not long, therefore, of suffering himself to be prevailed upon to lend his countenance to the efforts of patriotism. He swore to put an end to the villany of the monopolists; and declared that, in the event of the English landing, he would himself lead on the inhabitants to repulse them. Such speeches had a great effect, for the name of prince is associated with ideas of loyalty; and the people of Martinique came to think it their duty to be loyal to the Duke of Modena, since that potentate happened, by whatever extraordinary chance it occurred, to find himself in the West Indies.

The Marquis de Caylus now began to feel somewhat uneasy at Fort St. Pierre, and despatched an order to the commandant to send him his unruly guest. The commandant, however, suggested that he could by no means take such a liberty, since the individual in question was assuredly the hereditary Prince of Modena; and the marquis therefore addressed a letter to the Count de Tarnaud, inviting him to repair to his residence. "To him," replied his highness, "I am Hercules Renaud d'Est, although the Count de Tarnaud to the rest of the world. If he desires to see me, let him repair to Fort Royal, which is half-way, and in four or five days I shall be there." The officers who brought the missive reported the stranger's resemblance to the Duchess de Penthièvre, and the governor's doubts began to give way. He set out for Fort Royal as commanded; but his heart failed him, and he turned back. The prince, not finding him there proceeded to Fort St. Pierre, accompanied by a retinue of gentlemen, and was seen by the governor from his windows; upon which the latter, exclaiming that he was the very image of his mother and sister, left the place in a panic, and retired to Fort Royal.

The Rubicon was now passed. It would be affectation to repudiate longer a rank which had been assigned to him without any agency of his own, and the Prince of Modena assumed his ancestral state, and appointed his household. The Marquis d'Eraguy had the honor of being nominated his grand equerry; Duval Ferrol, his first host on the island, became one of his gentlemen attendants; and the faithful Rhodez exulted in the office of page. He held a court, and gave formal audiences; and his levees were sedulously attended, not only by all who had complaints to make against the existing government, but by many of the officers of the administration, who conceived it politic to seek the protection of a hereditary prince. His palace was at first the convent of the Jesuits; but this excited so much the jealousy of the Dominicans, that after a time he removed to the establishment of the latter, where he was treated, if possible, with still more distinction. A table of thirty covers was laid for him and his guests every day. His dinner was a great spectacle, which passed on to the sound of trumpets; and as it was the custom to admit the people into the hall on the occasion, it became necessary to have the table defended by strong rails from the pressure of the crowd.

Under this régime, St. Peter's presented the aspect of a vast theatre. Serious business was no more thought of; the wheels of government stood still; money once more came into active circulation; provisions, liberated from the chains of monopoly, arrived from all quarters; eating, drinking, and dancing were the order of the day; and, as if fortune had determined to signalize the reign, as it may be called, of the duke by her choicest triumphs, the news of the peace of Aix-la-Chapelle came over the Atlantic to complete the general intoxication.

It may be supposed that the character of the royal adventurer was severely tested during a period of more brilliant fortune than he could have

Digitized by Google

enjoyed on the ducal throne. We must remember, however, that he was a mere lad, exposed to temptation of every kind, and not condemn too severely the vagaries into which he was led by his wild and restless spirit. Accustomed to indulgence, as it appeared, from his cradle, he never knew what it was to repress a wish, or even feel a doubt; and he plunged madly into all the excesses of the time and place, and led the way in dissipation as zealously as he had offered to head the ranks of war. But the strange thing was, that even in his wildest moments he never forgot his *rank*. Neither the madness of wine, nor the witcheries of beauty, ever betrayed him into laying aside, for an instant, the dignity of the prince; and thus it was, that even the companions of his most unguarded hours continued to look upon him with a kind of awe.

The hospitality of the monks, it will be seen, was highly convenient for the wandering sovereign, who had landed in Martinique without a coin in his pocket; but soon he had abundance of money from a more legitimate source. It chanced that the Duke de Penthièvre possessed considerable property in the island; and his agent was of course not the last to present himself at the court of his constituent's brother-in-law. A gracious reception, and a half-hour's conversation in private, were sufficient to determine the honest man to do his duty to the family; and the Penthièvre funds were freely placed at the disposal of the young prince. This circumstance completely shut the mouths of the few malcontents who still affected to doubt his rank; for the agent was a prudent and cautious man, well acquainted with the affairs and connections of the house, and would never have taken such a step except from absolute conviction. The malcontents, besides, could not fail to see that the money was not intrusted to unworthy hands. An impostor would either have squandered the treasure in mad extravagance, or have hoarded it against the time when he might think it necessary to decamp; but the Duke of Modena was neither careful of money nor profuse, spending just what was proper and liberal in his station, but nothing more. The doubters could not have been strengthened in their unbelief even by the consideration that on so remote a stage it was possible for an impostor to strut his little hour undiscovered, for he was always most anxious to meet everybody who came from Europe; and independently of the two gentlemen who had already recognized his person, a third, more recently arrived, recollected having seen him the year before at Venice. And the occasion was somewhat remarkable; for his highness, in a frolic, had broken in a shop glass articles to the amount of £1500, which he afterwards paid for. Was it wonderful that so wild a youth had taken the fancy to come to Martinique!

Wildnesses of this kind, however, were now over, for he was here in the school of the world. His European education had only been begun, though begun on a princely scale. He possessed a smattering of half a dozen different sciences; he spoke, though indifferently, several languages besides his own, and understood a very little Latin. His drawing was better than his writing; he was a capital horseman; and, more than all, notwithstanding his flightiness, he had a great fund of natural good sense and precision of thought. If to this we add the most absolute self-possession, and a serene tranquillity of manner which nothing could disturb, it will be felt that, both in his merits and defects, Hercules Renauld d'Est was every inch a prince.

The prince wrote to his family; and the governor, on his part, despatched a messenger to Europe to relate the extraordinary circumstances that had occurred, and demand instructions as to how the Duke of Modena should be treated. Six months had flowed past, and no answer was received by either. The political crisis in the mean time had gone by, and the inhabitants of Martinique began to find the residence of their royal guest somewhat expensive. The prince himself, after having spent 50,000 crowns of the Penthièvre funds, at last grew weary of his adventure; and in another month he hoisted an admiral's flag in a merchant ship, and, saluted by the cannon of the fort, took his departure for Portugal, with all his household, an almoner, and the king's physician at the colony.

Immediately on his back being turned, the long-expected courier arrived, bringing an order to the governor for the arrest of the stranger! By the same vessel the agent of the Duke de Penthièvre received a severe reprimand for his want of caution in allowing himself to be fleeced of so large a sum; the duke, however, in consideration of all the circumstances, retaining him in his employment, and consenting to share the loss. Both these communications were very extraordinary. The order for the arrest, after a delay of six months, and presented only when the prince had left the island, appeared to indicate that the whole affair had been nothing more than a youthful frolic; and this seemed so fully confirmed by the otherwise unaccountable good-nature of the duke, that public opinion ran stronger than ever in favor of the young knight-errant.

This personage in due time arrived at Faro in Portugal, and was there received with a salute of artillery. On landing, he demanded to be provided with a courier, to send to his chargé d'affairs at Madrid, and likewise with the means of proceeding with his suite to Seville, where he intended to await the return of his messenger. All was complied with; and the prince, still living on borrowed funds, was the gayest of the gay, drinking, dancing, and making love so vehemently, that he became the envy of all the men, and the admiration of all the women. His entrance into Seville was like a triumph. The windows were crowded as he passed; the principal inhabitants waited upon him to pay their respects; and sumptuous entertainments were prepared for him; all of which he returned with a magnificence conformable to his rank. In the midst of this there came a new order for his arrest.

The prince was astonished, the people indignant, and the women, more especially, furious. He had taken up his abode at the convent of the Dominicans, who protected him for some time, but at length, on the fermentation becoming serious, consented to deliver him up to the authorities, provided this could be done without bloodshed. One attempt to take him was defeated by the courage of the youth, who defended himself with his sword; but at length a burly monk, who was accustomed to wait upon him at table, clasped his arms round him one day as he sat at dinner, and held him till the alguazils, rushing into the room, took him prisoner.

He was at first thrown into a dungeon, and strongly ironed; but the next day, for no reason that could be imagined—for he had haughtily refused to answer all interrogations—he was released from his irons, and lodged in the best apartment in the prison. The persons composing his retinue, however, were treated with less ceremony; they were examined regarding a supposed conspiracy to

Digitized by Google

seize the island of Martinique, and banished from the dominions of Spain. The prince himself was ultimately condemned to the galleys.

When the time came for his removal to Cadiz, it appears that apprehensions were entertained of a commotion in his favor. The whole garrison of Seville was under arms, and the prince, supported by the captain and lieutenant, entered a carriage drawn by six mules, and proceeded through the town between two ranks of infantry which lined the streets. Opinions were still divided as to his pretensions to the ducal throne, and bets to the amount of 60,000 piastres depended upon the question. The extraordinary thing was, that there came an order from the court to prohibit the laying of wagers; and, more extraordinary still, the messengers sent off by those who had money at stake, to decide the whole matter by finding him whom they supposed to be the real duke, were unsuccessful. No Duke of Modena was to be found in Italy!

Arrived at Cadiz, the prince was conducted to the fort of La Caragna, the commandant of which was instructed to treat him with *politeness;* and here he lived very comfortably for a time, busying himself in making such presents as the sale of his effects enabled him to afford, to those from whom he had received kindness in the course of his strange adventures. But the romance was at an end; the real Duke of Modena had been at length found; and our paladin, growing tired of a life without notoriety and without excitement, made his escape.

Soon after this, the captain of a merchantman which had come to anchor in the roads of Gibraltar went on shore, and reported to the governor that he had on board the individual who was so well known by the title of the Prince of Modena. "Let him beware of landing, then," replied the governor, "or I shall apprehend him immediately!" The captain looked perplexed. He returned slowly to his ship, weighed anchor, and set sail; and with him disappeared forever this singular young man, as completely as a bubble vanishes from the face of the sea.

There are few of the monstrosities of romance which equal in wildness and improbability the above transcript from real life. The series of coincidences which favored the imposture, and the numerous mistakes as to the personal identity of the hero, committed by persons who knew, or affected to know, the real prince, seem little less than miraculous; while the moderation of the Duke de Penthièvre, and the tenderness exhibited by the court towards a convicted felon, throw around the whole story a romantic mystery, which, at this distance of time, it would be vain to attempt to penetrate.

BURNS.

BY MONTGOMERY.

WHAT bird in beauty, flight, or song,
Can with the bard compare,
Who sang as sweet, and soared as strong,
As ever child of air?

His plume, his note, his form, could BURNS,
For whim or pleasure, change;
He was not one, but all by turns,
With transmigration strange;—

The Blackbird, oracle of Spring,
When flowed his moral lay;
The Swallow, wheeling on the wing,
Capriciously at play:

The Humming bird, from bloom to bloom,
Inhaling heavenly balm;
The Raven, in the tempest's gloom;
The Halcyon in the calm:—

In "auld Kirk Alloway," the Owl,
At witching time of night;
By "Bonnie Doon," the earliest fowl
That carolled to the light.

He was the Wren amid the grove,
When in his homely vein;
At Bannockburn the bird of Jove,
With thunder in his train:—

The Woodlark, in his mournful hours;
The Goldfinch in his mirth;
The Thrush, a spendthrift of his powers,
Enrapturing heaven and earth;—

The Swan, in majesty and grace,
Contemplative and still;
But roused—no Falcon in the chase
Could, like his satire, kill:—

The Linnet, in simplicity;
In tenderness, the Dove;
But more than all beside, was he
The Nightingale, in love.

Oh! had he never stooped to shame,
Nor lent a charm to vice,
How had devotion loved to name
That Bird of Paradise!

Peace to the dead! In Scotia's choir
Of minstrels, great and small,
He sprang from his spontaneous fire,
The Phœnix of them all.

From the Christian Citizen.

AGAIN WITH THEE.

AGAIN with thee—how swift the hours are speeding,
As thus we join in converse dear and sweet;
Thought jostles thought, and each to each succeeding,
Chase through the mind's domains with flying feet.

Again with thee—and hope is softly telling
Of coming joy which I shall share with thee;
And every cloud by its warm light dispelling,
It maketh life an endless jubilee.

Again with thee—my heart to thine is clinging,
And every tendril round thy own doth twine;
While to my eye the hidden tear upspringing,
Cometh as incense from affection's shrine.

Again with thee—and carking doubt is sleeping,
And holy trust doth reign the victor here;
While sacred love unwearied watch is keeping,
And quick destroyeth every rising fear.

Again with thee—and reason bows before thee,
And loves to scan thy mind's superior might;
And thus my heart and soul will aye adore thee,
Both proud to own in thee a guiding light.

Pomfret, Ct.

[In a former number of the Living Age, we said that we should be willing to vote for the incorporation of Mexico into our Union. For this expression some of our best friends blamed us. They did not (so we thought) look at the matter in all its bearings. It was not our meaning (the remark was made before the war) that this should be done without the consent of Mexico. Perhaps the strongest feeling against our suggestion was caused by the anticipation of the introduction of slavery there. Of this we were not afraid; but have always in private maintained the opinion that the annexation of Texas would weaken the political power of slavery, and that the maintenance of that institution in Mexico was impossible. This is a matter which we have no intention of discussing at length, but we copy from the National Era a very remarkable article in favor of so making peace with Mexico. This paper is established at Washington with the intention of discussing the question of slavery with our southern brethren, and of so doing in a gentle and rational manner. Pressed as we have been, we have not read it heretofore as much as we feel that its ability will oblige us to do hereafter.

There are many objections to the proposed incorporation; but, we think, not enough to overbalance its advantages. The next step will perhaps be the incorporation of Canada—with the consent of Great Britain—and after that we will consider whether we can reännex our disobedient mother herself.]

UNITED STATES AND MEXICO—PLAN OF PACIFICATION AND CONTINENTAL UNION.

"THERE is a mysterious connection between the destinies of this country and those of Mexico." Such was a sentiment expressed by Mr. Calhoun in his celebrated speech on the war-question last winter. Whether that far-seeing senator had in his mind all the reasons that might suggest such a remark, it is not necessary to inquire. We adopt and repeat the sentiment: "There *is* a mysterious connection between the destinies of this country and those of Mexico."

At the beginning of the century, few, if any, statesmen foresaw the rapid growth of the United States, or the bearings of this growth on the fortunes of the Spanish dominion in North America. During the last ten years of the last century, we were humbly negotiating for the free navigation of the Mississippi; and Congress instructed Mr. Carmichael, in 1790, to urge on the Spanish government, as inducements to concede this, the considerations, that the United States would be a safer neighbor than Britain, to Spain; that conquest was repugnant to the genius of our government; that it was "*not our interest to cross the Mississippi for ages;*" that it "*never will be our interest to remain connected with those who do.*" In the beginning of this century, all that President Jefferson asked of Napoleon was, the cession of New Orleans and of the Floridas, with the Mississippi as the final boundary of our possessions; and at last he was fairly forced to take the *whole* of Louisiana!

How shortsighted is the wisdom of the wisest! Some of those statesmen have lived to see the seat of American empire transferred from the Atlantic slope to the west of the Alleghanies, and the Mississippi river, which *was* to be the *perpetual western* boundary of American territory, passing far to the east of its central point!

Now, cast your eye on the map of North America. An energetic race of people, speaking one language, assimilated under one system of free institutions favorable to the utmost development of human faculties, has taken possession of the best portion of the continent, stretching from the great chain of inland seas on the north to the Gulf of Mexico on the south, and indented on the Atlantic seaboard with numerous commodious and secure harbors. It has acquired not only the free, but the *sole* navigation of the central river of the Mississippi valley. It has secured every harbor on the northern coast of the Gulf of Mexico. It passes beyond the Mississippi—builds states upon its western shores—sweeps onward above the fortieth parallel of latitude, to the Rocky Mountains, surmounts those formidable barriers, pours down their western declivities, and, in 1846, finds itself in safe possession of seven degrees of the Pacific coast. It has belted the continent with its power—one people, one language, one mind, prevailing from ocean to ocean. The government which fifty years ago trembled for its stability at the bare idea of colonization beyond the Alleghanies, is now sending the mail to American colonists across the Rocky Mountains.

The people who have accomplished these results, meantime, have multiplied from three to twenty millions, and the old world is now pouring its hundreds of thousands, the excess of its population, into the country which they have opened.

But it was only above the fortieth degree of latitude that their energies had scope, and the tide of population could roll onward to the Pacific. Below that, reaching down ten degrees to the Gulf of Mexico, progress was arrested a short distance beyond the Mississippi, not by natural barriers—mountains, lakes, or deserts—but by another empire, running up from the sixteenth degree of latitude to near the thirtieth, in a narrow slip between the Gulf of Mexico and the Pacific Ocean, and thence upwards from thirty to forty-two degrees, between the Pacific on one side and two thirds of the western boundary of this country, on the other; and this boundary, not natural, but artificial, depending upon parchment deeds and titles. The portion of Mexico thus bounded, pressed upon by the restless energies of the United States, constitutes its larger portion, and yet contains scarcely any population, while the whole of Mexico has but eight souls to the square mile. The race which made it an empire is scarcely one eighth of the entire population, and has failed to establish institutions favorable to the assimilation of the various classes of people under its ascendency, or to the development of their energies. The people languish. Five millions, when we were three, they are now only seven millions, while we are twenty. Agriculture, manufactures, commerce, are all at a stand. Civilization struggles for life.

What is to be expected when two such races, so contrasted in all the elements of power, are yet brought into immediate juxtaposition, without the impediment of any natural barrier—a vast wilderness owned by the one, inviting the reckless adventurers of the other? Texas is first settled, then annexed. This would have taken place, even though the curse which hastened that event, and has alloyed its consequences with evils not yet fully disclosed, had not been the *immediate cause*.

But the stronger race has overleaped its limits; it has passed to the Nueces, and then, by a second thought, to the Rio Grande, thus adding, at one stroke, three hundred thousand square miles to its territory, grasping one third of the western shore of the Gulf of Mexico, and bringing itself a thousand miles nearer the Pacific. The weaker race feels itself aggrieved; and for good reason. It has been foully dealt with. What has happened, would

Digitized by Google

have happened, had there been no slavery to precipitate the result by means repugnant to fair dealing—but it would have taken place by the operation of natural causes, probably in such a way as justice might have sanctioned.

Has the force of these natural causes, however, now spent itself? Have we acquired a natural boundary? Have we a sufficient number of safe ports on the western shore of the gulf? Have we a free, ready, safe outlet to the Pacific? Has the tide of foreign immigration ceased swelling towards our shores? Has the stronger race lost any of its daring, its reckless energy? Has the weaker become more united, more vigorous, more enterprising? There is yet an immense tract of country bordering on Texas, separated from it—no, united to it—by a river; scarcely settled, often disaffected to the central government, a portion of it hardly amenable to its rule. It borders the Pacific, embracing on that coast the best harbors in the world—it touches lower down on the gulf. Again, slavery, availing itself of the working of natural causes, and international difficulties and irritations, precipitates a result which would, without its interference, have been accomplished more slowly, more safely, and, at the same time, honorably. American troops are marched to the extreme limits of a territory which, to say the most, was of doubtful jurisdiction. War is the consequence, and the first step is the seizure of the very tract of country we have described. California and New Mexico and Chihuahua are overrun and conquered—and now American dominion, by force of arms, (a new and perilous method of advance in this country,) has made a reach of five degrees to the twenty-fifth parallel of north latitude, circling one half of the Gulf of Mexico, stretching from its shores to the Pacific—where, to its seven degrees of coast held in 1846, it has added seventeen degrees in 1847!

But these violent accomplishments have cost the stronger race blood, and treasure, and honor, and awakened in its own bosom the elements of terrific discord. They have outraged, and humbled, and desolated the weaker race, and aroused in it a fierce national antipathy. We have gained immense territory, won many battles, made many "heroes"—but the government has on its hands a domestic question which threatens its stability, and a foreign difficulty which seems to defy settlement. At this hour the capital of Mexico is doubtless resounding with the reveille of the American soldiery—its central government has probably ceased to exist—its states alone carry on governmental functions. And now commence our most serious difficulties. What next is to be done?

1. "Make peace." Ay—if you can. Suppose General Scott find a central government, and it be willing to concede all that is demanded. Peace is made. One third of Mexico is left in our possession. Our armies are withdrawn: then begins the battle at home—the great, decisive struggle between slavery and freedom. Must we say it? That struggle, we fear, we are sure, will terminate in the triumph of slavery. The curse will move like a pestilence over the new territory acquired, till it overshadow the western boundary of the continent, poisoning every department, every institution of our country. And would Mexico then be safe? Look again at the map. What natural boundary is there, until the whole be taken? That would be the bold aim of the slave power, unless, indeed, the reaction in this country, produced by its tyranny, should become so great as to overthrow the Union. We want to see peace upon no such terms. The idea of being involved in the "deep damnation" of a career of conquest, carried on at the will and for the benefit of slavery, is too abhorrent to be endured by any American citizen who is not prepared to defy the moral sentiment of the world, and war against the throne of God.

Besides, New Mexico and Chihuahua have now, and California soon will have, a population entitling them to admission into the Union. But, independent communities of people, as they would be, would have the right to elect, for themselves, whether to seek admittance into the Union, or stay out of it—whether to acknowledge the government of the United States, or not. Such is the doctrine of the democratic party and of southern statesmen, in relation to territories of this Union. Will they falsify them as it regards other territories? But, suppose the territories acquired, and organized into states of this Union, could they not then secede? If Mr. Calhoun is right, they could. How, then, would such a peace as is contemplated be permanent, or secure the objects aimed at by the war?

Suppose, however, General Scott should find no government to treat with?

2. "He must then set up a provisional government, and treat with that." A precious device of statesmanship! How would this conciliate the Mexican people? How would it comport with the American principle of self-government, to force upon an unwilling people a government at the point of the bayonet? How would it suit our economical, peace-loving, limited government, to sustain a strong standing army in a neighboring country, for the purpose of keeping its disaffected population in subjection to the rule of the conqueror?

The whole project is an absurdity.

3. "Call back the armies, then, and let us return to just where we were at the beginning of the contest." This supposes an amount of justice and stern self-denial on the part of the American people and their government, which it is almost idle to talk of, and which, if possessed by them, would have prevented any collision at all with Mexico. Is it not a waste of time to insist upon what we know will not be done?

4. "Let the government adopt as its maxim, '*No territory*,' and it will be easy to secure peace." Just as idle as the preceding proposition, and not half so sincere. We could respect a man who would urge this, on the ground of justice and magnanimous dealing—but this is not the motive. If it be urged in sincerity, it is done with the unworthy purpose of evading the issue between slavery and freedom, and of thus securing the tranquillity of the country, at the hazard of its complete overthrow by the insidious influences of the former; but, in most cases, it is insisted upon as a mere device for obtaining a party triumph—party managers being fully aware that it is sheer trickery. "No territory!" Let any party go into a presidential canvass with that motto emblazoned on its banners, and its doom will be sealed; or else, the whole history of this nation is a lie.

5. What does the administration meditate? A writer having said—"Speak as much as you will of the peace party in Mexico, such a party does not exist. To have peace, the first thing to be done is to create this party, sustain it, treat with it, put it in power, and keep an army there, perhaps for years, to maintain peace, and the peace party at the head of affairs"—the *Washington Union* remarks:

Digitized by Google

"We are not aware of what course our government may pursue in this predicament; but we can scarcely be mistaken in supposing that the war will be prosecuted with greater vigor. We must subdue these guerilleros, and keep open a free communication between the capital and the coast. We must teach these Mexicans that we are superior to them in energy as well as in our military skill and military resources. We must impress them with a deep conviction that their true interest is peace with us—now, and in all future time. Acting upon these high principles, we will prosecute the war with greater means, a sterner will, and with irresistible vigor. If they are not sufficiently beaten to make them seek for peace, we must beat them again and again—coerce them at every available point, scatter their guerilleros, occupy their towns, and levy more contributions upon their inhabitants."

Bloodthirstiness, and extreme folly! Does the *Union* suppose the American people would be willing to send out volunteers, involve themselves in inextricable debt, concentrate more and more power in the hands of the executive, keep up a large standing army, just for the purpose of murdering the Mexicans, till they abjectly submit, or were exterminated? Whatever else they may do, they would turn out any administration that could contemplate such an atrocity.

6. What, then, is to be done? Suppose, inasmuch as slavery and war have hurried the march of American empire, and plunged us into "fightings without and fears within," we now divorce American progress from those baleful influences, and anticipate the course of events, by proclaiming the cessation of all hostilities on our side, and in all good faith, in a proper way, submitting to every state in Mexico, having the requisite number of inhabitants, the proposition to enter, if it so choose, into the American Union, upon a footing of equality with the original states. This plan may seem startling, but let us examine—

First, its relations to justice;

Secondly, to the federal constitution;

Thirdly, to expediency.

Few persons deny the right of a state to dissolve its connection with the rest, for good and sufficient reason, of which it must be the sole judge. The New England states have the right to-day, to secede from a government which has been prostituted to the support of slavery, and to set up for themselves. We have never questioned the right of South Carolina to do what she has so often threatened; nor will southern statesmen, who have always been in the habit of contemplating a dissolution of the Union in certain contingencies, dispute this right of independent election, in a state, whether she shall remain in the Union or go out of it. While in it, of course, she is bound to obey the laws it constitutionally imposes. The alternative is, obedience or secession. We always denounced the foul dealing of the United States towards Mexico, and opposed the annexation of Texas, on account of its relation to slavery, but never doubted its perfect right to dispose of itself as it saw proper. We maintained the same position as to the right of the settlers and natives of Oregon to dispose of their territory.

In relation to right or justice, then, there could not be the slightest objection to the submission of a proposition of annexation to each of the sovereign states of Mexico, or to the free acceptance by each of such a proposition. *Free* acceptance, for each should be left perfectly free to decide for itself, and its decision ought then to be respected.

The second question regards the *constitutionality*, on our part, of such an act. This, if we understand the matter, has been settled by precedent. The American people have ratified the purchase, by Jefferson, of *foreign territory*, and the same authority has ratified the act of the American congress, in passing a joint resolution for the annexation of a *foreign state*. If a foreign slave state could thus be annexed, there can be no doubt as to the power to annex, in a similar way, a foreign *free* state, or any number of them. We shall not now go behind that act of congress, and its ratification by the American people.

The great question to be discussed, then, concerns the expediency of such annexation; and here we must take a wide range, as the subject is of vast importance, and embraces many points of view.

First, as to the practicability (one element of expediency) of extending our government over this immense territory. Some may doubt, but we have always held that the peculiar political system of this country is specially adapted to extended empire. State governments will prevent the oppression of local interests by the central government, and provide of themselves efficiently for their promotion; and we can see no reason why the great interests of peace and war, commerce with foreign nations and between the states, the public lands, and the treatment of the aborigines, of the whole continent, may not be as well cared for by one central or federal government, as by many. Thus far, the extension of territory and multiplication of states, by weakening the proportionate power of faction, and generally of local interests, adding to the dignity of the federal government, and increasing national spirit, have strengthened the bonds of union. The states were in far more danger during the last war, and before it, of falling apart, than they have ever been since.

In a few years, a state, formed in Oregon, will be knocking for admission into the Union. By the constitution, it is provided that the election for president shall be held on one day in all the states. Congress, when the State of Oregon shall have been admitted, will be obliged to amend the law on this subject, so that the election may be held at an earlier day, to allow time for the transmission of the vote in Oregon. Last Thursday, the news was received in this city of the arrival of Messrs. Shaw and Bolden, at St. Louis, on the 5th instant, *direct from Oregon*, having left the *frontier* settlements on *the 5th of May—three months from the frontier of the Oregon settlements to St. Louis!* And yet, no one dreams of the impossibility of extending our federal government over Oregon. American enterprise, we know, availing itself of the discoveries of modern times, will, in due season, annihilate distance, and bring this portion of our Pacific empire in close fellowship with the old states. Now, there is scarcely any part of Mexico, which, even at this time, without the construction of suitable roads, may not be reached within one third of the time required for the journey to the mouth of the Columbia; the greater portion of it is as readily accessible as our territory between St. Louis and the Rocky Mountains, and a large portion of it is far more so. We go from Washington to New Orleans in seven days, and from New Orleans to Vera Cruz in three or four; from Vera Cruz to the city of Mexico in four more. With

Digitized by Google

proper improvements, we shall be able to reach the city of Mexico from the capital of the United States in twelve or thirteen days, and by the telegraphic wires receive intelligence from there in a few hours! The city of Mexico, be it remembered, is in the 19th degree of north latitude, while the Mexican territory stretches up as high as 42 degrees; so that a great portion of it lies still nearer the United States. Yucatan, bending upwards, as if to approximate still more closely, indents the gulf to a point as high as 22½ degrees. The truth is, a glance at the map will show that Mexico and the United States constitute *one geographical system*, all the parts of which may be easily made accessible to each other, between which intelligence may be rapidly communicated, all of which, if under *one political system*, would possess a remarkable community of interests.

So much for the practicability of the project. Let us glance at its advantages.

It would extend the principle of free trade, already in active operation between the states of this Union, to nearly the whole North American continent.

It would give to Mexico the principle of religious toleration, without interfering with her religious faith.

It would establish, throughout her borders, free institutions.

It would confer upon her people personal security.

It would open the way for, and hold out inducements to, enterprising immigrants.

It would bring her soil under a better cultivation, stimulate the growth of manufactures, and augment indefinitely her commerce.

It would lead to the institution of the common school system of education.

It would put an end to military rule and wasting revolutions.

It would open to the New England manufacturers a new and valuable market for their wares. Hitherto our trade with Mexico has been inconsiderable, considering the proximity and wealth of the two countries; and, for many years before the war, it had been steadily decreasing, while England was carrying on a profitable and brisk commerce with her.

It would add vastly to the commerce of this whole country, and open a new field for the enterprise of our citizens.

It would increase the power and influence of the Union, and forever put to rest all projects for the establishment of a monarchical system upon this continent, and for the play of European interests and tactics.

It would settle our present difficulty with Mexico at once, without any unpleasant controversies about indemnity, without any humiliation to our sister republic, without leaving one trace of animosity, without suffering to remain open any question for future wrangling, any opportunity or chance for future collision.

It would establish the peace of the continent on a perpetual basis.

It would secure to the federal government what is in fact becoming indispensable to the maintenance of our possessions on the Pacific—*the right of way across the isthmus, for the construction of a canal.* It is idle to think of maintaining long the integrity of our Pacific empire, if we cannot reach it unless by an overland journey of three months, or a sea voyage of six. A canal through the isthmus of Tehuantepec will bring New Orleans within twelve or fourteen days of the mouth of the Columbia river and enable government at Washington to send despatches to Columbia, and receive answers thence, within a period of thirty days.

It would secure the control of the mines which supply the currency of the world.

It would settle in a peaceful way, so as not to offend the pride of the south, the domestic question of slavery, as raised by the project of annexing by force merely a portion of Mexican territory. This is a most important consideration.

According to Brantz Meyer, the departments or states of Mexico are the following:

Departments.	Population.
Mexico,	1,389,520
Jalisco,	679,311
Puebla,	661,902
Yucatan,	580,948
Guanajuato,	512,606
Oajaca,	500,278
Michoacan,	497,906
San Luis Potosi,	321,840
Zacatecas,	273,575
Vera Cruz,	254,380
Durango,	162,618
Chihuahua,	147,600
Sinaloa,	147,000
Chiapas,	141,206
Sonora,	124,000
Queretaro,	120,560
Nueva Leon,	101,108
Tamaulipas	100,068
Coahuila,	75,340
Aguas Calientes,	69,698
Tabasco,	63,580
Nueva Mexico,	57,026
Californias,	33,439
Total in 1842,	7,015,509

Nineteen of these states, it will be seen, have the requisite amount of population for states of this Union. They would add thirty-eight senators and about eighty representatives to the congress of the United States. But each of these states is *non-slaveholding*; and, according to the favorite doctrine of Mr. Calhoun and South Carolina, each state must determine and regulate its own peculiar institutions. Hence the question of slavery, *as raised by the war*, would be settled at once, satisfactorily to the free states, to the advantage of the cause of human rights, and in such a way as not to offend the *state pride* of the slave states.

Two questions would remain to be disposed of—that relating to the public lands, and that relating to the public debt. Both could be united and settled, by the assumption of the public debt by the federal government, and the session to it, as an equivalent, of the public lands. The details of this arrangement could be attended to in due time, so as at once to satisfy all creditors, and not impose upon our present states.

Some might object, that this wholesale admission of Mexico would give to Catholicism an undue influence in this country; but they forget that Protestantism asks no aid *from legislation*. It demands entire toleration, a divorce of state and church, as it regards the general government, and that the rights of conscience shall never be abridged—this is all. If, in the open field of controversy, without governmental interference on one side or the other, it cannot maintain itself against Catholicism it is not of God, but of man—it is not truth, but falsehood. We cannot apprehend danger from the free

Digitized by Google

collision of mind with mind, opinion with opinion, system with system—the truth, in the long run, will commend itself, and a lie, as Carlyle has it, cannot live forever.

Others may object, that the population of Mexico is heterogeneous, ignorant, unfitted for republican institutions. It is no more heterogeneous than the hordes of immigrants who are pouring in upon us every year, but whom we find becoming rapidly assimilated and elevated, under the predominant influence of our strong native population and regenerating institutions. There will be enough intelligence, and virtue, and master-energy, in this country, to maintain the ascendency in the federal legislature. It is true, the population of Mexico is comparatively uneducated; but statistics show that, number for number, its inhabitants are as generally educated, at least, as those of South Carolina and some other southern states, which are nevertheless deemed capable of maintaining republican institutions.

We can see but one alternative worthy of a moment's consideration. Either back out of the controversy, bring back our armies, withdraw all our posts within the Nueces, leave Mexico to recover from the anarchy to which we have reduced her; *or*, make use of our present position to save her from anarchy, and ourselves from dishonor, by giving her states the privilege of becoming equal members of our own political family. True, they might at first regard the overture with distrust; but let patience have its work. By uniform kindness, and forbearance, and every demonstration that could inspire confidence, convince them that the proposition was made in good faith, and that the decision of each state for itself should be respected; or, if the central government should be in existence, address the proposition to it. If this alternative be rejected, if the small policy of taking a portion of Mexican territory be adopted, then, we say, it will be a burning disgrace to refuse to apply to it the guaranties of personal freedom contained in the ordinance of 1787.

The annexation of the Mexican States on the plan proposed, always, of course *with their own free will and consent*, would complete our continental boundaries south, secure us a basis of 4,000,000 of square miles for our empire, establish freedom as the fundamental and unchangeable law of the North American continent, and give republicanism the perpetual ascendency over all other forms of government. The United States would appear then before the world, not as the robber of a sister republic, but its greatest benefactor; not as the foe, but the friend, of Christendom. Can the administration rise to the full height of this idea! Will it have the magnanimity to disdain all petty efforts to dismember Mexico, to abhor all bloody schemes to coerce Mexico, to trample under foot all base conspiracies to extend slavery, and embrace the grand conception which would really enlarge the area of freedom, by the fraternal offer to free Mexico, of a name and place in our Union, which would then, indeed, be the glory of the earth!

Natural Gas Jets.—A correspondent informs us that at the village of Wigmore in Herefordshire, there are fields which may be, and two houses which really are, lit up with a natural gas. This vapor, with which the subjacent strata seem to be charged, is obtained in the following manner:—A hole is made in the cellar of the house, or other locality, with an iron rod; a hollow tube is then placed therein, fitted with a burner similar to those used for ordinary gas lights, and, immediately on applying a flame to the jet, a soft and brilliant light is obtained, which may be kept burning at pleasure. The gas is very pure, quite free from any offensive smell, and does not stain the ceilings, as is generally the case with the manufactured article. Besides lighting rooms, &c., it has been used for cooking; and indeed seems capable of the same applications as prepared carburetted hydrogen. There are several fields in which the phenomenon exists, and children are seen boring holes, and setting the gas on fire for amusement. It is now about twelve months since the discovery was made; and a great many of the curious have visited, and still continue to visit, the spot.

Necessity of Truth.—We are so constituted, that obedience to the law of veracity is absolutely necessary to our happiness. Were we to lose either our feeling of obligation to tell the truth, or our disposition to receive as truth whatever is told to us, there would at once be an end to all science and all knowledge, beyond that which every man had obtained by his own personal observation and experience. No man could profit by the discoveries of his contemporaries, much less by the discoveries of those men who have gone before him. Language would be useless, and we should be but little removed from the brutes. Every one must be aware, upon the slightest reflection, that a community of entire liars could not exist in a state of society. The effects of such a course of conduct upon the whole, show us what is the will of the Creator in the individual case.—*Dr. Wayland.*

Heart Tests.—It is in the relaxation of security, it is in the expansion of prosperity, it is in the hour of dilatation of the heart, and of its softening into festivity and pleasure, that the real character of men is discerned. If there is any good in them, it appears then or never. Even wolves and tigers, when gorged with their prey, are safe and gentle. It is at such times that noble minds give all the reins to their good-nature. They indulge their genius even to intemperance, in kindness to the afflicted, in generosity to the conquered; forbearing insults, forgiving injuries, overpaying benefits. Full of dignity themselves, they respect dignity in all, but they feel it sacred in the unhappy. But it is then, and basking in the sunshine of unmerited fortune, that low, sordid, ungenerous, and reptile souls swell with their hoarded poisons; it is then that they display their odious splendor, and shine out in the full lustre of their native villany and baseness.—*Burke.*

The Humanizing Influence of Cleanliness.—A neat, clean, fresh-aired, sweet, cheerful, well-arranged, and well-situated house, exercises a moral as well as a physical influence over its inmates, and makes the members of a family peaceable and considerate of the feelings and happiness of each other; the connection is obvious between the state of mind thus produced and habits of respect for others and for those higher duties and obligations which no laws can enforce. On the contrary, a filthy, squalid, noxious dwelling, rendered still more wretched by its noisome site, and in which none of the decencies of life can be observed, contributes to make its unfortunate inhabitants selfish, sensual, and regardless of the feelings of each other; the constant indulgence of such passions renders them reckless and brutal, and the transition is natural to propensities and habits incompatible with a respect for the property of others or for the laws.—*Topic, No. 32.*

LATE VICTORIES IN MEXICO.

TACUBAYA, (near Mexico,) August 22, 1847.

THE celebrated Archbishop's Palace of Tacubaya is now occupied by Gen. Scott; and a portion of the army, after twice defeating the enemy in two of the hardest fought battles of the war, are quartered immediately around him. I have already sent you a hurried sketch of the glorious events of the 20th, and even the present letter must be a hurried synopsis of the battles which have shed such additional glory upon the American arms.

On the 14th instant, a reconnoissance made by Col. Duncan, having proved that a road for artillery and wagons could be cut off from Chalco to San Augustine, Gen. Worth's division moved on the afternoon of the 15th in that direction. Gen. Pillow followed the next morning; at the same hour Gen. Quitman broke up his encampment at Buena Vista, a small hacienda between Vienta de Cordova and Ayotla; and immediately Gen. Twiggs was in motion from the latter place. By this move a new line of operations was taken up on the southern and northwestern side of the city of Mexico, and the strong works of the Penon and Mexicalsingo, upon which Santa Anna had bestowed such immense care and labor, were completely turned.

On the 16th of August Gen. Worth marched as far as the hacienda of San Gregorio, beyond which it was found that the enemy had cut up and ditched the miserable trail along which the artillery and wagons were obliged to pass. He would have gone to Santa Cruz, another hacienda a league further on, had not an order come from Gen. Scott for a halt. It seemed that Gen. Twiggs had met a large force of the enemy drawn up in front of him near Chalco, as if with the intention of disputing his advance, cutting him off from the main body of the army, and perhaps bringing on a general action. Gen. Twiggs promptly ordered some of the heavier guns to be unlimbered, and, after a few discharges, the enemy was dispersed, with the loss of five or six killed; but the demonstration made by the Mexicans, as I have before said, caused a halt in Gen. Worth's division before half a day's march was made.

At 6 o'clock on the morning of the 17th Gen. Worth resumed his march, his route running through cornfields and narrow and rocky lanes, along which carriages had never passed before. The filling up of the ditches caused some little delay, but by 8 o'clock the advance was in sight of Santa Cruz, and the spires and domes of the noted capital of Mexico could be discerned in the distance. The obstructions in the road, of which I have spoken, were obviously of recent construction—evidence that the enemy had but just got wind of our approach, and that Gen. Scott had completely stolen a march upon Santa Anna.

Other than the ditches, and rocks which had been rolled down from the precipitous hill-side, no opposition was made to the advance of Gen. Worth until he had reached a point in the road not far from Santa Cruz; but now a scattering fire was opened upon the head of his column by a force stationed at advantageous positions above the road to the left. The enemy was quickly dispersed, however, by Col. C. F. Smith's light battalion and the 2d artillery under Major Galt. As the division neared the hacienda of La Novia the advance was again fired upon, but again the enemy's pickets were driven in, without loss.

A turn of the road beyond La Novia brought the pleasant village of San Augustin in sight, and after two or three light skirmishes, in which the Mexicans had two or three lancers killed and wounded, our troops had quiet possession of San Augustin. Our only loss during the day was one man, a soldier of Smith's light battalion, who was wounded from a cornfield near Xochimilco.

At 7 o'clock on the morning of the 18th Gen. Scott arrived at San Augustin, and at 10 o'clock Gen. Worth was in full march for the city of Mexico by the main road. Majors Smith and Turnbull, Capt. Mason and other engineer officers, were sent in advance, supported by Capt. Blake's squadron of dragoons, to reconnoitre, as it was known the enemy was in force at or near San Antonio. The party, when within a thousand yards, was fired upon from a battery which was masked by trees, and the first ball from a twelve-pounder instantly killed Capt. Thornton, of the 2d dragoons, besides severely wounding a guide, Jonathan Fitzwalters.

Col. Garland's brigade was now ordered to occupy the hacienda of Carrera, within plain sight and range of the enemy's batteries at San Antonio, while Col. Clarke's brigade and the battery under Col. Duncan took a station in the rear close by. The engineer officers were at once sent out to reconnoitre, by Gen. Worth, to ascertain the practicability of turning the strong works of the enemy, and in the mean time Gen. Scott had despatched Capt. Lee with a supporting party, composed of Captain Kearny's squadron and a body of the 11th infantry under Col. Graham, to ascertain the practicability of finding a road by which the village of San Angel could be reached, and thus turn the stronghold at San Antonio. This latter party had a sharp encounter with the advance of the enemy, the main body being found posted at a strong point not far from the factory of Counteras.

In the skirmish some six or eight Mexicans were killed, and as many more taken prisoners; on our side not a man was touched. The result of the reconnoissance proved favorable. It was ascertained that a road could be made which would enable the army to reach San Angel, and thus turn the strong batteries at San Antonio, and perhaps others the enemy might have upon the road between that and the city of Mexico. The Mexicans were plainly seen in force at a commanding position near Coutreras, and it was evident that they had a number of cannon in position; but at a council held at night it was determined to attack them the following day.

In the mean time, while this reconnoissance was in progress, Gen. Worth had established his headquarters at the hacienda of Curera, while from the windows countless numbers of the enemy could be seen at work upon the batteries of San Antonio. About noon they opened upon the hacienda with both round shot and shell, nearly every one of which took effect, but without doing other injury than to the building. Late in the evening the batteries again opened, but with no other result than showing the position of the different guns. For a marvel the batteries were silent during the night. Had the fire been kept up, the hacienda might have been torn in pieces and the entire command compelled to retire.

Before going further it may be well to state that the city of Mexico lies about nine miles nearly north of San Augustin; that San Antonio is about three miles in the same direction; while the point occupied by Gen. Valencia, near Coutreras, for he had command at that place, is at least three miles in a

Digitized by Google

straight line and in a direction nearly west. It was ten miles the way many of our troops had to march, for you cannot imagine a more rough, uneven, and jagged surface.

At eight o'clock on the morning of the 19th the batteries again opened on Gen. Worth's position at the hacienda near San Antonio, the balls crushing through the walls and filling the rooms with fragments of plaster and broken furniture. Shells also burst in the air over the building, and the pieces dropped among the men stationed in the rear. So hot was the fire that the troops were obliged to gain shelter behind the building, but still did not give up the position. About nine o'clock the divisions of Generals Pillow and Twiggs were ordered to advance in the direction of Coutreras, and by one in the afternoon were in plain sight of the enemy's batteries, and within range of the heavier guns.

The brigade of Gen. P. F. Smith was ordered to advance directly towards the enemy's works, while that of Col. Riley moved towards a small village to the right, with orders to gain the main road, and thus be enabled to cut off any reinforcements which might be sent to Valencia from the city. An incessant firing of cannon was opened upon the advance of Gen. Smith, and soon the rifles were engaged in skirmishing with the pickets of the enemy and driving them in.

The 12-pounder battery of Capt. Magruder was pressed forward with all speed, as was also the rocket and mountain howitzer battery now commanded by Lieut. Callender, of the ordnance department. As soon as they could gain a position they opened upon the enemy, but were so much exposed to a fire from heavier guns that they were soon silenced. Lieut. Johnson, of the 1st artillery, but attached to Magruder's battery, was mortally wounded, while Lieut. Callender was severely wounded in both legs.

At 3 o'clock the brigade of Gen. Cadwalader was ordered out to support Col. Riley—heavy reinforcements being seen on their way out from the city—while Gen. Pierce's brigade was sent to sustain Gen. Smith. The firing from the batteries of the enemy continued incessant, while from a hill just outside of the range of their guns the spectacle was most grand and imposing.

At about 4 o'clock Gen. Scott arrived, and, seeing the immense strength of the Mexicans, at once ordered Gen. Shields' brigade from San Augustin —a part of Gen. Quitman's command—to the right to support Riley and Cadwalader, and prevent, if possible, a junction of the forces coming out from the city with those of Valencia. But few of the movements of our own troops could be seen from the hill where we were posted, owing to the dense chaparral, sharp rocks and ravines, but not a motion of the enemy but was plainly visible.

The order of battle of Valencia was certainly most imposing. Infantry were seen drawn up to support the batteries, while long lines of the enemy's cavalry were stationed in the rear, as if awaiting the shock of battle. Two separate charges of the latter were distinctly seen repulsed by Col. Riley, who had moved his brigade at one time to a position partially in the rear of the enemy's works. Col. Harney was exceedingly anxious to march his cavalry to the scene of action, but it was deemed utterly impracticable. The nature of the ground was such that the infantry even had great difficulty in finding the way across the *pedregal*, as the Mexicans term it; ground covered with sharp jagged rocks.

Until night had fairly closed in the fire from the enemy's batteries did not slacken: it had been a continuous roar for nearly six hours. Gen. Scott retired to San Augustin about eight o'clock, and in the midst of a hard rain, which had just commenced falling. Generals Twiggs and Pillow came in about 11 o'clock, wet and completely exhausted. It was impossible to use horses on the rough and exceedingly broken ground on which they had been operating for nearly twelve hours.

Not anticipating the immense strength of the works of the enemy, or the almost insurmountable difficulties of reaching them, it had been at first thought that the batteries would be taken at a dash, and that the troops would be all comfortably quartered in San Angel for the night; instead of this, a large portion of them were compelled to bivouac without blankets, in the midst of a pitiless rain and on ground where they could not even stretch themselves out. Add to this, the prospects of the morrow were far from flattering—were enough to dismay any but the stoutest hearts—that the enemy would doubtless reinforce and strengthen his works during the night, having every opportunity in knowledge of the ground: add again to this that the men were weakened by long exertions, want of food, and chilled by the continuous night rain, and it is not saying too much to assert that the bivouac of the 19th of August was gloomy in the extreme.

Early in the morning of the 20th Gen. Worth was ordered to move with a part of his division (Garland's brigade) towards the scene of action at Coutreras, to aid in the attack upon Valencia, for to force this position was deemed indispensable. A few discharges of cannon were heard about 7 o'clock, and a heavy rattling of musketry, and some even said that in the distance they had seen large masses of Mexicans in full flight towards the city; yet few dreamed that the batteries at Coutreras had been stormed and carried. Yet so it was. Gen. Scott himself, accompanied by Gen. Worth, started for the scene of action, when they were met by Capt. Mason with the joyful intelligence that Valencia had been completely routed, after a short but terrible struggle.

The attack upon his works was planned by Gen. Smith, and resulted in the capture of fifteen pieces of artillery, some fifteen hundred prisoners—among them Generals Blanco, Garcia, Mendoza, and the notorious Salas—all the ammunition and camp equipage, while the road along which those who escaped fled was strewed with muskets. No less than seven hundred of the enemy, among them many officers, were left dead on the field—the number of wounded was undoubtedly far greater. I have no time now to enlarge or comment upon this well-planned and brilliant achievement, but, reserving a more full description for some other time, must pass on to other exciting events.

The works at Coutreras completely in the power of the American army, Gen. Scott at once ordered Gen. Worth to fall back upon San Antonio, to turn and capture that work, and then to push on towards the capital by the main road, while the main body of the army, under Generals Twiggs, Pillow, Smith, Pierce, and Cadwalader, moved on towards San Angel and Cohoycan. Scarcely had the advance of General Twiggs got half a mile beyond the latter village before a rattling fire of musketry announced that it was actively engaged with the outposts of the enemy, and the heavy booming of cannon now gave token that the noted second division had fallen upon another strong work.

Digitized by Google

But a few minutes more and a tremendous firing from the right, and immediately in the main road from San Augustin to the capital, made it evident that Gen. Worth's division was actively engaged. He had completely turned the strong works of San Antonio, but, while doing so, the enemy had abandoned the place, with the loss of their heavy guns, and had fallen back upon his second and stronger line of works. It was now at the commencement of the battle, about one o'clock in the afternoon, and sure such a rattling of fire-arms has seldom or never been heard on the continent of America, accompanied with such booming of artillery; and this was continued over two hours, and until the enemy was fully routed from every point, and until those who were not killed or taken prisoners were in full flight for the city.

Let me endeavor in words to give the reader an idea of the position and works of the enemy. As you come along the road leading from San Augustin to the capital, and immediately this side the Puente del Rosana, the Mexicans had thrown up a strong and exceedingly well-built battery, commanding the road completely. On the right, as you faced the city, stretching for a long distance, was a continuous ditch, behind the bank of which an immense number of Mexican infantry were posted. On the left of the *tete de pont*, or work at the bridge, three hundred yards distant, was the church of Churubusco, or San Pablo, strongly fortified with works for infantry, and also having a well constructed battery containing a number of guns of heavy caliber. This work was a little advanced from the *tete de pont*, and nearly in a line between it and the village of Cohoycan. Further on, on the other side of the work at the bridge, and about three hundred yards from the road, was a large building, well adapted for the protection of infantry, and in which the enemy had also posted an immense body. The ground in the vicinity of all these points was completely covered with corn and other fields, cut up in every direction by wide and deep ditches, presenting obstacles innumerable to the advance of our troops. No reconnoissance of the position of the enemy had been made, and consequently its strength could only be ascertained by hard blows and knocks.

The divisions of Generals Twiggs and Worth were at once engaged, the former with the church and stronghold of Churubusco, and the latter with the batteries at the bridge; and in the mean time Gen. Shields' brigade—the New York and South Carolina volunteers—together with the 9th, 12th, and 15th regiments of infantry, under Gen. Pierce, were hurrying onward from Cohoycan to attack the hacienda. Soon they too were engaged; and now the battle became general. The enemy had over twenty pieces of cannon, all in admirable position, and served with more than ordinary skill, while but few of our guns could be brought to bear. The battery of Capt. Frank Taylor, it is true, opened a well-directed fire upon Churubusco; but so exposed was its situation that it suffered most terribly, both in officers and men.

To describe the fierce conflict, even now that two days have elapsed, or to give an account of the part taken by the different regiments, were impossible. From the opening of the strife up to the time the Mexicans were entirely routed and in full flight for the city, was one continuous roar of cannon and musketry, accompanied by the loud shouts of the victors as some new vantage ground was gained; and high above the din rose a dense column of smoke, at times completely shrouding the combatants.

The strength of the enemy at this battle is known to have been fifteen thousand at least—many say twenty thousand—all fresh troops, and in a position of uncommon strength. Opposed to them were about six thousand Americans, jaded and broken down by marches and countermarches and by incessant toil before the stronghold of Coutreras and San Antonio. At Churubusco the Mexicans themselves say Santa Anna commanded in person, but that he left early. The noted battalions of Hidalgo and Victoria, and of Independencia—the *Polkas*, or young men of the capital, from whom so much was expected—nearly all fled without firing a gun.

In the different works (but mostly in the church) taken by Gen. Twiggs nearly two thousand troops were captured. Among them were Gen. Rincon, who commanded in person; Gen. Anaya, lately President substitute; and Gen. Arevallon, as also Col. Gorostiza, formerly minister at Washington. Gen. Garay was captured near San Antonio by Gen. Worth, and several influential officers, among them Col. Miramon, by Gen. Shields, at the hacienda. But the most important capture of all was the entire foreign battalion, mostly made up of deserters from our own army, with their commander, the notorious Riley himself. They are all now under close guard, and I trust will be strictly dealt with.

The loss on our side has fallen most heavily upon the South Carolina and New York volunteers, the 6th infantry, and Smith's light battalion, attached to Worth's division, and the batteries of Captains Magruder and Taylor. The South Carolina regiment was nearly cut to pieces, losing 137 out of 272 men with which it went into action. The first artillery has suffered severely in officers.

The Mexican accounts acknowledge the loss, in killed, wounded, and prisoners, of no less than thirteen generals (among them three ex-presidents) and forty-five pieces of cannon. One of our officers says that we have captured more ammunition than Gen. Scott has used since he has been in the country.

G. W. K.

The following, from the New Orleans *Delta*, contains more particulars of the brilliant exploit of Gen. Smith:

During the night of the 18th, Gen. Worth's division, with a part of the 1st brigade, occupied the hacienda of San Juan de Dios.

On the 19th, Gen. Twiggs came up with the advance, Gen. Smith's light brigade advancing on the left, and Col. Riley's to the right, supported by Capt. McGruder's battery, and Lieut. Cadwalader's howitzers, which belonged to the division of Gen. Pillow. The enemy opened his heavy batteries from Coutreras, and the advancing troops of Gen. Smith's brigade engaged the enemy's infantry. These two brigades for more than one hour sustained the fire of 22 pieces of artillery, mostly of heavy caliber. They were finally compelled to retire, after sustaining a severe loss in killed and wounded. Gen. Pillow had ordered Gen. Pierce's brigade to the support of Col. Riley. At this stage of the proceedings, while the battle was raging, the enemy appeared on the left of the fort of Coutreras, and in rear of the village of Ensaldo, with a force of 12,000 men, under the immediate command of Santa Anna.

The 15th infantry, under Col. Morgan, was then ordered by Gen. Pillow to the support of Smith's and Riley's brigades. About this time Gen. Scott came upon the ground, bringing with him General Shields' brigade of volunteers, which was imme-

Digitized by Google

diately ordered to the support of the forces under General Cadwalader. General Twiggs, as night approached, finding it impossible, from the nature of the ground, to reach his command, fell back to the position occupied by Gen. Scott, and passed the night exposed to the inclemency of the weather. McGruder's and the howitzer battery being disabled, and our left advancing on a road previously prepared by the enemy, thereby exposing our infantry to a destructive fire as they approached—McGruder's and the howitzer batteries were ordered by Gen. Smith to open, to attract the attention of the enemy, while he made a movement to the right, to try one of the enemy's flanks. After passing over the broken and irregular surface of ground, and crossing the deep ravines, he succeeded in reaching the village of Ensaldo. Gen. Smith being the ranking officer, Gen. Cadwalader reported to him with four regiments of Gen. Pillow's division. Col. Riley's brigade had crossed the ravine, and passed towards Coutreras, after a strong body of the enemy, which he drove off. The enemy was now drawn up into line, above the village, on the right of the fort. This was a strong position of the enemy.

General Smith now ordered Gen. Cadwalader's force to be drawn up on the outer edge of the village, facing the enemy's heavy force on the left of the fort. After making the proper disposition of his forces, Gen. Smith now determined to attack the enemy's right, with Col. Riley on the left. Gen. Cadwalader, on the right of the former, returned in echelon, but before the movement could be completed night approached—the enemy's line could not be seen—therefore the order was countermanded, Gen. Cadwalader resuming his position on the outer side of the village. Col. Riley's brigade was formed in a long lane inside and parallel to the village, the rifles on his left, and the 3d infantry on the church-yard. "But now," says our correspondent, "imagine the position of this portion of the army, numbering 3500 at the outside without artillery or cavalry, while the enemy in front and on the left, had 19,000 troops, (those in the fort said to be the best in Mexico,) with 22 pieces of artillery, and among his troops about 7000 cavalry. It was evident that some decisive action had to be taken; that some great effort had to be made; and Gen. Smith and Col. Riley, seconded as they were, were just the men competent to the task, and an attack on the main work was determined upon, and the movement to take place at 3 o'clock of the following morning."

The force of Gen. Smith was not strong enough to carry the enemy's works, and at the same time to hold possession of the village; but fortune favors the brave; for while he was preparing for the attack, Gen. Shields reported his near approach with the South Carolina and New York volunteers. Gen. Shields, though outranking General Smith, had too much magnanimity to assume the command, or to pluck the bright laurels about to be gathered by a brother soldier in carrying one of the enemy's strongholds, and accordingly he moved subject to the command of Gen. Smith. Gen. Shields' brigade was then placed in the village of Ensaldo, to cut off the enemy's retreat from Coutreras, or to take the reserve of the enemy in flank, if he should change his front.

At 3 o'clock on the morning of the 20th, the movement commenced, which was so slow that daybreak appeared before the head of Cadwalader's brigade commenced ascending the ravine at the village of Ensaldo. As soon as Col. Riley ascended the hill and came in full view of the enemy, they opened a severe fire on Riley's forces.

Our correspondent then continues—"Col. Riley threw out his two advance divisions as skirmishers, and said, 'Now, boys, close in with them, and let the bayonet do its work,' and his command rushed down the slope with a yell and enthusiasm enough to strike terror to the heart of the boldest, while the rear of his command moved steadily forward as if they were all made of one piece. The sappers and miners and rifle regiment which had been thrown across a ravine intervening between the one they passed up, and under the brow of the slope which Col. Riley came down, from that position poured in a fire which swept in front of Col. Riley's column; then inclining towards their left, joined in the attack of the troops outside of the left flank of the fort. Gen. Cadwalader followed the route taken by Col. Riley, and as soon as his troops were formed, moved on to his support. The first brigade, which was bringing up the rear, had been ordered to follow the same route, but while it was on its march by the right flank up the ravine, and nearly opposite the fort, Gen. Smith ordered the brigade to face to the left and advance in line to attack the enemy's force in flank. This movement was executed in less time than it takes me to write it. They met the enemy outside of the fort just as Col. Riley's brigade rushed into it; the enemy was completely routed and commenced a precipitate retreat. Their cavalry and infantry had been formed to receive the charge, but were compelled to give way to the bayonet. The rout was most complete and the victory most decided; but while Riley's brigade took possession of the work, and planted their colors upon it, the other force continued the pursuit down the road. The retreating force had to pass near where Gen. Shields' brigade was placed to intercept them. They, however, were not aware of it until they received the well-directed fire of the South Carolina [and New York] regiments, which mowed them down like grass before the scythe."

The rout and dispersion were now complete. In the fort, were captured 22 pieces of artillery, an immense amount of munitions of war, and upwards of 1500 prisoners, among whom were several officers of high rank. The enemy left dead upon the field upwards of 700, which we buried; but his loss, says our correspondent, was much larger, as the Mexicans were still burying the dead two days after the battle. The troops in front were commanded by Valencia, and those outside by Santa Anna. *The two 6-pounders of Washington's battery, taken on the field of Buena Vista by the Mexicans, were recaptured in this fort.*

The enemy were pursued to San Angel. He endeavored to make a stand at every point. They were finally compelled to take refuge in Chumbasco. At San Angel Gen. Pillow assumed the command, and when the troops arrived at Culican, shortly after, Gen. Scott assumed the command of the whole. The position now occupied by the enemy (Chumbasco) was a very strong one, and it being the last stand the enemy could make in defence of the capital, he fought with desperation for more than two hours, before the works were carried. Our loss at this point was over 1000 men. Several pieces of artillery, and two stand of colors were captured; General Rincon, with 104 officers, and upwards of 1100 non-commissioned officers and privates, surrendered as prisoners of war. The Mexican loss in this engagement is said to be 5000

Digitized by Google

in killed and wounded, and out of a force of 30,000 men, there were but 6000 men left, the balance being killed, wounded, prisoners or totally dispersed.

After the result of this decisive battle, *commissioners were immediately sent to Gen. Scott, from the city*, and an armistice agreed upon.

ALONE.

'T was midnight, and he sat alone—
The husband of the dead.
That day the dark dust had been thrown
Upon her buried head.
Her orphaned children round him slept,
But in their sleep would moan:
Then fell the first tear he had wept—
He felt he was alone.

The world was full of life and light,
But, ah! no more for him!
His little world, once warm and bright—
It now was cold and dim.
Where was her sweet and kindly face?
Where was her cordial tone?
He gazed around his dwelling-place,
And felt he was alone.

The wifely love—maternal care—
The self-denying zeal—
The smile of hope that chased despair,
And promised future weal:
The clean bright hearth—nice table spread—
The charm o'er all things thrown—
The sweetness in whate'er she said—
All gone—he was alone!

He looked into his cold, wild heart,
All sad and unresigned:
He asked how he had done *his* part
To one so true, so kind!
Each error past he tried to track—
In torture would atone—
Would give his life to bring hers back—
In vain—he was alone.

He slept at last; but when he dreamed,
(Perchance her spirit woke,)
A soft light o'er her pillow gleamed,
A voice in music spoke—
"Forgot—forgiven all neglect—
Thy love recalled alone:
The babes I leave; oh, love, protect,
I still am all thine own."

[*Copied by Chambers' Journal from an American paper.*]

COPERNICUS.

The mountain church of Frauenburg
Hath many a narrow bed,
Where the oaken cross points upward
And peasants weep their dead;—
Stand we beside yon graven stone,
And vail the reverent brow,
And muse upon the mighty one
Whose body lies below.

Earth lay in darkness;—as a star
He rose upon the night,
And outlines of the things that are
Shone dimly by his light.
How dreamy seems the world's wild youth
To us of elder time,
Familiar with God's steadfast truth,
So simple—so sublime.

He first it was, whose piercing eye
Through the thick midnight saw,
In endless changes, unity,
And in confusion, law.
Though other hands unwound the clue
To realms of clearer day,
All honor to the first is due
Who pointed them the way.

He moved through life, as one who hears,
And answers from within,
Faint music from celestial spheres
Through earth's discordant din.
Well might he stand with brows inclined,
In silence and apart,—
A thought of the Creator's mind
Had passed into his heart!

What nights of happy toil were his,
Toil that itself repays,
Scanning creation's mysteries
With no irreverent gaze!
Oh, hour of hours, when first he seemed
To grasp the truth, long sought,
And the solitudes of starlight teemed
With multitudinous thought!

Strange is the destiny of life,
Wondrous is fame's behest,
Passing the labor and the strife—
Crowning the time of rest!
Long years of lonely watching o'er,
There came at last the hour
When to the dying sage they bore*
The record of his power.

They would have kneeled around the place
Where, pale and faint, he lay,
But, silent, with unaltered face,
He motioned them away;
Earth's greatness vanished there, as snow
Melts from the summer sod—
His soul had done with time, and now
Stood face to face with God!

Sharpe's Magazine.

Apparel.—A man ought, in his clothes, to conform something to those that he converses with, to the custom of the nation, and the fashion that is decent and general, to the occasion, and his own condition; for that is best that best suits with one's calling, and the rank we live in. And seeing that all men are not Œdipuses, to read the riddle of another man's inside, and most men judge by appearances, it behoves a man to barter for a good esteem, even from his clothes and outside. We guess the goodness of the pasture by the mantle we see it wears.—*Feltham.*

* The first proofs of the work in which Copernicus proclaimed the order and harmony of our system, were brought to him on his death-bed.

THE MAIDEN AUNT.

Miss Margaret Forde, the lady from whose journal we now propose to offer a few selections to the public, died in the year 18—, aged seventy-one. She was one of a class, which, fortunately for mankind, is neither small nor rare. She was a maiden aunt, and she possessed that cheerful unselfishness, that indefatigable activity in the service of others, those warm, ready, and expansive affections, which we are enabled, by happy experience, to pronounce the appropriate characteristics of her genus. She was the eldest of eight children, of whom six married, and multiplied, and were scattered over the face of the earth, while Margaret, and Owen, the youngest brother, remained in single blessedness. Of him we have little to say: he graduated at Cambridge, travelled for a few years, to complete his education, as the phrase has it, and then returned, to live as fellow of his college, assembling around him multitudes of minute comforts, studying his own peculiarities with a view to their scientific gratification, carefully guarding himself from all possibility of annoyance—in short, behaving to himself exactly as a devoted wife might behave to an invalid husband, in whose happiness her own consists, and whose every gesture she watches with the tremulous anxiety of deep affection. Shall we be forgiven for insinuating that Owen formed no unfair specimen of another class of responsible beings, usually known by the name of old bachelors. While he was thus drawling and fidgeting through existence, knowing no harder trial of patience than the occurrence of a false quantity either in his verses or his punch, no heavier misfortune than the breaking of a watch-glass, or the overboiling of an egg, his sister Margaret was *living* in the full sense of the word—living more in one hour than he lived in a twelvemonth—doing, suffering, and sympathizing—mourning with those who mourned, and rejoicing with those who rejoice. In many a house, to many a heart, her face was as sunshine, and her step as music; and if some human faults or harmless foibles occasionally provoked a frown, or compelled a smile, there were few who did not feel that, in her, the ridiculous was never far separated from the sublime—the sublime of charity and goodness. During the whole of a long and active life, passed among brothers and sisters, nephews and nieces, friends and acquaintance, aunt Peggy amused herself by the feminine occupation of keeping a journal; and as, in addition to her other virtues, the good lady was a bit of a bluestocking, she not unfrequently attempted to work up the incidents she was recording with something of artistic skill, and thus to present a continuous narrative, instead of a pile of fragmentary notes. That, among the fortunes of so large a family as we have described, she found many materials for her pen, the reader will have no difficulty in imagining, and we shall proceed, without further preface, to lay before him such parts of her lucubrations as have appeared to us to possess some degree of general interest. The character of the writer will be better developed by herself, than by any description we could hope to give; and we shall add nothing to her words, except such particulars concerning the various members of her family, as may seem necessary to render her story intelligible.

THE ALCESTE.

[Emma, the youngest sister of Margaret Forde, married James Ferrars, a captain in the navy, and was left a widow, with two children—a son, who followed his father's profession, and a daughter, who was the godchild and namesake of her aunt Margaret. Mrs. Ferrars resided near a large seaport town on the southern coast, which we shall call Wearmouth.]

July 7th, 18—.—This morning I arrived at my sister's, for the visit which I have annually paid ever since that happy day when I laid the little Margaret, a sweet, fair, whimpering baby, one hour old, in her mother's arms. Dear child! I have watched her through life, and perhaps loved her all the better, because she is not one of those who have received the blessed gift of being generally loved. She has little beauty, though there is a charm of sense and sweetness in her face, which makes it lovely in my eyes; and she has always been so grave and shy in society, that there must be many who have known her all her life, without having an idea of her true character. But I know her nobleness of mind; I know how rich she is in those fine, pure, elevated feelings, which people who are not capable of understanding them are in the habit of stigmatizing as romantic. Nevertheless the world goes so much by outward appearance, and Margaret has so universally obtained the reputation of a quiet, cold, gentle girl, with nothing striking in her exterior, and very little general conversation, that I confess I was surprised when the news reached me that she was engaged to be married. I had set her down for one of the sisterhood—not, perhaps, exactly for the same reasons that have made *me* an old maid, for I might have married, had I so chosen, several times over. But, knowing the earnestness, the imagination, the enthusiasm, which lay hidden under Margaret's quiet manner and composed features, I felt sure that she could not attach herself to a common-place person; and, alas! her want of fascination rendered it too probable, that one who was not common-place would not attach himself to her. Pity, thought I, that such capacities for loving as hers, should not find full employment. But I was all wrong, and I confess my mistake with delight. Seldom have I known a happier morning than that which announced to me her engagement. And to-day I heard all the particulars, which are in every respect satisfactory. Doctor Thornton is thirty-two; that is, eight years older than his betrothed, which I consider a very good difference. He is already in excellent practice; and, as the other physician in Wearmouth is an old man, and there can be no doubt that he will succeed to his connection, his income is likely to be handsomer than Emma had any reason to expect for her daughter. How one falls into the habit of mentioning income first, when a marriage is in question! Money is to happiness very much what the alphabet is to learning; it would be hopeless and absurd to expect to do without it; but the absurdity of being satisfied with its possession, as though it were the only thing necessary, is far more glaring, and far less excusable. I have heard little of Dr. Thornton; but I feel so secure of his highmindedness and excellence, because he is the choice of that dear girl, that I have scarcely cared to ask any questions about him. Yet I am heartily glad that he dines here to-day. Margaret's wedding is only delayed till her brother Frederick returns, and, as his vessel, the Alceste, is expected daily, the important ceremony will take place (D. V.) before I leave them. As for Margaret, she is a changed creature, and I can scarcely take my eyes from her face. Such radiance of happiness I never beheld—and

Digitized by Google

happiness, too, which partakes not of the quietness and restraint consistent with her habitual demeanor. It is as if you were to follow a stream from its source, under the shadow of thick trees and tall overhanging rocks, and then suddenly step forth into the sunshine, and see the dark, sombre waters changed into gushing, sparkling ripples of light. She passes from tears to laughter, and from laughter to tears, like a child. How Owen would be astonished if he could see her! He once told me that he thought her the most uninteresting of all his nieces.

Dr. Thornton, or *Francis*, as I am to call him—(he called me aunt Peggy immediately, and entreated me to be equally unceremonious with him)—arrived early. At the first glance I admired, at the first warm shake of the hand I felt sure I should like him. I detest that cold stroking of fingers—that light touch of the lips against the cheek, which some persons consider to be the warmest testimonies of affection tolerated by refined society. Give me my darling Margaret's shower of fond kisses, or her Francis' hearty, prolonged shake of the hand, which sends a feeling of warmth and comfort to the heart. He is a distinguished-looking man; tall and stately, with a remarkably fine forehead, mouth expressive, intellectual, and somewhat stern, but eyes so full of openness and kindliness, that you feel at home with him instantly. I can easily believe what Emma tells me, viz., that he has been an object of speculation among the Wearmouth ladies; and I can fancy, moreover, that no little astonishment has been felt at this choice.

The evening was rather happy than lively, and afforded several opportunities for the display of Francis Thornton's conversational powers. It was easy to see that he had read much and thought deeply; but I was chiefly interested by certain slight indications of an under-current of high enthusiastic feeling, which I knew to be so thoroughly in accordance with the temper of Margaret's mind. For instance, my sister, in speaking of her son's character and prospects, observed, "Yes, he should have had a college education, ill as I could have afforded it—but, from a child, his heart was set upon the navy, so I let him have his way. What more can we wish for those we love than to know that they are happy?"

Thornton acquiesced in the sentiment, but glanced somewhat expressively at Margaret, who answered with kindling eyes, "*You* don't think so, do you, Francis? That is not in accordance with your theories."

He turned to Mrs. Ferras with a kind of half-deprecating smile, and said gently, in answer to her exclamation of wonder, "Oh, we shall find that we think pretty nearly alike when we come to define our notions of happiness."

"And what is your notion of happiness?" asked I.

"First, to *be* good, and then to *do* good; and then, if possible, to be great."

"What, Francis?" cried Mrs. Ferrars, reproachfully; "and you leave out affection in your notions of happiness?"

"*Do* I leave it out?" said he earnestly. "Nay, on the contrary, it pervades the whole idea. But the happiness of affection consists not so much in the presence as in the nobleness of the object beloved. It is the incentive and safeguard to virtue. Love, to be perfect, must cast out not only fear, but sin also—and even weakness. And it does so."

There was a momentary pause, which Francis broke by saying, in a changed and playful tone, "This is good philosophy, but I hope it may not be put to the test. Margaret, could you play Thekla if there were need?"

"Don't ask me," said she, looking down, while a sudden glow rose to her cheeks; "yet I hope and believe that I could."

"My dear child," cried her fond mother, who did not exactly understand the allusion, "I am quite sure you could play anything you chose to attempt, only you are so diffident. Was not that a knock at the door?"

"You have a late visitor," said I. "Who can it be?"

The servant announced Mr. Moreton, the rector of Wearmouth, and an old friend of the family. He entered, and greeted me kindly, with an effort to assume his ordinary manner; but his face was grave and his demeanor troubled.

"You are come early, or rather late, to pay your respects to aunt Peggy," said Emma. "When did you hear that she had arrived?"

"I did not know Miss Forde was here," returned he. "I came for a different reason. I am sorry to say, my dear friends, that I bring you unpleasant news."

All looked at him in silent anxiety.

"Let me begin," continued he, "by telling you our great cause for thankfulness. Frederick is perfectly well."

"*What* has happened?" cried Emma, vehemently.

"It is this," replied he. "The Alceste has arrived, but cannot be admitted into the harbor; in short, there is sickness on board, and she must go through some sort of quarantine."

"And Frederick?" said Emma. "Are you telling me the truth?"

"I pledge you my word," replied he, solemnly, "that he is, as yet, perfectly well; but it would be mistaken kindness to conceal from you that he is in a position of danger."

"What is the complaint?" inquired Francis.

"They call it," answered Mr. Moreton, with some appearance of reluctance, "the Black Fever."

My eyes were on Thornton's face, and I could see that he changed color as these words were uttered. He continued to question Mr. Moreton, but in an under tone of voice.

"How many deaths?"

"Nine—in three days."

"And the medical officer—"

"Died, on the second day after the disease made its appearance."

"But what attendance have they? Who has volunteered to take his place?"

"No one," replied Mr. Moreton. "Dr. Monckton has a wife and family; and so has Brookes. But the news has been sent up to London, and doubtless by the day after to-morrow"—

"The day after to-morrow!" cried Thornton. "And they are dying by dozens!"—

He paused—perhaps struck by a sudden deep sigh from Margaret, who clasped my hand at the moment with a movement as of terror. Her cheeks were as white as paper, and her eyes fixed on her lover's face. Looking earnestly upon her, he stood up and said, "My dear, dear friends, surely there can be but one opinion as to my duty."

"Good God, Francis," exclaimed Emma, "what are you thinking of? Is there not misery enough?"

"These poor people," began he—but Emma interrupted him, putting her hand upon his arm and speaking with much agitation.

Digitized by Google

"We will not hear of it," she said. "No, no; you have no right to sport with Margaret's happiness in this manner. You have other duties to think of. Margaret, speak to him!"

Poor Margaret! She sat speechless and motionless, drawing her breath with a quick, uneasy sound, and never lifting her eyes. I held her trembling hand between my own.

"Margaret shall herself decide," said Francis, whose voice plainly showed how deeply he shared the emotion to which he was determined not to yield. "You are right, my dear mother; her claim is indeed great. Speak, my beloved, shall I go or stay?"

She cast herself upon her knees, covering her face with her hands, and murmuring, in broken tones, the words, "God help me! God help me!"

Francis approached her, raised her with the utmost tenderness, and placed her in a chair. "Nay, my dearest," said he, greatly moved, "it is too much for you. Be calm, be comforted; I will never leave you."

With a sudden movement she flung her arms around him. "Oh, go—go!" she cried, "I would not keep you for a moment. Go, dearest—God be with you!"

Gently unlocking her clasped hands, he consigned her to me; the poor mother, utterly overwhelmed with sorrow, was sobbing on the sofa. Oh, the sound of his feet as he moved across the room to depart! Each step seemed planted on one's bare and shrinking heart. He paused in the doorway, and gave one look back—Margaret did not see it—she was kneeling, with her face hidden in my lap. She had not dared to look upon him since she pronounced the fatal word "go!"—and the door closed, and he was gone.

Margaret arose, went to her mother, clasped her arms around her, and they wept in silence on each other's bosoms. We felt how vain it was to offer consolation; we could only sympathize; but when Mr. Moreton spoke of the nobleness of that spirit of martyrdom which was ready to give up all for the sake of duty, the poor girl lifted up her face, and looked at him for an instant with *such* an expression—it was proud, it was almost joyful. But it was drowned in a fresh burst of tears.

Never shall I forget the few days that followed. Margaret moved about the house like a restless spirit, or sat motionless with clasped hands; sometimes, to all appearance, unconscious, sometimes evidently engaged in mental prayer. Emma, with the true unselfishness of a mother's grief, did nothing but watch and wait upon her child. Each evening Mr. Moreton brought us the report from the Alceste. Entering without knocking, and coming rapidly up stairs so as to give us no suspense, he would cry, "Good news," before he opened the door. And then we kneeled down and gave thanks; and then heard the sad tale of disease and death, which always, however, began and ended with the delicious words, "Frederick and Thornton are well."

When I would call up before my eyes an image of those four terrible days, it is neither the pale and tearful face of Emma, nor poor Margaret's glazed and melancholy eyes and drooping figure, that I behold. I see the scene visible from the staircase window of my sister's cottage, at which it was impossible to help pausing every time one passed it. The gay town, the busy harbor with its clustering masts, the cloudless summer sky, the broad and sunny sea; and there, in the midst of that sheet of bright waters, like the evil spirit lurking at the gates of paradise, lay the black hulk of the plagueship, rocking and swinging with every movement of the lazy waves. What scenes were enacting on board that gloomy vessel! What tortures were there preparing for our unconscious hearts! I shudder when I think of it.

The fourth evening came. We were sitting together, as we generally did, when the hour of Mr. Moreton's visit drew near. It was now somewhat past the time at which he usually arrived, and we uneasily avoided each other's eyes, as we tried to keep up a forced and languid conversation, to conceal from ourselves that we were beginning to grow fearful.

"Poor Mrs. Ellis sent for some wine for her little boy this morning," said Margaret; "he has been—" She stopped short; her cheeks and lips became deadly white, as though every drop of blood had been driven back to the heart. There was a knock at the door.

"My darling girl, how nervous you are!" cried I, jumping up. "There—stay quietly where you are, and I will go and learn what it means."

I hurried out of the room, and met Mr. Moreton on the stairs. The first glance at his face was sufficient; I saw we had something terrible to hear.

He grasped my hand. "Oh, how shall we tell her? how shall we tell her?" said he, much agitated.

"*Which* is it?" I gasped, scarcely able to articulate.

"Thornton," he replied; "he sickened this morning."

We were interrupted by a cry, the sound of which did not leave my ears for many days—it expressed such bitterness of desolation. Margaret, unable to restrain her anxiety, had followed me to the door, and heard the fatal words. The next instant she was, happily for herself, insensible.

Her swoon lasted long, and, when she recovered, she was in a high fever—a result which might easily have been foreseen, after four days of such suffering, ending so terribly. She was delirious, and knew no one who approached her. For three weeks the violence of her disorder continued unabated; alternating between fits of raving and a kind of stupor that was not sleep. During this time our kind and true friend, Mr. Moreton, was constantly with us; and great were the comforts and support which my poor sister and I derived from his presence. "A friend loveth at all times, and a brother is born for adversity." How much added force does the truth of these words acquire, when the friend and comforter of your affliction is one whose high and holy mission it is to speak peace to the troubled spirit, and declare the counsels of God!

At length the delirium ceased, and was succeeded by a long and profound stupor, supposed to be the crisis of the disease. For several days after this left her she was in a strange kind of state: her eyes were open, and she took obediently whatever was presented to her, but never spoke nor moved; and we knew not how far she was conscious of what passed around her. Every day there seemed to be more and more of sense in those sad eyes, which feebly followed our movements about the chamber, with an expression so pathetic, that Emma and I were frequently unable to restrain our tears. At last—it was about five weeks from the first beginning of the fever—I was sitting alone by her bedside, and the sloping rays of the red and sinking

Digitized by Google

sun were showering their warm rich light upon the windows of the sick chamber, when she spoke to me. "Aunt Peggy," said she, in a low, but perfectly distinct voice, "is it only you?"

I took her wasted hand, and bent over her. "Yes, dearest; there is no one else here. What do you want?"

"Oh, now then, tell me all—everything. I would not speak before, because of distressing mamma. But, dear aunt Peggy, do tell me!"

I was troubled, and hardly knew how to answer her. "What am I to tell you, love?" I said, at last. "You must try to compose yourself."

"Yes, yes; I will indeed," she replied. "But I shall be so much better when I know it with certainty. It is several days since my mind came back to me; but it is still weak. I remember all; but sometimes my recollection is confused; and then my dreams—my dreams are so dreadful. I think, if I were once to hear it distinctly, I should not dream in this dreadful manner. Oh, if anything would stop my dreams!"

"Are they so very melancholy?" asked I.

"Oh, no, no; it is their happiness which is so terrible. I dream as if nothing had happened; and then, you know, I wake, and can hardly bear it; and then I get bewildered. But if you would only tell me how it all happened; if you would say it to me in words, perhaps I should not dream so again."

My tears fell fast, as I kissed her forehead, and replied: "But I would not check those dreams; they are sent in mercy, my own one; they are comforts, and not torments."

"Ah, you cannot understand me," she said; "but pray, pray, have pity on me, and do what I ask you."

"You have not strength," I said; "I must go for Dr. Monckton."

She held my hand tightly. "Oh, no—no, no," she cried, earnestly; "don't go away; I want no one but you. I have strength for anything; you don't know how much better I am."

I hesitated, and considered within myself. It was ten days since the crisis had terminated favorably. Dr. Monckton had pronounced that the disease was absolutely gone. Her weakness was excessive; but then she had been taking nourishment, and gaining strength day by day. I thought that the vexation consequent upon my evasion of her inquiries, might be worse for her than the agitation of having them answered. At any rate, I saw no means of escape; and being at all times a bad dissembler, I felt that I could not disguise the truth any longer; so I stooped over her, and kissed her, and spoke with a trembling heart.

"My darling child, suppose that those dreams were only preparations for reality."

She looked wildly at me, but did not speak.

"Recollect," I continued, "you know nothing certainly. When your dreadful illness began, it was all doubtful. God has been very merciful to us: your dear brother never caught the fever, and he is now at home; and—" I burst into tears, and could not proceed. But the disclosure which I had begun, perhaps somewhat rashly, was still more rashly completed. The door opened, and Frederick entered. But whose was that pale, joyful face behind him? Who is it that lingers on the threshold, looking wistfully into the chamber, but afraid to advance; his eyes bright with thankful hope and eager happiness, though his whole figure bears the traces of recent and severe illness? Need I name him? The sound of his step was enough—Margaret wept, and stretched out her arms. But we must leave the sacred rapture of that meeting untouched.

And what a party was it that gathered around the invalid's bed that evening! The mother, with her eyes fixed on her child's face, scarcely daring to rejoice, yet full of thankfulness, and clasping fondly in hers the hand of her restored son; and Thornton, the noble and self-devoted, receiving, even on earth, the abundant reward of his goodness. Of all who sickened in that unhappy Alceste, he was the only one who recovered. And don't forget Aunt Peggy; no heart was happier, or more grateful, than hers. Truly may we old maids thank God that the privilege of sympathy is vouchsafed to us; for, if we suffer by the sorrows of those we love, we have also great happiness in their joys.

DUNCOMBE PARK.

[Colonel Harwood was the husband of Jane, the next sister of Margaret Forde. Mrs. Harwood brought her lord a son and a daughter within the first three years of their marriage. Ten years afterwards she died in giving birth to a second little girl. The disconsolate widower went to reside in France, both to divert his own grief by change of scene, and to afford his daughters the advantages of education, which that region of indefinite extension, the Continent, is in England somewhat vaguely supposed to afford. He did not return till his two eldest children had attained the ages, respectively, of twenty-six and twenty-eight, while Janet, the youngest, had just passed her sixteenth birthday.]

CHAPTER I.

Dec. 14th.—It was an interesting visit on which I entered to-day, and I felt unusually nervous as my humble one-horse fly drove through the great gates of Duncombe Park, and finally deposited me, my carpet-bag, my trunk, my bandbox, my two baskets, and my seven parcels, beneath the stately portico of the mansion itself. I was ashamed to burthen the dignified footman with all my odds and ends, especially as I saw him raise a wistful look, first at the coach-box and then to the door, evidently expecting to see my lady's maid in the act of descending; and, when he became convinced that I travelled without any such appendage, I detected a spice of contempt in the elaborate civility with which he took package after package from my hands to deposit them on the hall table. I was afraid lest the yet grander butler, who stood behind, should see my prunella shoes; which I carried in a separate parcel that I might not have to fish them up from the bottom of the bag when making my toilette for dinner; so I thrust them into my spacious pocket in a great hurry, somewhat to the disadvantage of the symmetry of my figure, and affecting a lofty indifference as to the fate of that precious heap of parcels, every one of which I longed to carry up stairs and unfasten with my own hands, I followed my conductor across the marble floor. On the threshold of the drawing-room I was met by my brother-in-law, who took me by both hands, and welcomed me in the kindest possible manner. "My dear Miss Forde," said he, "I can assure you that this is one of the most gratifying moments I have experienced since I left the Continent." Then, giving me his arm, he led me forward and introduced me to his daughters, the elder of whom submitted to my embrace, while the younger cordially returned it. During the five or ten minutes which elapsed before I was conducted to my bedroom to dress, I had time to make a rapid survey of the trio, and compare them

Digitized by Google

with the faces of thirteen years ago, which still remained vividly impressed on my memory.

My brother-in-law is still a fine-looking man. He has grown somewhat portly, and a tendency to gout in the left foot has caused him to change his former activity of movement for a deliberateness which is not, however, without dignity. He has the same sweet smile, and his voice is even more gentle, his manners more bland than they used to be. Well, people may say what they please, but I never can believe he has so bad a temper as he is reported to have. Surely, if he were really so passionate, I must have seen some specimens of it before now. It is true that many circumstances prevented my having much intercourse with him during my poor sister's life-time, and that, more than once, when I have seen them together, I have fancied that she seemed afraid of him; yet his deportment to her was ever that of a devoted husband, and it really seems impossible that an expression of countenance so benevolent, and a manner of speaking so unusually mild, should belong to a man of violent temper. He is said, moreover, to be proud, and *that* I believe, although his bearing shows no symptom of it, except, perhaps, a certain elaborateness in his courtesies, which, as Owen used to say, "when you see in a *gentleman*, you may be sure that he looks down upon you." Perhaps Owen would draw a similar conclusion from his studious gentleness; but Owen is a caustic observer, and, though such persons always pique themselves on their perception of character, I do not find that they are generally so right in the end as those who take a more charitable view of their fellow-creatures. As for myself, I do not know that I can be called a good judge of character, but somehow or other I do manage to be generally on comfortable terms with all the manifold varieties that I encounter; and it has more than once been remarked that I have a true feminine gift of winning influence over even the obstinate. I hope I am not vain of this, and, if it be true that I do possess such power, I hope that I may always use it for good. At any rate I am not going to quarrel with my good brother-in-law, or to hunt for defects in his character just at the time when he is giving me so affectionate a reception.

My niece Anna is not so handsome as she promised to be at fifteen; but she has a fine figure and a very sensible countenance. Her manners are a curious contrast to her father's; they are positively abrupt, and, as she never smiles when she speaks, the first impression is certainly not pleasing. I should say she was a little ungracious; but I dare say it is fancy. I am so accustomed to breathe a warm atmosphere of love, that I feel chilled and oppressed without it; but how unreasonable it is to expect that a niece whom I have seen very little of for the first fifteen years of her life, and not at all since, should love me by instinct. I must try to win her affections, and it shall be hard if she baffles me in the attempt.

Janet is a sweet creature; very shy and downcast, but with the brightest little face I ever beheld when she smiles at you. She is very pretty, and very like her mother: tall, slender and blue-eyed, with her fair young face in a perpetual blush. She glanced so kindly at me through her long eye-lashes, that I could not help taking her hand in mine as we sat side by side, and indeed, I should have ventured on another embrace, if Anna's eyes had not rested upon us at the moment, with a half-surprised expression which deterred me. And where, thought I, is my old friend and favorite Charles? But I concluded he was engaged in some of those mysterious occupations which always separate young men from their families during the morning hours, even if they are neither students nor sportsmen, and that I should see him at the dinner-table.

"I hope you have not suffered from cold during your journey at this unpropitious season, Miss Forde," observed Colonel Harwood; "Anna, is there a good fire in your aunt's room? We must be careful of our visitor's comforts, you know."

"I have no doubt there is, papa," returned Anna. "White seldom neglects her duties."

"I went in just before I came down stairs, papa," said Janet, "and saw that everything was comfortable for aunt Margaret."

"This is my little housekeeper," said the colonel, putting his hand on Janet's shoulder with a smile. "You will find differences of character in your two nieces. Anna is fond of her books, and Janet studies the details of every-day life. I am no foe to varieties of character—develop rather than change, guide rather than check, that has been my system of education. Faults must of course be cured—and they both have their faults: but they have also their peculiarities, and I am by no means prepared to say that those peculiarities are faults."

During this speech Anna looked cross and Janet awkward, while I felt it impossible to make any answer whatever, except a little absurd laugh, of which I was ashamed because it was so unmeaning. "All very wise and right, my dear brother-in-law," thought I, "but are you not a little, just the very least bit in the world, pompous? And is it not very unpleasant for your daughters to be described before their faces in that manner?" Somehow or other the conversation flagged after that speech of the colonel's.

"Will you not like to dress, Miss Forde—aunt Margaret?" asked Anna after a pause. I acquiesced, and we were quitting the room, when I was checked by hearing my brother-in-law say in his politest tone, "Have you not dropped something, Miss Forde? Here, Janet, take this to your aunt." He stooped with some difficulty, owing to his gouty foot, and lifted my unhappy shoes off the carpet. I was the more annoyed as the parcel had opened, and discovered two or three little last thoughts which I had popped in with the shoes just before starting. He collected with the utmost care a pair of black silk mittens, a paper of pins, some bootlaces, and, alas! that it must be confessed, a small box of corn-plaster, all of which he presented to me with an air of complete unconsciousness.

I could scarcely conceal my vexation. Janet could not restrain a burst of girlish laughter; her father turned to her in displeased surprise. The poor child became crimson; but I put my arm round her waist, and drew her out of the room with me, joining the laugh as I did so, for the whole matter was so ludicrous that my annoyance soon gave way to amusement. "Oh, aunt!" she began apologetically, when we reached the staircase. "Don't say a word about it, my love," interrupted I; "old maids, you know, are privileged to have oddities, and henceforth I grant you the privilege of laughing at all mine as fast as you find them out. But, tell me, where is Charles? I shall see him, shall I not?"

Janet's face became gravity itself, and Anna answered, "No, he is not at home."

"Not at home!" repeated I, in dismay, "but he will return before I go, I hope."

"I do not think there is any chance of his being

Digitized by Google

able to do so," replied Anna, shortly. Her manner was so decided, and Janet's eyes had become so tearful since her brother's name was mentioned, that I felt sure there was some mystery behind the scenes, and did not like to say any more. An hour afterwards our little party assembled at dinner. The colonel was the kindest and politest of hosts, but I did not feel very gracious towards him, for I was sure, from Janet's flushed face and timid manner, that she had undergone a lecture on the ill-breeding of laughing at her aunt. Nevertheless, it is evident to me that he is an affectionate father, though, doubtless, somewhat too much of a disciplinarian; both the girls seemed fond though afraid of him, and his manner to the dear little culprit evidently shows that he has forgiven her misdemeanor, after duly reprimanding her for it. I wish with all my heart that he did not think himself such a perfect father, and feel bound to keep up his character on every occasion. Striving after perfection is doubtless right, but constantly trying to act up to an inward self-consciousness of perfection is a very different and a far less pleasant thing. I must take myself to task about my brother-in-law. I am beginning already to find his company a perpetual little provocation to me, and this is both tiresome and ridiculous. I cannot describe what there is about him which I do not like—he is kind, hospitable, sensible, and gentlemanlike; but there is a sort of elaborateness and self-consciousness about all he does and says, which I greatly wish I had not observed, because it teases me, and perhaps after all it is only fancy. It seems as if he were perpetually saying in his own mind, "Now I am being the courteous host—now I am going to speak as the kind brother—this must be said with an encouraging bow to Miss Forde—now I am showing by my manners that I think women have a full right to express their opinions, but delicately conveying at the same time that they should always express them with modesty. I never forget the well-bred gentleman in the affectionate relation, nor the affectionate relation in the well-bred gentleman." Oh, if you could but forget *yourself*, you would be a very agreeable man! But it is foolish and even ungrateful to think in this manner, and I will put it out of my head if I can.

"We are but a small Christmas party," observed the colonel; "I have not yet been sufficiently long at home to renew my acquaintance with the other members of our family, of whom I have lost sight for so many years. I confess that I am fond of family meetings, and always encourage them. They are *right*, and I generally find that what is right is also agreeable."

"You must have been lonely sometimes, when you were abroad," said I. "I think the seasons at which those happy unions are natural and habitual, must be very desolate when you have no familiar faces to gather around you."

"It was a deprivation, certainly," returned he, "but I do not think we were lonely. I hope we have too many resources in ourselves and in each other to find any situation lonely. I should be almost as sorry to find my children dependent on society, as disdainful of it."

I felt nearly out of patience, but scolded myself for my absurdity, and replied very civilly that I thought he was perfectly right.

"I must look to you," he continued, "for information concerning those with whom I hope, ere long to become personally intimate. You have just been staying with the Bryants, have you not?"

I acquiesced, and said a few warm words in praise of those dear creatures.

"My girls," proceeded the colonel, "anticipate much pleasure and profit from the society of their cousins. Anna is looking forward to an acquaintance with Katharine, who must, I think, be nearly her own age. Is it not so, Anna?"

"I really don't know papa," returned Anna; "I have not the slightest recollection of my cousin Katharine, and I never thought about her age."

"She is five-and-twenty," said I, secretly amused at seeing that the colonel appeared a little disconcerted by this speech. "Do you remember Frederic? He has just been distinguishing himself greatly at college."

"He promised to be clever," remarked the colonel, "though I should have supposed him rather brilliant than solid. He visited us at Nice, during his first college vacation, and I observed, then, a certain tendency to repartee in conversation, a disinclination to the steady pursuit of any discussion, and indeed, in some instances, an apparent incapacity to feel the force of the arguments which were employed against him, which, however natural in so young a man—and I hope I am always ready to make allowances for youth—were more creditable to his wit and imagination than to his judgment."

"He has just taken a double first class," said I, as demurely as I could.

"Indeed!" replied my brother-in law, "I rejoice to hear it. And George—he must be growing into a man now—has he not some unfortunate impediment in his speech?"

"He stammers a little," answered I, "but we hope it is improving. It will be a great disadvantage to him if he enters the church."

"A great deal more may be done towards curing or concealing those little natural defects than people are apt to imagine," observed the colonel, complacently; "I speak from experience. If I were so unfortunate as to stammer, I should assume a slow, and, as it were, explanatory mode of speaking, by which the repetition of the word or syllable would generally be avoided, and in which, when such a repetition *did* occur, it would seem rather an intentional emphasis, in character with the manner, than an inevitable defect."

"Do you think stammering could be cured by such a system, papa?" asked Anna.

"I am not prepared to say that it could be *cured*, my dear," returned her father, "but I believe it might, except in very bad cases, be rendered perfectly inoffensive. In a somewhat analogous case, I have followed a similar plan myself, with complete success. Since I last saw Miss Forde—" (with a bow and a smile to me) "I have been afflicted with a slight tendency to gout, but by adopting a slower manner of moving, which is certainly not unsuited to my advancing years," [another smile,] "I have so effectually concealed it, that I would venture to say, that no person, unacquainted with the circumstance, would ever guess it; and that Miss Forde herself would be puzzled to decide in which foot the malady lay."

By the time he had finished this speech, he had turned to me with an air of modest and triumphant inquiry, and I was once more reduced to my little stupid laugh, for in the first five minutes I had seen as clearly as possible that he had got the gout, that he had it in his left foot, and that he was trying to look as if he had not got it at all. Fortunately his self-complacency on this subject was too secure to be easily alarmed, and he took my short chuckle for

Digitized by Google

a sign of complete approbation. Soon afterwards we rose to quit the dining-room, the colonel holding the door open for us with profound politeness. As we passed out, he stopped Janet, put his arm round her waist, and kissed her cheek, I suppose, in token of complete reconciliation. After all, he is a good creature, and I like him very much.

Anna apologized for leaving me alone with her sister till tea-time. She is learning German, and her master, who has many engagements in Exeter, which is fourteen miles from Duncombe Park, is able to attend her only at this unusual hour. I was not sorry for the opportunity of improving my acquaintance with my youngest and most attractive niece; so we sat down together on the sofa, and in a very short time she was chattering away with innocent freedom, and with a fluency for which I had scarcely given her credit. "But, tell me," said I, after listening with interest to her glowing description of the last year which they had spent at Rome, when, as she observed, she was beginning to be old enough really to enjoy the wonders, and appreciate the advantages, around her, "tell me something about Charles. Was he with you at Rome?"

"No," she replied, casting down her eyes, while her face was overspread with sadness; "it had all happened before then."

"It!—what?" inquired I, my curiosity now thoroughly roused. "What is the matter about my favorite, Charles?"

"Oh, aunt Margaret, that is just what I wish so much to tell you," returned the little girl; "I have got a letter for you from him," added she, first giving a cautious glance round the room, and then drawing a paper from her pocket, which she hastily put into my hand, "but before you read it, I must tell you a little, or you will not understand it. Charles is married."

"Married!" repeated I, in utter amazement, yet scarcely able to keep from laughing at the absurdity of the thing—that my heedless nephew should be a husband, and that he should employ his little sister clandestinely to convey a letter on the subject to me, his almost unknown aunt, was really altogether so very astonishing, and so completely puzzling, that the eagerness with which I demanded further information was no more than might have been expected. Janet informed me, that Charles had become attached to a young French lady at Nice, and that, his father's prejudice against an alliance with a foreigner being absolutely insurmountable, he had married her privately, about four years ago. With all the sanguine ardor of his character, he hoped that the colonel would pardon him when the thing was irrevocably done, though he never would have permitted him to do it. He was wofully mistaken. "Oh, aunt Margaret," said the innocent narrator, "I never shall forget the evening when it all came out. It was very dreadful. Charles had been away for about a fortnight—he pretended it was to make a little tour—but, in reality, he had gone to be married to Mademoiselle de Millebrun. We were all sitting at tea, when there was a loud ring at the bell, and the next moment the door opened, and in he came. He looked odd and excited, as I afterwards remembered, but at the time I was so pleased to see him return unexpectedly, that I did not notice it, but jumped up to kiss him, while papa said, a little gravely, 'Why, Charles, you have taken us quite by surprise. We have not received any letter—but I suppose you wrote, to announce that you were coming?' Papa particularly dislikes surprises of any kind."

"I dare say he does," rejoined I, observing that she paused, and I added, in my own mind, "they must break in terribly upon those systematic methods of moving and speaking, which he thinks so clever."

Janet continued:—

"Well, I scarcely know how it all happened, and, indeed, I hardly understood it, even then—but after a few incoherent attempts to talk as usual, he broke quite desperately into the subject. 'My dear father,' said he, 'will you forgive me for the first disobedience to your commands of which I have ever been guilty? My—' here he hesitated—'you know, my—the strength of my affection for Adêle—for Mademoiselle de Millebrun, and'—My father stood up, and his face was terrible with anger—it was quite white, and he drew his lips together as if he were almost afraid of speaking. 'Anna and Janet,' said he, in a very low, quick voice, 'go to your own rooms—I do not choose that you should hear this.' Anna got up, and left the room directly, and I stole after her, quite terrified, for, you know, I love Charles so very dearly, and so I could not help lingering a little, and was just going to take his hand, for sometimes, when papa is angry, he lets me coax him, and is quite kind again. But I did not understand how terribly serious he was now, and I met a glance from his eye which frightened me so much, that I dared not stay. Half-an-hour passed—oh, what a half-hour it was! I was by myself, and in the dark—I had a kind of feeling that I would not ring for a candle, lest the servants should find anything out, so I sat down on my bed, and cried, I hardly knew why, and tried to hear the sound of their voices in the room below, but I only heard Charles' voice now and then, and that was a bad sign, for when papa is excessively angry, he always speaks low. Suddenly there was total silence; and, a minute afterwards, I heard a step at my door, and a whisper, 'Janet, are you there?' I ran forwards, and poor Charles clasped me in his arms, and kissed me again and again. I felt his hot tears upon my cheek, and I sobbed, so that I could not speak to him, and he said nothing but 'Good-by, my own darling! God bless you! good-by!'—at last he seemed to make a great effort to control himself, and said to me, hurriedly, and in a whisper, as if he was afraid of being interrupted or overheard, 'My dearest Janet, you are not old enough to understand all that has happened, but thus much I must tell you. I am married to Mademoiselle de Millebrun—she is now my wife, and she already loves you as a sister—and Anna, too, of course. But my father is very angry about it, and has desired me to go away, and refused to see my wife, or to allow me to see you, my own sisters, again. He says he will never forgive me, and though he did not blame Adêle so much, because she is so very young, only seventeen, he said over and over again, that as long as he lived, I should never set foot within his doors again. I am afraid he will keep this promise only too strictly, and so I have stolen up stairs to say good-by to you, and to beg you, as you grow older, never to forget this last conversation—never to forget how much I love you, nor that I have told you, that upon my word and honor, your new sister, Adêle, is as innocent as a child, and that you must think of her with affection, and never suffer anybody to teach you to think unkindly either of her or of me. Will you promise me this?' You can fancy how I felt, aunt Margaret, and what I answered, as well as I could for my tears. I am not telling you about myself, you know, but about

Digitized by Google

Charles. He then went on to say, that he was afraid of doing wrong in telling such a child as I was to hide anything from my father, but he did not know what to do, he could not bear to go on without hearing from me and writing to me. So he settled this plan. We have an old nurse who has lived with us ever since papa married, and who is so fond of Charles that she would cut off her hand to do him a pleasure. Twice a year Charles was to write to me under cover to her, and I was to answer his letter, and trust to her to get it taken secretly to the post—"

"It was not right, my love," interposed I; "he should not have done it. I pity him very, *very* much—but, indeed, it was wrong."

"It is more my fault than his," returned Janet, blushing with earnestness. "In the second letter that Charles sent me he told me that he felt he had done wrong, that his conscience was uneasy on the subject, and that, great as was the sacrifice, he must give up hearing from me. But I could not bear it; so I persisted in writing to him just the same, and, you know, he could not help answering my letters."

"Well, well," said I, inwardly feeling that in poor Charles the boy was truly father to the man, and that he had grown up the same impetuous, warm-hearted creature, governed by impulse rather than principle, that he was at fourteen—"well, well, Janet, go on with your story."

"There is not much more to tell," she answered, "Charles made me fetch Anna to wish him good-by——"

"Oh!" said I;—"and Anna—is she very fond of Charles? Why did he not go to her instead of to you?"

"Because," replied Janet, with a little embarrassment, "he knew Anna would never have agreed to write to him against papa's wishes—besides, Anna and Charles—I don't know—they used not to be so *very* fond of each other—they used sometimes to quarrel. But Anna was very sorry indeed, and cried a great deal, both that night and the next morning. I often thought she was vexed, too, that Charles did not go first to her, for she never would speak upon the subject at all, but if ever I mentioned it, she bade me 'Never mind,' and said, I was too young to be able to understand anything about it."

"Does she not know that you write to Charles, then?" asked I, in some surprise.

"Oh, no, no! I dare not tell her; she would think it wrong, and then she would tell papa directly."

"And has she heard nothing of her brother, then, for four years?" cried I, unable to suppress my wonder.

"Yes; she has heard of him now and then, through a third person," answered Janet; "Charles and his wife settled at Boulogne—they are very, *very* poor, and he wanted to live as cheaply as possible, but, I believe, he has found the place dearer than he expected. Now, we have a friend near Boulogne, with whom Anna corresponds, and this lady always writes word how Charles is; from her, too, papa and Anna heard of the births of his two children. Anna always gives the letters to papa, but he never makes any comment upon them."

"And Colonel Harwood has never shown any signs of relenting? Four years!—it is a long time to be angry with a son."

"Why, I am coming to that," said Janet; "it is the strangest part of all. Anna's friend, who wishes well to Charles, has more than once written to say how very poor he is—how much distressed in his circumstances. He has tried to support himself by giving lessons in English, Latin, and drawing, in which he is a proficient; but he got very few pupils, and now he has three persons besides himself to maintain, and he grows poorer and poorer. At first, he could not bear that Adêle should work too, but he has been obliged to give up his objection, and she embroiders, and teaches music, but still they earn very little."

"Has Adêle no relations?" interrupted I.

"No, none," said Janet. "Her family was well-nigh extirpated at the time of the revolution. Her mother was its only living representative besides herself, and she died a year after Adêle's marriage. I believe her fortune, which is very, very small, is all they have to live upon except their earnings."

"And his father can bear to know this?" exclaimed I.

CHAPTER II.

Janet proceeded with her story—"The last letter from Anna's friend arrived about five weeks ago, and gave a most melancholy account of them. They had been then several months without any pupils at all, and the lady said she believed they would come to England to seek employment, if it were not that they had been compelled to run in debt at Boulogne, and, not being able to pay their debts, of course they could not leave the place. Papa gave this letter back to Anna, as he had done all the others, without saying a word. But two days afterwards nurse told me that among the letters sent to the post that morning, had been one directed in papa's hand-writing to Mrs. Charles Harwood to the care of Madame Viéville, Grande Rue, Boulogne. I was surprised that he wrote to Adêle and not to Charles; however I felt very happy, and thought it was all going to turn out well at last. I thought so still more, when, a fortnight afterwards, as we rose to leave the dining-room, papa told us, in his shortest manner, that Mrs. Charles Harwood and her children were coming to spend the Christmas with us. I could have jumped for joy, and in my ecstasy I could not help saying, 'Oh! papa,—and Charles?' He knit his brow and said, 'Understand, both of you, that this is a subject on which I do not choose to be spoken to. You are to hear what I say, and make no answer.' Of course I dared not reply, but still I felt quite confident and very happy, till last Thursday, when nurse gave me a packet from Charles containing that note for you. There was also a letter for me, in which he told me that papa had written very shortly to Adêle, saying that he wished herself and her two children to spend the Christmas with him. Poor Charles was in ecstasies—he thought this was certainly the first step to a reconciliation—he made Adêle answer the cold, brief invitation in the most grateful terms, and he himself wrote a long letter full of thanks, expressions of affection and repentance, and entreaties for forgiveness. This letter was immediately returned unopened. It was enclosed to Adêle, and in the cover were written these few lines:—

"'Madam—I shall be happy to receive yourself and your children as soon after the 17th of December as you can make it convenient to come to me. I return you unread a letter which never should have been written, and which never could have been sent, had you not made the great mistake of supposing that I could not distinguish between the misled and the misleader—between mere weakness and positive sin. *You* have never yet had any duty

Digitized by Google

towards me to fulfil, and therefore you have transgressed none. I remain, madam, your sincere well-wisher, EVERARD HARWOOD.'

"Oh, what harsh, harsh words!" cried poor Janet, interrupted by her own tears.

After a moment's pause she resumed her tale,—

"Charles told me that, in spite of these bitter words, which have made him very miserable, he cannot give up all hope; he thinks still that papa *must* be intending to relent, and therefore he has decided that Adêle and the children shall certainly come. He desires me to tell you the whole history before you read his letter to you, and—but now, dear aunt Margaret, please read the letter."

I opened the paper, as she desired, and read as follows:—

"My dear kind aunt Peggy,—"

"Poor Charles!" said I, involuntarily stopping to wipe my eyes. I began again,—

"My dear kind aunt Peggy—For well do I remember your kindness to me when I was a boy, and I should indeed be most ungrateful if I could forget the thousand and one treats and presents with which you used to brighten my school-days. It is the recollection of all this which makes me hope to find a friend in you now, and if you have not quite forgotten the affection which I know you used to bear me, (and I think it would be a hard matter for you to leave off loving any one,) you will not refuse to help me now that Janet has told you my sad story, and you know how unhappy I am."

"But how, *how* can I possibly help him?" asked I, interrupting myself again.

"Read on, and you will see!" cried Janet, whose face was full of joyful hope. I continued to read—

"I will not take up your time by defences or apologies for my conduct. I was to blame—I was wrong—I don't seek to deny it, either to myself or to others. But I am severely punished, when I see the sweetest wife that ever brought happiness to a man's heart and home, and two innocent babes, actually suffering from want. Of my own personal affliction from the displeasure of a father whom I must ever revere, and the cessation of intercourse with sisters whom I love most tenderly, I will say little. Perhaps I deserved it. But has not my punishment lasted long enough? Now, my dear aunt Peggy," (the boy must know by instinct how that name wins its way to my heart,) "will you use your influence in my behalf? My father has the highest opinion of you. I have heard him say repeatedly that there is no person to whom he would so willingly confide the education of his daughters as to yourself. He has likewise a warmer feeling towards you, remembering that you were the favorite sister of my poor mother. I cannot help imagining that he is now just in the state of mind only to require to have the matter reasonably put before him to induce him to yield. I cannot but hope that a few arguments and a little persuasion from you would win my cause. Will you refuse to make the attempt? No, I am quite sure you will not; and the idea of your consent sends a feeling of happiness through my heart, to which it has been very long a stranger. God bless you, my dear aunt Peggy, and prosper you in the effort which I am sure you will make for me. I need not commend my Adêle to your kindness—you will love her the moment you see her. And as to the piccaninnies, I know you love all babies, and I don't think you will like my little son and heir the less because he is reckoned the image of his unlucky father. Perhaps you will say I should write 'blamable' for 'unlucky,' and perhaps you are right—however, amid all my faults and misfortunes, I have still pleasure in signing myself, Your affectionate and grateful nephew, CHARLES HARWOOD."

I put down the letter, and there was Janet's beaming face at my side. She clasped her arms about my neck, half-sobbing, and saying, "Oh dear aunt Margaret, you say yes, don't you? you will try for poor Charles, I 'm sure you will." What could I do but kiss her, and promise to do my best? yet never did maiden aunt feel more bewildered than I did in the new position I had thus involuntarily assumed. In the first place, I was a little afraid of my brother-in-law at all times; and, in the present instance, I felt by no means sure that he would not resent my interference, as quite uncalled for and impertinent. But then both Janet and Charles seemed so secure of my influence with him; and then, thought I, suppose I *should* succeed, suppose I *should* reconcile son and father, of what happiness should I be the cause, and what a delightful remembrance it would be for me, to the end of my life! Owen says, that to appeal to me about my usefulness, or my influence with others, is attacking me on my weak side. And certainly, when I leave a house, I *do* like to be able to say to myself that I have done some good in it. How could there be a better opportunity of doing good than this? I am getting sanguine, and my hopes outweigh my fears.

I am the more inclined to be confident because I cannot but agree with Charles that the invitation to Adêla, cold and ungracious as it is, must be considered as a sign that the colonel intends to relent. If he has no such intention, why did he not send them a remittance, instead of that unaccountable invitation? Poor dear Charles! Who could have fancied that he remembered me so well and so kindly? He was always a favorite of mine, but I little thought that the trifling kindnesses of so many years ago would make so deep an impression. How he must have suffered! and my sweet little Janet, too—what a singular mixture of prudence and feeling has she shown for so young a girl! The prudence has been taught her by fear, which, as I have often observed, will teach a sorrowful kind of caution, very painful to witness, even to a little child. But Anna—there is a mystery in her. She must have a cold heart, I am afraid; perhaps her affections have never been encouraged to expand, for I suspect Janet is the favorite both with brother and father. As to Colonel Harwood, the more I reflect on his character the more hopeful I feel, though I was at first so much cast down. His temper, though roused to one violent ebullition by such defiance of authority, is evidently under control, and would certainly never show itself towards me, of whom he has so high an opinion. But I must go to work very carefully, and manage to introduce the subject at the right time, and in the right manner. Everything depends upon that. Some people in my situation would go blundering straightforward to the point they wished to attain, and spoil their work by their clumsy method of doing it. But I fancy I have rather an aptness for the sort of thing, and, with the help of a little woman's wit, I do not despair of succeeding.

I am writing this account of my first day at Duncombe Park, in my bedroom, before going to rest, and I have so lost the thread of my story in meditating on the grand effort which I am to make to-morrow, that I had nearly forgotten to say how the evening passed off. There is not much to re-

Digitized by Google

cord. Anna joined us at the tea-table, and I tried to win my way through her reserve by talking to her of the German poets, with whom I supposed she was beginning to make acquaintance. But she seems more occupied with the grammatical structure of the language, than with its literary stores, and she has a school-method of classing the "stars" which somewhat amused me. She puts Schiller above Uhland because he is less easy to comprehend, while Göthe stands highest of all, not by reason of his marvellous genius, but "because he is so very difficult." The exquisite "Hermann and Dorothea," is however an exception among his works, and was contemptuously dismissed with the observation, "Oh, that is quite easy; I read that when I was only a beginner." This manner of judging was new to me as applied to literature, though I have remarked that it is common enough with reference to the fine arts; the accomplished pianist who utterly despises Mozart, and takes a cool superior tone above Beethoven, will speak with rapture of Thalberg or Doehler, and with a reverent awe of Chapin, proportioned to the difficulty of unravelling the involved mazes of his time, and deciphering the mysterious double sharps and triple flats, wherewith he is pleased to diversify the monotonous simplicity of musical notation. He is a politic man doubtless. Who cares for plain C? It is a note of no importance or dignity whatever. But call it D double flat, and immediately it is invested with a character of grandeur and originality which it might have sought to attain by any other means, in vain. The doctor who tells you to drink camomile tea three times a day, has no title to your respect—no claim upon your faith. He might have won both if he had but had the sense to call for a sheet of paper, and write—*Decoctio florar: camomil: ter diem.*

After tea, my brother-in-law, who had watched my conversation with Anna, with evident satisfaction, (I kept it up the more diligently because I am of course anxious to encourage the high estimation in which I find that he holds me, and because I observed that he was pleased to see that I was likely to assist his daughters in their studies,) drew his chair forward and addressed me in his blandest and most cordial manner. "I like," said he, "to encourage and keep up all the old-fashioned customs connected with this season of the year. I am no enemy to merry-making in proper place and time, and among the other innocent amusements with which our grandfathers and grandmothers were accustomed to while away the long winter evenings, I, for one, see no objection to a good game of cards." His voice assumed a tone half inquiring, half congratulatory, as he closed his speech, and slightly rubbing his hands together, he looked pointedly at me, as much as to say, "Here 's a tolerant, benevolent, cheerful, benignant brother-in-law and father of a family for you." The plain English of these words and looks of deferential self-approval, was, that Colonel Harwood chose, on every winter's evening to play whist for two mortal hours, and that I was expected to supply the place of the Dumbie who ordinarily held the fourth hand in the rubber. I positively detest cards, and am generally in the habit of making all sorts of mistakes, even in the simplest games; this evening, however, in pursuance of my plan of establishing myself in my brother-in-law's good graces, and maintaining him in that good opinion of me which he has chosen to adopt, I assumed my place at the table very amiably, and gave my whole attention to the matter in hand. And as, happily for me, I was Janet's partner, my want of skill passed unnoticed, for the colonel was too well pleased to win, to depreciate the abilities of his antagonists, and we parted for the night, the best possible friends. And now, before I lay my head on my pillow, one more look upon those skies of dark, clear frosty blue, on which every star stands out like a hewn projection of glittering diamond. Oh, perpetual reproof of the littleness of man! Is it not marvellous that he has walked beneath you for five thousand years, and has not yet received the placidity of your greatness into his soul!, Would it not seem as though one glance upon the majesty of the midnight heavens were enough so to subdue, calm, and humble the spirit of a mortal, that all strifes, envyings, and jealousies, all vanity and all meanness, should depart from it, never to return, giving place to noble shame, and assured though reverent hope!—Surely he who should ask his bitterest foe to forgive him, amid the silent magnificence of night, could never be repulsed!—Poor Charles! My last thought before I sleep is of you—my last prayer is for the reconciliation of the father and son, and a voice within assures me that it shall not remain unanswered.

December 15th.—What a simpleton have I been! I could beat myself for very vexation! My ridiculous vanity has been at the bottom of it all—I am ashamed to look back at the pages of my journal and see how I had worked myself up into believing that I was appointed to heal the wounds and soothe the differences of this family. It is astonishing that I could so deceive myself. And now I have done harm instead of good; and I wish my tongue had been cut out before it exposed itself and me by such uncalled for absurdity. Well, it is fit that I should narrate all the particulars of my unhappy failure, as a punishment for the past, and a lesson for the future. I found no opportunity in the course of the morning for introducing the important subject. I had weighed the matter well in my mind, and decided that the presence of my nieces would be an obstacle to my success, and that I must choose some occasion when I should be alone with their father for making the attempt. This view I founded upon my supposed comprehension of the colonel's character, and I plumed myself not a little upon the penetration wherewith I imagined that I had estimated his various peculiarities, and the skill wherewith I believed myself to be suiting, allowing for, and taking advantage of them. Poor, silly aunt Peggy! you are fit for nothing but worsted-work, letter-writing and small talk! It seems to me, now, as though Charles and Janet were mad to give me such a commission—but theirs are young heads—what is to be said of the discretion of their mature confidante and agent?

To proceed, however—I passed the whole day in studying to please and oblige my brother-in-law. At breakfast he amused himself by giving me, in a style at once elevated and colloquial, sublime and familiar, a sketch of the habits and pursuits of himself and his household. Had not every tone and gesture so completely expressed "this is the picture of a rational and happy family!" I believe I should have responded to his description by that very remark; but this incessant modest consciousness, and candid confession of great merit, effectually checks all disposition to admire. I found that he considered it part of his duty as a father, to exercise a certain sort of superintendence over the education of his children; at present he was engaged

in reading Italian with Anna, and giving Janet lessons in history. After all, he is really a well-read and accomplished man, and I have no right to ridicule him. His system of historical instruction seems to be a particular hobby; all his information is imparted by means of tables which he draws up, and which Janet has to study till she is thoroughly mistress of the dates and succession of incidents for the period under consideration. It is then her business to compile from books, with which he supplies her, an abridged account of all the events noted in the table, according to the order of their occurrence. The colonel is exactly the kind of man to reduce all knowledge to a matter of tables, systems, and abridgments. Nothing that exceeds the limits of a book of reference appears to him worthy of acquisition; and I could fancy him giving a "Tabular view of the characters in Shakspeare's plays, forming a key to a condensed edition of his works, in which all the similies are omitted, and every phrase, scene, or allusion, which has no direct reference to the evolution of the story, carefully expunged." In the plenitude of my amiability on this unlucky day, I offered him my assistance in drawing up the parallel tables of the histories of France, England, Spain, and Italy, during the first half of the thirteenth century, on which he was then employed. He seemed greatly pleased at the idea; and I worked for a couple of hours under his direction. When the tea-things were removed in the evening, it appeared that poor Anna was suffering from so violent a headache, that she was unable to take her place at the whist-table, and the colonel, with a vivacity that surprised me, proposed that he and I should adjourn to his study, and finish the business of the morning—a suggestion in which I, of course, readily acquiesced. He seemed quite eager about it; it is amusing how rapidly the primness and pompousness of a man will evaporate under the influence of a real, downright hobby—for all men have their hobbies, even the prim and the pompous. He lighted a candle himself, and conducted me to his sanctum, moving, however, with the staid dignity which his gout rendered necessary, and which, on the present occasion, seemed more burthensome to him than usual. We there spent half an hour in hunting for authorities, after which we were to return to the drawing-room, to work upon the materials we had obtained. But, alas! my head was full of poor Charles, and my own enterprising determination. Instead of being an assistance to him, I was the greatest possible drawback; I turned over the leaves of a kind of dream, gave every date wrong, fitted the personages of one country into the history of another, violently compelling them to assume the costume of a third, and winding up my description with an abridged account of the arts, manufactures, and literature, of a fourth. The colonel is not a bright man, and his confusion was boundless.—"What is your authority," asked he at last, with much politeness, as he held my rough sketch in his hand, "what is your authority for attributing the social state of Spain in the thirteenth century, to the effect of the Norman invasion in the twelfth? You have mentioned it several times, and here, I see, you name 'the Conqueror,' but without designating more particularly the leader of this Norman invasion."

"You have got the sketch of England," cried I, in some perturbation. "No indeed," he returned, showing me the word *Spain*, in large letters, at the head of the unlucky sheet. "Will you have the goodness to let me look at the volume from which you have drawn up this little account."

In a kind of bewilderment, I handed him Adam's Roman Antiquities, which happened to stand next Rapin, and he spent at least five minutes in hunting through the index with knitted brows, and a face of increasing surprise, before it occurred to him to look at the title. Then his patience did seem a little disturbed, and I even thought I heard him mutter to himself the words, "Confound the Roman Antiquities!" However, he speedily recovered his usual courtesy, and proposed that we should return to the drawing-room, adding with a smile, that he thought I had had work enough for one day. He rose as he spoke, and I felt desperate. It is clear, that I could not have chosen a worse moment for my experiment than this, but some spirit of evil judgment possessed me, and I plunged into the dilemma headforemost, without pausing to consider.

"I wished to speak to you, Colonel Harwood," said I, getting extremely hot, and feeling, at the instant, as if I were pronouncing my own sentence of transportation for life.

Standing still in his progress towards the door, he turned towards me with an air of polite interrogation. He said nothing, and I was compelled to proceed, though I felt that it was an abrupt and unpromising beginning.

"I have a great favor to ask—or rather, it is not a favor to me, but to your dear girls—your dear children I should say, and even to yourself." His brow visibly darkened, but, by this time, I had warmed with my subject, and went on fluently. "Ah, my dear brother, it is so grievous that there should be a disunion in your family—now at this joyful time of year, when, as you say yourself, all those who love each other ought to draw the bonds of their affection more closely, and feel that the one great cause for common thankfulness and common humiliation should heal all wounds and reconcile all differences: do not be angry with me for imploring you to forgive poor Charles, and take your son back to your heart again. He is sincerely penitent; that I know—and surely he has suffered long enough, and bitterly enough. If his dear mother were alive, how earnestly would she join my entreaty; for her sake, if for no other reason, grant him your forgiveness, and let us celebrate this Christmas by a happy meeting of the whole happy family."

While I spoke, the expression of my brother-in law's countenance had changed from boundless astonishment to extreme indignation, and it was only the strong effort which he made to restrain his passion and behave with becoming calmness, which prevented him from bursting in upon me, ere I had concluded. As it was, he did hear me to the end, though I am quite certain, that from the moment in which he became aware of the purport of my speech, he neither listened nor heeded, but was solely employed in subduing his wrath, so as to be able to cut the matter short at once with due dignity, but at the same time with a proper degree of politeness and composure. It was in this spirit that he answered—

"You must pardon me, my good lady, but this interference in family matters is scarcely well judged. I should be very sorry to speak harshly to you, and I am quite sure that you have the best possible intentions. After I have once put it clearly before you, that I am the sole judge of my own conduct, and that your position as a greatly esteemed sister,

Digitized by Google

does not exactly entitle you to direct or advise me in the management of my family, I feel sure that your own good sense will show you that you have been in error, and that delicacy and propriety will induce you to avoid mentioning the subject to me again. Let us therefore forget the last five minutes, and return to our former friendly intercourse as if they had not occurred."

He thought he had done it to perfection. The mixture of authority, gentleness, and resolution, could not have been better contrived to overwhelm me with shame and reduce me to silence. But, as he uttered the last gracious words, and was advancing with a slight and dignified wave of the hand to quit the room, that spiteful little demon who seemed ever on the watch to convert his sublimity into absurdity, caused him to stumble against a footstool, and, in order to save himself from falling, he was obliged to sit down with extreme suddenness on a chair which happened to stand near. As he did so, however, he maintained an air of unconsciousness, though his face flushed a little, and he looked boldly at me, as much as to say, "Will you presume to think for a moment that I did not intend to sit down in this chair?" And now, what can I say for myself? At my age, under my circumstances, with my whole heart full of interest for poor Charles, and indignation against his father, was it not inexcusable that I was unable to restrain my sense of the ludicrousness of this little incident? I could *not* restrain it, and I laughed aloud, though his eyes were full upon me. No offence could be greater than this. Actually pale with passion, he turned from me, saying in a suppressed tone of voice, "This levity, madam, is wholly unaccountable, unless I am to suppose it a premeditated insult." He struck his hand vehemently and angrily upon his writing-desk as he spoke, and the historical tables flew upwards with a great flap, and put out the candle. The scene was now complete—or rather it attained perfection in the next minute, when my stately and furious brother-in-law, finding himself in the dark, and at an equally great distance from the door and the bell, was literally obliged to solicit the aid of my arm to return to the drawing-room, having twice struck his gouty foot against some obnoxious chair or table, in his attempt to complete the transit unassisted. "Will you have the goodness to give me your arm as far as the hall?" said he, in a short, snappish, sulky tone of voice, as unlike as possible to his usual dignified suavity. I hastened to comply, and happy was it for me that he could not see my face, for, as we cautiously traversed the study floor, and I felt the pressure of his arm upon mine, and knew all the while that he was absolutely boiling over with rage against me, it was all I could do to keep from laughing in his face a second time. Anna's headache was a great comfort to us during the awkward hour and a half which passed ere we separated for the night. It was a sufficient reason for the profound silence which prevailed. The sufferer lay on the sofa and never spoke; Janet and I sat side by side, engaged with our embroidery, and occasionally conversing in suppressed tones, and my poor brother-in-law leaned back in his easy-chair, and pretended to read. Never was a man so thoroughly confounded and thrown out of his usual mode of action as he was that evening. I suppose such a thing had never occurred to him in his life before, nor had the faintest vision of the possibility of such a thing ever crossed his mind. And he really was quite at a loss, and did not know how to behave under it. This too was one of the most annoying facts of his position to him. Under all circumstances that had hitherto befallen him, he had preserved his conscious and elaborate dignity unruffled—whether he were acting the gracious host, the kind father, the stately master, or the severe disciplinarian, he had been decided, self-contemplative, and self-satisfied in all. The bursts of passion to which he had occasionally given way, had frightened those with whom he had to deal, and left him sole master of the field, with his foes flying on every hand. But he now found himself in the situation of the Chinese general, (pardon the anachronism!) who painted his soldiers' faces, and made them clatter shovels and tongs together in order to scare the English—the English did not run away, they stood still and laughed—and the baffled general, not knowing how to make his mode of attack more awful, tore his pigtail for very vexation. My poor brother-in-law! How guilty I felt as I stole from time to time a peep at his flushed and troubled countenance, and perceived clearly that he was quite incapable of attending to the newspaper which he held in his hand, but that his angry and bewildered mind was employed in recapitulating to itself my heinous offences, and musing over the possibility of inflicting adequate punishment. I wished him good night like a culprit, and from the brusque and (to use an unclassical but most expressive word) grumpy manner in which he replied, I knew that he had not yet recovered himself. I wonder on what line of conduct he will determine. I should not be much surprised at receiving notice to quit to-morrow morning. And now to bed—but scarcely, I am afraid, to sleep. The colonel cannot be more provoked with me than I am with myself, and the recollection of Charles and Adèle banishes all disposition to slumber, and seems to put me into a fever.

CHAPTER III.

Dec. 16th.—The colonel has chosen his line of action, and I have discovered it in a manner which precludes the possibility of mistake. As I descended to breakfast this morning, I heard him talking to his daughters, and paused for a moment on the threshold of the room. "Your aunt Margaret, my dears," said he, in a sustained and complacent tone of voice, "is a very good, but a very weak woman. I should wish you to show her every possible kindness during the time of her stay with us, but at the same time I would have you very careful not to suffer her thoughts or sentiments to have any influence over your own." "That is exactly what I thought of her, papa," responded Anna, with alacrity. In I walked, as demure as possible, and quite contented to be forgiven, because I was counted for a fool. Here is the end of all my secret self-congratulations on the high place which I held in my brother-in-law's good opinion! I am properly punished for my vanity. And now we all go on very peacefully, though in a strange manner enough. The colonel tacitly avoids me as much as possible, but is very civil to me when we come in contact; there is an air of good-humored condescension about him, and an evident endeavor to let himself down to my level when he does speak to me; nevertheless he seems half conscious that his superiority is not genuine, and never meets my eye if he can help it. He no longer treats me to orations of labored ease, on his ways, thoughts, and principles; but this is manifestly a great restraint to him, and more than once he has

Digitized by Google

begun involuntarily, and got as far as "My position as father of a family——" but here *ought* to come the affable little bow to me, so here he stops, clears his throat with an air of vexed recollection indescribably comic, glances towards me with a half alarmed expression, to see whether I am laughing, and suffers the premature speech to die a natural death, one scarcely knows how. Anna follows his lead very closely, and is as cool and civil as she can be. The only difference between them is, that she sometimes brings me a difficult passage in her German studies, and looks a good deal provoked when she finds that I am able to explain it. Sweet little Janet continues faithful and fond, and wins every day on my affections. I told her simply that I had made the effort to soften her father, but had completely failed; and though she cried bitterly, she was so grateful to me for my zeal in her brother's cause, that she seems to love me all the better for it. If it were not for her, and for my great anxiety to see Adêle, who is to arrive the day after to-morrow and to discover what the colonel's intentions are with regard to her, I think I should bring my visit to a very speedy conclusion. As it is, I shall stay to the end of the month for which I was originally invited; but I cannot help thinking that I shall not soon receive a second summons to Duncombe Park.

Dec. 18th.—Adêle is here. She arrived from Exeter at about 12 o'clock to-day. I scarcely know whether I like her or not, and at present I certainly do not understand her. I must begin at the beginning, however, and write down all that has taken place, and perhaps, in so doing, I may attain a clearer comprehension of my own thoughts concerning her. Anna and I were at work in the drawing-room when she arrived; a little confusion in the hall, and the pleasant sound of a young child's voice, announced her, some five minutes before she actually made her appearance. I longed to run out and bid her welcome; indeed, I was in the very act of doing so, but Anna sat perfectly still, and I felt as if I had no right to be more *empressée* than she was. Janet was in the schoolroom taking her French lesson; so altogether there was an awkward, chilly pause, during which I looked wistfully at the door, and pitied with all my heart the young stranger whose entrance I expected every minute, and whose feelings I could well imagine. I consoled myself by remembering that she was a Frenchwoman, and therefore was not likely to lose either grace or presence of mind, even under these most trying circumstances. I was not mistaken. She entered and received Anna's cold embrace without the slightest appearance of embarrassment, lifting her large, dark, brilliant eyes to her face with so fixed and penetrating a gaze, that the hostess was abashed rather than the guest. She held by the hand her little boy, a lovely child of three years old, and the nurse followed with the baby. I was touched, and even overcome, but so repelled by the mother's manner, that I was glad to hide my emotion by stooping to caress the little ones. Adêle is not regularly handsome, but her eyes are magnificent, and when she lifts her full, wan eyelids, the radiance absolutely astonishes you. She is small, and very fragile in figure, and her pale olive complexion gives the idea of delicate health. Her dress, and her whole aspect, had the painful air of poor gentility—telling clearly of an effort to make the smallest possible expenditure produce the best effect. Thus her gown, a common print, such as maid-servants wear, fitted her with the most scrupulous precision, and was made in the last style of fashion, her snowy cuffs and collar were embroidered by her own hands, and her coarse straw bonnet was put on with the grace of a true Frenchwoman. The fairy proportions of her feet and hands, and the quiet elegance of her whole deportment, might have become a duke's daughter. She said very few words, and her foreign accent was markedly perceptible. I could not make out at the time, neither can I tell now, whether she felt the meeting as she might be expected to feel it; one thing is certain, she is either very callous, or very accomplished in the art of controlling the emotions. Had I been in her place, I am sure that I could not have restrained my tears for a moment.

After the first greetings were exchanged, Adêle stooped to untie her little boy's straw hat, and she was thus engaged when the colonel entered the room. Now, thought I, comes the great trial; and, fully expecting her composure to give way, I advanced sympathizingly to her side, and said in a low voice, "Here is Colonel Harwood." I wanted to give her a moment's preparation for the encounter. Her face did flush a little, and she kept her eyes resolutely fixed on the ground; but, to my surprise, she very quietly finished releasing her boy from the confinement of his hat and large fur tippet, and then led him forward to his grandfather, whose salutation she received quite calmly, but in silence, and without raising her eyes for a moment. The child looked splendidly handsome; his cheeks glowing with the keen frosty air, and an abundance of rich brown curls falling around his bright innocent face, and resting on his plump white shoulders. Even the colonel seemed to be somewhat moved at the sight of his grandchildren; he twice cleared his throat, and his usual fluency forsook him. Nothing could be more painful than the silence and awkwardness of the whole party, and everybody appeared to feel it, except this inexplicable Adêle, who was quite placid and composed, though more silent than all the rest.

"What is your name, my fine fellow?" said the colonel, drawing his grandson towards him, and making a desperate effort to shake off the influence of the embarrassed faces around him. The child turned with an impulse of timidity to his mother, who put her hands upon his shoulders, and slightly urged him towards the questioner, without herself speaking. Then the little fellow lifted his cloudless blue eyes to Colonel Harwood's face, and replied in that grave, doubtful manner in which a young child strives to repeat anything that has been taught to it—"Everard, grandpapa—your own name;" then clinging to Adêle, with a fresh access of shyness, he added, in a loud whisper, "Is that right, mamma, is that right?"

Colonel Harwood walked abruptly to the window, and at this moment Janet entered; Anna introduced her to Adêle almost as if she had been an ordinary morning visitor, and it was a relief to the poor girl's overcharged feelings to turn to the baby, a sweet fair creature of eleven months old, which in five minutes she was nursing as though she understood the business scientifically, and had practised it all her life. Indeed, had it not been for the children, I do not know how we should have got through that interminable morning; the five hours which elapsed before we went to dress for dinner seemed longer than any hours that I ever passed in my life. Knowing, as I did, all the feelings which ought to have been, which *must* have been, burning with different degrees of intensity

Digitized by Google

into the very heart of every member of the party, never did the ordinary etiquette and decorum of society appear so misplaced, so utterly senseless, so indescribably burdensome. But *I* certainly was not the person whose business it was to throw them aside, and, much as I longed to clasp my arms around Adêle, and tell her how completely she possessed my sympathy, and how ready I was to love her, a single glance at her cold, inanimate countenance effectually deterred me from any exhibition of the kind, and I was as quiet and well-behaved as the rest. Janet had all the natural shyness of a very young girl, who, not having sounded the depths of her own or of any other heart, scarcely comprehends what she finds there, and fears to express any feeling without a certain degree of encouragement. So we first walked a little in the grounds, and looked at the improvements, and admired the prospects; and then we talked of the weather, which certainly one would have thought was quite a safe theme; however, it naturally led to a comparison of the climates of France and England, and then we dropped it with one accord as leading us dangerously near the subject of Adêle's former life. Indeed, the one thought which must have been uppermost in each mind seemed to start up at every turn of the conversation, like a ghost, to scare us into silence. Scarcely a word was said that my busy fancy did not interpret into some possible innuendo, or allusion to things forbidden. It really was wretched, and my relief was boundless when the first dressing-bell sounded, and the restrained and uncongenial party who had been so long keeping up the mockery of politeness, had leave to separate.

As soon as my toilette was completed I went to Adêle's room to offer my assistance to her, thinking that her one maid must be sufficiently employed in unpacking the wardrobe and attending to the children. I tapped at the door, and receiving no answer, opened it to ascertain if the lady had already descended. Adêle was lying on the bed, her head thrown back, and her eyes closed. She was still in her morning dress, and I advanced in some alarm, inquiring if she was ill. At the first sound of my voice she started up, and her naturally pale cheeks were flushed with the deepest crimson as she hurriedly answered that she was a little tired with her journey, but quite well, and would dress immediately. In another moment she had recovered her calmness, and the manner in which she thanked me for my offered services, showed so clearly that she would rather be left alone, that I had nothing to do but to withdraw, which I did immediately, feeling that my intended kindness had been repulsed. Yet her manner was too gentle to give offence, and I could not divest myself of the idea that she was very unhappy. Even now I see her face before me, as it appeared when I entered the room unawares—the expression was that of exhaustion and acute suffering. Why does she thus withdraw from my sympathy? Surely she must see that, among these cold hearts, mine, at least, is ready to open to her with affection, if she would only let it. But there is that about her which effectually checks every demonstration on my part, and the more I warm towards her, the more resolutely and effectually chilling does she become.

The evening was as comfortless as the morning. Conversation was chiefly kept up by the colonel and his eldest daughter; I joined occasionally, rather because I felt the awkwardness of being silent than because I had anything to say. Janet was quiet and timid, and Adêle maintained the composure and reserve of her manner unaltered, scarcely lifting her eyes for a moment, and acquiescing in everything that was said, in as few words as possible. Sometimes I think she is excessively afraid of the colonel, which is not wonderful, considering their relative positions. Sometimes I think she is really and truly very dull, and has no opinion of her own about anything. Indeed, this latter supposition appears highly probable, from her total absence of interest in every subject that was discussed. Whether Anna spoke to her about the shortness of the days at this season of the year, or about the beauty and intelligence of little Everard, there was the same unmoved, unbrightening countenance, and the same unmeaning and polite affirmative. She has none of the volubility said to be so characteristic of her countrywomen, and I do not think she could bring herself to utter more than ten words in succession. Yet this is not from any difficulty of expressing herself in English, which she speaks with perfect ease, though, as I before observed, with the accent of a foreigner. The colonel is evidently observing her closely and forming his estimate of her character. I wonder whether he finds, or fancies that he finds, the problem easier to solve than I do. After tea, music was proposed by way of varying the entertainment of the evening; Anna and Janet played some duets very nicely, and Adêle performed a fantasia by Doehler with wonderful precision and brilliancy. The colonel, who has some taste for music, kindled into admiration, and pressed her to sing, which at first she very decidedly declined. When he reiterated the entreaty, however, appearing to imagine her refusal a piece of conventional young ladyism, she hesitated, colored, and finally moved to the piano, with the air of a victim, struck a few chords, and began Beethoven's exquisite "Kennst du das Land;" but her voice was hoarse and feeble, and scarcely carried her through the first page; when she attempted the accelerated time of the second, it failed her completely, she broke down in trying to reach the higher notes, and rose in some perturbation ere she had finished the verse, professing her total incapacity to continue. We were of course very civil in our regrets, but her want of power was so manifest, and her vexation at it so irrepressible, that the matter was immediately dropped.

Dec. 22nd.—The same state of affairs continues. I do not think that a single member of our party is more intimate with Adêle now, than when she arrived on the 18th; yet I have done my utmost to penetrate her reserve, and so has Janet, in her own innocent manner. Every morning directly after breakfast Adêle retires to her apartment for two hours, "in order," she says, "to carry on the education of her little boy." Of this the colonel highly approves, though, if the urchin, who is only three years old, were really pursuing his studies at the rate of two hours a day, I should consider it one of the most shocking evidences of the march of intellect that has ever come under my notice. I do not believe a word of it, however, and think it is only a pretext to obtain a short time of freedom during the day. At about twelve o'clock the lady appears, and stitches diligently at her worsted-work till luncheon; I have watched her, and I do not think she once lifts her eyes from the canvass. Such excessive industry is in itself a bar to conversation, and ours accordingly flags; five minutes being the average interval that elapses between the remarks that we respectively contrive to originate. After luncheon the carriage is ordered for a drive;

Digitized by Google

Adêle and Anna invariably form two of the party, and I am sometimes a third, but more frequently the colonel drives out with them, and I take a long country ramble with Janet, which I thoroughly enjoy. I pity Adêle for these drives; if she has any feeling beneath that frigid exterior, how intolerable must they be! And so passes the day; the evening being generally occupied by music or cards, for the colonel has descended to vingt-un and speculation, now that we are too numerous for his rubber. And all the day through Adêle is quiet, cold, and complying as at first. The only symptom which she gives of having "that within that passeth show," is an occasional low, long sigh, so suppressed indeed, that you would not notice it unless you were close to her, but indescribably painful to hear, because it seems to come from an overcharged and worn-out heart.

Later on the same day—The colonel has done me the honor to impart to me his opinion of his daughter-in-law. He thinks her a very sensible, well-behaved young person, fully conscious of her own position, and very grateful for, what he is pleased to denominate, the kindness which she has received. He thinks, too, that she appears to possess a most docile and gentle disposition, and he added that he had no doubt that the purpose for which he had invited her here would be completely answered. I looked as I felt—curious; but he did not deign to enlighten me, and left me with a slight bow and a benignant smile. There is profound peace between the colonel and me at present. I think, however, that we owe it rather to the deep interest which we have both been taking in our new inmate, and which has absorbed all minor feelings, than to any more congenial dispositions in ourselves. Whatever the cause be, the result is that the colonel is himself again, and to-day at dinner he treated us to one of his best-turned periods on the subject of domestic life, illustrating his theory of perfection by a modest appeal to the practice of himself and his daughters. Warming with the theme as he went on, and thinking only of his *daughters*, he said: "I have always reflected that, in the intercourse between parents and children, the utmost possible independence should be allowed on the one hand, the utmost possible deference maintained on the other. I have endeavored, to the extent of my ability, to carry out this principle, and I flatter myself, Miss Forde, (he was in full swing now,) that it would be difficult to find three persons more thoroughly happy in each other's affection than myself and my girls." Self-deceived as he was, and strange as it seemed that he should really be able to reconcile to his own practice a theory such as that which he had just enunciated, he was positively amiable at this moment. There was such genuine affection in the glance with which he regarded Anna and Janet, that one felt disposed to overlook the little strain of triumph in which he was indulging, and to forget that, in applying his principle, his mental vision was affected with an unconquerable squint, so that while he thought he was looking at the "utmost possible independence allowed by himself," he was in reality only seeing the "utmost possible deference," which no one could deny that he exacted from his daughters. But I had scarcely time to observe him, for my attention was riveted to Adêle's face of irrepressible wonder. When he commenced his allusions to domestic felicity, she had stooped a little more forward than usual, and appeared intensely interested in dissecting the chicken-wing which lay on her plate. As he proceeded, she lifted up her splendid dark eyes—I declare it is the only time I have fairly seen them since she entered the house, and literally *stared* at him, with an expression of inquiring amazement, as though she thought he were a singular sort of phenomenon which it was really worth while to investigate. Then she colored violently, cast down her eyes again, struggled to resume her usual manner, but as he concluded, answered him, as if she could not help it, in a low and bitter voice, "You are very sarcastic."

The colonel turned towards her in unfeigned surprise, but she stopped the inquiry which was on his lips, by saying hurriedly, "I beg your pardon for my bad English, I meant very successful."

"Yes," replied he, with an air half puzzled, half uneasy, "I believe I may flatter myself that I have had some success."

There was an awkward kind of pause, during which the blush which had overspread Adêle's features seemed rather to deepen than to diminish, and it was a relief to us all when Anna gave the signal for withdrawal. Adêle, as we passed through the hall, said something confusedly about having a bad headache, and ran up stairs to her own room, from which she did not emerge till we were assembled at tea. It had seemed to me that she ran away because she was unable to restrain her tears, and my opinion was now confirmed by the sight of her flushed cheeks and red eyes. I do not understand her, though it is plain that she feels a great deal more than she chooses to exhibit. If she would but let me comfort her!

Dec. 27th.—It is long since I have opened my journal, for the events of the last few days have absorbed me so completely, that I have found neither time nor inclination for writing them down. I must now, however, attempt to narrate them in due order.

During the first four days of Adêle's sojourn amongst us, it was evident to all that little Everard was making rapid progress in his grandfather's affections. There are few hearts that can resist the fascinations of a child at that most charming of all ages, (just three years,) and the mixture of perfect unconsciousness with perfect confidence is as amusing as it is irresistible. Whether from previous instruction or from natural inclination, the little fellow took a decided fancy to his grandpapa, and used to climb the colonel's knee and pull away his newspaper with an audacity which made his aunt Anna's hair stand on end, but which generally obtained a caress rather than a reproof. Adêle watched the progress of affairs quietly, but with manifest satisfaction; I too had begun to grow sanguine, though an idea which sometimes crossed my mind, that the colonel intended to disinherit his son in favor of his grandson, prevented me from indulging hope with any degree of confidence. Thus did matters stand, when, on the fifth day, Colonel Harwood stopped us as we were leaving the dining-room, (this seems to be his chosen time for family scenes,) and expressed a wish to speak with Adêle. All the poor young lady's assumed calmness forsook her in an instant. She became as white as the dress she wore, trembled, and grasped my arm for support, with a most appealing glance that seemed to express her confidence in my sympathy, and to implore me not to leave her. The colonel perceived her trepidation, and apparently not sorry to have a female auxiliary at hand in case of hysterics, for which he entertains a peculiar horror, (at least, thus I interpret his conduct,) requested me also to remain, with his blandest smile. The door closed behind Anna and Janet, and we were left alone. Adêle sat

Digitized by Google

down, breathing quickly, and struggling for composure. The colonel stood before her, cleared his throat slightly, and after a moment's pause, thus addressed her.

"You can hardly have supposed, Mrs. Harwood, that I had not some ulterior motive in inviting you to my house. Pray do not be distressed. I entreat you not to agitate yourself," (how coolly, when your very heart is bursting, do friends entreat you "not to be agitated," as if it were a matter of choice, and you were doing it on purpose because you liked it!) "I wish now," proceeded the speaker, "to explain to you as briefly and as kindly as possible, what are my present intentions, and I shall then hope for your answer, though I would by no means hurry you to a decision."

He paused, and Adèle bowed her head in reply. Her cheeks were glowing, her eyes sparkling, her whole countenance joyful with the radiancy of hope, but she really did not seem capable of articulating. I thought her absolutely lovely at that moment.

Colonel Harwood continued; "I intend to make Everard my heir; the boy has every promise of talent, and an excellent disposition. It is natural that, entertaining these intentions towards him, I should wish to have him under my own eye, as much to afford him those advantages which are suitable to his prospects, as to remove him from those influences which I should consider injurious to his character while it is in process of formation. I therefore propose to receive him as a member of my family, to be treated in all respects as if he were my own son. But I have more to say to you. During the last four days, I have had some opportunities of becoming acquainted with you, and I can assure you that they have afforded me unmixed gratification. The deference of your manner towards myself proves abundantly that you feel and regret the offence committed against me by another. I wish, as I said to you in my note, to distinguish —I should be sorry to involve innocent and guilty in the same condemnation—in short, while there are offences which I feel that I can never pardon, there are errors towards which I would fain be indulgent. I feel that a permanent separation between yourself and your child would be a great drawback to my present scheme, and I consider you in all respects a fit companion of my daughters. I should therefore wish yourself, and both your children, to become inmates of my household, and I need scarcely say that I am ready to take upon myself the whole expense of your maintenance, and of the education of the little ones. And although I stipulate that all intercourse with my—that is, with their father should cease, I am quite ready to allow of an interchange of letters at stated periods. It may be as well, perhaps, to point out to you, in conclusion, the advantage which will accrue to that person, by the proposed arrangement; he will be relieved from much expense and great anxiety—moreover, I would pledge myself, under such circumstances, that his interest should be properly cared for."

He ceased. Adèle had listened to him in speechless and wondering attention, as though she scarcely trusted her ears, or comprehended what she heard. Twice or thrice she passed her hands over her eyes and forehead with an impatient movement, as though she would fain get rid of some oppressive weight or film which impeded her perceptions. As he concluded, however, she started from her seat, clasped her hands together, and exclaimed, with a vehemence of agitation which defied all restraint, "Good God, is it possible? What have I been listening to? My own Charles—my beloved, injured, suffering husband—is there, can there be, such a cold, hard heart in the world as to ask me to leave him? I could not have believed it. And you are a father! Oh, you unhappy man, you who have never known, who have never felt, who cannot even understand, what a true, deep, fond affection is, how it brings happiness in misery, and strength in weakness, learn that I would rather live in the extremity of want, that I would work, starve, die, sooner than deprive myself and my children of the delight of their father's presence, or take from him the comfort of our society. Learn that no temptation should induce me—no, none—to give my little ones such an example as yours, instead of such an example as his. Learn that I hold the poorest beggar who loves his children, and who does his duty by them, for a better and a happier man than you are. And is it possible to have such a cold heart? Separate wife and husband, father and children—I would sooner send my son to a charity-school, I would sooner take him to a workhouse, than give him to be chilled and hardened by you. And all these four years that we have been so miserable, that we have lived in actual want; that our days have been days of labor, and our evenings evenings of weariness, and our nights have too often passed in the sleepless woe of those who knew not how to provide for the morrow; when each has lain through the long sad hours scarcely daring to breathe for fear of disturbing the other, and daylight has come and shown that both were still waking; even that very anxiety has been our happiness, while it has deepened our misery, because it rose out of the depth of our love. My own dear Charles! and through all these long melancholy years he has endured in patience, and not once, never once has breathed one syllable of complaint against his father. His reverence and his affection have never failed him for a moment—if he grieved, it was for your displeasure, not for his own suffering; he has hoped, longed, lived upon the idea of your forgiveness, he has taught his boy to love your name, and tried to teach the same lesson to his wife; he has condemned himself, but never you, and forgotten all your harshness to think of your old kindness, which must have been fancy, and your former affection, which could be nothing but a dream. And he sent me here in hope, and urged and entreated that I would suppress my indignation, and forget his wrongs, and wait patiently; and for his sake I have borne it, for the love of him was able to subdue the feelings which had arisen out of itself; but I have scarcely been able to bear it—and he is hoping still —waiting for the happy news—and *this* is what I have to tell him. This! God forgive you, and God comfort him!"

She had poured forth these burning words with an impetuosity which precluded the possibility of interruption, and she now stopped because utterance failed her, and burying her face in her hands, gave way to an agony of tears. Colonel Harwood stood absolutely silent; the voice of truth and nature was too strong for the man of conventional principles, who had built up in himself a fabric of imaginary virtues, and gazed upon it and exhibited it, till both he and others had forgotten that these very foundations were rotten, and that a breath would blow it away. It seemed as though the lie of his whole life stared him in the face for the first time, and he was struck dumb by the vision.

Adèle now struggled to compose herself, and

Digitized by Google

grasping my hand, continued to speak, though in an interrupted and faltering voice. "Dear, dear aunt Peggy, forgive me—how I have repulsed your kindness, and put away your sympathy! Indeed, indeed, I could not help it. And my sweet Janet too, what must she think of me? But I had been schooled into calmness and moulded into submission; I had promised him that nothing should induce me to show what I really felt, and the only means of doing this was never to give way for a moment. I dared not even meet the kind eyes that I knew were looking upon me, or it would have been all over with my self-command. Four wretched, wretched days! and how have they ended! But I will go—this very night—I will not sleep under the roof again—I will go back to him, to my deceived, hoping, desolate husband, and bring him, at least, the comfort of one loving heart that could never turn from him. But ah! how shall I tell him—how can I crush his hopes? It will kill him, I know it will! And it is his own father!"

She turned away as she pronounced the last agitated words, and was hurrying from the room. So excited was she, that I believe she would have been out of the house in another half-hour, children, trunks, and all, on the road back to her darling husband. Her hand was on the lock of the door, but Colonel Harwood called her back. "Adêle," said he, in a low, strange, disturbed tone of voice, "do not go. Come here—I did not know that Charles, that my son—" He stopped speaking. Adêle was so absorbed in her indignation that she scarcely listened or comprehended, but I seized her hand, and yielding to the impulse of the moment, exclaimed, "Go back, go back—he is going to forgive him." She gazed first in my face, then in the colonel's, with a wild look of amazement; then forgetting her anger in an instant, in the return of hope for Charles, she darted back, threw herself on her knees, and covered Colonel Harwood's hands with tears and kisses. I was not mistaken. In the bottom of every man's heart there is, there must be, a stream of true natural feeling; the difficulty is to penetrate deep enough to find it. Often, as in the present case, the rock must be stricken ere the waters will flow; and, certainly, it must be confessed that the stroke had been no light one. The idea of his son, suffering, repentant, but still loving and revering the father from whose displeasure his misfortunes proceeded, had unclosed the gates of the old man's heart. It had taken him by surprise. All this time he had looked upon Charles as a disobedient and rebellious child; upon himself as a justly severe and injured parent. The tables were turned, and he found himself the hard-hearted oppressor of one who had never ceased to deplore a fault for which he had already been bitterly punished. A thousand softening recollections had been called up by Adêle's vehement words—in short, he had been taken by storm, and was compelled to surrender at discretion. But the revulsion of feeling was too much for the young wife; she fainted, and was carried to her room, but not before she had mustered self-command enough to tell me to write to Charles, and to give me his address, which, somewhat to my surprise, was in Exeter. He had accompanied her to England, and was holding himself in readiness for the summons which he could not help hoping to receive, and which, I write it with joy, he received that very evening.

He arrived by daybreak the following morning. His father received him alone, and what passed between them, I know not; but the reconciliation was evidently complete. The young man's joy was absolutely rapturous—he could not contain himself. He folded his sisters in the closest embrace, kissed his aunt Peggy a dozen times in a minute, tossed up his boy, and flew at his baby, till even the pale Adêle lifted herself from the sofa where she lay, exhausted both in mind and body, to implore him to "take care of the children." And then, sobered in a moment, he stole to her side, and wound his arm around her, looking at her with an expression in which the love of years was concentrated, and calling her "his own sweet wife, to whom he owed it all." I was surprised to see how completely all Colonel Harwood's absurdities vanished beneath the refining and elevating touch of nature. He now *was* what he had before professed himself, a father in the highest sense of the word, and the deep and affectionate respect with which Charles evidently regarded him, did not seem misplaced or exaggerated. When we separated on that happy Christmas night, the expressive manner in which he uttered the few simple words, "God bless you, my son," went to the hearts of all; and Charles himself involuntarily dropped on his knees, and kissed his father's hand, while his eyes overflowed with tears.

I felt that the sincere repentance, and open acknowledgment of error, visible in my nephew's whole deportment, effectually connected the view of the case which Adêle's excited feelings and passionate love for her husband had given, and made the moral of the story as true as the end of it was beautiful. No one who saw or heard Charles could forget that he felt that he had offended deeply, and suffered justly, and the gratitude with which he received his father's forgiveness, showed clearly that he did not think that four years of poverty and unhappiness had been too hard a punishment for his disobedience. What a joyful fortnight was that which followed! Even Anna warmed into amiability—and, as to the colonel, I actually learned to love him, and to consider those foibles, which I had before found so annoying, as the most innocent peculiarities in the world.

And how did I feel as I drove away from Duncombe Park, when my visit was concluded, and I recalled that sentiment which I had inscribed in my journal, namely, that I never liked to leave a house without being able to reflect that I had done some good in it? What good had I done here? Little enough—but I had received much. The reconciliation of father and son had indeed been effected, but not by any of my judicious contrivances and ingenious manœuvres—it had been the straightforward work of genuine feeling, without any contrivance at all. And though I cannot but feel a little humbled when I recollect my anticipations of success, I have received a useful lesson, and one which in nowise diminishes my exceeding happiness in the result. Colonel Harwood and I parted excellent friends, and I am engaged to spend another month with them in the autumn of next year, to celebrate my favorite Janet's seventeenth birthday. To this visit I look forward with great interest. I am very curious to see how those various characters will assimilate, after the tension of feeling consequent upon the reconciliation has subsided sufficiently to allow their respective peculiarities to resume their usual prominence. I want to study Anna, who is still a mystery to me, to prosecute my intimacy with the interesting Adêle, to become as great a favorite with the baby as I

Digitized by Google

already am with little Everard, to enjoy the society of Charles and Janet, who both love me, and towards both of whom I feel more as a mother than as an aunt, and to do my best to regain the ground which I have lost in my brother-in-law's estimation. I must close my description of my first visit to Duncombe Park, by heartily wishing a happy new year to all its inmates—and I shall be at least as much disappointed as grieved, if the wish does not attain fulfilment.

ITALY.

ITALY has become a standing subject in the newspapers, and the interest in her position by no means diminishes. Austria seems to have reöccupied Ferrara; an act of hostility for which the pretext does not yet appear.

In the provinces of Naples there are immense military expeditions, professedly directed to quell banditti. It is reported that the excesses of the banditti have nothing to do with politics; but it is incredible that whole armies should be directed against mere thieves. The military movement is conjecturally explained by two suppositions—that the pretended robbers are really rebels; or that the banditti are a pretext for advancing troops to the Roman frontier in secret concert with Austria. There may be truth in both suppositions. In the capital of Naples, the educated classes show an unmistakable disposition to sympathize with the cause of national freedom.

Meanwhile, the pontiff is strengthening his government by secularizing many of the officers; he is replacing old effete intriguers by honest and vigorous men; and he has with him the very hearts of the people.

We observe that in Switzerland, as it is stated, Lord Palmerston has sent a verbal message to the president, through the British representative, Mr. Peel, promising to respect the independence of the Swiss, and recognizing their right to modify their federal relations. But the terms are equivocal, and the actual note addressed to Mr. Peel has not been published.

It is to be presumed that, à fortiori, Lord Palmerston must be prepared to make a similar declaration to the Italian powers. The case of the Italian states is very different from that of Switzerland, and much more deserving of such support. There is no question of violating established sovereign rights—of deposing sovereign authority: no one state pretends to dictate to the rest. It would be a great mistake to suppose that Italy presents an example of mere revolt; nothing can be more opposite. It is rather that she has *regained* her ancient strength, her ancient self-reliance, and knows that she has done so. She, once the mistress of the world, is about to put in her claim to take her place among the nations. It will probably be a consequence that she will shake off any alien rulers who may refuse to become thoroughly Italian, and continue to enforce their hold on Italian territory by an oppressive grasp; but that is not the object of the present movement in Italy: the object is, gradually to set free the intellect and independent powers of the people, and to endow them with institutions such as they have known before—institutions suited to a great people.

A suggestion often made has been revived by an intelligent writer in the *Times*, who lives at Rome—that the British government should give an invaluable moral support to the noble efforts of the Italian patriots, simply by sending a representative to Rome. Even if he went without a formal diplomatic style and title, but were deputed notoriously "for a purpose," this writer, "Anglo-Romanus," thinks that the effect would be attained.—*Spectator*, 21 *Aug.*

AUSTRIA has strengthened her grasp on the Roman territory; instead of merely throwing a garrison into Ferrara—which she had under certain treaty stipulations a right to do—she has taken military possession of the whole city. Although on a general view the object of Austria is quite plain, her immediate object and specific pretext do not yet appear. Some impute the demonstration to the dotage of Metternich; others to distraction of councils among the local authorities in the absence of sufficient instructions from Vienna. The advance looks at least premature. It is probable that Austria may know that an explosion is imminent in her own territory, and that the demonstration ostensibly directed against Rome may really be meant to overawe Milan. But if so, there is the indiscretion as well as the foresight of fear in the sally. Austria has yet no sufficient reason to allege for her violation of Italian territory; for her allies in Rome and Bologna failed to get up a pretext. The aggression has only served to call out remonstrances from Rome, the most multitudinous offers of volunteer service from the young men of the Eternal City, and the sympathy of foreign powers. It is even said that French and English fleets have been ordered to move up the Gulf of Venice. Events have happened that were more improbable and more untoward than that would be.

If obscure signs in the London press may be trusted, our government is on the right course, and England will not fail in her duty to Italy.

A well-written letter to the *Times* calls to mind technical difficulties to a direct diplomatic intercourse between the courts of London and Rome. Up to this hour, says "Ignotus," the legitimate title of the British sovereign to the throne is unrecognized by Rome; sentences of excommunication and deposition put forth by the predecessors of Pius the Ninth against the Queen of England and all her adherents are unrevoked; and these include the bull "in cœnâ Domini," renewing every year anathemas of excommunication against the British sovereign, clergy, nobles, and people, for disobedience to the pontiff. It is suggested that Pius should revoke these obsolete acts. But, however reasonable such a step would be, there are obvious difficulties. It is hardly for Pius to go prying into the misdeeds of his predecessors, which have not been formally and specially brought before him. As compared with England, he is much the weaker party; and if he were to make the first advance *proprio motu*, and to take nothing by his motion, he would be left most awkwardly in the lurch. England can better afford to make the first advance; which might be done quite easily and decorously. A confidential messenger could be sent to Rome, with the powers but not the formal style of an envoy, to negotiate the renewal of diplomatic relations; offering an alliance, if the pope himself would remove those obstacles of which England has a right to complain. Such a mission would answer every purpose without in any way committing England.—*Spectator*, 28 *Aug.*

FRANCE.

The French Chamber of Peers has been convoked by King Louis Philippe to try a peer for murder; but the prisoner has escaped from gaol and judge, by committing suicide.

Never perhaps did any atrocious crime excite more indignation than the butchery of the Duchess de Choiseul-Praslin. From the first, the wishes of the public anticipated the issue of the trial; and the execution of the suspected husband was demanded with such bitterness as amounted to intimidation of the judges. The government and the Court of Peers were threatened with the consequences of acquitting the accused. The public had altogether prejudged all the parties concerned. The injured duchess was worshipped as a faultless woman. The duke would be called a demon, but that it suffices the popular wrath to remember that he was a peer; his guilt was settled without extenuation of any sort. A governess, whom he is suspected to have admired too ardently, is adjudged to have been an accomplice. It is not, indeed, established on any known evidence that the duchess' jealousy of this person was well founded; that the dependent felt more than a reasonable attachment to her pupils and their father; or that the duke may not have had some provocation in the high-toned upbraidings which he is supposed to have received from his wife. The public has settled, without the trial, that she was spotless, the governess sinful, and the duke without a redeeming motive. His escape, though by a mortal and torturing way, is the signal for a shout of anger so bitter that it takes the shape of scornful jests. It is all but openly asserted that the government, by leave or wish of the king, must have permitted the police to supply the duke with poison, in order to spare shame to him who was their companion, and to save the institution of the peerage from the disgrace which the trial would have entailed upon it—such a trial at such a time! If these suspicions are correct, the indulgence extended to the duke is not more revolting to the notions of morality on this side of the channel than it was impolitic on the French side.

The manifest and general sense of contempt and hatred for those high in station or office has been only aggravated, not caused, by this incident. Already the charges of official corruption had provoked such a feeling that the sight of a minister in the streets raises a shout of "Au voleur!" That this feeling, however, has now been worked up to a most dangerous pitch, is a fact corroborated by the demeanor of the royal family and the upper classes. The private murder is regarded as a public calamity, which *must* have ulterior consequences. Poor Queen Amélie, always so anxious for her husband, has fainted several times. The duke now accused of wife-killing was a friend and frequent companion of the Duke de Nemours; an awkward intimacy, and one which would make the suspected connivance at suicide only the more impolitic.

But the French government seem to have been exasperated by their reverses and difficulties to a pitch of desperation beyond all thought for policy. While this ferment goes on, the officials wage open war with the press. Seven journals have been seized; one for a licentiousness in a story—though the license, it is said, was not greater than has often passed; others for sneering at the demoralization of the privileged classes, for significant but generalizing exhortations on honesty, or for copying such remarks from other journals; and some for anticipating the stages of these strange proceedings with too much probability. A more uneasy and dangerous state of feeling has not existed in France since July, 1830.—*Spectator*, 28 *August*.

ROYAL ABDICATIONS.

We hear on all sides of monarchs disgusted with the exercise of sovereignty. King Leopold of Belgium, one of the shrewdest and ablest of men, who has managed his most uneasy people with a success that few could have rivalled, is said to be at last weary of their exigencies. He has just given them a liberal or ultra-liberal ministry, but seeming to think they were foolish to insist upon such things. His majesty has yielded to his people's wishes, but not without a feeling of impatience and disgust, natural enough to sovereigns put out of their way.

There is a story of the Prince of Orange meditating an abdication of his rights as heir-apparent, and for the most singular of all reasons that ever entered into the head of prince—viz., to spite his wife, and prevent her ever becoming queen. The story is scarcely credible, though the mutual piques of the spouses is but too true.

Then we have the Emperor of Russia, whom report declares to be sick of reigning, and only anxious for Italy, and the *dolce far niente* of private life. When he sent so much gold to purchase funds in France and England, it was said to be for the professed purpose of having the exchanges and the credit of the two countries in his imperial power. It is now said that all this gold is merely to avoid the old mistake of Charles the Fifth, who left himself at St. Just at the mercy of his son and successor, and was left penniless and provisionless by him.

As the czar sighs for the south, Isabella of Spain sighs for the north. She is weary of that continual intermeddling of public interest with her private happiness. The genius of politics, Louis Philippe, began by sacrificing her to a Cretin husband, and the same genius now excites this same husband to render his wife as uncomfortable as possible; so that the girl-queen is driven to say—"Take my throne if you desire it, but leave me at peace."

The pope is at times in similar doubts as to the happiness of wearing a crown. His, to be sure, is a triple one, and proportionately heavy. Poor Pius! his delight is in being liberal and doing good. But this amiable taste has thrown him into a sea of troubles. He has Austria, France, and his own cardinals plotting against him—his people impatient and hard to satisfy. The good father is frequently perplexed between them, and his instant thought at such moments is resignation.

Examples of such a feeling and such a purpose, were rare in the olden time, and betokened a very philosophic or pious spirit—a desire similar to the prevalent one of quitting the world for a cloister. But now it is not love of asceticism, or a wish to exchange the excitement of courts for the excitement of ultra-devotion. It is simply that the comparison between public and private life becomes yearly and daily more and more in favor of the latter. More people forswear ambition than used to do so; and the freer the country, the more general is this disgust. In America a man of refined intellect or mind would scorn to enter upon public life. In England we have not gone so far. In despotic countries the great public personage is the sover-

Digitized by Google

eign. And we see instances multiplied of the wish to escape from it.

Private life is certainly becoming too comfortable—too secure—too much unmixed with doubt and care; whilst the means of amusement, of exerting the mind, and even illustrating one's name, independent of public life, have increased in a degree unknown and inconceivable to those who lived two centuries back. And we are coming to the day when thrones will want occupants—when ministerial portfolios will go a begging—when our chief anxiety about a king will be how to catch one—when people will run away from cabinet office as if it were a conscription, and eschew parliament as if it were the plague. We are certainly not so far gone as the Americans. But there were strange symptoms on our hustings, as there are singular ones in the courts of Europe.—*Examiner*, 28 *Aug.*

THE QUEEN'S VOYAGE AND CHILDREN.

NEVER certainly were the habitual life and disposition of a sovereign exhibited to a nation in more favorable guise than those of Queen Victoria during her sea-voyages. The history of the cruise to Scotland, in our present number, is like those which have preceded it. It displays the chief traveller in the most engaging light. We see her, the ruler of a maritime people, recurring for her holyday pleasures to the enjoyment of the sea; riding the waves with a fearless familiarity that yet has in it nothing unfeminine. The sovereign is pleased to gratify her people by going among them and reciprocating courtesies. Less reserved than some of her predecessors, Queen Victoria, surrounded by her family, still seems attended by a thoroughly English spirit of domesticity: the manner in which the children accompany their parents, share the walks of their father on shore, and enter into the whole spirit of the voyage, is simply a model of the national manners according to their best type. And while her husband and the children are "stretching their legs" on shore, the accomplished lady is seen with her pencil exercising her talents by sketching the scenery around.

These sea-voyages and progresses have their practical uses. They make the sovereign and country mutually acquainted. While they familiarize the sovereign with the aspect of naval life, they set to the people a good example of trust in the native element. Whereas too many crowned personages, forgetting alike the responsibilities of royalty and of paternity, have wasted their time and health in forbidden pleasures, the Queen of England, mother of a line of kings, seeks her pleasures from the gracious hand of Nature; borrowing renewed vigor for the imperial life-blood of her race from the elements in which they are to maintain the glory of the nation.

It is the same with the children, now of an age to share their parents' healthful excursions. The Prince of Wales for the first time joined the tour to the lands whence he derives two of his titles, as Duke of Rothsay and Baron of Renfrew. It is hundreds of years since Scotland saw an infant Duke of Rothsay; such a phenomenon is perhaps totally unprecedented in some of the wilder regions visited. The young prince and his sister the princess royal are made to learn the enjoyments of natural beauty; *such* enjoyments forming a most valuable part of moral education. The excellent training, begun by that estimable woman the Duchess of Kent, is worthily continued by her daughter in the third generation.—*Spectator*, 21 *Aug.*

QUEEN VICTORIA has set herself down in her Highland lodging at Ardverikie, among the Macphersons. She was welcomed by Cluny Macpherson and his kilted clansmen, a host of mountaineers, and a Scotch mist. The district is not only remote, but wild: the very house she lives in, compared even to her abode at Blair Atholl, seems to be simple to the degree of almost Spartan bareness. It is as if she had sought the wildest and remotest spot, in order to get, not only the most robust deer-stalking for the prince, but for her majesty absolute seclusion, beyond the reach of tourists and "gentlemen connected with the press." No hope of it: the newspaper reporters are there, describing might and main; and Ardverikie will probably become a cockney jaunt.

But civilization was already struggling with the wildness, vigorously as that survives. The aborigines, it appears, have not yet coined a name for "queen," whom they can only designate by the inappropriate periphrasis of "the king's wife." How can they compass the designation of the prince consort? must they call him "the king's wife's husband?"—But they are awakening to modern sentiments. Although the district is one in which stronger traces of Jacobite loyalty remain than anywhere perhaps in the uplands of Scotland, the mountain rigor unbends to the youthful sovereign; and the Highlanders think it necessary to signify that they waive obtruding the exclusive claims of the pretender: they notify this in an inscription of "Two in one"—signifying that in Queen Victoria's person they obligingly recognize the house of Stuart as well as that of Brunswick. Another sign of the times was a copious admixture, among claymores and shields, of cotton umbrellas. In London the fashion of carrying the umbrella has visibly declined: the effeminate convenience has passed to the hardy Lochaber men. It will next come to the navy, and no sailor will go aloft in a shower without his "four-and-sixpenny cotton."—*Spect.*, 28 *Aug.*

From the Spectator, 28 Aug.

THE DISEASE OF FRANCE AND ITS SPECIFIC.

THE morbid state of France is too apparent and too serious not to indicate an approaching crisis; and the root of the disease is to us scarcely less apparent, in the want of a truly national policy—a vocation for the people—something worthy to concentrate their desires, their convictions, and their energies. It is true that in England, by a dull kind of coxcombry, which it is to be hoped we are outgrowing, we are prone to regard as disease all that is not natural to our own state when healthy, and that we have a silly habit of using the word "French" as an epithet indicating certain kinds of vicious frivolities; as though there were but one standard of manners, and we had monopolized social perfection. But the symptoms of the disease in France are not confined to the ordinary national characteristics which we so readily set down as "morbid;" the sweeping extent of official corruption, the alienation of the royal family from the affections of the people, the criminal tendencies among the high-born and wealthy, of which the world has just had so flagrant an example, are evidences of the social disorder. Still more unmistakable proof is the manner in which the people treat those overt acts. Princes are assailed with scandalous reports which the whole people circulate with a relish; the reverses and disappointments of royal persons are noted with glee; to be a minister is to be hailed in the streets with cries of "Stop thief!" a murder committed by a peer is denounced as no more than

Digitized by Google

the turpitude generally characteristic of his class. And if there were a doubt as to the gravity of these popular manifestations, it is removed by the bearing of the government; the "laws of September," a glaring infraction of the compact of July, are enforced with the lavish frequency of reckless desperation. If the people have lost confidence in the institutions under which they live, the administrators of those institutions have lost confidence in the public opinion by which they exist. It is well said by the *Morning Chronicle*, that the cement of the social fabric is gone.

We believe that the primary cause of this disorder in society has been for some time at work, and that it is the absence of any settled purpose for the national activity. Nations, as well as individuals, demand a purpose to keep them in a safe and healthy state of moral activity. The man who lives without an object for the exercise of his tastes, energy, and ambition, is not only useless, but is ever open to temptation, and is almost certain to take to mischief for "something to do." With nations, the temptations are still more manifold and vast; the energies that must be turned to some action, to mischief in default of anything else, are proportionately gigantic—the need for action commensurate. Accordingly, all nations, so long as they were great, have had some determined work chalked out for them. To Greece fell the task of developing intellectual civilization in the early days of history; self-development, philosophy, and art, were national objects, the more vast and glorious for the rudeness and imperfection of the means at hand. Rome set herself the task of conquering the world, and began to decay when her work was done. From mythic ages, India and Egypt have handed down to us immense monuments, the product of some vocation, which, dark and rude though it may have been, must have been national in its scope and influence. The propagation of creeds and conquest of territory have been common objects which have excited the nations, Christian and Mussulman; have exalted great powers like that of Christian Rome in Europe, of Islam in Turkey, of the Moors in Spain, of the Normans in England, of the Spanish and English races in America. Even under the corrupt monarchy of France, a national worship of "la gloire" maintained a certain unity of action, which enabled the dominant classes to continue that incredible oppression of the bond classes until the day of its ceasing was regarded as the thing incredible, and the master sneered at the threat that his extravagant refinement of tyranny would make the slave rise. When the fact did come, he would not have believed his senses under evidence less than that of the horrible revolution.

But the monarch is no longer the state; and circumstances have combined to debar France from having any recognized national purpose. The present monarch, appointed as the representative of a national policy, as the deputy of a distinct popular opinion, has forgotten the duty which he undertook in the presence of the people, to maintain that policy and opinion, and has at last compelled his most sincere admirers to confess that the business of his old age has shrunk to purely family objects and interests. Nodding with the drowsiness of the tomb, the old man thinks now of nothing but keeping quiet in his palace and settling his sons.

As to the minister, the progress of time, the very success of his own policy, has developed a serious defect in the political theory of the philosophical historian who rules France. His main object is to preserve; to improve if forced, but less as a means of preserving institutions than as a means of contenting the restless. What the king desires for family purposes, is the same thing as the principle of M. Guizot's administration—quiet, mere passive quiet. The last session was a triumph of his policy; nothing was done—all was neutralized, hushed, postponed, shelved, set at rest. Algeria is a mere vent for the vulgar restlessness; too paltry for a truly national object, it makes a place for one of the king's sons, a subject for the annual speech, patronage for the ministers, and a road for those loose fish who like to "go to the devil" their own way, and who would make a noise if prevented. M. Guizot hates a noise. His policy seemed excellent, and so far was excellent, while war was the shape of danger which most threatened France and Europe. The war that was threatened in 1840 was a contest between the powers which must lead Europe in all peaceful advancement, and would have been nothing but calamitous. The danger to France now is the internal corruption incident to political inertia. France has no vocation; her king is thinking only of family interests; her minister wants only quiet; her statesmen are bribed and corrupted; great interests are compromised to purchase silence; paltry interests and corrupt intrigues supersede political activity; her writers cannot speak, for they are silenced by "the laws of September." The philosophical historian understands the people among whom he was born less than the mongrel adventurer from Corsica; when Napoleon planted the standard of France on the Po, on the Rhine, amid the snows of the Alps or of Moscow, and told his people to march, he proved himself more of a Frenchman than M. Guizot. He too might say "L'état, c'est moi"—until in personal objects he forgot the national objects, and left the nation without a purpose that engaged its own affections. M. Guizot's very aim is to keep the country without an active purpose. And he has been so far helped by circumstances—by the inferiority of his opponents, the levity and triviality which prevail among the statesmen of the day—that public opinion itself is effectually unsettled and distracted. It is not that the favorite purpose of France is thwarted by her rulers; she has no great and determined purpose. Hence political scepticism, official corruption, and popular revolution—for that is what it amounts to.

Nor is it that there is no great work in Europe worthy of the enlightened active intellect of France and her vigorous energies. To mention one alone, there is the emancipation of Italy. Were a Napoleon to arise—still better, were a statesman animated by the love of his race, instead of mere military ambition, to declare that France would once more gather her faculties and strength to assert and vindicate the opinions of Western Europe beyond the Alps—were France to help in establishing once more a "regno d'Italia," but *not* as a French province, to guarantee the monarch of Rome not in the person of its emperor's son, but in that of the great man who is so popular with the people of France, to give support wherever the Italians claim it, in a spirit worthy of the July of 1830, for Italian objects—France would again recover her healthy activity, her generous loyalty. Corruption would once more be left to the base alone; and revolution would be forgotten.

PUNCH.

A CHANCE THAT DOES NOT OCCUR EVERY DAY.—In the event of Holland, or Belgium, or Russia sending over to England for a king, the question is, whom can we send? There is old King Cole, but he is a merry old soul, and would almost die of *ennui* in such low countries. His pipers would have nothing to pipe but their eyes, and his fiddlers would find it rather hard work playing with the fear of the bowstring before them. There is also King Death. We could well spare him; but we imagine he is too busy on the railways, to seek for any other line just at present for the exercise of his peculiar talents. What other kings are there?—not one, excepting the Railway King, and he is wanted to open the railway parliament next year. We are afraid the only representatives left for the kingless countries above mentioned, will be the kings of the drama. There is Diddear, who has long played the *King* in *Hamlet*, and he is very perfect in the words; and there is George Bennett, also, who has never played *Duncan* without getting three rounds of applause; and there is Charles Kean, whose *Richard* would do admirably for Russia, where his great point of "Off with his head," would be taken as a proof of his great natural ability for the part of emperor.

These new kings could be imported at a very trifling cost, for they have each got a good stock of royal robes, with ermine collars, which would only require looking up a bit, just to clear them of the moths, and they would be ready to start to-morrow. They could find their own crowns also, and would have the advantage over a Coburg, of knowing how to start, and frown, and command, and "blessing the people," exactly like a real sovereign. We really do not see where better kings can be got for the money, and we do not think that England would cry her eyes out at parting with any one of them.

Supposing these talented gentlemen, however, do not accept the above engagements, there are the three ex-kings of Somerset House, who might find the offer a tempting one for carrying out in foreign countries the beautiful supremacy of the Poor Law, which they failed to establish in England. Siberia is just the sphere for royalty so cold-blooded as theirs.

DREADFUL SCARCITY OF KINGS.—Kings are as little given to resignation generally, as a whig minister; but somehow, the fancy is seizing, at the present moment, all the monarchs to resign. In addition to the list we gave last week, there is now the King of Holland, who is dying to be a plain Mr., and we expect hourly to receive the news of the resignation of the Emperor of China. If this rage for private life continues, it will be necessary to start a society, to provide monarchs with substitutes. The throne will be as much dreaded as the conscription, and we shall not be astonished to see a crown dangling out of the window of a palace with the following inscription:—"*Ici on demande un remplaçant.*" We wonder what the particular blight is this year, that there threatens to be such a scarcity of kings. However, we are happy to state that there is very little fear of the crop in England failing. Our royal "Champions" are in the very finest condition, and the nursery at Buckingham Palace is planted full of them.

A PROLIFIC CONTRIBUTOR.—What would the newspapers do if Rumor was to strike, and declare she would not write another line? Take away Rumor, and scarcely a newspaper would live. The fashionable papers, especially, would be left without a paragraph. What would become, too, of "Our London Correspondent?" He would not have a thing to write about. As it is, with Rumor to back him, he writes as with a hundred pens. By-the-bye, if Rumor was paid for everything that appeared in her name, what a deal of money she would make at penny-a-lining!

POETRY.—Burns, by Montgomery; Again with Thee, 16.—Alone; Copernicus, 26.

SCRAPS.—Natural Gas; Necessity of Truth; Heart Tests; Cleanliness, 21.

The LIVING AGE is published *every Saturday*, by E. LITTELL & Co., at No. 165 Tremont St., BOSTON. Price 12½ cents a number, or six dollars a year in advance. Remittances for any period will be thankfully received and promptly attended to. To insure regularity in mailing the work, remittances and orders should be addressed to the office of publication as above.

Twenty dollars will pay for 4 copies for a year.

COMPLETE SETS to the end of 1846, making eleven large volumes, are for sale, neatly bound in cloth, for twenty dollars, or two dollars each for separate volumes. Any numbers may be had at 12½ cents.

AGENCIES.—The publishers are desirous of making arrangements in all parts of North America, for increasing the circulation of this work—and for doing this a liberal commission will be allowed to gentlemen who will interest themselves in the business. But it must be understood that in all cases payment in advance is expected. The price of the work is so low that we cannot afford to incur either risk or expense in the collection of debts.

LITTELL'S LIVING AGE.—No. 178.—9 OCTOBER, 1847.

From Fraser's Magazine.

WALTER SCOTT—HAS HISTORY GAINED BY HIS WRITINGS?

We have been informed by our elders, that the present generation, brought up under the shadow of a Bulwer and a Disraeli, a Mr. James, and a Mrs. Trollope, is quite incapable of appreciating the particular kind of success which the early novels of Scott obtained. Every one of us has, probably, a distinct idea of what a novel is;—a book, which in the embryotic state of preliminary puff and advertisement is of neither good nor evil name, but which must be finally brought up for sentence before every man who belongs to a book-club, or subscribes to a circulating library. But thirty years ago, neither had the machinery which diffuses Mr. Colburn's publications over the face of the country come into existence, nor was this *primâ facie* character of theirs, or rather this absence of character, at all acknowledged. In fact, every novel came into the world with a brand upon it. The trail of the "Minerva Press" was over all. In writings intended more especially for the lower and middle classes, the good old cottage tracts, which used to enforce order and morality with edifying stories of rustic worthies and their miraculous success in life, we remember to have seen the respectable and decorous effusions of Mrs. Barbara Redgauntlet, and such small deer, denounced in language which one would, now-a-days, think strong if applied to Paul de Kock or Pigault le Brun; while essayists, the forcible-feebles of higher pretension, over whose dreary pages many of our readers have doubtless yawned in the countless editions and imitations of the *Elegant Extracts*, sneered magnificently at fiction, as unworthy to occupy the time which a man of intellect must spend in reading, much more in writing it. A few might still cling to a belief in Fielding and Smollett, and the world did actually make clear exceptions in favor of Miss Edgeworth and Mackenzie; but, in glancing at the contemporary criticisms on these last writers, one can hardly help being amused by the evident anxiety shown to separate them from the class to which they belonged, and the undaunted chivalry with which the critic insisted on saving his author's fair fame, at the expense of a total abandonment for the nonce of the common meaning of the most common words. In short, to the largest part of the reading public, including, perhaps, the worthiest portion of it, it must be confessed that the novel, like the pole-cat, was known only by name and a reputation for bad odor.

This state of things was completely changed in less than two years by the irresistible popularity of Scott. Alike intelligible to all, and appreciable by all, he became at once as much the darling of the milliner's apprentice as of the *bas bleu*; and the overflowing stream of refreshment found a thousand channels, conducting it to regions where nothing so exhilarating, so fertilizing, had been known or felt before. But men's prepossessions, though easily enough overruled by a sense of new gratification, do yet, in some degree, demand to be explained and accounted for. There were not wanting persons—among them men of the most various bents, dandy *littérateurs* like Rose; cool, clear-sighted analysts like Jeffrey—who set themselves energetically to speculate on the strange vicissitude in taste through which that department of literature, which was of late shunned by all, had now become the resort and delight both of the undiscerning public and of their critical selves. We must remember that but slender count was taken of Scott's peculiar merits—that few would admit his strength to lie in the liberality with which he had drawn on the common and patent stock of every-day life. No break in the continuity of fiction was discerned; the novel was the novel still; and accordingly the change from disgust to admiration looked very much like an impeachment of former tastes and preferences.

The device lighted upon to reconcile the contradiction was characteristic of the day—characteristic of that school of criticism, which, professing the keenest relish for the new-born literature it had undertaken to review, persisted meanwhile in the constant endeavor to explain its excellence by a reference to recognized standards, *generally* but slightly applicable—*frequently* governed by conditions of thought and feeling entirely different. The process seems to have been something like this. There is apparent on the face of the *Waverley Novels* a certain connection with and dependence on history; that is, in many instances the characters introduced are the representatives of men who in their day existed—of what are called historical personages; and the dramatic action and business of the plot frequently profess to proceed in periods, whose chronicles it is the province of history to examine, explain, and develop. This gave rise to the presumption, that it was the deliberate design of Scott to create a literature which should be strictly ancillary to history, and, though filling a subordinate office, should promote the same philosophy and contribute to the same ends. Accordingly, the term "Historical Novels" was invented—an appellation which Scott himself, who certainly was not ignorant of the real character of history, never, (such is our impression,) in one instance, countenanced. Now, history was a good thing; for had it not been so said by them of old! and a Waverley Novel was a good thing, in virtue of one of those facts on which it was impossible to reason. It followed, therefore, that Scott's merits were exactly measured by the degree in which the inherent value of history overbalanced the intrinsic worthlessness of novel. We are here inventing no imaginary paradox. In proof of what we have stated, we might refer our readers to the *Critical*, *Monthly*, and *Quarterly Reviews*—in short, to almost all the constituents of contemporary criticism. There is now open before us an article in the *Quarterly*, the writer of which—supposed to have been Lord Dudley—cites in proof of this identical position, not without much jubilant exultation, an edition of *Philippe de Comines* which appeared soon after the publication of *Quentin Durward*.

We believe it may be shown to demonstration, that in these views, frequently urged on a public completely enslaved to the periodical critics, originated this belief in Scott's services to history. We

Digitized by Google

need scarcely add, that the same theory, advanced by abler, or at least more unprejudiced, men, and supported by better arguments, has, in our own day, obtained so widely as to have almost passed into a literary canon. It is, for instance, a leading tenet of Macaulay, who, in several passages, has contrasted the meagreness of history, as long as it was entombed in chronicles, with its vivacious energy after Scott had breathed into the dead bones the breath of life. At the same time it is necessary to remark, that this question of Scott's furtherance of history is quite distinct from that of his influence on it. The first we are heretical enough to doubt, but we think that no one can reasonably hesitate as to the last. For good or for evil, it was an important day for history when Walter Scott first decided on translating from the German, *Götz with the Iron Hand*, the prolific origin of a world-famous progeny. It is true that, properly speaking, there is not at present in England anything like systematic history written; at the same time, the ground, which in an age more earnest and less accustomed to loose habits of thinking would be filled by the historian, is now occupied by a swarm of essayists, article-writers, and inditers of historic fancies—which last term shall at present only tempt us to remark, that it indicates great confusion of idea in the era which countenances its adoption. The whole of this scattered literature presents, more or less, the characteristic peculiarity of Scott's influence, the substitution of life-like portraiture and clear, intelligible description, for philosophical comparison and analysis. Look abroad, too, to the schools of literary production which are rising on the Continent. In France, which up to the Revolution was singularly barren of historians, the new generation has applied itself to vigorous labor in the unoccupied field, and a school of writers has arisen which looks to Scott, principally, if not solely, as its teacher and master. The avowed ambition of Michelet is to write French history as Scott would have rendered it, in a series of romances. In the same spirit De Barante has written his *History of Burgundy;* and all the ingenuity displayed in Thierry's *History of the Norman Conquest* would have been lost to the world if the author's attention had not been rivetted by a single passage in *Ivanhoe*, wherein is delineated in a few bold lines the Saxon hind, Higg, the son of Snell.

This notorious influence exerted by Scott on the whole productive intellect of our period, must necessarily give importance, as his vast celebrity must always give interest, to any inquiry like the present. To exhaust the subject would call for an effective definition of the province and offices of history, as well as a critical examination of Scott's merits and method. We will not even endeavor to answer these demands. It will be enough for us, if the few considerations which we throw out serve to clear the ideas of our readers respecting the real bearing of the question we propound, namely—Did History gain by the writings of Walter Scott?

We shall, perhaps, be pardoned for saying a few words regarding the sources from which Scott's mind derived its nourishment, and the artistic treatment, in conformity with which he developed the results of his mental experience. His intellectual capacities had, we think, this peculiarity, that their difference from those of men in general was not one of kind but of degree. He had a genuine love of the beautiful—not, perhaps, of moral beauty, but of that lower form which we denominate the picturesque—a love which he possessed in common with many ordinary men. But the development in Scott was enormous. He had strong prejudices, so strong, that it is sometimes hard to distinguish him from the fossil tory of the October Club; though in no instance did his dislikes weaken his appreciation of the beauty and reasonableness, or, to speak more correctly, of the fitness and self-consistency, of his adversary's views. He was the most catholic admirer one can conceive. Witness his Balfours and Macbriars, who, in the hands of a man equally prejudiced, and less singularly organized, would inevitably have become mere caricatures. And this acute relish for the beautiful extended to immaterial objects, if indeed it was not especially whetted by them. To whatever thing there attached a chain of associations, however slight and meagre, and however imperceptible to most men, that thing was endeared to Scott. Of this sort is the *vertù* with which his house at Abbotsford is crowded; but, unlike most virtuosi, he prized nothing that was simply rare or curious, while all that bore the faintest relation to persons or events he loved as the apple of his eye. And this idiosyncrasy embraced all existences, which are really the subjects of antiquarian zeal, words, sentiments, and tunes. Like the Florentine academicians, who were said to mix disguised with the market-people for the purpose of collecting the *riboboli*, the rounded idiomatic sayings of the Tuscan peasantry, so of words, phrases, and turns of expression, indicative of the smallest peculiarity in the speaker or the class to which he belonged, Scott was an indefatigable collector and chronicler. Further, he was a subtle observer of human nature—as are many provincial attorneys. But here again his special singularity lay in degree. Indeed, his retentiveness of personal peculiarities seems almost to have amounted to disease. It was not that he had great power of looking into the deeper springs and sources of character—here certain individual deficiencies obstructed his vision—but looks, movements, singularities, and eccentricities of habit or manner he never forgot. And all this can easily be accounted for by the accidental circumstances of his life and education. His physical misfortune had from childhood made him a sedentary observer, and it had been his lot from his earliest years to reside alternately in Edinburgh, then intensely provincial, and consequently a mine of character, and on the Scottish border, a country where the very scantiness of surrounding objects contributes in a remarkable degree to give clearness and definiteness to the associations connected with them.

These, then, were the qualifications which Scott brought to the exercise of his art—common ones enough, but in him almost preternaturally developed. Against these available excellencies we must set various deficiencies, which, were his character as a novelist only in question, it would be mere cavilling to mention. We allude to charges which have of late years been not unfrequently urged against him; as, for instance, that his perception of moral right was not extremely vivid—that his personal and peculiar ambitions marred the growth of many of the higher and finer aspirations—that his memory and imagination often, and especially as he grew an older man, were allowed to confuse each other—that he was not accurate, and that he was quite incapable of philosophical analysis or combination. But though his reflective powers were, comparatively speaking, weak, his perceptions and sympathies were preëminently strong; and when to all this is added the charm of his style, we need not wonder at the witchery he exercises

Digitized by Google

over us, and indeed over the age. The unreflective reader he never tasks, the most cultivated critic he never disgusts; and then all is conveyed in language clear, flowing and coherent, sometimes most racy and original. It is a free, bold, decided handling, which is and must be delightful, as long as men are men. The whole process is eminently what Carlyle has called "intellectual shampooing:" and beside this, we must allow that his artistic method, when confined to its legitimate sphere, is almost perfect. What was this method, and how it has affected history, it is full time for us to inquire.

We conceive it will be admitted that Scott's treatment of a subject was very much as follows:—He drew on his own stores of observation for the characters he required; these characters, so obtained, he transferred bodily into the scene and action of the novel, generally unaltered, sometimes slightly modified by an interchange of individual peculiarities: then he arrayed them in the costume necessary to perfect the illusion, and arranged and disposed them according to his own exquisite appreciation of grace and fitness. In thus stating the case, we have included in the term *costume*, not only dress, but also language and other adventitious appliances; for in the Waverley Novels the trick of speech, borrowed from contemporary chronicles or ballads, is as thoroughly adventitious as the buff-coat or the cuirass. The propriety of this treatment is on most occasions unimpeachable. When Scott depicted the Lowland Scotch and his scene was laid in comparatively modern times, the result of his method was full of natural and artistic truth; for in his younger days real Jacobites were not extinct: the Edinburgh lawyer, and the Lowland laird, were what they had been in the beginning of the century; and at this very moment the Scotch Presbyterian peasantry have altered surprisingly little from the typical Cameronian and Covenanter. But then, when his rapid exhaustion of old ground had forced him to change the field of his labors, and he was tempted to thrust his characters further back into the past, he continued precisely the same process. Scott's early acquaintance, Janet Gordon, not only figures as Meg Merrilies, but also passes into Norna of the Fitful Head, and beyond into the prophetess of Front-de-Bœuf's castle; and the adventurous Scotchman, who is the staple of his heroes, goes through the separate avatars of an advocate of George the Second's reign, a cavalier of the Revolution, a courtier in the time of James I., a Borderer of the reign of Henry VIII., and a *preux chevalier* of the era of the Crusades. But we need not stay to discuss facts so notorious.

That a great and romantic effect was thus produced, is evident. There is all the semblance of a genuine historical *tableau;* the elementary characters are living, breathing men, and they offend us by no discrepancies of manner or costume. But is historical truth preserved? We confidently answer that it is not, and that there is no surer way of contravening the realities of history.

We know no more difficult branch of historical science than that which professes to determine the action of an individual on his age, and the reaction of his age on him. The investigation is infinitely complicated, since the character of its subject varies constantly with the varying influences exerted on it: the man of this year is not necessarily the man of last year, any more than the events of this year are those of the last. The lord-protector Oliver is not the same with the parliamentary general, nor the parliamentary general with Colonel Cromwell. Now if this is partially true of an individual life, it is certainly true of periods and generations. Each generation can only be the same with itself. Myriads of coöperating agencies—law—custom—literature—have joined to make it what it is, nor could the same result be obtained except under a perfect identity of conditions. Let us test the truth of this by looking to our own characters. Their growth has been determined by circumstances which only a miracle can enable us to recall and enumerate. Every book we read, every conversation we hold, modifies us in some way; and there must be some men whose characters, like coral islands, are built on the foregone labors of millions of their kind. Can we, then, by any effort of thought, suppose ourselves existing wholly in a period other than the present? Scott transported bodily the men of the nineteenth century into the fifteenth. Can *we* do the same with ourselves? We can easily imagine ourselves placed among all the *external* peculiarities of the feudal age. We can picture ourselves blessed by the priest or unhorsed by the knight with a vividness almost sufficient to rival truth; but no strain of the imagination can transform us into men, accepting all this in the light of common every-day incident and accident; living continually under the influence of the universal church, and looking on the iron circle of feudality as the unquestionable dispensation of nature. It is just as impossible for the most imaginative among us to substitute for his own the sympathies and antipathies of a past age, as it was evidently then for the most resolute and advanced thinker to exhibit conclusions, tallying even distantly with the views we are in the habit of accepting as common-places. They can never come to us, and we can never return to them.

We are aware that it may be urged, in reply to these arguments, that, although we have not gained by Scott's treatment in the way of absolute truth, we are yet gainers by the removal of absolute error; and that though his tableaux do not give us the real men of the age they present, they have yet a sort of negative reality, in that they serve to weaken a besetting tendency to look on historical characters as mere names and abstractions. There is weight, no doubt, in this reasoning; and, so far as it goes, we gladly acquiesce in it; but we are not the less convinced that Scott engendered a large amount of new error to be set against that he removed. The novelist will almost necessarily, in the spirit of his art, depict scenes and characters which, although for the sake of verisimilitude there must be in them some admixture of error, will yet, on the whole, be interesting and attractive. The consequence is the introduction of a kind of rose-colored medium which, by harmonizing all objects, produces deception just as much as if it distorted them. We are the more anxious to insist on this, because we are convinced that what are called Young England views have originated in these falsifications of history; and, indeed, the birth of these theories is in itself sufficient to prove that no one can tamper innocently with historical truth. Representations, purely and avowedly imaginative, are not without a peculiar danger of their own, and much more dangerous are those but partially so. Fiction cannot border on reality without creeping under its robe: indeed, men will do violence to themselves for the purpose of investing the first with the dress of the last, in much the same spirit as that in which the English yacht-voyagers to Copenhagen have determined the position of Ophelia's grave, and of the pool in which she drowned

Digitized by Google

herself. And, after all, the advantages conferred by Scott's treatment are but equivocal gain, if we are compelled to accept with them intimate and substantial misrepresentations of historical periods. It was, no doubt, somewhat of an absurdity to see Garrick acting Richard the Third in a court-suit and powdered wig. But we should very dearly purchase our present attention to the proprieties of theatrical costume, if we were compelled to retain Colley Cibber's alterations in the text of the same play, in which the stilted rhetoric of the eighteenth century jostles the racy eloquence of the Elizabethan period, and 1750 and 1600 go hand-in-hand.

We said that we did not mean to hazard a definition of the historian's province. We will, however, venture thus far, and assert that his office is to note and comment on the *differences*, not the resemblances or the peculiarities of successive ages. If the experience of the past is to benefit us at all, for doctrine, for example, or for reproof, it must be in virtue of a power to make allowances and deductions for the discrepancies which hold between it and ourselves. Otherwise, each separate period is insulated in time, and has no connection with, or relation to, the ages which precede or follow it. Now for this branch of thought Scott was peculiarly unfitted. Our readers may, perhaps, remember a celebrated passage in Bacon, in which he distinguishes between *ingenia subtilia* and *ingenia discursiva* and then adds, "*utrumque ingenium facile labitur in excessum, alterum prensando gradus rerum, alterum umbras.*" To the first class belonged the intellect of Scott. He loved to linger on the *gradus rerum*, on those small particulars, which, at some period in the mental experience of all, are full of interest and even of beauty. But to the last division we must emphatically assign the intellect of the man who possesses what is called in German the "historical sense," and we know no better example of a writer so endowed, than David Hume. With some remarkable deficiencies, as for instance his incapacity for appreciating enthusiasm and religious faith, he had yet a distinct historical theory, and a full comprehension of national progress and social advance. He has in his day done more than any other man to show how the mere indications of one age become the sharply-defined characteristics of the next, and to demonstrate the fore-ordained aim and ultimate union and convergence of those innumerable, seemingly irreconcilable particulars which Scott and his school treat as distinct and isolated facts.

It is very difficult to take up a volume of Scott in anything like a spirit of critical examination. One cannot read him in cold blood. He sets all one's tastes and sympathies working at once to the dire distraction of the reason. Flooded by his humor, and exhilarated by his heartiness and freshness, one lingers in the company of his gloriously life-like creations about as much disposed to question their title to the name they bear, as an opium-smoker to doubt the existence of his imaginary houries. And here again Scott's admirable tact throws us at fault. We are never *taken aback* by a virtual paradox. Even in his delineations of single personages, where no more than an ordinary acquaintance with history at once convinces us that there is a misrepresentation somewhere, its exact nature is most difficult of detection. The dark side of a character, the remorseless cruelty of a Claverhouse, the mean-spirited selfishness of a Leicester, is always indicated—subdued, it is true, in tone, but still never wanting altogether. By this appearance of fairness, one's ideas on a broad question of right and wrong become strangely biassed in the teeth of oneself and one's convictions. There is a fallacy, certainly; it lies in the balance of motives; the writer has deceived us by his crafty adjustment of the scale; but not one reader in a hundred has the courage or the inclination to look further than the conclusion of the process. And, if Scott can thus mislead us in cases where it was probably his deliberate intention to produce a certain and given effect, the danger of deception is much greater in instances where he himself sinned unknowingly and unconsciously against the truth, in his transpositions and translations of scenes and characters whose nature and peculiarities were due solely to the influences of his own age, upon the discordant world of the past. Even more deceptive, as well as more untrustworthy, is the general result, when such methods are applied to the description of whole states of society and periods of history, with their complicated enginery of agency and consequence. We know but one way of keeping our eyes open. Let us not look to Scott, but to his imitators. Coleridge has somewhere said that pathology is the test of physiology. Examine things in their *diseased* form, and you will learn their true nature. Now we presume no one imagines Mr. James' novels to be real presentations of the past. If the eternal couple of knights, who open the tale by riding through impossible scenery at sunset, if the unnatural incident, the commonplace morality, the dialogue forced into stilted quaintness, if all these, as brought out in the inimitable Barbazure, constitute a genuine historical picture, then is history something more uninstructive than an old almanac. And yet detach a Waverley novel from its accidents, and the *caput mortuum* is a tale of Mr. James. Apart from Scott's taste, from his accuracy of detail, from his wit, from his humor, from his knowledge of human nature, these absurdities represent not unfairly those elements of his productions which bear directly on history.

God forbid that we should detract from the true fame of this great man. A veritable Nemesis would avenge so ungrateful a return for the hours of delight we owe to him. But we have distinctly said that the novelist, as such, is not the object of our strictures. We only lament that his method should have proved so fruitful of questionable consequences. In our opinion he might have adopted a different treatment without detriment to his peculiar excellences. He might have written always as he wrote occasionally, that is, he might have bestowed the additional pains necessary to give an artistic form to the materials with which he was so freely provided, without resorting to the deceptive illusion of a pseudo-historical garb: or perhaps he might have emulated the far more difficult achievement of describing the past as it really existed, and of illustrating, not creating it, by his acquaintance with the present: or he might at least have kept the subject and its accidental vehicle so far apart as partially to obviate all danger of misrepresentation. This last appears to have been the method of Shakspeare, who almost takes pains to separate the characters introduced from the scene of introduction. The existing laws of the stage compelled him to transact his stage-action at Verona, Venice, Padua, Athens—anywhere but in Elizabethan England. But his Veronese gentlemen belong to Paul's and the Temple, Iago and Cassio smack somewhat of Alsatia, Dogberry and Verges are redolent of the Fleet, and some Stratford weaver

Digitized by Google

certainly sat for the Athenian Bottom. Moreover, in the historical plays, in which nothing but the bare skeleton of fact is present, all historical consistency is systematically neglected. With Scott, on the contrary, there is a deliberate effort to identify the fictitious with the historical scene.

But we will not be tempted to mingle questions, which are in reality distinct. From taking Scott as our guide and instructor, we are learning to prefer to patient thought and candid investigation, an easily-induced attention to the imaginary graces and prettinesses of the past—

"*Le donne, i cavalier, l'arme, gli amori,*
Le cortesie, l'audaci imprese,"

and the consequence is, that Mr. Smythe is likely to be the exponent of our opinions on history, Mr. Pugin of our views of religion, and Lord John Manners of our statesmanship.

Imitative Power in Birds.—So strong is the imitative power of birds, that a canary who had been taught to pipe, having heard a chaffinch that daily sung in a tree near the window where the cage was hung, learnt his note in a few days, omitting at that time the air he had been accustomed to sing. At the end of the spring, after having been removed from the neighborhood of the chaffinch, he resumed the air as before. A nestling nightingale also learnt the notes of a hedge-sparrow that sung near it, for want of other sounds to imitate; and it was extraordinary to hear the gentle, although agreeable warble of the latter, attuned to the full compass and power of the nightingale. The effect was most pleasing, although of course not equal to the natural notes of this bird, not one of which he retained. Indeed, many birds are almost, if not entirely, imitative, and, in default of hearing the parent bird, borrow notes of others; soft-billed birds always prefer the song of soft-billed birds, and *vice versa*. It is hoped, from what has been said on the above subject, that persons who are in the habit of keeping caged birds will be induced to educate them in the manner suggested. Then, instead of hearing the shrill, deafening natural notes of the canary, they will be delighted with those of the nightingale, the blackcap, and other warblers. "They will then breathe such sweet music out of their little instrumental throats, that it may make mankind think that miracles are not ceased." So said the good Izaak Walton.—*Jesse's Favorite Haunts.*

A Friend in Need.—An instance of animal sagacity and humanity, unequalled in our remembrance, took place before our door on Saturday. An unfortunate dog, in order to make sport for some fools, had a pan tied to his tail, and was sent off on his travels towards Galt. He reached the village utterly exhausted, and lay down before the steps of Mr. Young's tavern, eying most anxiously the horrid annoyance hung behind him, but unable to move a step further, or rid himself of the torment. Another dog, a Scotch colly, came up at the time, and seeing the distress of his crony, laid himself down gently beside him, and gaining his confidence by a few caresses, proceeded to gnaw the string by which the noisy appendage was attached to his friend's tail, and by about a quarter of an hour's exertion, severed the cord, and started to his legs, with the pan hanging from the string in his mouth, and after a few joyful capers around his friend, departed on his travels, in the highest glee at his success.—*Galt Reporter.*

Bad Arrangements in our Criminal Courts.—If all who have to attend criminal courts were criminals, hardened to shame and corruption, worthless to shield from physical suffering and injury, the arrangements in those courts would be merely cruel; but as criminals are only a small fraction of the number, the authorities responsible for mixing up the most innocent with the most depraved, and for torturing the guiltless, incur the gravest censure.

To take the principal alone, look at the Central Criminal Court. It is filled daily. Those whom the law or the need of redress obliges to fill it are not classified according to their condition, but according to the arbitrary distinctions of a court, into prisoners, judges, barristers, jury, witnesses, and "public:" they are separated merely into penfolds. The unventilated atmosphere is fetid with vicious squalor. The prosecutors and witnesses have no proper place of retreat, but must sit in court, or wait in the lobbies. Thus the refined and the brutal, the innocent and the depraved, are huddled together: decent matrons are squeezed between policemen and ragamuffins; modest girls are jostled by the boon companions of the prisoner, indecently swaggering in to "speak to character." It is filthy. So long as you may be "wanted," you must sit in court and hear all that goes on, however tedious, however disgusting, however improper for many ears around. The very arguments of counsel on the revolting cases with which the court is familiar defile the ears. The bodily fatigue incidental to attendance in the Central Criminal Court is no small evil: but physical suffering can be endured; it is the sight of the unstricken countenance of youth amid the base and the brutal, in an atmosphere of vice and disease, within hearing of allusions so vile as to be sometimes harmless because unintelligible, but too often carefully made intelligible—it is the sight of innocence forced by "the majesty of the law" into hideous contact with depravity, that is intolerable.

Incessantly are complaints made of these evils; and periodically does some judge at the Central Criminal Court reply with a hope that the "corporation" will look to it. The whole arrangement is disgraceful to all concerned—not omitting the judges and lawyers. All the public buildings of this country, with scarcely an exception, are unworthy of their objects, especially in size. The ancients, with far slenderer resources, raised structures which put ours to shame. We, with immense population and proportionate need of space, with immense wealth and immense advance in the mechanism of the arts, are content with public buildings ugly, mean, and small. A high sense of art would instinctively dictate a style more befitting its objects: our instincts in that direction are not very sensitive; our trading spirit makes us pare down everything public—except feasting—to bare necessity; and it is only when we find justice and innocence shut up in a reeking hole with vice and crime that we discover our mistake. This Central Criminal Court ought not only to be larger than it is in the body of it, but ought to be surrounded by convenient retiring-rooms for those who have to wait, sufficiently spacious and numerous to obviate revolting associations. The want of decency detracts from the boasted "majesty of the law;" and we wonder that the bench and the bar have so long been content to administer their high functions in places which would turn the stomachs of their humblest menials.—*Spectator.*

AIDS IN SWIMMING.

Some persons have supposed that the only reason why a man, however unaccustomed to the water, does not swim as well as one of the lower animals, is, that the former has more dread of the foreign element; and they assert that all we have to do, in order to float, is to discard fear, and trust implicitly to the natural buoyancy of our bodies. But this comfortable theory is at most not more than half true. When one of the lower animals finds himself in the water, he is in his natural posture for movement, and plies his feet to escape from the danger, just as he would on land in the action of running. Man, on the contrary, if he would use the four paddles with which nature has provided him, must throw himself prone on his face, abandon all his usual habits of motion, and attempt to push himself on against the water with his palms and soles, and at the same time manage in such a way, when drawing them in for a new stroke, as to prevent the preceding effort from being neutralized. Swimming, therefore, is an instinct with the brute, but an art with the man. That fear, however, impedes the progress of a man in *learning* to swim, is perfectly true. It deprives him of the presence of mind necessary for acquiring an art in circumstances of apparent danger; while the very same feeling gives added energy to the instinctive motions of the brute. Many tribes of horses and dogs are vastly more timid than man; and the only reason why the former move with comparative safety in the water is, that in the action of swimming they have merely to obey a natural impulse. When the writer of these lines was a boy, some pains were taken to teach him to swim, and he acquired without much difficulty the theory of the art. But the practice was quite another thing: he no sooner raised his feet from the ground, than down he sank like a stone, till he at length believed that some physical peculiarity rendered swimming an impossibility for him. The peculiarity, however, turned out to be moral, not physical. One day, on the shores of one of the Western Islands, he was bathing in the company of a huge Highlander, and having laid his clothes upon the cliff, was about to descend to a little creek, where the water was smooth and shallow, and the sand soft and white. In front of the rocks was a natural basin, in which a frigate might have swam, with the circling sands of the beach at some little distance beyond; and into this basin rolled the smooth majestic swell of the Atlantic. When about to descend, he was caught up by the giant, and pitched over the cliff like a clod, and found himself, with a shout of mingled wrath and terror, struggling in the hitherto impracticable element! Now, had he not previously learned to swim, he must have sunk, or owed his extrication to his well-meaning friend; but being acquainted with the art, he did swim, like a duck, to the opposite sands—although so little grateful was he for the lesson he had now been taught, that his supposed inability was mere cowardice, that the first thing he did, on regaining his feet, was to fire a volley of stones at his instructor.

Everybody knows that to persons well acquainted with the art, it is possible to rest for a certain time in swimming, by lying upon the back; but this can only be done in perfectly smooth water; and in other attitudes, the body, however great its buoyancy, must be kept constantly trimmed by the motion of the hands and feet. It is not surprising, therefore, that so many plans have been tried for obtaining an independent buoyancy. Every season we hear of some new invention with reference to this grand desideratum; for the attempts that were formerly made to increase the force of the swimmer's movements appear to be abandoned as chimerical. The gloves, for instance, with web fingers, are quite unsuited to our muscular power, which finds the resistance offered by the water to our naked hand quite great enough. The same thing may be said of the attempts to provide the feet with similar contrivances, intended to expand when shoved against the water, and to close at the return. But we are not sure that the "swimming skate," invented in France a few years ago, has attracted so much attention as it would seem to deserve, from the circumstance of its being the only contrivance (so far as our knowledge of the subject goes) the effect of which is to place man, when swimming, in his usual walking attitude.

The swimming skate is a piece of wood, furnished with two parallel rows of plates, folding over each other, so as to resemble in some degree the laths of a blind. These open or shut, according as the foot to which the skate is attached moves downwards or upwards; and the swimmer advances by the alternate motion of his limbs, as in mounting a stair, keeping the head and body a little forward, as in skating. By the aid of this instrument, he is able, it is said, to remain stationary in the water; but we presume this can only be for a short determinate time. At any rate, he can turn in any direction he pleases, raise himself out of the water as high as the girdle, and continue the exercise almost as long as that of walking. In order to plunge to the bottom, he has only to raise himself, by quick motions of his limbs, as high above the surface as possible, and then point the toes downwards.

We presume it is some instrument like this which assists in the exhibition, not uncommon in this country, termed "walking in the water;" but the experiment of *adding* to the swimming skate the inflated cape or belt might be worth trying. The latter, and all similar contrivances, however valuable, as affording the means of floating, rather diminish the facility of motion than otherwise, from the addition they make to the volume of the body. The grand thing to be sought after is the power of movement through the water, in union with perfect safety in the water: the latter we cannot think derivable from the skates alone, while without them, the accidental rupture of the air-vessels would be fatal.

The part which the lower animals take in this question reminds us that, as among them there are tribes even of the same species better adapted for swimming than others, so there may be families of mankind that take to the water as naturally as Newfoundland dogs. This is affirmed by Sir George Simpson of the Sandwich islanders, who, he says, "may almost be said to be born swimmers; for they actually take the water before they leave the breast. At Lahaina, in particular, I was highly amused with the early development of this innate talent. Through the town there runs, or rather creeps, a sluggish streamlet, into which urchins that were hardly able to stand used to crawl on all fours; but no sooner did they gain the congenial element, than they struck out like a young fish, diving, and ducking, and performing a variety of feats with confidence and ease." The art, thus early learned, is highly important in after-life; for if an islander founders at sea, he is quite undisturbed even if he

Digitized by Google

should find himself in the midst of a shoal of sharks.

In what has been said regarding artificial aids in swimming, we would by no means be understood to advocate the use of such instruments by those who merely enter the water for healthful exercise. Nothing can be better for the purpose than swimming as it is usually practised; and as the accidents that expose us to drowning do not commonly come at convenient times, it would be folly to trust to our having the preventive apparatus always ready. A man is much more likely to have it in his power to save his life by swimming, than by belts and skates; but appliances like the latter possess the same kind of scientific interest we attach to balloons, with a greater probability, as knowledge advances, of becoming practically useful.

From Chambers' Journal.

ARTIFICIAL COLD.

Since the days of that dissipated heathen who, in order to cool the air during an oppressive summer, caused mountains of snow to be piled up, and suffered them to melt away, down to the present era, in which there prevails a rage for the thing, mankind has been incessantly in quest of refrigeratives. In those regions where ice and snow are found during winter, it became an easy expedient to store up such treasures of cold for use in warmer seasons; but where, if formed at all, they could only be of a momentary existence, it is manifest that some other means must be devised to supply the luxury of coldness to the noble and wealthy; and thus the art of artificial refrigeration—an art which has to boast of the elaborate researches of the ingenious Robert Boyle, and has occupied much of the consideration of other philosophers before and since—took its origin. We have already taken notice of the now prevalent use and means of procuring beautiful ice for the table: we shall here present a brief sketch of the history, and a short notice of the methods, of producing cold artificially.

Cold, as a luxury, was far from being unknown to the ancients. The winter's snow or ice was rudely gathered up in heaps, or buried in pits, and covered with straw or chaff. But this was a wasteful, and grew to be an expensive method; and it became desirable to have ready means at every season, and independently of the accidents of the skies, for obtaining the same end. The simplest of these proceeded on the principle of loss of temperature, as a result of rapid evaporation. The Egyptians were accustomed to cool their water by placing it in earthen pitchers, the exterior of which was kept constantly wet by being sprinkled with water by slaves. It was the habit of one of their luxurious monarchs to have several servants for this office alone, whose duties were to expose the water to cool on the summit of the palace, and constantly supply the royal table with the beverage. Cooling pits were also dug in the earth, into which the water-vessels were placed during the daytime; the exterior being well soaked with water, and then surrounded with the fresh leaves of a vine or other plant, evaporation rapidly went on, and the liquid became most agreeably cool. Another method is said to be mentioned by Plutarch, which was by casting into the water a number of small stones, the agitation and consequent evaporation produced by which would probably exercise a slightly frigorific power over the water. It was probably an accidental observation of what could not have failed to have been an every-day occurrence, that led to the next improvement in this method of refrigeration. Many of the earthen vessels of the Egyptians are made of unglazed ware: water placed in one of these was found to be considerably cooler than when kept in other vessels; and the more open and porous the material, the more rapid the transudation of the water, and its evaporation from the surface of the jars, and the greater the degree of cold obtained. Water-vases were then formed for that purpose solely; and the invention, unaltered in principle, has come down with increasing usefulness to the present time. Illustrations of the second great chemical law—that liquefaction produces cold—next followed. For ages in India, it had been the practice to cool beverages in that burning climate by dissolving saltpetre in water. From India the practice made its way into Europe; and Beckmann states that a Spanish physician, Blarious Villa Franca, practising at Rome, first introduced this method of producing cold in Italy about the middle of the sixteenth century. It is related that wine, placed in this mixture, was cooled to a degree making it almost intolerable to the teeth; and this was a considerable step in the history of artificial cold. Other saline substances came into use, and pits were formed, into which, on the large scale, the water to be cooled was put in vessels, surrounded by the cooling mixture. Finally came the important discovery, that an intensely freezing mixture was capable of being formed by mixing snow or ice and salt together. A celebrated physician electrified a large audience by exhibiting its effects upon a bottle of wine, which he actually froze into ice; and "this new method of freezing water" is also mentioned by Lord Bacon. Such are the conditions under which this subject has been handed down to existing posterity.

A little consideration of the processes described in this cursory sketch, of the chemical progress of the luxury, will show us that they are all reducible to the two axioms—that evaporation and liquefaction create cold. The philosophy of which fact is simply, that in the change of condition from a fluid to a vapor, and from a solid to a fluid, there is a change in the capacity for caloric. If a certain measure of water is to become vaporized, or if a certain weight of salt is to become a solution, these changes cannot occur without the water and the salt receiving an additional supply of heat, which is of course abstracted from all surrounding bodies; and the abstraction of heat being an equivalent expression to the production of cold, we are brought back to the truths with which we commenced, and have seen how evaporation and liquefaction produce cold. Caloric disappears in both cases, and, burying itself among the particles of the new product, is said to have become *latent*. There are some facts connected with the production of artificial ice which deserve mention here. The congelation of water is materially promoted by rapid motion. Water has, in fact, been cooled, and yet remained quite fluid, many degrees below the temperature at which it generally becomes ice; but the moment a little movement was communicated to the liquid, instantly the temperature rose to 32 degrees, and the mass became ice, needle-like crystals flying through its substance in a most curious manner. This fact was seized upon by the refrigeratists, and repeated accounts of making artificial ice are extant, in which much stress is evidently laid upon the act of stirring the fluid to be frozen rapidly round with a stick. The experience of mankind also appears to have discovered

Digitized by Google

that water, after it has been boiled, freezes more rapidly than otherwise. It is a custom among many nations of warm climates either to warm the water in the sun, or to boil it, previous to attempting to reduce its temperature. Dr. Black of Edinburgh published some experiments undertaken to determine the question; and his results were, that boiled water does freeze a little more rapidly than unboiled. The act of boiling expels the air; and as in freezing a similar expulsion takes place, a step is gained in advance of the unboiled liquid.

The means in present use for artificial refrigeration are very various, some of them very interesting. Among these, the employment of porous earthenware may receive an early place. The Moors introduced into Spain this article of luxury, in the shape of very elegant vases, wonderfully light and porous. Water kept in these became rapidly deliciously cool, and, from some peculiarity in the process of the manufacture of the vessels, it acquired, in addition, a very agreeable flavor. In Egypt, and in India, and in most sultry regions, this expedient is at the present time a very prevalent one. It has also for some time been extensively employed amongst ourselves—porous wine, butter, and water coolers, of many elegant designs, being now produced at our potteries. But porous ware keeps water coolest where the clime is hottest, the very increment of heat being made to react in the production of cold by rapid evaporation. The Moorish name for their earthen jugs was *Alcarrazos*, or *Bucarros*. The Arabs, burnt up with the eternal fire of their scorching country, make use of goat-skins for their water-vessels, which suffer a little water slowly to exude, and thus keep the remainder comparatively cool. A common method of cooling wines in India is one which will almost appear a paradox: the bottle is wrapped in flannel wetted with water, and placed directly in the rays of the sun: violent evaporation ensues, and the wine actually becomes very cold. It is a common plan, too, for sailors, in warm latitudes, to cover their wine with cloths constantly wetted. Apartments are cooled on a similar principle, and an abundance of water is frequently dashed against the walls of the room with the most grateful effect. In India, also, the cold, so dangerous and penetrating on a clear night, is applied in a peculiar manner for the purpose of freezing water. Near Calcutta, in an open plain, there are large shallow excavations made in the ground, and filled with straw; upon this many rows of small, shallow, porous pans, filled with water, are placed at sunset. During the night ice forms in thin cakes upon the surface of these pans: it is carefully removed before sunrise, carried to a proper repository, and pounded into a mass there, and then covered over with blankets. This manufacture can only be pursued during the months of December, January, and February; and in the districts where the ice is formed in this manner, it is never produced naturally. This ingenious process must wholly disappear before the new import of Wenham Lake ice. What a revolution has commerce effected in India, when we remember that early travellers in that country were looked upon as liars and impostors for asserting the possibility of solidifying water into ice!

Where saline substances are cheap, the more powerful mode of refrigeration has been the use of the frigorific mixture. Some of these mixtures are capable of producing the most intense cold known to philosophy.* Dissolving saltpetre in water creates a very useful degree of cold; and where the salt is plentiful, as in India, it has long been employed for this purpose. It was the peculiar duty of one domestic to cool beverages for the table by this means, who received the impregnated solution for his perquisite. Where, however, snow or ice is procurable, the intensity of the freezing mixture rises to its higher points. Snow and salt produce a mixture which was deemed by Fahrenheit to be of the greatest possible degree of cold. This was the temperature of his zero. Our confectioners are in the habit of using for their craft a mixture of pounded ice and salt. The substance known as chloride of calcium, mixed with snow, produces a most severe cold, sufficiently great to freeze mercury. Mr. Walker, to whose interesting experiments upon this subject it stands much indebted, was on one occasion able, by successive coolings, to attain a depth of cold equal to 91 degrees below Fahrenheit's unhappy zero. In the laboratory of the chemist, great degrees of cold are procurable by the use of highly volatile liquids for evaporation. Every juvenile chemist's ears have tingled with the startling enunciation of the possibility of freezing a man to death in the height of summer, by wetting him constantly with ether—which is, however, a fact hitherto undemonstrated. The sulphuret of carbon, and, more recently, liquid sulphurous acid, both of them exceedingly volatile fluids, create intense cold by their evaporation. The almost magical experiments of M. Boutigny, in which water was frozen in a red-hot crucible, were effected by the assistance of sulphurous acid in the liquid form. The remarkable substance, liquid carbonic acid, takes the highest rank as a refrigorific agent known. Mr. Addams of Kensington actually manufactures this curious liquid as an article of commerce, and has occasionally as much as *nine gallons* of it in store. In drawing it from its powerful reservoirs, it evaporates so rapidly as to freeze itself, and it is then a light porous mass, like snow. If a small quantity of this is drenched with ether, the degree of cold produced is even more intolerable to the touch than boiling water! a drop or two of the mixture producing blisters, just as if the skin had been burned. Mr. Addams states, that in eight minutes he has frozen in this way a mass of mercury weighing ten pounds.

There have been some mechanical contrivances for the manufacture of ice. Evaporation may be accelerated mechanically to a degree so great as to produce ice in considerable quantities; and this is the principle of Sir John Leslie's celebrated freezing apparatus. In conducting some experiments upon the rarefaction of air, he was led to conceive the idea of manufacturing ice on the large scale from a little phenomenon observed in the receiver of his air-pump. Introducing a watch-glass full of water, and in contact with sulphuric acid, into the receiver of his air-pump, and on making a few strokes with the piston, the water was converted into a mass of solid ice! With a body of parched oatmeal instead of the acid as the absorbent of moisture, he froze a pound and a quarter of water into ice. Experiments on the large scale followed; powerful machines were constructed, and various improvements were adopted in the apparatus, all tending to facilitate its application to the wants or luxuries of mankind. Several of these machines have been exported into hot climates. Dr. Ure suggested steam as the

* It will be noticed, that throughout this article the term cold is made use of, for convenience' sake, as if it indicated a positive principle, and were not, as it is, a mere negation.

Digitized by Google

vacuizing power; and the idea has been conceived, that wherever a steam-engine is employed, there an ice apparatus might be erected and sustained at a trifling cost, with great prospect of productiveness.

The most recent ice-machine is "Masters' Apparatus," the principal feature of which is, that a metallic cylinder is made to undergo rapid rotation in a freezing mixture, the motion appearing in a singular manner to expedite and facilitate the process.

Some account of the applications of artificial cold may perhaps suitably conclude our paper. For some time the ingenuity of men in this particular developed itself no further than in simply cooling wine and other beverages; but a more refined and even elegant mode of doing so was afterwards discovered. In Boyle's "History of Cold," it is stated that he was accustomed to make wine-cups of ice, by means of tin moulds, for use in hot weather: pleasant trifles, as he calls them, which imparted a delicious coolness to the wine poured into them. In an old romance, named the "Argenis," a dinner in summer is described, at which fresh apples half-incrusted with ice, and a basin of ice filled with wine, were among the curiosities upon the table. Then came the invention of water-ices by one Procope, an Italian, who had an immense sale for them in Paris. Cream ices, and the iced juice of fruits, were then made, and found a rapid consumption. More recently, the art of the confectioner has applied this process to imitate many kinds of fruit and peaches—apricots and nectarines of ice—copying the originals with curious fidelity.

THE ARISTOCRACY OF NAMES.

Our readers are aware that the strange thesis has been maintained before now that "private vices are public benefits;" and some may have wondered at the desperate ingenuity which could work evil into good by the simple rule of multiplication. But we live in a world of seeming anomalies; and however difficult their reconciliation may be, there is no doubt that the errors of individuals are overmastered in their collective tendency, and that we all, good, bad, wise, and foolish alike, cöoperate unconsciously, in the great work of human progress.

As a familiar illustration of what we mean—the philosopher smiles at the enthusiasm of the vulgar in their aspirations after an undefined and undefinable good they call the Genteel; but the philosopher may smile on, for the wisdom of the learned Theban is foolishness. Such aspirations are the beginning of all refinement. They lead, it is true, to the perpetration of innumerable caricatures; but these in time correct themselves, or are corrected by collision, till every day some individuals, rising gradually above the mass, ascend into the region of true taste—or what is taken for such by the present generation. And what is true of individuals, is true of nations, and of society at large. The history of manners and costume, or, so to speak, Fashion, is the history of virtue and intelligence. How many revolutions have we passed through, before reaching our present simplicity of attire! And how many horrors have we encountered, before subsiding into our present condition of comparative charity and peace! Our contemporaries are better, as well as better dressed, than their ancestors; and our posterity will be better, and better dressed, than ourselves. Already our women have more elegance, and less bustle; and already our men have grown ashamed of their pig-tailed coats, not a thread of which will survive for their heirs at law. Already, in like manner, do we begin to pick up little thieves and beggars from the streets, to imprison them in schools, instead of contaminating them in jails; to turn them to knowledge and industry, instead of confirming them in ignorance and crime; and to lead them on to public usefulness, rather than the hulks and the gallows. Condemn not, therefore, the vulgar-genteel, any more than our ancestors, for, like the latter, they are pilgrims on the road, and their very errors are paths that lead to truth.

But there is one thing in the general bearing and tendency of the present age towards the Genteel which is a little puzzling—not that we think the thing unnatural or improper in itself, but we cannot well see in what way the result is to benefit society. Gaudy or ill-matched colors betray a mental struggle, which may end in advancing the individual in the path to taste; and a control, however rude, of the language and movements of the body, may in like manner result in an approach towards politeness. But of what utility in our social progress is the present chronic revolution in proper names? Suppose, for instance, the whole race of Smiths get on to writing their name Smyth, or even reach the *ne plus ultra* Smythe, *cui bono?* Smythe is not intrinsically better than Smith; it is only more uncommon; and every advance the multitudinous tribe makes in this direction defeats its own object. If Smythe were a good, or a beauty in itself—if it were the *beau ideal* of Smith—that would be another thing; but it does not even make the name a dissyllable—it leaves it the same short, squat, *ruturier* word as ever. Nothing, in fact, can be done for Smith but giving it an amiable prename, or, better still, a title. Sir Sidney Smith, for instance, has a decidedly aristocratic sound; and this has no dependence upon its personal associations, otherwise Adam Smith would be recognized as the legitimate chief of the clan. Without a prename at all, Count Smith, and Baron Smith, so common on the continent, are highly respectable; and if a suggestion had been adopted, which was kindly and happily made, on the occasion of the marriage of an Irish beauty of the name with a scion of Italian royalty, Smith would have become one of the most distinguished patronymics in the kingdom. The match alluded to was reckoned a *mesalliance* on the part of the lover, who was accordingly threatened to be discarded by his family; and he was therefore advised to confer upon the name of his lovely bride his own title, and call himself Prince Smith.

But even a prename alone may be of great advantage. There is one of the novels of Miss Edgeworth—we forget which—in which a gentleman of the name of Harvey figures as the hero. Harvey! Only fancy John, Peter, or even William Harvey as the hero of a novel! But Miss Edgeworth was too well acquainted with the philosophy of names to commit such a blunder: she made the individual Clarence Harvey; and the name has never to this day been objected to even among the female teens. Our own attention was first attracted to the importance of names by the case of an adventurer in London whom we knew personally. He was a countryman of the Princess Smith alluded to, and had come up to push his fortune in the musical line. Being really a person of fair abilities, he obtained a few pupils, and had even a couple of little songs published by the music-sellers; but it would not do.

Digitized by Google

He did not make enough to keep his family, (for he had brought his wife and child with him,) and when want began to stare them in the face, and pinch too, as well as stare—he at length made up his mind, though with many bitter regrets, to go back to Connaught. What could he do? Nobody cared about songs by R. A. R——; and to this day their merits remain an impenetrable mystery. We were in the music shop when he was closing the publishing transaction, and he had occasion to sign his name—we fear not to a receipt. The publisher stared at the document, in which the signature was given at full length, and then at him.

"R. A.!" cried he. "Why, your name is Ralph Abercromby!"

"You may say that. Was n't it after the gineral I was christened?"

"Goodness gracious! Ralph Abercromby! Why did you not mention this before? And are you really off now—with a fortune in that name?"

"Sure it 's time to be off, when I have paid the fare, and forgotten the rint. Bad luck to the name! If the initials have brought is to this, would n't the rest of it have starved us entirely?"

"The man is an ass!" mused the publisher aloud, as our friend flung out of the shop. "But Ralph Abercromby R——! that name would have carried him through, if he had brayed *worse* than a donkey!"

Sometimes it is considered advantageous to give one's name a foreign air; as if we were valuable exotics naturalized in the country, but still looking brown and yellow, as it were, in honor of our origin. Thus plain Miller is homely and sturdy (though not overly honest) till it is improved into Muller; but when this again becomes Mühler, it is quite a molendinary curiosity. We fancy Mr. Mühler was some centuries ago Herr Mühler, and we long to ask him, When did you come over? This expression, by the way, *come over*, is very captivation. Some came over with the Saxons, some with the Normans—it matters little which; the thing is to get back one's origin till it is lost in the morning twilight of history; and the breadth of the ocean counts to our imagination like an additional space of time. A foreign miller, besides, is a more poetical personage than an English miller. In England, gentry of this profession may be thieves, (as it used to be the fashion to represent them,) but abroad they are banditti; and in Germany, some of the wildest scenes that followed the Thirty Years' War, were enacted in a mill. Most people, in fact, have a strong objection to names that are associated with the vulgarities of a common trade. An aspiring Mason, by simply doubling the *s*, so as to make himself Masson, laughs at detection; although a Tailor has less facility of escape—and more need of it; he tries Taylor, and probably shakes his head; then the other syllable, Tailour; and if still appalled by the horrors of the name, he makes it, as a last resource, Tailyour.

But there are other associations still more frightful, as in the Scotch name Boag, which is identical, at least in sound, with that of the insect called by the English, bug. The desperate efforts made here by the hereditary victims are truly alarming. Some write the word Bogie; but finding that they have thus got into the spiritual world, they rush madly into Bogue, and sometimes Boog. When a name, on the other hand, has a meaning complimentary to its possessor, the grand desideratum is, to make it as plain as possible. Thus Archibald is somewhat equivocal as it stands; and it is neatly and decisively modernized into Archbold. Frequently the only fault complained of is the want of euphony—as in Mucklewham. Somebody says, in the Waverley novels, that he could not think Venus beautiful if announced in a drawing-room as Miss Mac-Jupiter. What would he think, then, if presented for a quadrille to Miss Mucklewham? But thanks to the taste of the times, the name is nearly obsolete, and our fair partner is now Miss Meikleham.

A familiar object, even when its associations are good, is not approved of for a name. Burn (a stream) was sought to be made a little grander, by being given in the plural, Burns; but personal associations, as we have already observed, having no effect in this species of mania, some diverged into Burnes; while others, determining to sever definitively all connection with poetical immortality, called themselves Burness. Mill, in like manner, was made Mills, and was then sunk entirely in Milne; and Home became Hume; and Hume, Hulme. John, on the same principle, is pluralized Johns, and this made into Johnes, and Jones.

But personal associations are only ineffective when modern. It is considered a great attainment to get back Cumming to its probable origin, Comyng; and those who are not satisfied with elongating Graham into Grahame, rest with delighted pride upon the Celtic Graeme. The colors, we need hardly add, are always sought to be washed out. White becomes Whyte, and is then entirely obliterated in Wight; and Brown, after passing through the intermediate Browne, relinquishes its identity in Broun.

In all these transformations the aim is the same—distinction. We wish to divorce ourselves from things common and vulgar, and fancy—oddly enough—that we in some measure accomplish this by misspelling the name we have received from our parents. We once knew an instance, and rather an instructive one, in which this nominal distinction was carried progressively on with the advance of the fortunes of the individual. His original name was Cuningham; and he was born in a station in which people think very little, and frequently know very little, about their patronymics. He was an errand-lad and porter in a draper's shop in one of the larger towns on the west coast of Scotland, and being a smart fellow, was on some occasion promoted to a station behind the counter. This was a great advancement for the errand-lad, and he became all on a sudden prodigiously genteel. What first put it into his head, it is hard to say; but certain it is, that a little twirl at the end of his written name subsided gradually into an *e*, and at last, to all intents and purposes, he was Mr. Cuninghame. In two years after this consummation, he was left very unexpectedly the sum of £200 by a distant relation, and Mr. Cuninghame determined to retire from his employer's counter, and take one of his own. While looking out for a proper place for his intended establishment, a new change occurred in his name corresponding with the expansion of his ideas in other respects; and he became now, to the great surprise of his acquaintance, Mr. Coyninghame. But it so happened that, before he had quite fixed upon a site for his "warehouse," he was quite fixed himself in admiration of a young lady, the heiress of a tallow-chandler; and as she was much struck with his person, and the uncommon gentility of his name, he abandoned his present pursuit, and laid siege to her as the more promising speculation of the two. In the course of his courtship a new change occurred in his name, and he

Digitized by Google

was now Mr. Coynynghame. It is supposed that this was in homage to the taste of the heiress; and the supposition receives some color from the fact, that after she proved faithless, he knocked out indignantly the additional *y*. It was not so easy, however, to place himself in other respects *in statu quo*. His capital was by this time nearly all gone; and after a dreadful struggle with his pride, he was compelled to step behind the counter once more as the shopman of another. With a stern philosophy, he signalized his fall by the sacrifice of the remaining *y*: but the Furies were not yet appeased. The great monetary crisis took place at this time, which reduced most of the establishments in the town, and among a multitude of others, threw Mr. Cuninghame out of work. His remaining funds were quickly exhausted. What was to be done? He had the good sense to take a porter's employment again, and became once more plain John Cuningham.

In this history we see movement without progress. The mistake was to suppose that a change of position rendered a change in the name an advantage, or that any additional dignity could be derived from spelling it with one letter instead of another. It was very proper for the porter to abandon his jacket in favor of a coat when he became the shopman; but a name is no indication of rank, any more than rank is an indication of virtue. After all, we believe the most frequent revolutions in names have been the result of mere accident, such as the ignorance of the parties of the mystery of orthography, and the disregard in which such niceties were held before the language had attained its present fixed and regular form.—*Chambers' Journal.*

Cultivation of Conscience.—As we cultivate taste, or our susceptibility to beauty, by meditating upon the most finished specimens of art, or the most lovely scenery in nature, so conscience, or our moral susceptibility, is improved by meditating upon anything eminent for moral goodness. It is hence that example produces so powerful a moral effect; and hence that one single act of heroic virtue, as that of Howard, or of illustrious self-denial, gives a new impulse to the moral character of an age. Men cannot reflect upon such actions without the production of a change in their moral susceptibility. On the contrary, the discriminating power of conscience may be injured by frequent meditation upon vicious character and action. By frequently contemplating vice, our passions become excited, and our moral disgust diminishes. Thus, also, by becoming familiar with wicked men, we learn to associate whatever they may possess of intellectual or social interest with their moral character; and hence our abhorrence of vice is lessened. Thus men who are accustomed to view, habitually, any vicious custom, cease to have their moral feelings excited by beholding it. All this is manifest from the facts made known in the progress of every moral reformation. Of so delicate a texture has God made our moral nature, and so easily is it either improved or impaired. Pope says truly,

> Vice is a monster of so frightful mien,
> As, to be dreaded, needs but to be seen;
> But seen too oft, familiar with her face,
> We first endure, then pity, then embrace.

It is almost unnecessary to remark, that this fact will enable us to estimate the value of much of our reading, and of much of our society. Whatever fills the memory with scenes of vice, or stimulates the imagination to conceptions of impurity, vulgarity, profanity, or thoughtlessness, must, by the whole of this effect, render us vicious. As a man of literary sensibility will avoid a badly-written book, for fear of injuring his taste, by how much more should we dread the communion with anything wrong, lest it should contaminate our imagination, and thus injure our moral sense!—*Wayland's Moral Science.*

Porridge.—Oatmeal is likewise used, and deserves to be much more used than it is, in the form of what is called stirabout or porridge. This is made by gradually stirring oatmeal into boiling water, until enough has been added to give the required degree of consistence—continuing the boiling until the meal is sufficiently cooked. It is commonly eaten either with milk or with butter-milk. This is usually a very unirritating kind of food—an article of diet which is well adapted to the case of children, and little less so to that of dyspeptics; and for the laboring population it forms a breakfast that is much more nourishing and wholesome than the tea and the bread and butter, or bread and dripping, which are in England so much more generally made use of. Flour bread and milk, although certainly well suited to the stomachs of most children, is nevertheless found to disagree with some; and as a general breakfast for children, I think that oatmeal porridge and milk deserves to be preferred. It is an unstimulating diet; it is very easily digested; it contains a very considerable proportion of nutriment; and it seems usually to act slightly on the alvine excretions—while in many cases a continued use of milk renders it necessary to take an occasional dose of aperient medicine.—*Dr. Robertson on Diet and Regimen.*

A little boy of the commune of Hery-sur-Alby, in the canton of Geneva, was lately seized by an eagle at the moment at which he had taken some eaglets from a nest. The bird carried him to a height of upwards of 600 metres, to the summit of a rock; luckily, some shepherds saw what was passing, and rushed to the rescue. The poor boy escaped with a fright and the deep impressions of the eagle's claws in his flesh.

At Croydon Assizes, last week, Mrs. Armsworth, the widow of a laborer, brought an action against the South-eastern Railway Company, for compensation on account of injury sustained by the death of her husband. In January last, there was a fall of chalk on the railway at Merstham; deceased and other men were employed to clear the line, the rubbish to be conveyed some distance from the spot; the men rode on the train, that they might shovel out the chalk at the appointed place; in one of these trips Armsworth rode in a wagon filled with chalk; the signal being given to shovel out the chalk, he began the work, but just then the engine gave a plunge forward, Armsworth was thrown off, and crushed under the wheels. This was the plaintiff's case. For the defence, it was shown that the man had no business on the chalk-truck; a wagon was attached to the train specially for the laborers to ride in, but Armsworth and others would get into the chalk-trucks that they might set to work more quickly. It was denied that any signal had been given to the men to begin unloading when the engine was put in motion. The jury returned a verdict for the plaintiff—damages, 100*l.*; 50*l.* for the widow, and 25*l.* for each of two children.

From the Examiner.

Wayfaring Sketches among the Greeks and Turks, and on the Shores of the Danube. By a Seven Years' Resident in Greece. Chapman and Hall.

THIS book will bear comparison with the cleverest of the clever books that have been lately published on the east. It is written by a lady, and has the best and worst characteristics of feminine genius. The logic is terribly vague, and the rhetoric of a very questionable order; but the general ease, vivacity, and sportful observation, the brilliant touches of description, the lively humor, the quick good sense, and the delightful under-current, all through, of womanly grace and sprightliness, have charmed us very much indeed. In some passages we seem to have a vision of Lady Mary herself. But what would Lady Mary have said to the writer's denunciations of the harem? And what will Mr. Milnes say to it?

The writer introduces her sketches, which seem to have been taken in a voyage home from Greece by the Danube, with a well-written account of the result of her impressions of a seven years' residence in Greece; and this gives a tone to the volume which is preserved throughout, of more thorough information than ordinary travellers possess, and of a certain previous knowledge of eastern life and custom which communicates substance and reality to what she afterwards relates. She is not a mere maker of paragraphs, and there is little of the dead life of the hand-book in her volume. We doubt if Eothen himself is more real at times, more full of personal incident, more amusingly life-like. The lady has not a little comic talent; and her sketches of fellow-travellers from Europe or Kentucky, as well as her pictures of gluttonous Turks, wise dervishes, Bulgarian pachas, Rabbins' houses, and Mahometan harems, give very free and pleasant scope to this love of comedy. We recommend the book to the Dramatic Authors' Society. It is full of character and incident, and tells a great many pathetic little stories, as well as tales of a comic cast. We must say, however, that we prefer the latter. Her fine writing is too fine. She gets into oriental folds and amplitudes of phrase, and has to make the most awkward twists and turns to effect her escape from them.

We cannot stop at her introduction for more than one brief extract. But its account of Greece contains matter more favorable to the Greeks and to the prospects of their condition than we have been at all accustomed to receive, even in the late thoughtful and intelligent travel of Lord Nugent; and describes the people, in their kindly, genial, and (above all) *improvable* qualities, grievously to the disadvantage of the Turks.

THE LITTLE SILK-WINDER, KATINKO.

"Katinko was more like the most exquisite statue than a human being—the repose of her matchless features, and the marble paleness of her complexion, were quite unequalled. We soon found, however, that she shared in a deficiency common to all inanimate pieces of sculpture, and more general among living beings than we are disposed to admit. The mind, the intellect, that should have illuminated that perfect countenance, existed not, and she was a very child in capacity and in tastes. Still we took a great interest in her; and our distress was extreme when we discovered, after she had been with us two years, that she had consented to enter on a new line of life very different from that we could have desired for her.

"Just at this time some young men, returning from their colleges in Europe, full of enthusiasm for their country and its departed glory, determined to revive several of the ancient tragedies, and have them performed at the little theatre at Athens.

"A *prima donna* was, of course, indispensably requisite, and some one had, most unfortunately, caught a glimpse of Katinko, wandering among the vine walks of our garden, when the evening breeze had lifted from her beautiful face the long folds of the floating veil, which completed her native costume.

"She was not proof against the golden offers which were instantly made to induce her to go on the stage, and she left us almost secretly for Athens, where she was to be instructed in her new calling. It was in vain we remonstrated; nothing we could offer could compensate to her ambitious old mother for the delight of seeing her child figuring as a princess or queen, were it but for an hour.

"Katinko shed many tears at parting; but, nevertheless, she went; and it was the last we saw of her, with her simple, child-like manners, and her picturesque Albanian garments.

"About a year after, I was accosted in the street by a young woman in the European dress, whose appearance was decidedly remarkable, from the outrageous violation of all good taste which characterized her attire. Not only was she loaded with feathers and ribbons, but her face was positively masked in paint, applied seemingly without any attempt at concealment! It was actually not until she turned towards me the exquisite profile, which nothing could change, that I recognized our once beautiful Katinko!"

The return from Greece described in the volume was by Smyrna, Constantinople, the Black Sea, and the Danube. But before the writer and her friends left their seven years' home, there were great lamentings and farewells.

"The villagers crowded round us to take leave; even the old woman who is the wonder of the country round for her great age—for it is known that she has passed 110 years—hobbled down to see us for the last time. We were much amused at the look of profound disgust with which she assured us, that if ever we came back, we should be certain to find her still alive, for that she had given up all hopes of dying. She has a curious idea on the subject; she thinks it a judgment on her, for some sin she has committed, that she is thus condemned to live; and grumbles much at the severity of the punishment."

We suspect an occasional disinclination in the writer to do justice, in her general remarks, to the Turks. She exhibits a sectarian zeal against Mahomedanism, and tries the mosque with the measure of the kirk. We have often reason (not questioning her object, or the excellence of it) to except to her *tone* on this subject. But we make the necessary allowance as the volume goes on, and do not find that this ultra-religious zeal affects anything very seriously but her logic and her rhetoric.

Passing several most charming sketches in Smyrna, we must visit a very grave and learned dervish, Abdul Mesrour, living in the suburbs. He is an astrologer, and must be visited with the morning star; at any rate before six in the morning. He has, for his porter, a little negro slave, who is as good as a page from the *Arabian Nights;* but we

Digitized by Google

omit all preliminary description, excellent as it is, and come to the conversation.

"He commenced by asking me how old I was? when I told him, he ejaculated 'Wonderful!' whether in allusion to my extreme old age, or in astonishment that I should have travelled so far, I cannot say. He then inquired after the health of my husband, and as I knew by experience how impossible it is here, where no young lady is unmarried after twelve or fourteen years of age, to convince him that no such person existed, I merely bowed in return, which he took as an intimation that that imaginary gentleman was in good health, and expressed himself much gratified thereby.

"He now desired to be informed what country I belonged to, and I perceived, from the rather singular ideas he had formed as to the geographical position of Great Britain, that his profound astronomical researches had led him to treat the details of our own little planet with much contemptuous indifference. This, however, he seemed to think a good opportunity for obtaining some lighter instruction in an easy and familiar manner, and he therefore requested I would give him a full and particular account of the government, laws, religion, and civil institutions of England, with which he modestly acknowledged himself altogether unacquainted. Monsieur V—— laughed heartily at my look of despair when this herculean task was proposed to me; but happily I broke down at the very outset, for I failed signally in my first attempt to convince him that England was governed by a female monarch, and he was so disgusted at my trying to impose on him in this manner, that he gave up any further inquiries."

Our next extract is from a scene in

THE SLAVE-MARKET OF CONSTANTINOPLE.

"A most interesting group presented itself before us: two young female slaves, both with most pleasing countenances, stood together closely embraced, the arm of the one round the neck of the other; their attitude, as well as the strong likeness between them, pointing them out at once as sisters. By their side was an African slave-dealer, in whose ferocious countenance it seemed impossible to discern a trace of human feeling. He was armed with a large heavy stick, with which he drove them to and fro, literally like a herd of animals. Three or four Turks were discussing, with considerable animation, the price of one of the women; but the bargain had been struck just before we came in, and one of the party, a stout, good-looking man, was paying down the money. When this was completed, with an imperious movement of the hand, he motioned to his newly-purchased slave to follow him. It was the youngest and the most timid of the two sisters whom he had selected. Nothing could have been more painful than to watch the intense, the terrified anxiety, with which both had followed the progress of sale; and now it was concluded, and they knew that the moment of separation was arrived, she whose fate had been sealed, disengaged herself, and, turning round, placed her two hands on her sister's shoulders, with a firm grasp, and gazed into her eyes. Not words, not tears, could have expressed one half of the mute, unutterable despair that dwelt in that long, heart-rending gaze. It were hard to say which face was most eloquent of misery; but the Turk was impatient; he clapped his hands together. This was a well-known signal. A slight tremor shook the frame of the young slave; her arms fell powerless at her side, and she turned to follow her master. The voiceless but agonized farewell was over. In another moment, we could just distinguish her slender figure threading its way through the crowd, in company with the other slaves belonging to the Turk. Her sister had hid herself behind her companions, and now sat on the ground, her head sunk upon her folded arms."

Other sketches of like dreadful incidents in that horrible human market are even more powerful. The examination by a fat phlegmatic Turk, of the teeth, the arms, the flesh, and general condition of a group of handsome young Circassians, not unconscious of their misery and degradation, but looking at the girl from Europe "with unutterable sadness," is very painfully affecting.

A NIGHT ON THE BLACK SEA.

"Directly below me, an unfortunate lady was extended on a mattress on the floor, which was inlaid with polished wood; every time the vessel rolled, the mattress and its burden slid down the room to the opposite wall, where the lady received a violent blow on the head, and then, as the ship righted again, returned slowly to their place. There was a species of fascination in this slow torture, which occupied me the whole night; and such was the state to which we were all reduced, that although the lady who thus helplessly acted the part of a living pendulum, was my own mother, I lay composedly watching her sail away to the other side, and waited till she should come back and knock her head, without even making an effort to relieve her. Daylight brought no improvement in our position, and I alone had strength enough left to creep on deck. I managed to crawl round to offer my assistance to the inmates of the respective berths before I left the room; but I received no other answer from any, than an entreaty that I would put a speedy termination to their existence."

Here is a description of some of the writer's fellow-voyagers, a party of Turks at supper on deck.

"I found the whole party seated round a large bowl of pilaf, into which they were digging joyously and savagely; nodding their turbans over it, with solemn ejaculations of Mahomedan piety, and cramming it down their throats with a celerity which seemed to have no other object but a philosophical desire to ascertain how much they could swallow in a given time, without any reference to the nourishment to be derived therefrom. I wished them a good appetite, in Greek, which is a set phrase I knew they would understand; and they were all so delighted with this proof of intelligence on my part, that I narrowly escaped being choked by the great bullets of rice which they speedily rolled up in the palms of their hands, and would have jerked down my throat with singular dexterity, had I not earnestly deprecated so oriental a proof of good-will. One corpulent old gentleman, who seemed to have had a superior education, sat looking at me with profound disgust, and affectedly stroked his yellow slippers whenever they even came in contact with my dress. I specially addressed him with a polite invocation for the increase of his appetite, already so voracious, that had my wish been fulfilled, I doubt if any amount of food would have satisfied him; but though he gravely responded, I saw it had no effect in subduing the savageness of his feelings towards me; I was still a ghiaour, and a thing without a soul, and therefore to be despised; seeing this, I went to my father and begged a little tobacco from him, with which I returned, and silently pre-

Digitized by Google

sented to him; 'Mashallah,' he exclaimed, this was quite another story; the soulless thing had a wonderful instinct for comprehending his precise tastes, and he instantly became the most affable and talkative of old gentlemen."

A haughtier specimen of the Turk subsequently presents itself. He is going on a mission to Belgrade, and will let nobody but his pipe-bearer approach his sofa of state. But he relaxes into a game of chess.

"In the evening when candles were brought in, Monsieur Ernest proposed to me to play at chess, and we were just sitting down, when the haughty Turk, who seemed rather tired of his solitary grandeur, on the state canopy, from which he had driven all others by his surly looks, suddenly shuffled down, and coming towards us, very coolly set Monsieur Ernest aside, and intimated that he himself would do me the honor to play with me. There was something rather comical in the idea of playing chess with a Turk, and although the technical terms of that game in the Turkish language had certainly formed no part of my education, I thought, with the help of a few of the wonted exclamations, it might be managed, so we sat down with all due solemnity. His head with the turban and long beard certainly did look uncommonly fierce over the chess-board, but we found no difficulty as to the science of the game; for the word 'check,' or 'ehec,' seemed to have been converted into Turkish as 'chok,' and the king he called 'pasha;' and as he was a first-rate player, he beat me in about ten moves, repeating 'chok, pasha,' pertinaciously, till he check-mated me outright."

Monsieur Ernest himself, however, and his worthy uncle, must not be omitted from our extracts. They are fellow-travellers with the author, and become great favorites with her. Very deservedly; if they helped to amuse her, as much as, with their help, she certainly amuses her readers.

"Monsieur de B—— had always informed us that his nephew had gained a prize at college, destined to reward a perfect knowledge of the German language, and it is probable that he can, indeed, read it very well; but his accent is very peculiar, and as he has never attempted to speak it before, no waiter has yet been found capable of understanding him; so that, when he gives his orders, their interpretation of his carefully-prepared speeches, invariably appears in the shape of some strange breakfast or dinner, altogether different from what he has asked and expected; and then Monsieur de B—— invariably exclaims, with a look of surprise, '*et pourtant*, Ernest, you gained the prize for,' &c.: the climax, however, was put to his discomfiture, to-day, in the most amusing manner.

"We had agreed to play at chess, and he volunteered to ask for the chess-board, refusing all offers of assistance. Presently he came back, most triumphantly, to say that the man had perfectly understood him, and was to bring it immediately. He prepared the little table between us with great animation, and called for all our companions who were in the habit of watching our play. We waited some time, but the chess-board did not appear, and at last the waiter happening to pass through the room, Monsieur Ernest asked if he were not going to bring it? His answer was prompt but mysterious; he said that it was not yet heated. We had heard of heated chess-players, but never of a heated chess-board; and Monsieur Ernest began to look very uneasy, when suddenly the door opened, and the man appeared with a large leg of ham, smoking hot, which he placed on the table between us, with plates and everything requisite, for a comfortable *dejeuner à deux*, which he supposed we meant to enjoy together. There is, in fact, a considerable similarity between the words which express in German a ham and a chess-board; and amidst the rage of Monsieur Ernest, and the infinite amusement of every one else, the voice of Monsieur de B—— was still heard wondering 'et pourtant, Ernest, tu as gagné,' &c."

They reach the Hungarian town of Buda, and Monsieur Ernest is in great excitement and anxiety to see the famous crown of St. Stephen, which is kept in the palace of the Prince Palatine there. But obliging as a Swiss guide is disposed to be, he cannot make M. Ernest out.

"Sometimes he put on an expression of the most hopeless despondency, and turned to me as though he thought I should have been able to understand him, saying, piteously, 'What does the little gentleman want!' At last, when he seemed about to usher us out without having seen the famous crown, Monsieur Ernest became highly excited, and his impatience rendering him still more incoherent, the poor man grew quite bewildered, and not having the smallest idea of what he was asking for, the conversation which followed between them was most ludicrous. 'Sie haben ein Kron!' (you have got a crown!) said Monsieur Ernest to him, very decidedly. 'I! Armer mensch!' 'I have got no crown.' 'Yes, you have—you have got a crown and a sceptre.' 'Holy Saint Nicholas! I have neither crown nor sceptre—I am a poor man with a large family.' 'A king's crown,' shouted Monsieur Ernest, 'and a sceptre and a mantle.' 'Ich bin kein könig,' he said, doggedly, 'and I have not got a sceptre, I keep the keys.' At last, catching at a word, he made out his meaning, and told us the crown was at Vienna; when Monsieur de B—— wound up the whole by remarking, 'Et pourtant, Ernest, it is very strange that you should have gained,' &c."

We shall close our extracts with one of the best descriptions of a harem that we have had from a modern traveller. It is the harem of the Pacha of Widdin, one of the most populous towns of Bulgaria. That grave and important personage had been so much struck with the solemnity and politeness of the European lady-traveller as to order her admittance to even the sultana's apartments, and she was conducted by a duenna to her highness' chamber.

"We were interrupted by the arrival of some fifteen or sixteen young slaves, who came running into the room, laughing and talking like a party of school girls, each one pausing at the door to make me the usual salutation, and then clustering together in groups to gaze at me with the most eager interest. They all wore the same dress, and certainly it looked on them most singularly graceful, as they stood in a sort of languishing, indolent attitude, with their arms folded, and their long almond-shaped eyes, half closed. It consisted of a loose silk jacket, reaching to the waist, another underneath, of a different color, falling below the knee, and finally a pair of enormously wide trousers, either wholly red or a mixture of gay colors, which almost covered their little yellow slippers. A silk handkerchief and various other ornaments were twisted in their hair with quite as much genuine coquetry as is to be found in more civilized countries. Of all the number, only three struck me as having any great claim to beauty; but cer-

Digitized by Google

tainly creatures more lovely than they were could nowhere have been seen. Two of them were Circassians, with long fair hair and soft brown eyes; the other was, I think, a Georgian—very dark, with beautiful features, and the most haughty expression of countenance. It was evident that she was held in great respect as the mother of a fine little boy, whom she had in her arms. All of them had their nails dyed with that odious henna, with which they disfigure their hands and feet.

"Presently there was a strange shuffling noise heard without, a prodigious rustling of silk and satin, and the interpreter, hurrying in, announced the sultana. The slaves fell back, and arranged themselves in order. I rose up, and her highness entered, preceded by two negro boys, and followed by half a dozen women. She was a tall, dignified-looking person, of some five and thirty, and far from handsome. Nothing could be more splendid than her dress, or more perfectly ungraceful. She wore a pair of light blue silk trousers, so excessively large and wide, that it was with the greatest difficulty she could walk; over these, a narrow robe, of red cashmere, covered with gold embroidery, with a border of flowers, also worked in gold, at least six inches wide. This garment was about five yards long, and open at the two sides as far as the knee, so that it swept on the ground in all directions. Her waist was bound by a cashmere scarf, of great value; and from her shoulders hung an ample pelisse, of brown satin, lined with the most beautiful zibeline fur. Her head-dress was a silk handkerchief, embroidered with gold; and to complete her costume, she was literally covered with diamonds.

"She received me in the most amiable manner, though with great stateliness and dignity; and when I begged the interpreter to tell her highness how greatly I felt the honor she had done me, in inviting me to visit her, her features relaxed into a smile, and dragging herself and her load of finery to the divan, she placed herself upon it, and desired me to sit beside her. I obeyed, and had then to recommence all the compliments and salutations I had gone through at the pasha's, with still greater energy; for I could see plainly that both herself and her slaves, who stood in a semicircle round us, were very tenacious of her dignity, and that they watched most critically every movement I made.

"I was determined, therefore, to omit nothing that should give them a high idea of my 'savoir vivre,' according to their own notions, and begun by once more gravely accepting a pipe. At the pasha's, I had managed merely to hold it in my hand, occasionally touching it with my lips, without really using it; but I soon saw that, with some twenty pairs of eyes fixed jealously upon me, I must smoke here—positively and actually smoke—or be considered a violator of all the laws of good breeding. The tobacco was so mild and fragrant, that the penance was not so great as might have been expected; but I could scarcely help laughing at the ludicrous position I was placed in, seated in state on a large square cushion, smoking a long pipe, the other end of which was supported by a kneeling slave, and bowing solemnly to the sultana between almost every whiff.

"Coffee, sweatmeats, and sherbert (the most delightful of all pleasant draughts) were brought to me in constant succession, by two little negroes, and a pretty young girl, whose duty it was to present me the richly embroidered napkin, the corner of which I was expected to make use of as it lay on her shoulder, as she knelt before me. These refreshments were offered to me in beautiful crystal vases, little gold cups, and silver trays, of which, for my misfortune, they seemed to possess a large supply, as I was obliged to go through a never-ending course of dainties, in order that they might have an opportunity of displaying them all.

"One arduous duty I felt it was quite necessary I should perform, and this was, to bestow as much admiration on the sultana's dress as I knew she would expect me to feel; I therefore exhausted all my eloquence in praise of it, to which she listened with a pleased smile, and then, to my surprise, rose up and left the room. I was afraid I had offended her; but in a few minutes after, she returned, in a new costume, equally splendid and unbecoming, and I once more had to express my enthusiasm and delight, which seemed greatly to gratify her. She then returned the compliment, by minutely inspecting my own dress; and the slaves, forgetting all ceremony in their curiosity, crowded eagerly round me.

"My bonnet sadly puzzled them; and when, to please them, I took it off, they were most dreadfully scandalized to see me with my hair uncovered, and could scarcely believe that I was not ashamed to sit all day without a veil or handkerchief; they could not conceive, either, why I should wear gloves, unless it should be to hide the want of henna, with which they offered to supply me. They then proceeded to ask me the most extraordinary questions—many of which I really found it hard to answer. My whole existence was as incomprehensible to this poor princess, vegetating from day to day within her four walls, as that of a bird in the air must be to a mole burrowing in the earth. Her life consisted, as she told me, of sleeping, eating, dressing and bathing. She never walked further than from one room to another, and I can answer for her not having an idea beyond the narrow limits of her prison. It is a strange and most unnatural state to which these poor women are brought; nor do I wonder that the Turks, whose own detestable egotism alone causes it, should declare that they have no souls.

"Her highness now sent for her children, to show them to me, which proved that I was rapidly advancing in her good graces; and, as I luckily knew well that I must not look at them without pronouncing the wish that they might live forever, in case I should have an evil eye, she was well disposed to receive all my praises of them, and to allow me to caress them. She had four fine little children, and the eldest of them, a boy of six years old, was so perfect a miniature of his father, that it was quite ludicrous. He was dressed exactly in the same way, wearing even a little sword; and he came in bowing with so precisely the same dignified manner, that I really should as soon have thought of offering *bons-bons* to the pasha himself as to this imposing little personage."

The sultana's affection is quite won by admiration of the children, and, with one of those sudden thoughts which do honor to the female heart in Bulgaria as well as in Britain, proposes through the interpreter, that she and her new friend should be "sisters." So they swear eternal friendship, and in earnest of the compact the lady traveller is obliged to receive a handsome diamond ring. But if she made as favorable an impression on the sultana as her book is likely to make upon her readers, she deserved the sultana's gift.

AFFAIRS OF HONOR.—A remarkable sequel to the Dujarier duel has engaged the Paris gossips, in the shape of a trial which exhibited the Viscomte d'Ecquevilley, formerly one of the witnesses for the defendant Beauvallon, now as a prisoner charged with perjury; M. Beauvallon taking his turn as a hard-swearing witness. The French papers are full of the proceedings; but for the English reader, the connected narrative supplied by the *Times*, which goes back to the original affair, will be at once more intelligible and more interesting.

"In a most equivocal society, composed of 'literary men and actresses,' Beauvallon [editor of the *Globe*] and M. Dujarier [editor of the *Presse*] quarrelled at a card-table, and a challenge from the former was the result. Beauvallon wished to fight with the small sword; a weapon which M. Dujarier, well aware of his own helplessness and his opponent's skill, declined, and selected pistols, as giving him, at all events, a better chance for life, though even on those terms he had to oppose the most utter inexperience on his own side to notorious excellence on that of his adversary. At six o'clock on the morning of the duel, Beauvallon repaired to D'Ecquevilley's garden; where by appointment he met a M. de Meynard, and commenced practising at a mark. So admirable was his performance as to elicit a compliment from Meynard; which he acknowledged by stating that the pistols belonged to his brother-in-law, and that he was well acquainted with their peculiar capabilities. After the practice, D'Ecquevilley and Beauvallon proceeded to M. Dujarier's seconds to arrange the conditions of the duel. The meeting had been fixed for nine o'clock, and M. Dujarier was punctual to the hour; his adversary, however, was not so; and M. Dujarier was kept waiting shivering in the snow till half-past eleven; when Beauvallon stepped out of a snug carriage, with his clothes wadded, and with a very reasonable confidence in his instruments and his arm. So palpably had the duel been forced on the unfortunate victim, and so little ground was there, even according to a Frenchman's code, for this combat à l'outrance, that M. Bertrand, his second, a son of the marshal, went to unusual lengths of negotiation on the spot, and actually 'supplicated' Beauvallon to proceed no further; an intervention which was cut short by the reply, 'No, I have not come here for nothing.' On this rebuff, M. Bertrand betook himself to his charge of loading the pistols; when he discovered, to his astonishment, that the barrel was actually warm in his hand; and upon inserting his finger in the bore, it was perfectly blackened from the soil of the recent discharges. He dropped the weapon instantly, exclaiming that the duel was impossible; when D'Ecquevilley reiterated his solemn word of honor that Beauvallon had never seen the instruments, and that the barrel had merely been soiled by a little powder flashed off (*flambage*) to air it. The combatants were accordingly placed on the ground. The shot from the shivering and unpractised arm of M. Dujarier passed full sixty paces from his antagonist, who was now in legal command of his victim's life. So gratifying was this crisis that he was reluctant to end it; and, instead of firing, stood 'looking full at M. Dujarier with a sort of pride,' till at length M. Bertrand called out, 'Dépêchez vous donc, M. Beauvallon.' He then did fire, and shot M. Dujarier through the brain.

"The origin and incidents of the last trial are equally striking. After the duel, D'Ecquevilley went to Meynard and made interest with him to conceal the facts respecting the ownership of the pistols and the previous practice. To a suggestion of D'Ecquevilley's that he should come into court and directly perjure himself on this point he demurred, saying it was dishonorable, but consented to absent himself while D'Ecquevilley swore to all that was required. He soon, however, began to babble, and was urged to retract his admissions; which he declined to do, but agreed to tell no more, and to do all that he could, consistently with his honor, to inspire a belief that the reports he had circulated were false. Unfortunately, his forbearance was tried beyond its powers; and the result was a formal deposition, which occasioned the present trial. His statements were confirmed by the seconds, by the surgeon in attendance, and by a multitude of indirect proofs, which left no doubts upon the mind of the court. Even the mistress of Meynard deposed that Beauvallon had called upon her on his way to the practice before the duel on that morning, had told her he was going to some pistol-shooting, and had endeavored to make an appointment with her for a ball in the evening; a mark of confidence in the result of the engagement which she afterwards could not help recollecting. On the trial, Beauvallon and Bertrand were confronted; and on the president's remarking that the evidence of the latter contradicted that of the former, 'You would have then,' exclaimed Beauvallon, 'a duel between M. Bertrand and myself?' When we add that Dr. Guise, the medical witness, deposed to his having been challenged by D'Ecquevilley, and that the brother-in-law, the owner of the pistols, actually challenged one of the witnesses in the witness-room of the court, our readers may form some idea of the uses of duelling in such society.

"It would be unjust to conceal that the judgment of the court on all these points was severe, and that public opinion did on this occasion side with the court. It is true that Alexandre Dumas and some other lights of literature tendered emphatic testimony to the honor, probity, and integrity of the accused. But the court sentenced D'Ecquevilley to ten years' reclusion; a sentence involving the severest labor and imprisonment for that period, and entailing civil degradation and indelible infamy as its sequel. Beauvallon, the voluntary witness for his 'friend,' is also placed under arrest for manifest perjury during this trial; an event which will at length bring some punishment home to him, but which will fall very short of securing him his deserts.

"One incident on the trial is both too extravagant and too characteristic to be omitted from its report. Here were two men who to a systematic life of the grossest profligacy, sustained by swindling and shielded by imposture, had added a deliberate and concerted murder, the fine for which they had evaded by absconding, and the facts of which they were laboring to conceal by cool conspiracy and unrepenting perjury. Yet when Beauvallon is told by the judge that he can no longer 'consider himself a gentleman,' he colors up with indignation, and can hardly restrain himself from a violent protest in the open court!"

From Sharpe's Magazine.

THE MARTYRED TEMPLAR.

ALTERED FROM THE GERMAN OF SPINDLER.

It was a wild rocky coast; the gale was tremendous, and the waves ran high, so that a young fisherman who had been struggling for some hours to effect a landing, had the utmost difficulty in at last running his little vessel on shore in a narrow sandy cove, the entrance to which was almost concealed by the high cliffs. Here he proposed to remain until the storm should subside, it being too far away from his home to think of returning there by land, in darkness, and over a difficult pathway. His only companion was a boy, who, though not grown up, had strength enough to assist in adjusting the sails, and sometimes in rowing. The remains of a ruined chapel, dedicated to St. John, were about a quarter of a mile distant, and hither the mariners wended their way to seek shelter for the night. Strange stories were circulated with regard to the sacred remains; for the inhabitants of the north of Europe were quite as superstitious, when the incidents of our story took place, some centuries ago, as their descendants are now; and it argued some courage on the part of the young fisherman to venture there at all. They had scarcely reached the old building, and stretched their weary limbs under the part of the chapel still protected by a roof, when the boy started, and whispered to his master, "Hark! do you not hear the sound of men's voices? And there! see a light through the grating that covers the vault."

"Hush!" said the fisherman, "creep softly to the grating, and try if you can discover anything without being seen."

The boy obeyed, and informed his master that a great assemblage of men were gathered together below, who seemed to be consulting in a strange language, which he could not understand. They were clad in white mantles, and each carried a drawn sword in his hand; but the indistinct light prevented him discovering more. The young fisherman turned pale at this intelligence, and exclaimed, "God preserve us! These must be the great lords from France, that have taken refuge in our country. Some people say they go to St. John's Chapel to pray, and others that it is for wicked purposes they assemble here! At any rate let us depart, for it is not safe to remain, lest they discover us, and think we are spies."

So saying he took the boy by the hand, and dragged him away, but the noise of their footsteps, and the long shadows moving in the moonshine, betrayed them to one of the party, who was stationed outside as a sentinel. "Halt!" was cried in a loud voice; and an armed man in a white mantle advanced with threatening gestures towards them. The boy then threw himself on the ground; the fisherman, kneeling, begged for mercy, assuring his captor that his presence in the chapel was purely accidental.

"What weather, brother?" cried a second man in white, appearing at the door of the vault.

"It rains," said the first; and the questioner instantly disappeared. Had not terror obscured the faculties of the captives, they would have taken the strangers for madmen, as the storm had abated, and nothing could be clearer than the firmament at this moment; the stars were shining brightly, and not a single rain-drop was to be felt. A tall and stately man now stepped out of the vault, and began to question them. The fisherman related everything simply as it had happened, and the boy corroborated his narrative; so that it was easily seen that they were not spies, and that they had had no time to make any discoveries, while, from pure curiosity, looking down the vault. Upon this, the stately-looking chief dismissed the lad, ordering him to return home immediately, and, if he valued his life, never to breathe a word of what he had seen and heard. The boy promised all that was required; and, being set free, darted away like a frightened deer, leaving his master in the hands of the strangers.

"You are a fisherman, are you not?" asked the chief. "Do you think that you could convey a man, without luggage or other encumbrance, to the coast of France; set him on shore in the neighborhood of Calais; and after waiting till he had finished his business, however long that might detain him, convey him safely here again?"

"Why not!" exclaimed the fisherman, after a moment of consideration. "My boat is an excellent one, or it would not have survived this gale. I have gone to France before, so I understand very well how to steer my way through the high seas. There is nothing to hinder me, provided you give me a suitable reward."

"Do not be afraid," said the chief; "I shall take care you shall be handsomely recompensed. In the mean time go and get ready your little bark, for your passenger must embark without delay."

"I must go home first," said the fisherman, who had by this time lost his fear, "to provide food and other necessaries for the voyage."

"That you shall not," said the chief, with an oath. "Your passenger will provide everything; in the mean time you must be watched."

With these words he reëntered the chapel; and the sentinel in the white mantle accompanied the astonished fisherman to the cove where his little vessel was lying. They had not long to wait; for a fine-looking young man, in a dark dress, speedily followed them, and, after handing in a few necessaries, stepped lightly into the boat, and silently sat down on the plank laid across the middle for his accommodation. He took no notice of the sentinel, not even vouchsafing him an adieu; and, making signs to the fisherman to steer, leaned his head on the cross of his sword, and looked moodily at the waves over which the vessel danced merrily, the storm by this time having completely subsided.

The stranger appeared to be dumb, for during the whole of the following day not a syllable escaped his lips; and when the fisherman that evening put into a little seaport, he handed him money in solemn silence, making signs to him to purchase more provisions. While he rested along the bottom of the boat, during the man's absence, he was careful to conceal his face in his cloak whenever any one approached. On the return of the fisherman he betook himself to slumber, and the poor fellow once more laid hold of the rudder, cursing the stupidity of his companion, who never offered to assist him, nor even cheered him by friendly conversation. Sleep at last unloosed the tongue of the strange passenger; his dreams appeared to be troubled; words escaped from his lips, and were audible to the astonished fisherman, even through the folds of his mantle, which he had drawn over his countenance.

"Will it then be accomplished?" he muttered. "Will the noble building be completed? Shall I mix the cement, and build up the pillars? Oh! master, master! You might have spared your comrade

Digitized by Google

this duty." Other mysterious words he continued to murmur, which were almost unintelligible.

"Oh, ho!" said the fisherman to himself; "the secret is out now! Well, how I have been mistaken! I thought my passenger had been something extraordinary, and now I find he is only a common mason, or hewer of stones. And these French gentlemen have probably come to our parts in order to repair, and build again, those chapels and churches which have been ruined by pirates, or during the wars. A most pious undertaking, and one highly to be commended!" At this moment the eyes of the fisherman were arrested by the sword which hung at the young man's side, and shaking his head, he continued, "Well, well! If I did not take the fellow for a noble knight! However, it does not matter; since a mason's gold is quite as good for my purpose as that of a man of quality."

In the same manner passed away other twenty-four hours, the young man still preserving the strictest silence, till at last they arrived at Calais, when, for the first time, he addressed the fisherman. "So this is the coast of France!" he exclaimed, as he stood up in the little bark; and looking towards the shore, sighed heavily. The fisherman assented, and asked him where he wished to be landed. The youth seemed overpowered with strong emotion; his breast heaved; his face was flushed; and he took off his hat, and tore open his vest to cool himself, although the rain was falling in torrents. The fisherman, after waiting in vain for an answer, turned the boat's head towards a secluded landing-place, at a short distance from the town; and running up close to the little quay, the stranger hastily leaped on shore. A small hut was near, but instead of taking shelter there from the inclemency of the weather, as the mariner advised, the young man told him to hold his tongue; and proceeded himself to inquire, at the cottager's, the road to the chapel of "Our Lady of Tempests." The inhabitants of the hut described the path to be long and difficult; the young man, however, had already taken his resolution. "By the third day, at furthest," whispered he to the fisherman, "I shall return." Then, wrapping himself in his mantle, and using his sword as a pilgrim's staff to support his steps, he proceeded along the wet and slippery track which had been indicated. By and by he reached a cross erected at the side of the road; and throwing himself on his knees, embraced the cold stone, while tears filled his eyes. "Mother earth! holy ground, where I was born!" he stammered forth, sobbing; "with what changed feelings do I now behold thee! Would to God it had been spared me thus to return as an assassin to the land of my ancestors! Alas! I must again flee from thee, beloved country, as soon as my vow shall be accomplished!——— Hail once more to the dear land of France; and, oh! dark night! shield me with thy dusky wings, that no one may follow on my track—no one watch the deed I am about to do!"

Having said these words, he rose, and walked manfully forward towards a distant field, from which a light glimmered faintly. The rain fell more and more heavily, and the way became more difficult; whilst the damp mantle of the traveller clogged his steps, impeding every motion with its weight. The storm raged without; but more tumultuous still were the feelings which contended within the bosom of the youth. By the time he reached the little church whence the light had proceeded, his strength was nearly exhausted; and he was obliged to sit down to recover himself, while he tried to distinguish the objects around him. "Here is the church," he murmured, "of which the master spoke. There to the right I can discern the large white cross, still visible through the darkness. On the left I hear the gushing of a brook;—all is, in short, as was described. Courage, then! Advance! If not deceived by the mist, I think I can trace the outline of a building, which I must shortly reach.—There is the goal of my labors!"

He was not mistaken, and soon reached the building; it was in the form of a square, and surrounded by a field inclosed by a stone wall, a small gate forming the entrance. The young man sprung over it, and passing by numerous implements of agriculture piled against outhouses, reached the entrance of the building, and climbing up the ruinous steps, gave two loud and quick knocks on the door, which he followed after a second or two by a third, long and resounding. A dog within the house now began to bark. No one came, however, and the stranger was obliged to repeat the signal, which he did in exactly the same manner. At length a man's voice was heard, asking what was wanted.

"I am a poor and hungry pilgrim, who has lost his way," replied the youth. "Can you give me shelter?"

After a short pause a light was seen through the window, steps approached, the bolt was withdrawn, and the door opened. The stranger had meanwhile laid his hand on the hilt of the dagger which he wore below his clothes; but his purpose faltered when he beheld the man who advanced to greet him. Benevolence and frankness were depicted on his countenance, as he welcomed the wet and weary wanderer. The hand of the youth sank powerless as he relinquished his dagger, and his tongue stammered as he inquired, if he were now in the presence of the proprietor Gilbert. The man replied in the affirmative.

"Then I greet you in the name of God, and of St. John, whom we both acknowledge as our patron," said the youth, holding out his hand. "And I call upon you to greet me at my entrance under your roof."

At this salutation, Gilbert staggered back astonished, while the mysterious grasp with which the unknown pressed his hand increased his fear and bewilderment.

"Why do you not respond to my greeting? Why not make the sign with your hand?" asked the stranger, boldly. "Brother Perrail, that is not right!"

Ashy pale, Gilbert supported himself against the wall. "Then you know—?" he stammered; but soon recovering himself, he continued. "Let us see," said he, "if some rogue is not mocking me. Your pass-word?"

"Notuma," replied the youth.

"Give me the word!" continued Gilbert, in an anxious and threatening tone.

"Tell me the first letter———I shall then give you the second," answered the stranger.

In this manner they made out the word. Gilbert had no longer any doubt. He clasped his hands together, and whispered, "Man, what wouldst thou in my house, that thou comest upon me like a thief in the night?"

"I want bread, salt, fire, and shelter," replied the stranger.

"Dare I trust you?" inquired Gilbert, with some hesitation.

Digitized by Google

"Are we not bound by an oath!" said the stranger.

"Alas! the oath!———" sighed Gilbert, whilst his head sunk upon his breast.

"Calm yourself," rejoined the youth. "I am a runaway like yourself; therefore am I come to you."

Gilbert scrutinized him for some moments with attention, and then shook his head distrustfully. At last he closed the door, and led his singular guest into an apartment, in the corner of which stood a plain, but clean-looking couch. He then set bread and wine before him, and, stirring the fire, proceeded to dry his wet mantle.

"I wish you a sound and peaceful slumber," he then said to the youth, who in silence watched all his proceedings. "You are in perfect safety in my house. To-morrow we shall talk more."

"Gilbert!" cried a soft and pensive voice from an adjoining apartment. "Where are you! With whom are you talking?"

"I am coming," replied Gilbert, calmly, as he shook hands with his guest.

"Is that your wife, brother Perrail?" asked the latter, in a significant whisper.

"Yes! my wife," replied the host, in a firm voice, after a moment's pause; and then withdrew, saying Good night to the stranger.

The youth long remained standing before the fire, watching the burning embers, and plunged in contemplation. Now and then he pressed his hand on his breast, as though he would thereby calm the tumultuous emotions within. "And shall I bring death into this peaceful house?" said he to himself. "This man, upon whose calm brow is legibly impressed benevolence and truth, utterly incompatible with the perjury of which he is accused—shall I blot him out from the land of the living, and make his wife, whose soft voice so touched my heart, a widow?———Uncle! cruel, cruel uncle! what a price hast thou set upon my admission into thy order!" He now paced in great agitation up and down the apartment. "Shame on thee, Guy!" said he then to himself. "Dost thou shudder at the trial! Oh! wherefore did my arm tremble when I entered this abode! Wherefore did I not smite the perjured and accursed one to the earth, thundering in his ears, 'This is the last greeting of the grand master and companions, perjured brother of the order!'—then all would have been done. Oh, incomprehensible destiny! why didst thou restrain my arm! Why dost thou compel me to pay hospitality with ingratitude—nay, with *bloodshed?* for the deed must be done. Oh, that some friendly spirit would warn the unhappy wretch to take flight! If he only would make use of this night's delay! happy then should I be; my obligation would be fulfilled, and with pure hands I should return to the brotherhood. May God, and the blessed Virgin, and the holy St. John, direct me what to do!" Then, committing himself to the Divine protection, the agitated youth, overpowered by fatigue, forgot his perplexities, and fell asleep.

Late the next morning, a sudden noise awakened him from a troubled dream. He fancied that he beheld his host standing beside his bed with a drawn sword in his hand, and that he uttered these words:—

"Die thyself!—thou who camest to sound my funeral knell!"

Half asleep, and unable to distinguish imagination from reality, he started up with a loud cry, and grasped his sword. Then, for the first time, he became aware of the presence of a very beautiful woman, with an infant in her arms, who stood near his bed. He sank back confused, while the same sweet voice that he had heard the night before calmed his perplexity.

"Be not alarmed, dear sir," said the fair lady. "You must have had a frightful dream, since you are so agitated by the voice of a weak woman like myself, who now comes to bid you welcome. You have slept long; the sun is now high in the heavens; and I bring you your breakfast."

Heartily ashamed, Guy took a basin of rich soup from the white hands of his hostess, and inquired, hesitatingly, whilst he looked around, "Where is Perrail?"

"I do not know whom you mean," replied the beautiful woman. "Of whom do you speak?"

In some confusion Guy struck his forehead, and then spoke more firmly: "Pardon me, I mistook! I meant to ask about your husband, Gilbert."

"He has gone to the fish-pond to catch fish," replied Blanche, for that was the name of the fair lady. "You know this is maigre-day, and my husband wishes to provide you a good dinner."

"God be praised!" said Guy to himself, in the strong conviction that Perrail had guessed his errand, and was now saving himself by flight from the vengeance of the order. Joyfully he now raised his eyes towards his kind hostess, and sank them again, lost in admiration of her beauty. Her simple attire added nothing to her loveliness, but, on the contrary, borrowed charms from it; while, as she stood before the youth, with the innocent child in her arms, she seemed to him a living image of the Madonna. A rough dog, of enormous size, crouched humbly at her feet, and jealously watched every motion of his mistress.

"The soup is most excellent," said Guy, as he laid down the empty basin. "May God reward the hospitality you have exercised towards a stranger! And now, pardon me for asking, has your husband explained to you the business which has led me here?"

"I know nothing about it," replied Blanche. "He did not tell me whether he knew you before or not, and has not alluded in any way to the business which brings you here. It is more my duty to attend to our guest, than to ask questions concerning him."

"But has not———I mean Gilbert, explained ———in short, made you acquainted with the circumstances of his past life?" rejoined Guy.

"Oh, yes!" replied Blanche, with the simplicity of a child. "His occupation has always been known to every one. The life of a master mason is necessarily common-place, and without adventure, unless during the time passed in travelling to learn the trade. Gilbert's life has been like the rest. He was born in the city of Arles, and journeyed about in his youth, till he became a master. Then he took a fancy to revisit France, the land of his birth, and passing through Calais, got acquainted with my father, to whom this farm belonged, part of the former possessions of the Templars, the ruins of whose hospital can be seen from this window. My father and Gilbert formed a strong friendship, and, after a while, the latter gave up his trade, and took to agriculture, when he married me. My father did not long enjoy the assistance of his honest son-in-law. He died, and was consoled on his death-bed by the thought, that he was leaving me to a kind protector. Believe me, kind sir, Gilbert is one of the best of men, and is respected throughout the

Digitized by Google

whole country. But perhaps you knew him before, and I am tiring you with my talk."

"On the contrary," said Guy, "you interest me greatly. But what is keeping Gilbert? He is very long in returning; perhaps the pond is at a distance."

"No," replied Blanche, "it is quite near. I begin to wonder also that he is so long."

"God be praised!" whispered Guy's conscience; for all conspired to confirm his previous conjecture. "God be praised! He has escaped, and I am spared the commission of an act which would have filled me with remorse to the end of my days. My errand is accomplished, and, to avoid any unlucky mischance, I shall instantly return to where I left my little vessel." Then, wrapping himself in his mantle, and grasping his sword, he strode towards the hearth, where Blanche was busily preparing some food. "Farewell, kind hostess!——" he hurriedly began, as though he feared to be detained; "accept my warmest thanks for your hospitality. I must depart immediately. Farewell!"

Blanche raised her eyes in astonishment, unable to account for this sudden resolution. "Are you obliged to go?" she inquired. "How? What is this? I know not what you mean. Is it possible that I have offended you?"

"On the contrary, you have gained my esteem and friendship," replied Guy, in great agitation; "and for that very reason I must depart."

"I do not comprehend you. My husband, Gilbert, will be very much grieved when he finds you gone at his return."

"I wish to go before his return," continued Guy. "I wish to spare both him and myself a painful meeting. Unfortunate woman, do not detain me! The happiness of your life is departed, should I remain." Once more he pressed the hand of Blanche, and turned towards the door; but started back as though annihilated—for on the threshold he met Gilbert.

"How? where are you going in such a hurry?" exclaimed Gilbert, after silently scanning the youth for a moment. "Return, I beg, my worthy guest. The weather is unpleasant. A cold wind blows from the sea, and the appearance of the sky is more like winter than summer."

"The gentleman wishes to leave us," interposed Blanche. "In my ignorance I have given him offence; or else our humble accommodation is not to his taste."

Gilbert gazed at the youth with a calm and steady glance, which penetrated to his soul. "Dear, sir," said he, at last, to Guy, who stood like a detected culprit before him, "you will not surely affront me before my neighbors, by thus suddenly leaving my house, without even explaining the business which led you here. See! I have brought you beautiful fish, which the steward of the estate has kindly permitted me to catch from the pond. Blanche shall cook them, and you shall have as good a dinner as the Templars themselves could have had."

With these words, he emptied the net in which he carried the fish, into a large vessel filled with water, and busied himself in assisting his wife in her preparation. Meanwhile, a sudden resolve darted into the mind of the youth, and earnestly he grasped the hand of his host.

"A word with you!" said he, in a meaning tone. "*Now* —— *instantly* it must be spoken! I wish to be without witnesses."

"As you please," replied Gilbert, calmly; and making signs to Blanche to remain behind, led his guest to a verandah, which opened on the garden and commanded a view of the desolate ruins of the hospital. "Here I think we shall be unheard," continued he to his moody and stern companion. "Speak on."

"I will," replied Guy, in constrained tones. "I dare not take a place at your table, eat your bread, and drink your wine, and afterwards do the deed which I am commanded to execute. Cast aside your disguise, brother Perrail; runaway companion of the Templars! I myself will do it. Grasp, sign and pass-word, have already revealed me to thee as a brother; hear now my name. I am called Guy de Montfort, and am the nephew of Aumont, the grand master of those who, escaped from the sword of the persecutor, have sworn once more to build up the Temple of Solomon, in defiance of the powers of darkness. I, who am yet but a neophyte, am sent here by our noble brotherhood to thee, thou perjured master of our order! Canst thou divine my errand?"

"You are to kill me," replied Perrail, with composure. "I know the punishment of perjury."

"You know it," exclaimed Guy, fiercely, "and yet you were guilty of it!"

"Young man," replied Perrail, with dignity, "judge me with the heart which God has implanted in your breast."

"But your oath!" interrupted Guy.

"Hear me," said Perrail, "before you unsheath your dagger, and avenge your injured brethren; for a noble fire gleams from your eyes, and I should wish you to compassionate, not to despise me. Driven by the cruelty of tyrants from our homes, and saving nothing but our lives, I sailed with Aumont, the successor of our murdered superior, to a more hospitable shore. These events occurred before I had taken the solemn vows of our order; and my doing so was deferred until Providence should send us brighter days. Meanwhile, on St. John the Baptist's Day, we swore to avenge ourselves upon our enemies. As the blood of the holy Baptist watered the foundation of the glorious temple of Christianity, so we hoped that ours should prove the cement of that new temple which should be built in place of Solomon's, in the land which had been the cradle of our order. Years, however, passed away, and all our enterprises failed. King, emperor, and pope, were all against us, and, with untiring severity, enforced the edicts for our annihilation. Even the people refused to sympathize with us, for the misdeeds of some of our more unworthy brethren; their pride and luxury had estranged the hearts of the poor. At this juncture I was despatched by our master to sound the popular voice, and gain information respecting the sentiments of the French nation towards us. The result of this mission proved our expectations hopeless. Sad and dispirited, I was preparing to return, when I chanced to make the acquaintance of Blanche, and her family. Now that I saw the hopes of our order utterly annihilated, and that my weak arm and small ability were powerless to help and assist it, the thoughts of returning to exile, far from the dear land of my fathers, to waste existence on some iron-bound coast washed by the northern ocean, became daily more and more insupportable. I decided then to remain and to marry Blanche; but I broke no oaths, for I had as yet taken none. An old priest, attached to the order of the Temple, being at this time about to visit our exiled brethren, I wrote a letter to the grand master, declaring my resolution, and returning my insignia, which I despatched by him. All

Digitized by Google

these were received by Aumont, but he sent me no answer This is the amount of my offending; it is for you to judge of it. Against the order I have never sinned; for no living soul has learned from me its existence, far less its statutes, signs, or passwords. Even my wife is ignorant on these subjects; for never by a single syllable have I betrayed my brethren. You now see, Sir Guy de Montfort, that my transgression has not been very great; nevertheless, I am ready to suffer punishment. My wife, it is true, will become a widow, and my boy a fatherless orphan; but their sorrow will, after a time, pass away; and, meanwhile, I do not regret the five happy years I have spent with Blanche, even though I pay for them so dearly with my blood."

"You have deeply moved me," replied Guy, after a long silence; "and, for all you have related, I cannot blame you. I am sorry to say, however, that, in your defence, you have not alluded to the great crime with which you are charged, and on account of which I have been sent on this hateful mission. The priest faithfully conveyed to my uncle all that you had sent; but he added the intelligence, that you had been guilty of simony. At one time he had been chaplain to the hospital of the Templars, whose ruins we are now contemplating. During the cruel persecution, he and the bailiff of the establishment buried a costly treasure in one of the vaults. It consisted of pearls and precious stones, which a pious knight of the temple had brought from the east to adorn the statue of the blessed Virgin. The ruthless destroyers of our buildings never discovered the place of concealment, so well had the secret been kept. Several years passed away, and then the priest returned to the scene of his former ministry, and found you in possession of the ruins, which you had just then bought. In the silence of night, he revisited the spot where he had left the treasure, and, to his surprise, found it gone. Who could have been the robber, if not you?"

"The treasure is in my possession," calmly answered Perrail.

"You confess it!" exclaimed Guy; "now, then, repent, and pray God for mercy; for you must die! Strange it is, that you have not been annihilated by shame already! When you looked at these ruins, against whose noble possessors you so scandalously sinned, were you not afraid that the earth would open and swallow you up? Perjured and faithless master! worse than the beast of prey, for you have wounded the mother that nurtured you! By your robbery, you have profaned the sanctuary, and placed yourself on a level with those wretches who slew our martyred brethren. Pray, then, to that holy trinity whose blessed sign we bear, and be *obedient unto death!*"

"I am so," replied Perrail, in great agitation; "follow me, however, before proceeding to the last act, otherwise it will be done in vain, for you will have lost the treasure. Do not hesitate; you may indeed trust me."

Guy, astonished at his demeanor, followed him in silence towards the ruins, and down a dilapidated stair-case. They entered a vault, in the corner of which was a heap of rubbish. Perrail began to remove it, and Guy lent his assistance. A square black marble stone now became visible. With some difficulty Perrail lifted it away, and drew out of the cavity beneath a rich golden casket.

"The priest was mistaken," said he, solemnly, "when he maintained that he had searched the very place where he and the bailiff deposited the treasure. This is the spot, and the treasure never left its hiding-place. The bailiff died in my arms, and confided to me the secret, while I was still in exile, and before I revisited France. It was in order to preserve the riches of the order that I purchased these neglected ruins; and, finding the treasure still in safety, I covered the spot with yonder heap of rubbish, which, doubtless, served to mislead the priest, when he made his unsuccessful search. When the Lord of Craon, a valiant brother of our order, was about to sail and visit Aumont, on the rocky coast he had chosen for his abode, I gave him a letter to the grand master, announcing the existence of the treasure, and requesting he would send some confidential person to get it removed. It was some time after his departure that the priest visited me, and I considered it useless to repeat the information to him, particularly as I knew not how far he was to be trusted, and had no idea on what errand he had come. Since that time I have received no intelligence from Aumont; and the treasure has consequently remained undisturbed."

"You make me ashamed," replied Guy, whose cheeks were dyed crimson; "I must believe you, although my uncle never received your first letter; for the Lord of Craon perished at sea in a violent storm, and only one sailor escaped to convey the melancholy news."

"Now I am happy," said Perrail, leaving the vault along with Guy; "for you are convinced of my innocence, and will clear my character to my brethren. Take, then, this casket into your possession; draw your sword, avenge the order, and fly!"

"Man!" exclaimed Guy, deeply offended, "do you suppose I have the blood-thirstiness of the tiger? Would I murder you when my heart clears you of the guilt of apostasy, and my reason of the crime of simony? I could only execute my commission if I found you guilty. I was not sent to wreak vengeance on the innocent, and thus render myself unworthy of the mastership, which was to be the reward of justice."

"Youth, worthy of a brighter destiny, come to my arms!" exclaimed Perrail, as he pressed the noble young Templar to his breast; "I thank thee for these tears, and for thy kind compassion; but the laws of the Templars must be executed, otherwise thou wilt fall a victim to the displeasure of thy brethren. Do, then, thy duty."

"Art thou mad?" exclaimed Guy; "friend, husband, father, thus to summon the destroying angel!"

"Brother," interrupted Perrail, "my course upon earth is about to end! A sure presentiment tells me so; since for these three successive nights I have been warned by a heavenly messenger. Descending from the blue empyreal, a martyr's crown has been suspended over my head; and, with child-like peacefulness, I was awaiting it even when you arrived. Now, with the equanimity of a man and a Christian, I am ready to suffer death; therefore, brother, messenger of vengeance! strike, and do not linger. Here, amid the ruins of the house of my order, let me die by the hands of a friend and of a Templar."

"Away!" cried Guy, almost beside himself; "wilt thou constrain me to slay a righteous man? Trouble not thyself about my fate, whatever it may turn out to be. Banish thy gloomy anticipations, and live for thy wife and thy child. Pray for us, and be happy!"

At this moment they were interrupted by Blanche

Digitized by Google

hastening, pale and breathless, towards them, scarcely able to carry her little boy in her trembling arms. "For God's sake, Gilbert, save yourself!" she cried, in her anguish. "The whole neighborhood is in an uproar; an armed multitude are approaching our dwelling. They say that a Templar is concealed here; and the magistrates have sent officers of justice to apprehend him. Neighbor Remy hastened to the house by a short cut to give us warning."

"Treachery!" thundered Guy; whilst a horrible suspicion crossed his mind, and compelled him to draw his sword from the scabbard. "Traitor, who with honeyed words of apparent honesty, allured me into the snare! Now all is made clear. What was it delayed thee so long this morning? Didst thou not inform the government of my concealment? Tremble, wretch! My arm can strike ere thy plans succeed!"

So saying, he aimed his sword at the head of Perrail; but Blanche darted between, in time to avert the blow; for the sight of her blooming loveliness, and the cries of the innocent babe, for the instant disarmed him.

"Calm yourself, brother!" said Perrail, "I am guiltless. The powers of hell have betrayed your secret, and not I. Think you I wish your destruction? No! I desire to save you. Follow Blanche through that door, which opens to the vaults of the temple-court. A narrow foot-path will thence lead you to the corn-fields at the end of my estate. May God's blessing accompany you, and save you from your pursuers! In half-an-hour's time you will reach the shore. Meanwhile I shall delay the murderous wretches. Fly then! and may you reach your bark in safety! Guard well the casket, and greet the brethren for me."

Guy, oppressed with shame and sorrow, cast himself on the bosom of the noble Perrail; and after embracing him, took the hand of the terrified Blanche, and accompanied her to the place of safety.

"What do you want, friends and neighbors?" said Perrail, advancing towards the excited multitude; "wherefore do you besiege my house?"

"Deliver up the blasphemer—the heretic—the Templar whom you have concealed!" shouted the enraged mob.

"I have got no Templar here," replied Perrail, fearlessly. "You are mistaken."

"Do not believe him! He lies!" cried Renaud, an envious neighbor; "I myself saw him walking with the miscreant whom the foreign fisherman talked about. They took their way to yonder ruins. Concealed behind a hedge, I heard them speaking of a treasure which they were going to dig up."

"A treasure!" shouted the multitude eagerly, whilst desire of plunder glared from their greedy eyes; "where? where?"

"Listen to me," exclaimed Perrail, in vain striving to calm them. "Control your unworthy passions, and remember that you are men and Christians!"

"We don't forget it," cried the ringleader; "we know we are men; but the Templars are the children of the devil, whom they do not scruple to call their father. We are Christians, while the Templars are heretics, who despise Christ, and wear idolatrous images on their breast. They must be burned, for king and pope have sanctioned it; and it shall be done."

"I do not care a straw for the Templar," growled forth Renaud, who understood the people he had to deal with; "but the treasure—it is the treasure that we ought to seek for."

"Yes! yes!" shouted the mob. "Go on, Gilbert, and guide us, or it will cost thee thy life."

Against his will, Perrail, with a few friends, who gathered round him, was pressed forwards by the crowd towards the ruins of the hospital. At the very spot where Guy had taken leave of Perrail they halted, and the multitude once more furiously demanded the treasure. At his refusal to answer, the most eager divided themselves into parties, and explored the crazy ruins and dilapidated vaults, in the vain hope of discovering gold and silver. Renaud alone kept his eyes fixed upon Perrail, determined that his victim should not escape. "Fly!" whispered the brave man's friends; "we will cover thy flight."

"I remain in the hands of God," replied he, with equanimity; and did not even change color when some of the ruffians returned with the intelligence that the place had been discovered where the treasure had been concealed.

"Dost thou deny it still?" thundered the voice of the malignant Renaud; "the empty nest is found, but where are the birds that were in it? where is the accomplice that carried them off?"

Perrail maintained an indignant silence. "The king's seneschal has the right to demand that question, and not you," replied the faithful Remy, in a tone of defiance.

"To unmask a secret sinner, is the duty of every honest man," replied Renaud, "and Gilbert is such a person, for no man knows whence he comes; doubtless he has been a dependent of the accursed Templars, who misled our youth, wrung from us the fruit of the soil which we earned with the sweat of our brow, and spent the profits of our weary labors in luxury and debauchery. Is there one of you who has not just cause to avenge himself on the detestable knights? Thy garden, Nicholas, was forcibly taken from thee by their bailiff. Thy son, Matthieu, used to be forced to watch night after night, after a weary day's labor, that the rest of a certain luxurious knight might not be disturbed. And thy grandchild, honest William, was whipped by their commands until he died, for the small offence of catching a hare and getting it roasted. These deeds of cruelty, and a hundred others, we have seen with our own eyes, and yet, here stands a man who gives shelter to one of the accursed brood whom the king has banished, and with him divides the treasures of their heretical society! Look at him, how like an honest man he stands! How he even dares to smile! Neighbors, will you put up with this contempt? Perhaps he himself is a concealed Templar! Perhaps the wretch even bears their secret mark on his breast."

So saying, Renaud seized Perrail to examine him, who indignantly pushed him back; but the insidious speech had already made a deep impression, and with a wild cry the enraged multitude darted on their victim.

Blinded by fury, a smith armed with a hammer struck a murderous blow on the head of Perrail. Bleeding, he sank to the earth, while the purple crown of martyrdom again hovered before his closing eyes. "Hiram!" he exclaimed, as his senses wandered. His lips moved perhaps once more to utter the hallowed name of Jesus; but in vain! Darkness obscured his vision—the dew of death glistened on his brow, and the seneschal, who a short time after arrived, found the multitude,

Digitized by Google

ashamed of what they had done, standing in speechless consternation round the corpse; some of the more charitable striving to reänimate the unfortunate Blanche, who, returning at the fatal moment, had swooned away.

* * * * *

"Now, brethren, I have concluded my recital," said Sir Guy de Montford to the assembled Templars gathered together, as heretofore, in the vault of the ruined chapel of St. John, on the bleak and rocky coast from which the young knight had sailed a short time previously. "I could not slay him, because I believed him guiltless: let him, therefore, who believes himself without sin among you, cast the first stone at me! I now fearlessly place myself before you, my brethren and my judges;—do with me what seems best to you. I did not tremble when, with twenty swords at my breast you tried my courage in these vaults, ere I set out; and I do not tremble now before your poniards, for my conscience approves me, and I know that I have done right. If the rank of Master is only to be obtained by bloodshed, then I abjure it forever, and separate myself from this association of cruelty, whose members, under the mask of benevolence and brotherly love, conceal fiendish hatred; and who hide the assassin's dagger under the insignia of a peaceful handicraft."

Guy was silent, and there was for some moments a solemn pause, while the Grand Master sat in deep consideration, with his head leaning on his hand. At last, he raised his eyes towards the emblem of the Blessed Trinity represented on the canopy above his chair, and from the divine fountain of wisdom imbibed lenity and prudence.

"Brother Perrail undoubtedly left us," at length he said; "nevertheless we shall cherish no rancor against him on that account, for he did not break the oath to defend the rights of the order, but, on the contrary, lost his life in preserving Brother Guy from the destruction which threatened him. On another account also, we must still number Brother Perrail in our ranks; he has shown the perfection of human benevolence; and is not perfection the aim of our association?"

"So let it be!" exclaimed the brethren with one voice; while Guy replied, in altered tones, as soon as the uproar subsided, "My Lord and Master, your clemency has touched my heart, and filled it with gratitude. Let me now, however, conclude the story of the unfortunate Perrail, who fell a martyr to his fidelity to the order. Being detained by adverse winds, I had time to learn the melancholy news. In the night I returned to the house of mourning, and persuaded the bereaved widow to accompany me, along with the corpse of her husband, and her orphan boy. I promised that friends of Perrail should protect her and her child, and for that purpose I have brought them hither."

"You did well, De Montfort!" replied the Grand Master; "the noble death of Perrail merits all the poor recompense we can offer; let her therefore be conducted into our presence. And now, my brethren," he continued, turning towards the knights, "cover the emblem of the Blessed Trinity, and remove all our mystic symbols from the vault."

His orders were obeyed. Blanche was admitted. She seemed bowed down with care and sorrow, as, conducted by Guy, she approached the venerable Grand Master, and would have sunk at his feet, had not he, touched to the heart, raised her in his arms; then, gently laying his hands upon her head, he blessed her, and said: "Like thee, poor stricken one! we call from the depths of our affliction to the Lord of hosts, and hope for a new Jerusalem, and a bright future of immortality. God is my witness, that, from this day henceforth, I shall look upon thee as my daughter, and upon thy orphan babe as my son, and, after my death, my nephew shall take my place in fulfilling this duty."

After saying these words, Aumont commanded the poor widow to be led away, and the dead body of her husband to be brought. The knights, with one accord, lowered their swords as the corpse was carried in, and over the coffin of their martyred companion, was Guy de Montford, by grasp, step, sign, and brotherly kiss, received to the dignity of Master.

Near the chapel of St. John, the body of Perrail was deposited in holy ground. A heap of stones was his only monument, but, during many long years, his humble resting-place was visited with veneration by the members of the order.

PUNCH.

MUSICAL NOVELTY.—The spread of music in the metropolitan thoroughfares has become so general, that a company is, we believe on the point of formation, with a view of affording a regular supply of harmony to all the streets, squares and crescents, in London and the suburbs.

The company is to start with a capital of one thousand organs; so that the organization will be at once tolerably complete; and there will be a reserve fund of five hundred guitars, which will be available for special purposes. The shares may be paid for either in money or instruments—not legal instruments, such as bills, which suggest only promissory notes—but instruments of a metallic currency, such as trombones, French horns, trumpets, and cymbals, which are in fact symbolical of harmony. Any person may pay his deposit either in gold, silver, or brass, and the contributor of two *cornets à piston* will stand in the same position as a subscriber of one sovereign.

The source from which the shareholders will derive their profit will be a rate levied on all householders, in the style of the paving, lighting, or police rate; and in consideration of this payment every inhabitant will have a supply of music regularly laid on, before his door, either once, twice, or thrice a week, according to the wealth and respectability of the neighborhood. A numerous staff of itinerant musicians will be employed, and will be taken on duty to their respective districts by a regular superintendent, from a sort of central barrack in the neighborhood. Every square of consequence will be entitled to a troubadour, on alternate evenings with the nearest crescent, and by an arrangement with the company, on payment of an increased rate, two troubadours, or double service, may be laid on during the height of the season.

By private agreement a troubadour can be introduced on to the premises, for a limited period, once in each week; but, for this, the charge will, of course, be proportionate. In the more humble neighborhoods it is proposed that a lower class of professors shall do the musical duty; and for this purpose the staff of itinerant organists must be exceedingly large, as the demand is very extensive in the less wealthy localities.

Digitized by Google

Arrangements have already been made to adapt "Marble Halls" to one hundred instruments, so that the inmates of two, three, or even four-pair backs or fronts, may have an opportunity of at once dreaming that they "dwell in marble halls," and are loved "all the same," notwithstanding the dinginess of their apartments, and the diminutiveness of their incomes. Should the scheme succeed, as far as we are justified in announcing it at present, a vocal concert will be added for laying on a continued series of popular songs throughout the entire metropolis. The poet of Cremorne will be placed at the head of the lyrical department, *vice* Bunn extinguished.

RATHER TOO NICE.—Our old friend, the *Herald*, commenced one of its leading articles the other morning with the words, "We are not very fond of interfering with other people's affairs." Surely our respectable contemporary does not mean to say that its own affairs are the only subjects it delights to write upon. A journalist who is averse to interfering with other people's affairs, had better retire from business at once, for he cannot expect that his prattle about himself would prove a source of interest to the community.

OUR FLIGHT WITH RUSSELL.

Up, up my Lord John Russell—'t is a fair night for a fly—
Be thou a new Cleophas—a new Asmodeus I!
Come, clutch my cloak—and thro' the smoke together let us mark
The life of London, huddled 'neath the blanket of the dark.

The moon-light falls on fair St. Paul's, on the Abbey, grim and gray;
Lo! the lamps, like fiery serpents, go winding far away;
Or, like glow-worms, scattered, twinkle and wink up from below—
But 't is not to gaze on this fair sight that thro' the night we go.

Not a builded brick, or stone, or stick, on those wide acres thrown,
But bears a tongue within it—hath a language of its own;
In street, and square, and alley bare, with its growth of human seed,
Is a great book spread beneath us—look down, my lord, and read!

In steeples upward springing read prayer, struck into stone;
In prisons barred and bastioned read crime, and curse, and groan;
In lighted west-end houses read mirth, and warmth, and show;
In foul St. Giles' hovels read squalor, want and woe.

There 's a homily—hark to it! 'T is the Voice of Saffron Hill:
"I suffer, how I suffer from my freight of human ill!
All is filthiness without me; all is ignorance within;
I ache with cramps—I shake with damps—Oh, the warmth of glorious gin!"

And now for proof—off goes a roof—Is that a house or hive?
Each bed 's a room, each room a town, so packed and yet alive!
Lo, the maggot life of London! And that hopeless, hapless horde,
In foulness bred, in foulness fed, is work for you, my lord!

Another and another, and the sight is still the same;
Suffering that knows no solace, and sin that knows no shame.
Hunger by thousand tables; savage life 'mid thousand schools;
Here are human hearts to frame anew—Bethink you of the tools.

But hark! another Voice is up, and pompously it booms
From well-spread tables, easy beds, and trimly furnished rooms.
"I am Respectability: things must not go on so;
There 's nowhere I can drive my gig, but something calls out woe.

"Then your sanitary meddlers, all agog for drain and sewer—
For my part, all I know is, I wish the drains were fewer;
Poor folks *will* throw things down 'em—as for unwholesome air,
I know our street 's extremely sweet, and that 's all my affair."

Whereon chimes in big Bumbledom, "You 're right my worthy friend;
'T is time this stuff and nonsense were brought unto an end.
There 's the Union Workhouse for the poor—you should see how we have broke 'em
Into temperance by short diet, into industry by oakum."

But hark! that hoarse and hollow Voice—'t is from a Newgate cell—
"Be silent, heartless blind-worms!—a different tale I tell;
I 've wrestled crime for centuries, and feeble all I feel,
Tho' my bones are bones of granite, and my sinews hammered steel.

"Ye little wot how hard and hot the tide of crime flows ever;
How it laughs my Canute talk to scorn, and mocks my stern endeavor;
How Law aghast aside is cast before that fearful sea
Which makes a plaything of the scourge, and a toy of the gallows-tree.

"Call Mother Church to help me; let Saint School do all she can;
Give them Child Crime to fight with, and leave me the full-grown man,
Or soon the evil saps my walls, and down forthwith ye fall,
Master Bumble, Sir Respectable, gig, mace, cocked-hat, and all!"

The stern sounds cease, the stars look peace on the streets so still and gray—
And now to Downing street, my lord, with what appetite you may;
And bethink you of the lesson of London, read aright,
When, with *Punch* for guide, you listened to the Voices of the Night.

LE PREMIER PAS.

THERE appears to be something pedantical in criticising a popular proverb—something vexatious in calling in question the sort of ancestral wisdom it is supposed to contain—in disputing a truth, which has been formalized and accepted by the general assent and perpetual iteration, at all hours of the day, by all sorts of talkers. Besides, who knows not that a proverb is not a logical statement! It is always a one-sided view of the matter, so that the most opposite of proverbs may be equally true; it gains its currency, and its very force and pungency, by a bold exclusion at once of all that qualification, and exception, and limitation, which your exact thinkers require. We will not, therefore, enter into any profane or captious dispute of one of the most current of the whole family of proverbs, that which assigns so great a value to the *premier pas*, to the first step, in any enterprise or career of life, so that this once accomplished, all the rest is easy, all the rest is done, *ce n'est que le premier pas qui coute*. We will not criticise, nor qualify, nor except; only this we *will* say, that many a first step has been made that led nowhere—to nothing; that a multitude of professional and other aspirants would allow, if they reflected on it a moment, that they had, all their lives long, at certain intervals, been making first steps, and never made any other. More glory, doubtless, is due to them for having overcome so many successive difficulties. Whilst, on the other hand, many who have advanced to eminence in their chosen career, would find it hard to distinguish, in that gradual progress which toil and talent had together commanded, any one first step, or stride, which set them going on their prosperous path, any step a jot more extraordinary than the rest, or that did more towards the completion of the journey than the first step one makes in walking from Edinburgh to Leith. They would have as much difficulty in describing the *premier pas* which started them on the road to fortune, as many a good Christian, well brought up from youth to manhood, would feel if called upon to answer a Whitfield or a Wesley, as to the precise day and hour of his conversion. The truth is, we apprehend, that in this popular proverb, two several matters are confused together under one name, thus giving to it a greater force than it should legitimately possess; the *premier pas* not only signifies that first step one takes on any of the high roads which conduct to wealth or honors, but under the same title is also included, we suspect, those startling turns and tricks of fortune, on which no human wit can calculate, and which raise a man suddenly into some new and unexpected position in the world. All kinds of fortunate starting points are mingled together in one view, and under one title; and thus, the *first step* becomes magnified into half the journey, as indeed it is sometimes the whole of it.

For instance—a Meinherr Tettenborn was passing the weary, half-employed hours at a merchant's desk, kicking his heels, probably, on one of those tall, uneasy stools, which, with strange mockery of disproportion, raise the lowest functionary to the highest footing, but which nevertheless contribute to preserve the due distinctions of society, by inflicting all possible discomfort on the elevated sitter. Perhaps there was some association of ideas between the military profession, and the equestrian position he occasionally found it convenient to assume; however that may be, Meinherr Tettenborn suddenly bethought him that he would bestride a high-trotting horse instead of his tall black stool. He threw away the pen for the sword. At this time all Europe was up in arms against Napoleon; so that, although he entered the service of the Emperor of Russia, he was still but enlisting in the common cause, in which his own Germany was more interested than any other country. He entered, as may be supposed, in the lowest rank of officers; and, as cornet, or with some such title, you may picture him at the head of a small troop of horse, despatched for forage or some ordinary service of the like kind. As he was thus conducting his little troop, he spied "something black" lying in a field by the side of the road. He cantered up to it. The something black was nothing less than a small park of artillery, sixteen guns, which the enemy had left behind them, perhaps in some false alarm, or for want of horses to draw them, but apparently for the very purpose of being captured by Meinherr Tettenborn. He ordered up his little troop, harnessed their horses to the guns, and rode back triumphant to the camp. The emperor himself was present. News was speedily brought him of the capture of a park of artillery, and the illustrious victor was introduced. Many questions were not asked of the how, or the when, or the where; the guns happened to be particularly welcome; the emperor took from his own neck the order of the iron cross, and suspended it round the neck of the fortunate young soldier, greeting him, at the same time, with the title of General Tettenborn! The general was a brave man, was equal to his new position, captured other guns in another manner, and rose, we will not venture to say how high in the imperial service.

Now this very anecdote we have heard cited as an example, illustrating the proverb, *ce n'est que le premier pas*, &c. Yet this finding something black lying quietly in the green fields, which proved to be a park of artillery waiting to be captured, cannot certainly be set down amongst the early steps of a military career, is not known amongst the means or stages of promotion, but is manifestly one of those joyous caprices which Fortune occasionally indulges in, for the express purpose, we presume, that castle-building in the air may never go quite out of fashion.

In a very amusing collection of anecdotes, entitled, *Fêtes et Souvenirs du Congrès de Vienne, par le Comte A. de la Garde*, there is a good story told of one of these capricious visitations of Fortune, which came—where Fortune does not often play her more amiable tricks—to a miserable poet, releasing him at once from poverty and his jaded muse. We regret to be obliged to tell the story from memory. We ought to have preserved the book, if only out of gratitude—for it was the most pleasant travelling companion, the best fellowship for a diligence or a steamboat, we remember to have encountered. But the market-price of the small paper-bound volume (such was the shape in which it came to us) was so little—it being one of those editions which the journalists on the continent often print to distribute gratis to the subscribers to their journal—that no pains were taken to preserve it. Very absurb! We print books so cheap, that the book loses half its value: it is bought and not read; or read once, and thrown aside, or destroyed.

Poor Dubois was one of that unhappy class, which we are given to understand is dying out of Europe, (we hope for the sake of suffering humanity that this is true;) of that class which we in

Digitized by Google

England used to call Grub-street poets. He *flourished* at the time of the empire, and had been flourishing during the whole of the eventful period that preceded the elevation of Napoleon. Poor Dubois had alternately applauded and satirized all parties, and written songs for all sentiments; but had extracted very little either of praise or pocket-money from any of the reigning powers, whether republican or imperial. He was quite in despair. Still young in years, but with worn-out rhymes, he was lamenting one day to his sister his melancholy and hopeless fate. This damsel was in the service of Pauline, the sister of Napoleon. "Write me a sonnet," said she, "about Pauline, and about beauty, and let me try what I can do." A beautiful sonnet, and a sonnet about beauty, are two very different things. Dubois made nothing of his task, but did it out of hand: his sister took the sonnet with her.

It was not long before she had an opportunity, in her capacity of *femme de chambre*, of speaking to Pauline about her brother the poet. She produced her sonnet about beauty. Pauline did not exactly read it; no one but the writer, and a few afflicted friends, and those heroic souls who do things to say they have done them, ever do read sonnets; but she glanced her eye down the rhymes, and saw her own name in harmonious connection with some very sweet epithets. Therefore she asked what she could do for the poet—what it was he wanted? Alas! everything! was the prompt and candid reply—some little post, some modest appointment.

Now it happened that Fouché at that time was doing his best to conciliate the fair Pauline, who, with or without reason, had shown a little humor against the minister of police. He had frequently entreated her to make use of his power in favor of any of her friends. "Well," said the good-natured Pauline, "this Fouché is always plaguing me to ask for something; give me my desk."

A lady's pen upon the smooth vellum—you know how fleetly it runs, and what pretty exaggeration of phrase must necessarily flow from it. The style, the very elegance of the note, demands it. Dubois was in an instant, and most charmingly, converted into a man of neglected genius and unmerited distress. What was the happy turn of expression is lost to us forever; but as Fouché read the note, he understood that there was a man of talent to be assisted, and, what was still more to the purpose, an opportunity of showing his gallantry to Pauline.

The next day the minister rode forth in state accompanied by four mounted *gens-d'armes*. Following the address which had been given him, he found himself in one of the least inviting parts of Paris, far better known to his own myrmidons of police than to himself. But, arrived before the enormous pile of building, which was said to enclose our poet amidst its swarm of tenants, he made vain inquiries for Monsieur Dubois. At last an old crone came to his assistance: she remembered him; she had washed for him, and had never been paid. If you do not wish to be forgotten by all the world, take care there is some one living to whom you are in debt.

Meanwhile Dubois, from his aërial habitation, had heard his own name pronounced, and looking out at window caught sight of the *gens-d'armes*. For which of his satires or libels he was to undergo the honor of prosecution, he could not divine; but that his poetical effusions were at last to bring him into hapless notoriety, was the only conclusion he could arrive at. That he was still perfectly safe, inasmuch as write what he would nobody read, was the last idea likely to suggest itself to the poet. He would have rushed down stairs, but steps were heard ascending. So much furniture as a cupboard may stand for, the bare walls of his solitary room did not display. There was nothing for it but to leap into what he called his bed, and hide beneath the blankets, always presuming they were long enough to cover both extremities at once. The minister, undeterred by the difficulties of the ascent, and animated by his gallantry towards Pauline, continued to mount, and at length entered the poet's retreat. Great are the eccentricities of genius, and lamentable the resources of pride and poverty, thought Fouché, as he gently drew the blankets down, and discovered the dismayed Dubois. Some conciliatory words soon relieved him of his terror. The awful visit of the minister of police had terminated—could it be credited!—in an invitation to breakfast with him next morning.

Judge if he failed in his appointment; judge if he was not surprised beyond all measure of astonishment, when the minister politely asked him whether he would accept so trifling a post as that of commissaire-général of police of the Isle of Elba, with we know not how many hundreds of francs per annum, with half a year's salary in advance, and all travelling expenses paid. The little condition was added that he must quit Paris directly, for the post had been too long vacant, and there were reasons which demanded his immediate presence at Elba. How he contrived to accept with any gravity, without a broad grin upon his face, can never be known. He would certainly have bounded to the ceiling; but by good fortune, or happy instinct, he had convulsively clasped his chair with both hands, and so anchored himself to the ground.

Off he started the very next day, happier than Sancho Panza, to the government of his island; for his post virtually constituted him the governor of Elba. Nor was the stream of his good fortune half exhausted. For immediately on his arrival he was appealed to for a decision, between two rich and rival capitalists, both desirous of undertaking to work certain mines lately discovered in the island. One offered him a large share in the future profits; the other a large sum of ready money. Our governor decided for the ready money.

When a gallant man renders a service, he does not run and proclaim it immediately. Fouché allowed a few days to transpire before he waited on Pauline. He then alluded to the appointment he had made; he hoped she was content with the manner in which he had provided for her client, Dubois.

"Dubois! Dubois!" said the lady, "I know of no Dubois."

The whole affair had entirely escaped her memory. Fouché assisted in recalling it.

"Oh, true!" she said, "the brother of my chambermaid; well, did you give him any little employment? What did you make of him?"

Fouché saw his error, bit his lips, and let the subject pass.

That very evening a messenger was despatched to recall Dubois—and home he came; but "with money in both pockets"—a little capital of solid francs. Poet as he was, the man had sense; he did not spend, but invested it, and the revenue enabled him to assume the life and bearing of a gentleman. We leave him prospering, and to prosper.

It is said that Fouché did all he could to keep this story secret. But Pauline discovered the truth.

Digitized by Google

and was malicious enough to disclose it to Napoleon, who more than once jested his minister on his governor of Elba.

There is a sort of *premier pas* known, we believe, amongst gamesters—at least trusted to very implicitly, we remember, amongst schoolboy gamesters—that which commences a run of good luck. When the cards, or the dice, have been cruelly against us, if the tide *once* turn, it will flow steadily for some time in its new and happier direction. In the palace of a certain Russian prince, whose name of course it is impossible to remember, for it is one of those names you do not think of attempting to pronounce even to yourself—you *look at it* merely, and use it as the Chinese their more learned combinations of characters, where they pass at once from the visible sign to the idea, without any intermediate oral stage. In the palace of this prince, you are surprised to see in the most splendid of its splendid suite of apartments, suspended behind a glass case —a set of harness!—common harness for a couple of coach horses, such as you may see in any gentleman's stable. Of course, it attracts more attention than all the pictures, and statues, and marble tables with their porphyry vases and gold clocks.

"The thing you know is neither rich nor rare,
But wonder how the devil it got there!"

You inquire, and are told the following story.

The Prince of ———— was one night led into deep and desperate play. He had staked estate after estate, and lost them; he had staked his plate, his pictures, his jewels, the furniture of his house, and lost them; his mansion itself, and lost it. The luck would not turn. His carriage and horses had been long waiting for him at the door, he staked them and lost! He had nothing more; he threw up the window, and leant out of it in utter despair. There stood his carriage and horses, the subject of his last wager. He had now nothing left. Yes! There was the *harness!* Nothing had been said of the harness. The carriage and the horses were lost, but not the harness. His opponent agreed to this interpretation of the wager. They played for the harness. He won! They played for the carriage and horses—he won. They played for the palace, for the plate, the pictures, the furniture—he won. They played for estate after estate—he still won. He won all back again, and rose from that table the same rich man he had sat down to it. Had he not good reason to suspend that harness in his very best saloon?

There is such a thing as a *first step* most fortunately *adverse*, in whose failure there is salvation. There are some well-known instances where wealthy young noblemen have been rescued from the pernicious habit of gaming by a first loss, which, though it partly crippled them, sent them back from what might otherwise have proved the road to utter ruin. When a man would tamper with any species of vice, a happy misadventure, thoroughly disgusting him with his experiment, is the most precious lesson he can receive. In the collection of anecdotes we have before alluded to, there was one of this kind which struck us very forcibly. It is an admirable instance of the *biter bit;* but here the young man who wished to be *nibbling* at roguery (who in this instance happens also to be a Russian nobleman) got so excellent and so salutary a lesson, that we almost forgive the old and consummate rogue who gave it.

The first Congress of Vienna had collected together all manner of Jew and Gentile—all who could in any way contribute to pleasure, which seemed the great object of the assembly; for balls, fêtes, concerts, parties of every description were following in endless succession, till one fine morning news came that the lion was loose again. Napoleon had broke from Elba—and every one scampered to his own home. Amongst the rest was a clever Jew and a rich, who, being very magnificently apparelled, and having that to lend which many desired to borrow, had found no difficulty in edging himself amongst the grandees of the society. This man wore upon his finger a superb diamond ring. The Count of ———— was struck with admiration at it, and as a matter of pure curiosity, inquired what might be the value of so magnificent a stone. The Hebrew gentleman, with the most charming candor in the world, confessed it was *not* a stone—it was merely an imitation. A real diamond of the same magnitude, he said, would indeed be of great value, but this, although a very clever imitation, and as such highly prized by himself, was nothing better than paste. The count requested to look at it closer, to take it in his hand and examine it; he flattered himself that he knew something of precious stones; he protested that it was a real diamond. The Hebrew smiled a courteous denial. The count grew interested in the question, and asked permission to show it to a friend. This was granted without hesitation, and the count carried the ring to a jeweller, whose opinion upon such a matter he knew must be decisive. Was it a diamond, or not? It *was* a diamond, said the jeweller, and of the very purest water. Had he any doubt of it? None at all. Would he purchase it? Why —humph—he could not pretend to give the full value for such a stone—it might lie on his hands for some time—he would give 80,000 rubles for it. You will give 80,000 rubles for this ring? I will, said the jeweller. At that moment, the spirit of covetousness and of trickery entered into the soul of the young nobleman. Back he went to his Hebrew acquaintance, whom he found seated at the whist table. Restoring him the ring, he said that he was more persuaded than ever that it was a real diamond, and that he would give him 50,000 rubles for it on the spot. (A pretty profit, he thought, of 30,000 rubles.) The Jew, quietly replacing the ring on his finger, protested he would by no means rob the gentleman, as he knew that it was *not* a diamond. The count urged the matter. At length, after much insistance on the one part, and reluctance on the other, the proprietor of the ring appealed to his partners in the game of whist. "You see, gentlemen," said he, "how it is—the count is so confident in his connoisseurship that he insists upon giving me 50,000 rubles for my ring, which I declare to be paste." "And I declare it to be a diamond," said the count, "and, taking all risk upon myself, will give you 50,000 rubles for it." The bargain was concluded, and the ring and the money changed hands.

The count flew to the jeweller. "Here is the ring—let me have the 80,000 rubles." "For this! Pooh! it is paste—not worth so many sous—worth nothing."

The Jew had *two* rings exactly alike, with the little difference, that in the one was a real stone, in the other an imitation. By dexterously changing the one for the other, he had contrived to give this beneficial lesson to the young nobleman, which, it is to be hoped, prevented him, forever after, from entering the list with sharpers, or trying by unworthy means to overreach his neighbors.

But to return to what is more generally alluded to as the *premier pas*—that first success which starts the aspirant on his road to fortune or to fame. It is the barrister and the physician who, amongst all professional men, have most frequently to record some happy chance or adventure that came to the aid of their skill, knowledge, and industry; and of the first brief, or of the first patient, the history is not unfrequently told with singular delight. The story we have to tell, and to which the above remarks and anecdotes may be considered by the reader, if he will, as a sort of preamble, regards the *first patient* of one who, commencing under great difficulties, rose ultimately to the head of his profession. It belongs to both those classes which, we observed in the commencement, are often mingled indiscriminately together. It has in it something of the marvellous, and yet afforded but a fair opening to genuine talent; it was a first step which the fairies presided over, and yet it was a step on the firm earth, and the first of a series which only true genius and worth could have completed. We are fortunate here in having the words before us of the French author from whom we quote, and we have but to render the anecdote—biography, or romance, whichever it may be—in whatever of the lively style of M. Felix Tournachon our pen can catch, or, under the necessity we are to abridge, we can hope to transfer to our pages.

THE FIRST PATIENT.

* * * He was not then the great doctor that you know him now. At that time he was neither officer of the Legion of Honor, nor professor of the Faculty of Paris. Hardly was he known to some few companions of his studies. The horses that drew his carriage were not then born; the pole of his landau was flourishing green in the forest.

He had obtained his title of physician, and lived in a poor garret—as one says—as if there were any garrets that are rich; and to accomplish this miserable result, to have his painted bedstead, his table of sham mahogany, two chairs wretchedly stuffed, and his books—what efforts had it not cost him!

He was so poor!

Have you ever known any of these indefatigable young students, born in the humblest ranks, who spend upon their arid labor their ten, their twenty best years of life, without a thought or a care for the pleasures of their age or the passing day!—youthful stoics who march with firm step, and alone, towards an end which, alas! all do not attain.

You have wept at that old drama, that old eternal scene which is recounted every day—yet not so old, it is renewed also every day:—the bare chamber, no better than a loft—the truckle-bed—the broken pitcher—the heap of straw—the sentimental lithographist will not forget the guttering candle stuck into the neck of a bottle. Thus much for the accessories, then for the persons of the scene; a workman, the father who expects to die in the hospital—his four children—always four—who have not broken their fast that day—and the mother is lying-in with her fifth—and it is winter, for these poor people choose winter always for their lying-in.

Oh! all this is very true and piteous—I weep with you at the cry of those suffering children—at the sobs of their mother. Yet there is another poverty which you know not, which it is never intended that you should know. A silent poverty that goes dressed in its black coat, polished, it is true, where polish should not come, and with a slaty hue—produced by the frequent application of ink to its threadbare surface. It is a courageous poverty which resists all aid—even from that fictitious fund, a debt—which dresseth itself as you would dress, if your coat were ten years old—which invites no sympathy—which may be seen in the sombre evening stopping a moment before the baker's shop, or the wired windows of the money-changer, but passing on again without a sigh heard. Oh, this poverty in a black coat! And then it enters into its cold and solitary chamber, without ever the sad consolation of weeping with another. No Lady Bountiful comes here. In the picture just now described, she would be seen in the background, entering in at the door, her servant behind loaded with raiment and provisions. What should she here? What brings you here, madam? Who could have sent you here? We are rich! If we were poor should we not sell these books?—all these books are ours; madam, we want nothing. Carry your amiable charity elsewhere.

Our young doctor had installed himself in the fifth floor of that historic street, *La Cloître-Saint-Mery*—a quarter of the town, poor, disinherited, sad as himself. Where else, indeed, could we have carried his mutilated furniture—which in other quarters would have only excited distrust! There was he waiting for fortune—not, be it understood, in his bed, but following science laboriously, uninterruptedly. His life was so retired—so modest—so silent, that hardly was he known in the house. On the day of his arrival, he had said to the porter, or rather porteress, "Madam, I am a doctor—if any one should want me." This was all the publicity of the new doctor—his sole announcement, his only advertisement. As his fellow-lodgers could gather nothing of him to gratify or excite curiosity—as his unfrequented door was always strictly closed, they soon ceased to concern themselves about him. His name even was forgotten; they simply called him *the doctor*—and with this title our readers also must be contented, unless their own ingenuity should enable them to discover another.

One night our doctor heard unaccustomed noises in the house, doors slamming, people walking to and fro. Presently some one knocked at his door—verily at *his* door. What was it? Was the patient come at last—that first patient, so anxiously expected? He was dressed in an instant.

"The countess is dying!" some one cried through the door. "Come directly!"

He was at her bedside in a minute.

The countess! Such was the title given in derision to precisely the poorest and most miserable old woman in the house. She had been at one period of her life in the service of a noble family, as *femme-de-chambre;* and as a woman who had seen something of the great world, she held unqualified strangers at a certain distance, and, to use a common phrase, kept herself to herself. This had procured her the ill-will and ill-opinion of several other old crones inhabiting the same house, who made her the subject of their perpetual scandal. Without doubt she had poisoned her last master, and could not look a Christian in the face; or at very least she had robbed him. Did you ask for proofs? She had a treasure stitched into a mattress. But she was nearly dying with hunger? Yes—the niggard! She starved herself, she could not spend her treasure.

Monstrous inventions! The poverty of the countess, as they called her in mockery, was complete. Niggard she was, and had good reason to be so, in

Digitized by Google

order to subsist on the little annuity she had contrived, in the days of her service, to scrape together. For the rest, as we have no wish to disguise the truth, the countess was by no means an amiable person—bitter and selfish, hostile to all the world, as venomous as her detractors, and without pity for others, as those so often are who have suffered much themselves.

She was now stretched motionless on her bed. The old crones had come about her less from humanity than to discover the secrets of her *den*, the access to which she had hitherto strictly defended. She held in her left hand a small packet wrapped up in half a pocket-handkerchief, which she clutched convulsively. It was the *treasure*, they all exclaimed.

Her case was a grave one—a congestion of the brain. The doctor bled her, and then wrote his prescription—his first! The bleeding brought the countess to herself. When she heard him tell one of the bystanders to go to the chemist and get the potion—

"Potion!" she exclaimed, laying hold of the paper. "I want no potion—I am not ill. Do you think I have money to pay for your drugs? Go away!—all of you—go!"

She crumpled the prescription in her hand, and was about to throw it on the floor, when something in the paper apparently arrested her. She read the prescription, and, turning to the doctor with a manner quite changed and subdued, asked how much it would cost? She then opened the little packet she had held till then so jealously in her hand. All the old crones stretched forward. A few franc-pieces and some great sous were all the *treasure* it contained.

That first client, so long looked for, was come at last. Our doctor had his patient—that first patient whom one pets and caresses, to whom one is nurse as well as physician. No uncertain diagnostics *there*—no retarded visits, no hasty prescriptions. If this one die, it is verily his fault. He devoted himself, body and soul, to the old woman. Certainly the fees would not be very brilliant, nor would the cure spread his reputation very widely. He thought not of this—but save her he must! He absolutely loved this unamiable countess. He assembled the *ban et arrière-ban* of science, and armed himself *cap-à-pie* in knowledge for her defence.

The object of all this solicitude received his attentions, however, with an increasing ill-humor, for each fresh medicine made a fresh demand upon her purse. "How long will this last?" she said one day; "I must go out—I have no more money—I must go out this very day."

"Do not disturb yourself," began the doctor.

"Not disturb myself!" she interrupted; "easy to say! Instead of giving me these drinks and draughts, give me something that will put a little strength into me—for I must go out."

"Listen to me! remain tranquil a few days." She turned round from him with impatience.

"To leave your chamber now would be to expose your life. Give me but four days; and if you have no more money, I will charge myself with the medicines."

"You!" cried the countess, looking up with astonishment.

"And why not me?" said the young doctor. "You shall return it to me some time—when you will."

"You! who have not often a dinner for yourself!"

"Who says that?" asked the doctor, blushing involuntarily.

"All the house says it."

"Miserable stuff!" he replied; "will you accept what I offer? If I promise, you may be sure I can perform."

The old woman looked at him with surprise, and at length consented to accept his offer and take his remedies.

The young doctor hastened to his chamber, shut fast the door, and looked round him, with his arms folded—"What is there here," said he, "that I can sell?"

What he found to sell I do not know. Enough that he supplied the countess with a sum sufficient to procure her the necessary medicines, and to relieve her from care as to the wants of life for some short time. The case proceeded favorably.

At night, as he was returning from one of those solitary walks in which he was accustomed to exhale his sadness, and also to gather fresh resolution for the struggle he had undertaken with destiny, and was slowly mounting the long, dark, dilapidated staircase that led up to that fifth floor on which he resided, he stumbled over some obstacle, and, on looking closer, found it was the body of a woman lying outstretched upon the stairs. It was the countess. In spite of solicitations and her own promise, she had gone out; but her strength had failed her. She had fallen, and now lay insensible.

Our young doctor, braving all malicious interpretations, carried her to his own room, which was the nearest place of refuge, and there, by the aid of some cordials he administered, restored her to her senses. She opened her eyes, looked around her, and understanding in whose room she was, she said, with a scrutinizing air, "You are miserably lodged here." It was the only observation his amiable patient made, and she repeated it several times—"You must be miserably off." Even when she had returned to her own room, and he had left her for the night, she still said nothing but—"You are miserably lodged!"

The next morning, when the doctor visited his patient—and you may be sure his visit was an early one—to his surprise, she was on foot, with sleeves tucked up, sweeping, dusting, and *putting to rights* her little abode. He was astonished. The shock which she had received the day before, instead of injuring her, had apparently aided in her restoration. She was quite gay.

"You are resolved to kill yourself, then?" said the doctor.

"I was never better in my life," she answered.

"Do not be too confident," was his reply. "You must keep your room two or three days; and this time," he added, with a smile, "I shall keep guard over you myself."

The countess consented with a most childlike docility. She would do what he pleased; only yesterday she was obliged to go out—it was absolutely necessary. There was so much gentleness in her altered manner, that the doctor was disposed to regard this as an alarming symptom in her case.

However, it was not so. Her health, day by day, improved, and the relation between the patient and her medical attendant became more amicable. She proposed, by way of some return, to assist him in his bachelor housekeeping. It would give her no trouble. An hour in the morning, when he was at his lectures, some of which he still followed; and then she could cook, and she could mend. These

Digitized by Google

offers the young doctor declined with a sort of alarm. Who but himself could reädjust those habiliments, whose strong and whose weak points he so very well knew? What needle could, on this ground, be half so skilful as his own? And cooking! Cooking with him! Cook what? *On* what? *In* what? It was in vain that the countess insisted; he would hear of no such thing. He kept his poverty veiled —it was his sacred territory.

Some few days after the countess' health might be said to be quite reëstablished, our young doctor, on entering his room, was surprised to see a letter lying on his table. Correspondence, for the mere sake of letter-writing, he had quite foregone as a pure waste of time; and he had no relatives who interested themselves in his fate, or who could have anything to communicate. Nevertheless, there the letter was, addressed duly to himself. He looked at it with an uncomfortable foreboding, assured that it must bring him some new care, or report some strange disaster.

He sat down and tore open the envelope. He bounded from his seat again with surprise—the letter enclosed fifteen notes of the Bank of France! It is no fairy tale, but simple history; fifteen good notes of one thousand francs each.

Inside the envelope was written:—

"This treasure belongs to you as your property. Use it without scruple. The hand that transmits it does but accomplish a legitimate restitution. May the gifts of Fortune conduct you to the Temple of Happiness!" There was no signature.

"Why, it is a dream, a hallucination. Am I growing light-headed?" said the doctor. But no—it was no dream; there they were—before him—on the little table—those fifteen miraculous pieces of paper. He turned his head away from them; but when he looked again, there they were—in the same place—in the same order—motionless. I leave you to guess his agitation and his many mingled emotions. From whom could this godsend have come? He read and re-read, and turned the letter in every direction. He racked his brain to no purpose to discover his anonymous benefactor. He knew, and was known to, scarcely any one. He strode about his chamber—as well as he could stride in it—inventing the wildest suppositions, which were rejected as soon as made. Suddenly he stopped—struck his forehead as a new thought occurred to him—"Bah!" he cried; "absurd!—impossible!—and yet——"

In a moment he was at the door of the countess. He paused a moment before he knocked. There was from the landing-place a window at right angles to that of the old woman's apartment; and if her window-curtain happened to be drawn aside, which, however, was rarely the case, it was easy to see from it into her room. On the present occasion, not only was the curtain drawn aside, but her window was open, and the doctor could see this fairy, accused of lavishing bank-notes of a thousand francs, kneeling before a wretched stove, striving with her feeble breath to rekindle a few bits of charcoal, on which there stood some indescribable culinary vessel, containing an odious sort of porridge, at once her dinner and her breakfast!

The doctor shook his head—it could not be the countess. Yet, completely to satisfy himself, he entered. She gave him her ordinary welcome, neither more nor less—talked, as usual, of her former masters, of the dreadful price of bread, and the wicked scandal of her neighbors. But what most completely set all suspicion at rest was the manner in which she spoke of the debt which she owed him. "I cannot yet repay you what you advanced for my medicines," she said, with all the natural embarrassment of an honest debtor speaking to a creditor. "You will be wanting it, perhaps. Now don't be angry at what I say—one is always in want of one's little money. In a few days I will try and give you at least something on account."

"No," said the doctor, when he was alone: "I can make nothing of it. Away with all guesses!" He resolved to profit by the good fortune, be the giver whom it might. And he hoped so to manage matters, that if, at a future day, an opportunity for its restoration should occur, he should be able to avail himself of it.

He was soon installed in a more convenient apartment, better furnished, and supplied, above all, with a more abundant library. The young doctor was radiant with hope. Yet he did not quit his old quarter of the town. It need not be said that he took formal leave of his first patient the countess.

From this time everything prospered with him. As it generally happens, the first difficulty conquered, everything succeeded to his wish. It is the first turn of the wheel which costs so much; once out of the rut, and the carriage rolls. By degrees a little circle of clients was formed, which augmented necessarily every day. His name began to spread. Even from his old residence, where he led so solitary a life, the reputation had followed him of a severe and laborious student, and the cure of the countess was a known proof of his skill.

Like the generality of the profession, he now divided his day into two portions; the morning he devoted to his visits, the afternoon to the reception of his patients. Returning to his home one day a little before the accustomed hour, he perceived a crowd of persons collected in the street through which he was passing. Perhaps some accident had happened, and his presence might be useful. He made his way, therefore, through the crowd. Yet he nowhere discovered any object which could have collected it. He was merely surrounded on every side by groups engaged in earnest yet subdued conversation. The greater part were women, and both men and women were generally of a mature age, and of that sort of physiognomy which one can only describe as *odd*—faces ready made for the pencil of the caricaturist. The doctor, who had no idle time, was about to make his escape, when a general movement took place in the crowd, and he found himself borne along irresistibly with the rest through a large door, which, it seemed, had just opened, into a spacious hall or amphitheatre. At the upper end was a stage; on the stage a large, strangely-fashioned wheel was placed; and by the side of the wheel stood a little child, dressed in a sky-blue tunic, with a red girdle round its waist, its hair curled and lying upon its shoulders, and a bandage across its eyes. The wheel and the child formed together a sort of mythological representation of Fortune. They were drawing the lottery.

After amusing himself for some time with the novelty of the spectacle, the doctor began to make serious efforts to extricate himself. As he was threading his way through the crowd, and looking this way and that to detect the easiest mode of egress, he saw, underneath a small gallery at the side of the amphitheatre, in a place which seemed to be reserved for the more favored or more constant worshippers in that temple of Fortune, a face, the last he should have expected to find there. It was no other than the countess. She was seated there

Digitized by Google

with all the gravity in the world, inclining with a courteous attention to an old man with gray hairs and smooth brown coat, who was very deferentially addressing her.

Having disengaged himself from the throng, and returned to his own house, this appearance of the countess recurred very forcibly to his mind. "After all," thought he, "it *was* the countess!—it was none but she who sent those notes." The enigma was solved. He had made his fortune in the lottery, and without knowing it. He determined to visit his old patient the next morning.

That very evening, however, he was waited on by the same old gentleman in brown coat and gray hairs, who was seen speaking to her at the lottery. He came with a rueful face, requesting him to visit immediately Madame ——, giving the countess her right name, which it is now too late in our story to introduce. Whatever may have been the case at some previous time, the wheel of Fortune had that day bitterly disappointed her hopes. She had been carried home insensible. The doctor hastened to her. It was too late. She had been again attacked by a congestion of the brain, which this time had proved fatal.

There appeared no hopes of a complete solution of the enigma.

"Ah!" said the same old gentleman, as he stood moralizing by his side, "the same luck never comes *twice*—she should have tried other numbers."

The doctor saw immediately that the old gentleman had been in the confidence of the deceased. He questioned him. There was a look of significance, which betrayed plainly that *he knew all*. He was in fact one of those who earn their subsistence by writing letters for those who are deficient in the skill of penmanship or epistolary composition. He had written *the very letter itself;* to his pen was owing that sort of *copy-book* phrase, "May the gifts of Fortune conduct to the Temple of Happiness!" The doctor had in truth, as he often said when alluding to the subject, made his fortune in the lottery.

We wish we could leave the story here, and let the reader suppose that gratitude alone had induced the old woman to act so generous a part. But the whole truth should be honestly told. There was a mixture of superstition in the case. It was *his number* that had won the prize, and she considered it, as expressed in the letter which accompanied the notes, in the light of his property. In all countries where a lottery has been long established, the strangest superstitions grow up concerning what are called lucky numbers. In Italy, where this manner of increasing the public revenue is still resorted to, not only is any number which has presented itself under peculiar circumstances sure to be propitious, but there is a well-known book, of acknowledged authority we believe, containing a list of words, with a special number attached to each word, by the aid of which you can convert into a lucky number any extraordinary event which has occurred to you. Let anything happen of public or private interest—let anything have been dreamt, or even talked of that was at all surprising, you have only to look in this dictionary for the word which may be supposed to contain the essence of the matter—as, for instance, fire, death, birth—and the number that is opposite that word will assuredly win your fortune. When the countess first saw the prescription of the young doctor, she was going to throw it angrily on the floor; but her eye was suddenly riveted by the *numbers* in it—the numbers of the grains and *ozs.* in the cabalistic writing—and she felt assured that in these lucky numbers her fortune was made. The first stake she played she played for *him;* and, singularly enough, she won! But, as the old gentleman in the brown coat observed, the virtue of the prescription was exhausted. She should have sought for numbers from some other quarter; the second trial she made ended in a severe loss, and was the immediate occasion of her death.

From Fraser's Magazine.

THE ORATOR OF THE SHOP.

AT HOME.

"For the committee to-night, Cameron!" said Taylor to his bench-mate.

The town bells were ringing the day of toil to its close as he spoke; and the other men were already locking up their tools.

"You will have to excuse me this night also," answered Cameron. "My little Ned was worse at dinner-time."

"Soh! And shall we not see you in the procession to-morrow?"

"If my boy be well, you may."

"Always so, Jack. You are never without a Neddy to back you out of duty."

Cameron turned round to the wall, took down his jacket from the nail on which it hung, and drew it on before he spoke. Evidently he was angry.

"Taylor, you and I have disagreed on this point before. I still think you take too great a lift in committee work. Do not turn up your lip so; committees can get on without us when our sick people cannot." So saying, he brushed past the cluster of shopmates who had drawn near to listen to the conversation, and hurried away to his sick child.

The men broke into a tittering laugh when he was out of hearing; and one of them looking over his shoulder, cried to Taylor,—

"Swirls in that stick, my chuck!"

"A cross-grained fellow!" replied Taylor, peevishly, tearing a shaving between his fingers. For he felt himself humbled before his comrades, to whom he had boasted that he would get Cameron along with them that night. "If the world were all of his mind," he continued, "how, I wonder, would the heavy work ever be done? Neddy! What has Neddy to do with public duty? A few more Neddy-nurses and our masters may have their own way sweetly! Look ye, men, Jack Cameron is an obliging fellow in his way, and has done myself a good turn or two, as you know; but for all that he must be trusted no longer in the trade. If only a pin scratches his boy's little finger, he shirks our meetings and rides off on his duty to his family. At a time like this, too!—when our oppressors are preparing their cramps! I say, a true patriot would not be hindered by his family. I say, perish my family when my country is at stake! But we must off to the meeting, we have matters to arrange for the morrow."

Taylor was a tall, well-made man, with open, intelligent features, with black hair and dark shining eyes—all the more shiny, that he was still on the young side of life's water shed. He was well read in a few directions, had a ready wit and fluent tongue, was given to no gross vices, was good-tempered and persevering. He was just the man, therefore, to become the orator of a shop. No one amongst his shopmates had so wide a knowledge of

Digitized by Google

public affairs: no one had lived so much in the public eye. Besides which, he had all the credit of being a superior workman. He would finish three windows whilst another joiner was at two. Indeed, with hardly a half of his ability, some of his fellows had risen to be masters and leading men in the trade. And not a few of the simpler neighbors would now and again wonder how Taylor, with all his handiness and public spirit, should still be a journeyman, and live in a poor apartment in the old quarter of the town.

The explanation lay upon the surface of his life,—in this one mistake, that duty had very little reference to any sphere but that of politics and public life. In his estimation, a man was doing his highest work when he was bending all his energies to the furtherance of the public weal. Whoever did less was a domestic drudge and mere worm. Society was on a great pilgrimage towards perfection, and it behoved its members to bestir themselves for the removal of those hindrances which blocked up the way. Especially did it become the people—the working classes—as the vanguard, in the onward movement, to devote themselves to this vast endeavor: to leave their homes, and if need be their shops, for this public work.

This was Taylor's deliberate conviction. It was not put on. It led to evil; but it was not put on to cloak that evil. In perfect sincerity of heart and purpose he cherished it, and sought to impress it upon others.

If his wife and only daughter, therefore, had many a weary and anxious waiting for him, in late, dark hours, when he was detained by public business, nobody will be surprised. Often after all the evening bells had rung out, and the streets had emptied and become dumb, and the house-clocks began to tick like pulses in the arm of night, might these two be found sitting in the chimney-corner, listening eagerly, waiting wearily, for the sound of his steps, and dreading—for they could not get used to it—that some evil thing had befallen him. Oftener still, when she was able to coax Jane to bed, the mother sat up alone; in this case, always at the open window, leaning over that she might see the whole street, as if she would question the darkness and the silent stones about her husband.

As one might expect, in such domestic waitings, and watchings, deprived of her natural rest and forced to breathe the damp night air, her health gave way. On the night the conversation reported above took place, she was lying pillowed up in bed, panting for breath, with no one to help her but little Jane. Poor Jane was almost wholly without education. She had received only such shreds of knowledge as her mother could give her in leisure hours. A simple child, but very affectionate, very full of the light of love! Her mother had asked her again and again to come to bed. Still she hoped her father would soon arrive. He had been late for several nights and surely he would be home early to-night. To-morrow was at hand, too, and his procession scarf was to sort. She replied to her mother with a new reason every time, which she clothed in words so sweet and soothing, that the sick mind was ever led by them into pleasing trains of thought; and another and another portion of the night was softly whiled away.

After midnight, however, the mother became worse. The fever mounted to her brain: her mind began to wander, and she uttered words which filled her child with fear.

"Look, Jane!" she cried at one time, fancying herself at the open window, "is not that your father? I know his white jacket passing under the lamp."

"Dear mother, he will soon be here; he was home last night before this time."

"Hist! those are his steps on the street—go—go."

Jane went to the window and pressed her ear to the glass. The measured foot-fall of a watchman pacing his rounds sounded up. The watchman was alone.

"The watchman, is it?" continued her mother. "Ay, I hear his voice, calling the hour out—there—hush—'past two.' Who has heard him calling that hour so many times as I? Dear Jane, thou wilt wait for thy father when I am gone. But go not to the open window. Dear life, shut down the window; death comes in at open windows—death and cold! It is very cold: see to the fire, love! ah—g—r—u—u, how cold it is!"

Jane put the last coal into the grate, and returned to the bedside. In a little while the sick woman quieted into slumber, and Jane began to listen for her father's footsteps again. But as she listened the coal kindled, and a red flame flickered up in the grate, and the light fell forward into the large, ill-furnished room, and reminded her of the disorder in which all things stood. So she stepped silently away from the bed, and arranged the few chairs around the walls, and swept the floor and the hearth, and was about to put the kettle to the fire when she remembered that there was neither bread nor coffee in the house, nor anything that her father could take.

She leaned her brow against the cold jamb and gave way to tears. Except a bite of bread in the morning, she had tasted no food all day. She could not help her grief. An experience older than her years had been forced upon her. Thoughts, which should have been strangers to a child, swept through her mind. Her mother's condition, her father's conduct, the state of their home, gave rise to many forebodings. The procession especially filled her with alarm. All might go well yet, she fancied, if it were once over, or put off, or not to be. She laid all the blame of her father's absence on it. She did not blame her father. In some way, she had grown to think that he could not help being away. But how delightful it would be if the procession were only over, and father had time to wait beside her sick mother! or—her face lighted up at the thought—if he could stay at home and not go.

At that moment the subject of her thoughts came in. He stooped over the bed to look at his wife: when he found she was sleeping he came forward to the fire. Jane forgot all her sorrow, her hunger, her foreboding, everything but the last thought which passed through her mind, and this she resolved to tell her father.

"Do you know what I 've been thinking, father? I 've been thinking—but stoop to me; come closer still, or we shall waken mother—I 've been thinking if you could stay from the procession how happy we would be."

"It is impossible, Jane."

Jane did not know the meaning of "impossible," and so went on,—

"Mother would be happy, and I would be happy, and you would be happy; and it would make mother well again. If you had seen her an hour ago—she was very ill."

Taylor turned round towards the bed to see, for

Digitized by Google

he had not noticed the change for the worse when he entered. Jane continued—

"Very, very ill! Speaking about death and you. Dear father, try and stay. I am afraid to be alone now by her side. Do you say 'Yes!' You will stay? How happy ——"

"You are too young to understand, Jane. I must go. I cannot stay. Duty forces me to go."

"Duty, father! Who is Duty?" She had never noted the word before. "Do I know him?" She sprang up and clasped her father's neck. "Father, tell me where Duty lives! I will go to him this moment. I will not care how far it is. I will tell him you cannot go. I will tell him how ill my mother is, how much she loves you; and he will not seek to force you away."

The orator was struck dumb. He silenced his daughter by gestures, and ordered her to bed.

When she awoke the sun was shining into the room; her father was already gone; her mother had barely strength to point to some coppers upon the table, which he had left to procure food and fire.

ABROAD.

From an early hour music sounded through the streets. The trades were uprisen and flocking to the appointed square. Parties from the country intending to join the procession began to arrive by the different gates. Flags waved and drums rattled at every corner. Excitement was visible on every face.

A universal holiday had been forced upon the town. The workshops were to still their noise; the factories to be silent; the markets to be suspended; even the ploughs on the surrounding farms were to lie idle in the furrows.

This day the public interest shall engage all men. The great measure on which the country's hopes had been fixed for years—for which they had struggled, and agitated, and petitioned, and subscribed, was in a perilous state. The ministry were shrinking! The opposition had acquired new strength! Unexpected resources, not free from suspicions of treachery and backing-out, had come to the opposition side. The country was bound to rise; to tread the streets until the legislature were awakened to the strength of the popular will; to utter its united voice in speech and resolution, and to roll its million-signed petition over the floor of the house of commons, to the bar of the house of lords, to the very footstool of majesty itself.

By ten o'clock all the parties expected have come forward; they only wait to appoint a marshal, and then proceed through the town to the open field, where the speeches are to be delivered and the petition signed.

The faces of the dense crowd are turned towards the inn. The flags drooping over the balcony are seen to rustle. The window behind flies open, and there, beautifully grouped together, their official scarfs depending gracefully from their shoulders, their riband favors blushing politics on their breasts, stand, bowing and attitudinizing, the committee.

A cheer loud as artillery bursts from the crowd—bursts louder and longer, again and again, for many minutes; sinks for a moment, swells upwards from some more enthusiastic corner, infects the entire mass anew, and so continues until a member of committee steps out upon the balcony and beckons them to silence.

The leader of the day is to be chosen. A steed finely caparisoned, led by a groom, is waiting at the inn door for the favored rider. Hearts are beating; little boys are wondering who the marshal is to be; women from the windows around the square are searching among the committee for the likeliest one. Who shall describe the rapturous acclamation which rang out from the whole throng, when Carpenter Taylor was proposed? The music crashed, the flags waved responsively. Taylor was an universal favorite.

"A man," said the mover, "tried, able, and disinterested! The devoted friend and counsellor of his fellow-workmen! No man here—I question if any other man in the whole country—has a better right to this honor. On this momentous day it becomes us to have one at our head who has never flinched, and was never absent, when the interests of the country were at stake; above all, who is one of ourselves!"

Taylor came forward. His dark eye kindled at the mass of human beings before him. His voice stilled them into attention. Never had day dawned upon his country of more importance than the present. He felt that all their past exertions were in peril. A Judas had entered the camp at headquarters, and was gloating over the thirty pieces of silver. The great measure on which the prosperity of this vast country depended, on which their freedom as a people, their stability as a nation, hung, was about to be rejected, sacrificed, outvoted!

"We are this day to demonstrate our strength. From this town we shall roll up a petition which shall strike awe into the opposition's heart. We, the working-men, the misnamed 'lower classes,' shall do it! We! Yes, the cheer which rings in this square shall spread and reverberate over all the land; shall pierce the ear of St. Stephen's; shall echo and reëcho throughout the world, uttering this command—'Vote with the people!' and the very echo of its echo dying away in the distant generations shall be heard to say—'Vote with the people!'"

But these preliminary proceedings came to a close. Taylor mounted his horse, and with baton in hand began to marshal the trades into the order of procession. First, by indefeasible right of primogeniture, marched the ancient order of Gardeners, with Eden flower-mottoes and flower-politics. Behind them, the descendants of Tubal Cain, carrying on an uplifted stage a huge sledge-hammer, which some hidden machinery wielded against an image of oppression. Thereafter, in honor of the marshal the union of Joiners, carrying an open coffin for oppression when it shall be fairly killed, and waving white fir wands to indicate the peace which shall follow. Other trades succeeded in their balloted order, with devices, flags, and music, until the line was complete, and then Taylor rode forward to his place amid the cheers of the whole procession.

Had the reader and myself known nothing of Taylor's private life, had we not chanced to listen to the moanings of his neglected wife, and seen the disappointed look of his waking child this morning when she found that he was gone, we too might have cheered him for his gallant look.

The marshal's dignity sat well upon him. He rode with an almost princely grace. The city crowds admired him as he went past; the open windows shot forth applauding looks. He could not fail to be affected. To him this was no show; but a real, abiding work. The circumstances, also, had their appropriate influence on his mind. Rolling up behind him came, now blended into one sound, now separate and distinct, the tread of the immense procession, the clash and roll of various music, the ever-renewing cheers of the spectators, the flapping

Digitized by Google

of many flags, and carried his mind above itself into a world wholly ideal.

"Might I step forward into the province of the historian," he thought, "how gloriously this day would be depicted on my page! Behold here, I would write, a sight which surpasses the pomp of royalty and the array of war. The majesty of the people has manifested itself this day; their hidden strength has revealed its brawny arms. The great dumb people have found a voice; it speaks in the tread of ten thousand feet, in the mottoes on their banners, in the varied devices of the trades, in the selected music and the hearty cheers."

In the midst of these historic fancies the procession had begun to defile through the old quarter of the town. The familiar aspect of the street in which he lived recalled him to actual life. A vague desire that his poor wife might see him in his pride, and, perchance, be cheered by his honor, as she used to be; this, and also, partly, the true instincts of home, which were not utterly trampled out of him, guided his eye up to the single window of his dwelling-place. And there, her small white face shaded with intense anxiety, stood Jane, waving her arms and pressing her lips, and making violent gestures to her father, which he could not understand.

There was that in her look, however, which went direct to his heart. It said as plainly as words could have done, "Mother is worse!" For the first time, the real danger of his wife's condition flashed upon him. While he was here, striving to meet a peril of the state, his wife might be dying in her desolate home. The music began to grate upon his ear. He was now under the very window where his wife lay, and he could not go to her nor comfort her.

At this moment Jane rushed out to him from the close. How now shall the well-dressed marshal act? This child is his daughter, and poverty is written upon her thin coverings! The windows and pavements are filled with neighbors who know him, and all the circumstances of his home. No cheer salutes him here; low murmurs of displeasure roll towards him from the assembled women.

"Better he were beside his dying wife!" cried one.

"Better he had given a frock to his daughter than bought that scarf!" cried another.

Meantime the procession flowed on behind, and he could not stop.

"Home, Jane, home! I soon will be," he half whispered to her aside, ashamed that a child so poorly dressed should be known as his. "Home! away from the horse's feet!—do not speak here!"

"Not this way, father!" cried out the child; "another way. You will kill mother! the noise of the trumpets and the cheering will kill her! Dear, dear father, another way! The doctor said she must be quiet. Not this way—not ——"

Her father was out of hearing. The procession came on and urged him forward, coiling like a hissing snake, through the street in which the dying woman lay, and separated father and child.

But the glory was departed from his view. He felt himself thrust back into the painful circumstances of his own home; he heard the upbraidings of his dying wife; he recalled the neglect which had been the rule of his married life; the magic dress fell from the procession; he saw nothing in it but idleness and show; the voice that was to echo down through generations died away in a taproom brawl; his dignity grew irksome; he would have abandoned it if he could, but there was no man to relieve him. Moreover, he had toiled for it, had longed for it, had exulted when it was put upon him. He rode on in agony. The air seemed to change the streams of music into dying groans; the open windows were filled with pale faces beckoning him to dismount and go home; beds of sickness and death floated before his eyes; pale faces, like that of his little Jane, pressed out upon him from the crowd, and seemed to touch his lips. His heart sickened at his position. For two hours his agony continued. His honorable duties changed into dry details. His mind was away from them—away from the entire proceedings. He sat carelessly upon his horse, took no interest in what was said or done, saw nothing but the image of his wife in her cold and comfortless abode.

At length the grand feat of the day was accomplished. The speeches had been spoken, and the petition signed. After the signing of the last name, Taylor was to give the signal of return, and all the bands were to resume their playing. He was still unconscious of his position. He did not notice that the reins had fallen from his hand, and lay loosely on the horse's neck. The sudden crash of the simultaneous music startled the animal. It reared back for a moment, and then sprang forward, like an arrow, towards the town. Taylor made one grasp for the reins, but was thrown in the attempt, and his right foot entangled in the stirrup. The horse rushed furiously on, dragging its rider over the stones. Long before it could be stopped his life was ebbing. He was found lying on the street in a pool of blood.

IN THE SHADOW OF DEATH.

Taylor was still sensible when the members of commitee came up to him with a surgeon. One of the large blood-vessels had burst. He signified his wish to be taken home.

Very solemn was the contrast between the going forth of the marshal and the return of the man. Borne along in a chair, supported by men decked out in the gay scarfs of the procession, the arm which had held the baton hanging powerless by his side, the face which answered the universal greetings all disfigured, the head leaning heavily forward on the breast, the dark hair matted with dust and blood—he did not seem to be the same.

The pavements were crowded to behold him as he passed, but with cheering crowds no longer. The news of the accident went before, and hushed the people into silence. Everywhere silence! The street in which he dwelt was as still as the grave. Only the poor women who had brawled against him in the morning broke the stillness with their tears.

"A sad sight!" said one of these.

"And going to a sad home!" continued another.

"Dear, dear," whispered a third, "how this life works! Life and death, pride and pain, follow each other hard! A sorry woman she would have been to see him so, though he did forget her. For you know she was very proud of him—very proud of him, poor soul. God has been merciful to her!"

There was the greatest difficulty in carrying him up to his house. The stair was long, and steep, and narrow. At each landing-place, too, the neighbors crowded forward and shut out the light, and made the place hot and stifling, but still there was the same dead silence. Of all those who had given him "Good morning" for many years, no one came forward to sympathize with him or speak a kind word to him now. They rather sought to avoid his eye, lest he should question them about his home.

Digitized by Google

Taylor himself felt that there was more in their silence than sympathy for him. The silence was too dead to be the expression of sympathy. There was awe and terror in it. A dreadful assurance of his wife's death brooded over his soul. A horror took hold upon him that he would be too late for her forgiveness. His mind stumbled over dark mountains of fear, as one would stumble at night over a place of graves. He yearned to reach his own door, and yet shook to his centre at every nearer step. When, at length, the weary height was reached, and the door pressed open, and the foreboding of death passed into certainty—when his eye rested on the still body of his neglected wife, and brought back the knowledge that the divider had come up into his home, the little strength which remained gathered itself into one terrific energy; he burst away from the men who supported him on his chair, flung himself passionately on the yet warm remains, and sobbed there like a little child until the energy had spent its force, and then he fell forward exhausted on the floor.

There was but one bed in the house. The men laid the body of the wife upon a table, and lifted the husband into her place.

The surgeon could do little. What was within his power to soothe the pain of his patient he did, added a few simple directions to the committee, and took his leave.

A half-hour elapsed before Taylor showed signs of revival. At length he began to recognize the faces around him, and his own condition. For awhile his mind came to him in mere gushes and starts, between the pauses of which he either raved or sank into stupor. The sight of the dead body on the table overcame him. He sobbed anew, and groaned bitterly. When they offered to remove it to another place, he besought them to refrain.

"While light remains, let me look upon her! It will not be long. Good soul, rest! There *is* rest for the like of thee!"

Then, addressing himself—

"Thou wretched man, for an hour of a vain show to leave her here to die alone!"

The men strove to quiet him.

"Men, men," he answered, "be not neglectful of your homes! Death will creep in when ye are out. Return to your own houses. Leave me here, I am better. Do leave me! Perhaps your wives are dying! Go home to your wives! There now, I can be left—go! I have something to say to my wife yet, and I would be alone. But, what!" remembering his daughter, "I miss Jane! Is not Jane there! Look for Jane! Ah, thou fatherless and motherless little one, thou art there!"

Jane had been stupefied by the events of the afternoon. When the strange men carried in her father, all covered with blood, she shrank terrified into a corner, and now came forward trembling from head to foot. She could not speak, but she lifted up her eyes upon her father, and there went forth from them such kind meanings, that he smiled, returning her look as if he had drunk in the quietness of her spirit and made it his own. New strength came to him, and his eyes closed slowly into sleep.

But it was disturbed. A change came up into his countenance. It was as if some fearful dream were darkening through it. His whole frame quivered as if in agony. One of the men touched him to break the dream, and he awoke and rolled his eyes wildly round upon them all.

"Ha!" he cried, "it is a fearful darkness which lies before me. It came up against me like a wall and shut me in—into itself—and out from the light of earth and the look of love. Back, back!" addressing the darkness, which he continued to see; "not yet so near! Take these gloomy eyes away! These?—these are your eyes, friends! It is a fearful thing to die"

A foolish member of committee ventured to reply—

"Come, come, Taylor! you did not always give way to fear. You are brave when you like, and have defied death before now!"

Taylor fixed his eyes upon him and said, slowly at first—

"When death is still far away, it is easy to defy it; easy, I think, in any case, if the heart were right. It is the heart that makes brave. If I had the heart of this little child, I would still defy it. But look ye, man," and he started from his pillow and seized the man by the arm, and pointed to the table and spoke more rapidly, "when the heart is full of darkness, and dark billows are rolling in upon me from that dead body, crested with upbraiding eyes, and all eternity lies before me without one star, I have good need to fear!"

It was a dull, ignorant soul he addressed, one who had not prudence enough to be silent; and who, therefore, plunged again into his ignorance and brought out this reply:

"Do not take things so darkly as all that; has not your life been a useful and glorious one?"

Taylor let go his hold of the speaker's arm, and lay back on the pillow and closed his eyes for a little. When he had gathered his thoughts into some shape he said:

"Comrades, it is an untrue word which has been spoken. My life has not been glorious. A glorious life is a good one, and mine has not been that. I have been living in a vain show!" He paused a moment while a spasm of pain shot through him. "I have not long to be with you: I have often spoken to you, I have often said foolish things to you, about our duty to the country. Hear me once more before I leave you. A time like this alters one's view of many things, and of nothing more than our past opinions." Another pause. "It is not glorious to abandon duties which lie around us from our infancy. It is not glorious to rush out into public life and leave the fireside desolate. No, not even for the rights of our trade! To scoop out a wider runlet for our earnings is a poor work, when to do it we must stop up the channels of the heart." His mouth filled with blood, and they besought him to lie silent. "I may improve the minutes which remain. I would fain undo any evil I have done. For I have abused to worthless ends my speaking talent. Honor no man henceforth as you honored me. Honor is due to him only who deserves it at home; for it is a shameful thing to appear great in the public eye, and be all the while useless at home." A pause. "And now, comrades, farewell. Be great at home. Duty lies in that direction. If you see Cameron, ask him to forgive and forget my many foolish words. Good night, good night!"

He fell once more into a sleep. The men left on some committee business connected with the procession, and Jane had to sit alone with the dying and dead. Her father's sleep was heavy and unrefreshing. The same dark cloud which appeared before, came ever, at brief intervals, over his brow. His mind was toiling, though his eyes were closed.

It might have been an hour ere he awoke. He was much weaker. His voice now could not rise

Digitized by Google

above a whisper. His first inquiry was if the men were gone. Then he called his daughter nearer, and asked how it had been with her mother before she died.

"Very joyful," answered the child.

"Was there no fear?"

"No fear, father."

"Any anger, then? Any upcasting of thy poor father's conduct?"

"No, no, no, dearest father! Her last words were words of kindness about you. She prayed for you that you might still be happy, and blessed you many times"

"Dear soul! Come nearer, Jane. Tell me all she said, and quick; I have not long to hear!"

"She bade me tell you that she died praying for you, that God might turn you to himself."

"Too late, now—too late! What more?"

"She bade me cleave to God, and told me how he is the good Shepherd who carrieth the lambs in his bosom. She said he would never forsake me ——"

"As I did."

"She did not say that, but she asked me to repeat the psalm I learned, and her eyes closed as I hummed over this verse—

"'Such pity as a father hath ——'"

(Hush, my light-bringer! the sweetest light is painful to an eye diseased.)

The dying man moaned out—

"No more of that!" and closed his eyes and withdrew his mind from his daughter's narrative.

She took his hand into hers, and sat down beside him. The window was straight before her. Over the roofs of the opposite houses the view stretched down into the west. The sun was sinking behind the piles of building. The smoke twilight was stretching up its dusky arms to receive him. Night, star-sandalled, was treading up behind. Already the evening star gleamed over a ridge of roofs on which it seemed to rest. The sun-light faded utterly from the sky; the large room darkened in every corner. The face of the dying man blended with the darkness. His hand grew cold and colder to the touch. Then it fell from the child's grasp, and she was alone with God, and Night, and Death.

ELEGIAC.

The reader and myself shall see the monument before we part. The cutting is rude enough, the meaning of the design is ill to guess. Such as it is, that square, rough block is Taylor's memorial here. I have heard that the rough squareness of the pillar was intended to express the character of his oratory. That fragment of drapery on the top was meant to be a workman's jacket. The inscription, had it been true, is the best of it—

"A PATRIOT'S GRAVE."

How strange that lies and weeds abound so much in the soil of death! He who rests here, as you well know, was no patriot. He was a mere speaker about patriotism.

We are only beginning to gather up the true features of this virtue. The time was when we fancied it to be a bluster about war. There came another time, in which it seemed to be a struggle against narrow laws. At present, it is public-spiritedness—a term which hides beneath its vagueness a world of lies! Had we looked deeply into the lives of those great men, who have done true service for their country, we might have erred less and learned more. We should have learned, for one thing, that the beginnings of all patriotism are in the heart and home, and that the public-spiritedness which is not rooted there is spurious and rotten to the core. For in the inner life of our greatest men there was ever first a struggle for truth and freedom to their own souls, before they ventured into public service. These men understood, that the sacrament of admission into the church of the patriots is the baptism of the spirit in self-denial. And, therefore, you always find that they were great in the inner courts of their being, having subdued their own wills to God, and established his law in their homes.

We have much talk about social freedom in our day; and we are not without earnest, well-directed aimings towards it. But we lack one thing much. We could do with less talk; but we must have more *personal* preparation. Our public men do not wrestle enough in private for inward freedom. There is too little of the secret battle against heart-tyranny in their midst. They are too easily content with seeking freedom and reform for the far-away and the external: they want the wisdom and the self-denial to begin at home.

Men like Taylor meet us in every province and grade of society. They often rush into the sphere of public life to escape the demands of their own hearts at home. And they end in deluding themselves by the lie, that they are bearing the yoke of public service, and furthering the cause of human happiness, when they are babbling about these things. Woe for them, when society shall discover that every sphere of duty is sacred in the eye of Heaven, and open only for those who have prepared themselves aright!

It is high time we were making this discovery. "Of the sounding brass and tinkling cymbal" we have had more than enough; of the men who go forth into the ministry of public duty, without a call from above, we could want a part; yet we still tolerate on our platforms, and vex the heavens by applauding, many who exercise a tyranny at home which might make us weep, and yield to a bondage within which should make us blush. The simple patriotism which kindles her torch in the heart, and sheds her first light over the family circle, and so outwards, is hardly known in our land; and in heaven no other kind is known.

The currents of some young heart, whose eye is falling on these words, are setting life-wards. The young heart has fond dreams about social freedom—fond hopes for its own fair future. Do not cease to cherish these. While the windows of heaven are open, admit the light. But one counsel in your ear, young friend. If you would realize the dream of your youth—if you would still tread onward, beneath azure skies, over a flowery, fruitful earth—if you would be really great and useful to your fellow-men, take this counsel into your heart of hearts, and let your free spirit brood over it; it comes to you from the solemn past; it is the key to your golden future; it is high as heaven; it is deep as hell:—THE WORK YOU WOULD DO FOR OTHERS, DO FIRST FOR YOUR OWN HEART AND HOME!

Let us retire by these steps! I see Taylor's old bench-mate coming up the walk to look at the stone. He is a rare fellow, that! Green and pleasant are the borders of his home—a living well in the desert! He has a mother's heart and care for those two children stepping on behind him. How beautiful Jane looks in her dark, mourning dress! With what sisterly tenderness does she help along little Ned, out for the first time!

From the Spectator.

AN AMERICAN'S SCENES AND THOUGHTS IN EUROPE.*

This volume is akin to various other books that have lately appeared from American pens; where a traveller, without special qualification or novelty of ground, keeps a journal of his thoughts and observations, or writes home an account of his journeyings in letters to his friends, which in due time are revised and given to the world. Whether the "cacoethes scribendi," a fashion of cheap books, or the rarity of good travels in America—for only the very best of this kind of English literature, and that of modern date, seems to be reprinted—be the cause of this Transatlantic fecundity, we know not. The result is a numerous class of books, which, if not intrinsically worse than the inferior tours produced by the Britishers, are more empty and more wordy —less adapted to an old people, with whose general public the age of mere sentiment and outpourings of individual opinion have passed away.

The author of *Scenes and Thoughts in Europe*, though belonging to the common grade of American tourists, is rather better qualified than most of them. He has not, indeed, any special training which would enable him to travel advantageously in Europe; but he has better qualifications than the run of his countrymen. In his youth he sojourned in Germany, if he did not study there; and in addition to the larger ideas which this advantage has given him, he seems to have contracted more scruples as to the sanctities of social life and personal feeling. Either in Europe or America, he has given some study to history and art, and considered the complex system of European society as it has grown up during so many ages, with an American bias, it is true, but without the self-sufficient vulgarity which characterizes many of his compatriots. Neither did he scamper over Europe at railroad speed. His letters embrace a period of nearly three years; and though he often left places slightly inspected, and lingered in others of no greater importance, time was allowed for the formation of opinion.

And it is opinion, conjoined with the writer's literary ability, that gives its character to *Scenes and Thoughts in Europe*. Though by no means an imitator of Emerson, or even a disciple, he resembles that writer in his manner of investigating things, so as to impart attraction to rather worn subjects by the vigor and novelty of his views. In fact, a great part of the book is less travels than essays upon subjects turned up in travelling. Incidents are few; the descriptions are not numerous, and are less of the things themselves than what they suggest to the writer: criticism or disquisition is the basis of all the more elaborately handled topics. The number of persons of leisure in Europe compared with America, leads to a view of the European aristocracy; in which a good deal of largeness and shrewdness are mixed up with some prejudice and some overstrained positions. The writer sojourned for six weeks at a cold-water-cure station; and he gives one of the best because the most logical expositions in its favor that we have met with. Paris suggests an estimate of the French people, and a criticism on French literature and its principal classics; which might perhaps have been done at home, but it is so obviously suggested by the *genius loci*, and draws so much illustration from the surrounding scenes, that it looks natural and appropriate. Venice is very briefly dismissed; Milan shortly, but not so short. The longest topic at Florence is a panegyric on the American sculptor Power, done with a critical tone, but with the unflinching purpose of a hackney puffmonger: the Yankee is placed on a level with the artist who produced the Medician Venus. Art is a leading subject at Rome also, but relieved by sights in which life predominates.

The form of the book is that of extracts from letters; the style is closer and more forcible than is usually exhibited by American writers, with a greater air of scholarly training; but the sustained interest is not equal to the ability of the writer, perhaps from the incongruity of the matter in reference to the form. We expect a book of travels, with its narratives, its incidents, and its pictures: we get a series of disquisitions, without notice, title, or arrangement, and are consequently disappointed.

The author commences with England; but there is not much space devoted to this country, and what there is chiefly relates to Wordsworth and the Lakes. It might be the contrast of London and seven years ago, but the sketches both of Havre and Rouen seem to bear hard upon those striking and rather pleasant towns of Normandy.

"At three o'clock, we left London by railroad for Southampton, which we reached at six; and, crossing the channel by steamboat in the night, entered the port of Havre at ten the next morning. The town looked dirty at a distance, and is dirtier than it looked. The small craft we passed in the harbor were unclean and unwieldy. The streets ran filth to a degree that offended both eyes and nose. Knots of idle, shabby men were standing at corners gossiping, and looking at parrots and monkeys exposed for sale. The inn we got into, commended as one of the best, was so dirty that we could not bear to face the prospect of a night in it. We hired a carriage, and started at four with post-horses for Rouen, which we reached at midnight. Here we spent Sunday. Rouen is finely placed, on the Seine, with lofty hills about it. In the diligence in which we started early on Monday to overtake fifteen miles up the river the steamboat to St. Germain, I heard a Frenchman say to a Frenchwoman, 'Rouen est le pot-de-chambre de la Normandie.' You know of the cathedral at Rouen, and of the Maid of Orleans' execution; but this is probably in all respects new to you. To me it was also new and satisfactory; being an indication that some of the dwellers in this region have a consciousness of the presence of stenches."

FRENCHMEN AND PARIS.

"A Frenchman more than other men is dependent upon things without himself. Nature and his own mind, with domestic interests and recreations, are not enough to complete his daily circle. For his best enjoyment he must have a succession of factitious excitements. Out of this want Paris has grown to be the capital of the world for superficial amusements. Here are the appliances, multiplied and diversified with the keenest refinement of sensual ingenuity, for keeping the mind busy without labor and fascinated without sensibility. The senses are beset with piquant baits. Whoever has money in his purse, and can satisfy through gold his chief wants, need have little thought of the day or the year. He finds a life all prepared for him, and selects it as he does his dinner from the voluminous carte of the restaurant. To live is for him as easy

* Published by Wiley & Putnam, New York.

Digitized by Google

as to make music on a hand-organ; with but slight physical effort from himself, he is borne along from week to week and from season to season on an unresting current of diversions. Here the sensual can pass years without satiety, and the slothful without ennui. Paris is the Elysium of the idler, and for barren minds a paradise."

FRENCH TRAGEDY.

"The French appear not to have had depth enough to produce an original tragic drama. The tragic material, whereof sentiment is as essential an element as passion, is meagre in them compared with the Germans or English; hence the possibility and even necessity of a simpler plot and a measured regularity. Corneille or Racine could not have wrought a tragedy out of a tradition or a modern fable; they require a familiarized historical subject. The nature of French tragedy compared with English is happily illustrated by the Hamlet of Ducis, which I have seen played at the Théâtre Français. The title of the piece is, 'Hamlet, Tragédie en 5 acts, imitée de l'Anglais par Ducis.' A fitter title were, 'Hamlet, with the part of Hamlet left out by particular desire of French taste.' It is as much an imitation of Shakspeare as straight walks and parallel lines of trees are an imitation of nature. Hamlet is resolved into a tender-hearted, affectionate son. He has not been put aside, but is king. Ophelia does anything but go mad. The mother is overwhelmed with remorse for the murder, which she confesses to a confidant. The heart of Hamlet's mystery is plucked out. The poetry is flattened into phrases. The billowy sea of Shakspeare is belittled to a smooth pond, in every part whereof you can touch bottom. It is not deep enough to dive in."

CLIMATE OF FLORENCE.

"It is much like ours of the Middle States, except that our winter is colder and drier. An American is surprised at this similarity on arriving in Italy; having got his notions from English writers, who, coming from their cloudy northern island, are enchanted with the sunny temperance of an Italian winter, and oppressed by the heats of summer. The heat is not greater than it is in Maryland: and our winter is finer certainly than that of Florence, being drier, and though colder at the same time sunnier. As with us, the autumn, so gloomy in England, is cheerful, clear, and calm, holding on till Christmas. They have hardly more than two cold months. Already in March the spring is awake, and soon drives back winter, first into the highest Apennines, where he clings for a brief space, and thence retreats up to the topmost Alps, not to reäppear for nine or ten months. Nor is that beautiful child of the light and air the Italian sunset more beautiful than the American."

SIR R. PEEL AND THE BIBLE.—Sir Robert Peel presided over the annual meeting of the Tamworth Bible Society, held 18 August, in the town-hall. Sir Robert's speech was the great feature of the proceedings, otherwise of a somewhat formal nature. Sir Robert enlarged on the reasons for the necessity of greater exertion to disseminate the Bible; among the chief of which were the increase of population, the increased congregation of working people in manufactories and railway works, and the extension of colonial establishments. He insisted upon the importance of Christian and especially of Protestant unity; and asserted its moral influence, as shown in the effect of missions to China. He therefore rejoiced at the present meeting, in which, forgetful of mere differences, they were met for a common object:—

"We make no compromise by meeting for this purpose. I would not meet here to-day if I thought I was making a compromise of my religious opinions. I avow that I am most decidedly in favor of the Established Church—I am in favor of that form of Christianity established in this country; I give a decided preference to its forms, to its doctrines, and its episcopal order; and I make no sacrifice of my principles by cordially uniting with others who differ with me upon these points, but concur with me in that high principle that the Bible contains the word of God. That principle has been so powerfully described by one of the ablest men, that I cannot do better than repeat his own words. 'By the religion of Protestants,' says Chillingworth, 'I do not understand the doctrine of Luther, or Calvin, or Melancthon, nor the Confession of Augsburg or Geneva, nor the Catechism of Heidelberg, nor the Articles of the Church of England; no, nor the harmony of Protestant confessions; but that wherein they all agree, and to which they all subscribe with a greater harmony, as a perfect rule of their faith and actions—that is, the Bible; the Bible, I say, the Bible alone, is the religion of Protestants.' Retaining, then, (said Sir Robert,) my opinion in favor of the Established Church of this country, but fully concurring in the principles laid down by that writer, I have great pleasure in coöperating with those who differ with me in points of church government, but I have still greater pleasure in coöperating with them in spreading the knowledge of that word from which we all draw our common faith."

ADVERTISING IN GERMANY.—A mercantile house at Berlin has proposed to all the railway companies of Germany to supply all their carriages with silk blinds for nothing. They simply propose to reserve to themselves the right of changing the blinds as often as they may please; and they require the companies to engage themselves not to accept, during fifty years, either for money or gratuitously, any blinds but theirs. Their object is to cover the blinds with advertisements.—*Galignani's Messenger.*

WE announce with great regret the death of Dr. Andrew Combe; which occurred at Gorgie Mill, near Edinburgh, on the night of Monday last. Dr. Combe was only forty-nine years of age; and, although he had long been afflicted by disease of the lungs, no expectations were entertained of his dissolution until within a week of that event. His immediate illness was a sudden attack of bowel complaint, under the weakening influence of which he sank without pain. Dr. Combe was one of the physicians in ordinary to the queen, and corresponding member of the imperial and royal society of physicians of Vienna; and his works—the chief of which were, *The Principles of Physiology applied to the Preservation of Health*, *A Treatise on the Physiological and Moral Management of Infancy*, and *The Physiology of Digestion*—had passed through a number of editions, and attained a celebrity rarely equalled, both in Europe and America. Just before his last attack of illness he was actively engaged in the preparation of a communication intended for insertion in the *Times*, on a subject of the greatest moment within his peculiar branches of philanthropic inquiry, namely, the nature and causes of the ship fever which has swept off within the last few months so many hundreds of the unfortunate Irish in their emigration to the United States. —*Times.*

From the Edinburgh Review.

1. *A Lytell Geste of Robin Hode, with other Ancient and Modern Ballads and Songs relating to this celebrated Yeoman.* Edited by JOHN MATHEW GUTCH, F. S. A. 2 vols. 8vo. London: 1847.
2. *Robin Hood;* a Fragment by the late ROBERT SOUTHEY, and CAROLINE SOUTHEY. 8vo. Edinburgh and London: 1847.

ON dismissing, in November, 1644, the commissioners whom the parliament had sent to him at Oxford to treat for peace, Charles I. most needlessly affronted them. He refused them the usual courtesy of communicating to them the contents of his answer to the proposals of which they had been the bearers. The commissioners ventured to remark upon the incivility, on which his majesty packed them off with the following rebuke—"What is that to you, who are but to carry what I send? And if I will send the song of Robin Hood and Little John, you must carry it." Obsequious cavaliers very probably repeated this impertinence as a notable exhibition of royal spirit; but graver men would ponder on it, as a truer revelation of the character and temper of their infatuated king, than what Clarendon had studied to impress upon his State Papers, in language so solemn and imposing, that it is almost impossible even now to distrust their majestic tone.

Our present purpose, however, is not to comment upon the ill-humor of Charles I., but upon his illustration. The song of Robin Hood and Little John, was the most popular instance of a familiar and household story that occurred to him. It was in the mouth of every one, from the palace to the cottage; and it is so still. It has floated down the stream of time for many centuries, and although it may have lost, in its descent, somewhat of its ancient fascination, there is even now an attractiveness about it, sufficient to allure many eyes and stir many hearts—quite enough to justify the publication of two as handsome volumes as those put forth by Mr. Gutch; and to enliven by its animating title a more appropriate fragment than the posthumous Robin Hood of Southey, which is not likely, we fear, to add another leaf from the holly-tree or the laurel, to either name.

The existing evidences of Robin Hood's widespread popularity are singularly numerous. There is scarcely a country in England, or any class of ancient remains, which, in some place or other, does not claim a kind of relationship to this celebrated hero. Cairns on Blackdown in Somersetshire, and barrows near to Whitby in Yorkshire and Ludlow in Shropshire, are termed Robin Hood's pricks or butts; lofty natural eminences in Gloucestershire and Derbyshire, are Robin Hood's hills; a huge rock near Matlock is Robin Hood's Tor; ancient boundary stones, as in Lincolnshire, are Robin Hood's crosses; a presumed loggan or rocking-stone in Yorkshire, is Robin Hood's penny-stone; a fountain near Nottingham, another between Doncaster and Wakefield, and one in Lancashire, are Robin Hood's wells; a cave in Nottinghamshire is his stable; a rude natural rock in Hope Dale is his chair; a chasm at Chatsworth is his leap; Blackstone Edge in Lancashire is his bed: ancient oaks, in various parts of the country, are his trees; Plumpton park in Cumberland, the forest of Feckenham in Worcestershire, the deep glades of Sherwood and Barnsdale, and the innermost recesses of Needwood and Inglewood, still resound with his exploits; while Loxley, the presumed place of his birth, which is set down by the old writers as in Yorkshire or Nottinghamshire, is now claimed by Warwickshire and Staffordshire; and will in due time be contested by the true Homeric number of candidates. A singular saying, "Robin Whood in Barnwood stood," had at one time made good its way into Westminster Hall, as a proverb for a quibble. It appears, by the reports, that reverend judges have done it the honor of introducing it on more than one occasion. If they could have foreseen the trouble they were bringing upon Ritson by this now obscure allusion, it may be hoped that they would have refrained—the outlaw would have been scarcely more perplexed at finding himself before them in his own proper form in open court.

Robin Hood's companions have a kind of coparcenary in their master's popularity. Wakefield still remembers her celebrated pinder George à Green; and he is a sign-post hero, not only there, but in places far distant from the scene of his first encounter with his chief. The names of Maid Marian and Friar Tuck, of Scarlet Much, and, above all, of Little John, are linked indissolubly to that of their leader; and the last of them eclipses, in the circumstances of his death and burial, even the exploits of his chief. If we are to believe his chroniclers, Little John lies interred, not only in three places, but in three kingdoms. England shows the house in which he died, and the spot where he was buried, at Hathersage in Derbyshire; and tradition—that safe guide, as we are told, in matters of faith, but not over trustworthy in matters of history—asserts that his grave having been sacrilegiously opened, some years ago, "by order of Captain James Shuttleworth," a thighbone was found in it of gigantic dimensions. The bone was as malicious as it was long. The curious captain and his coadjutor, a wicked sexton, were instantly visited by "many unlucky accidents." The thighbone threw the captain off his horse, and tripped up the sexton in his church-yard. Neither of them could obtain peace of mind or safety of body, until the pilfered *os femoris* was restored to its allotted resting-place, when "all these troubles ceased." One would have thought that these facts constituted a strong case for England. But Scotland overturns them all, by proving that she gave Little John a grave, not by any mere tradition, but by the ocular testimony of that most veracious canon of Aberdeen, the historian Hector Boece. We read in Bellenden's translation, that, "in Murray land is the kirk of Pette, quhare the banis of Littill Johne remanis, in gret admiratioun of pepill;" and he very judiciously adds, in reasonable explanation of the popular admiration, "He hes bene fourtene fut of hicht, with square membris effering thairto. Six yeris afore the cuming of this werk to licht, we saw his hanche bane, als mekill as the haill bane of ane man; for we schot our arme in the mouth thairof; be quhilk apperis," he concludes, and it is the moral of his story, "how strang and square pepill grew, in our regioun, afore they were effeminat with lust and intemperance of mouth."—(Bellenden's *Boece*, i. xxxiv.) But Scotland is not allowed to repose in triumph, notwithstanding the possession of this enormous "hanch-bane," and the energetic testimony of Hector Boece. Ireland puts forth a claim which has an antecedent probability, arising from its singular conformity with the national character. Little John, we are told, took refuge from English oppression in the neighborhood of Dublin. A hillock, perhaps a barrow, which once stood on Ostmantowne green, and was termed Little John's

Digitized by Google

shot, was a lasting evidence of his presence and of his skill in archery. But no Toxophilite dexterity could appease the severe majesty of Irish justice; and "it appears," we are told, "from some records in the Southwell family, that he was publicly executed for robbery on Arbor Hill, Dublin." Hard-pressed by this Irish evidence, Ritson could only suggest, that there should be a *profert in curiam* of the remains.

The existence of ballads of which Robin Hood is the hero can be traced back to the reign of Edward III. The author of Piers Ploughman, who wrote about A. D. 1362, introduces Sloth confessing himself unable to say his *pater noster*, and ignorant of all the hymns respecting the Saviour and Our Lady, but well versed in the "rhymes of Robin Hood."—(Wright's Edition, i. 101.) Of these "rhymes" probably several still exist, in altered forms, but there is no one which has come down to us in any unquestionable manuscript of the time of Piers Ploughman. The earliest that is at present known, occurs in a manuscript which formerly belonged to Withers the poet, and is now in the public library of the University of Cambridge. Mr. Wright has contended that this manuscript, although upon paper, is of the age of Edward II., but the more general opinion seems to be, that it belongs to the following century. Whatever the age of the manuscript, the poem itself may be of the date Mr. Wright has assigned to it; although we cannot say that the internal evidence has led us to that conclusion.* It is, however, a singular poem, and introduces Robin Hood to us in a light which broadly distinguishes him from vulgar freebooters. He was not only the boldest, and the most courteous, he was also the most religious of robbers; and here, at Whitsuntide, when the woods had put on their first brilliant livery, and the birds were singing merrily, and the deer were seeking shelter under the green-wood tree, Robin is lamenting that it was a fortnight and more since he had seen his Saviour, or, in other words, since he had heard mass. Under the influence of this prick of conscience he determines, that, "with the might of mild Mary," he would go that day to Nottingham, in order to join in the solemn services of Pentecost. He does so, and is recognized and betrayed by "a great headed monk," whom he had once relieved of a hundred pounds. The gates of the town are closed, and, after an ineffectual defence, Robin is thrown into prison; and the false monk is despatched to the king with tidings of the capture of the celebrated outlaw. Little John and Much waylay the monk on his journey to London, slay him and his little attendant page, and themselves proceed to London with his letters. The king directs that Robin Hood shall be brought into his presence, and sends an order by the hands of Little John and his companion to that effect, to the Sheriff of Nottingham. On their arrival at Nottingham, they are entertained with the honor due to royal messengers; but—

"When the sheriff was on sleep,
Drunken of wine and ale,"

Little John and Much betake themselves to the jail, kill the jailer, and release their leader. They all fly to the green-wood, and the ballad ends by the pardon of Little John for having beguiled both king and sheriff, on the ground of his clannish fidelity to Robin Hood. Not a word is said in condemnation of the murders.

A second "rhyme of Robin Hood," which is derived from another manuscript, also in the public library at Cambridge, is probably of about the same age as the last. Ritson assigned it to the reign of Henry VII. Mr. Wright would transfer it to Henry VI., on the strength of a memorandum on one page, setting forth the expenses of the feast on the marriage of the king with Margaret—"Thys ys exspences of flesche at the mariage of my ladey Margaret, that sche had owt of Englonde;" but surely this memorandum is more likely to apply to "my Lady Margaret," daughter of Henry VII., who was married "out of England," that is, in Scotland, to James IV., than to the Margaret who was married "*in* England" to Henry VI. The poem details the adventures of "Robin Hood and the Potter." After the usual trials of skill, with quarterstaff and sword, in which Robin is worsted, he changes clothes with the potter, buys his stock in trade, and, thus disguised, adventures into Nottingham. By offering his pots at an underprice, he soon clears his board of all but five, which he presents to the sheriff's wife. This act of liberality is rewarded by an invitation to dinner. At the sheriff's table Robin learns that a great trial of skill in archery is about to take place that afternoon. He attends, and surpasses all competitors. By way of accounting for his skill, he professes to have practised with Robin Hood, "under his tortyll," that is, his twisted "tree." The sheriff expresses a wish to see the famous outlaw. The potter offers to be his guide; leads him into the depth of the forest, and, at one blast of his horn, surrounds the astonished functionary by the well-known band. The sheriff is compelled to leave behind him his horse, "and all his other gear," and is glad to make a safe retreat upon any terms; while Robin, with his accustomed courtesy to the fair sex, sends home, as a present to the wife of the insulted sheriff, a white palfrey, "which ambles like the wind."

"Robyn and Gandelyn," which is another of the old manuscript "rhymes" included in Mr. Gutch's collection, does not seem to refer to Robin Hood. The names mentioned in it, and also the story it tells, are inconsistent with all the other ballads of this series. With the exception of a fragment of "Robin Hood and the Old Man," published by Jamieson, (Popular Ballads, ii. 49.) "Robin Hood and Guy of Gisborne," first published by Percy from his folio MS., is the only additional manuscript "rhyme of Robin Hood" which has any pretension to antiquity. This clever, and in some parts even elegant poem, details a fierce contest between Robin Hood and a person named Guy of Gisborne, who had sworn to apprehend the outlaw, and was roaming the forest in search of him, habited in "a capull hyde," which is said to mean a horse's hide,

"Top and tail and mane."

Robin is successful in the encounter. Guy is slain; his body is barbarously mangled "with an Irish knife;" and Robin clothes himself in the "capull hyde," and takes possession of his enemy's horn. Thus accoutred he proceeds towards Barnsdale, where in the mean time his men had had an encounter with the sheriff; several of them had been killed, and Little John was bound fast to a tree. Robin Hood, in ignorance of what had taken place, blew a loud blast on Guy's horn, which was recog-

* *Suum cuique.* It is said, in the last edition of Ritson's *Robin Hood*, that this poem, which is known by the title of "Robin Hood and the Monk," was first published by Hartshorne in his *Metrical Tales*, London, 8vo, 1829. Hartshorne was preceded by Jamieson, in whose collection of *Popular Ballads*, (Edinburgh, 8vo, 1806,) it will be found, vol. ii., p. 54.

Digitized by Google

nized by the sheriff, and, when he saw the wearer of "the capull hyde" stalk down the glen, he concluded that Guy had slain Robin Hood. It was not until Little John had been set at liberty, that the sheriff discovered his mistake, and "fled full fast away."

These are all the "rhymes of Robin Hood" which have any right (so far as respects external evidence) to be looked upon as of any considerable antiquity; and it is possible that they are some of the very rhymes alluded to in Piers Ploughman. The invention of printing soon put the story on a more permanent footing. Wynkyn de Worde sent forth from his new shop in Fleet street, perhaps in the year 1500, "A Lytell Geste of Robyn Hode and his meyné, and of the proude Sheryfe of Notyngham."* This is a ballad romance in eight fyttes, or books, and, in point of poetical merit, may fairly rank with the best compositions of its class. Robin is here again introduced in his character of a religious freebooter. We are told that he heard three masses every day before dinner; the third, which was his especial delight, being in honor of our "dear Lady." Such, indeed, was his love for the Virgin, that he never harmed any company in which there chanced to be a woman. Equally careful was he that no damage should be done to any husbandman "that tylleth with his plough," nor to any good yeoman, nor to any knight or squire "that wolde be a good felowe." But, in spite of his attachment to religious observances, there existed in his mind a wide distinction between the services of the church, and its ministers. His vengeance was guided by a kind of puritanical aversion to all clerical dignitaries. A fat abbot, or the steward of a monastery, was nuts to him, as the wood-land saying is; and the higher the dignitaries, the worse they fared with him. These bishops and "these archbishops"—such is Robin's charge to his followers—

"Ye shall them beat and bind."

The "Lytell Geste" informs us, that in the execution of their accustomed roving commission, Little John and two of his companions waylay a knight who is passing through the forest—a melancholy, miserable man, a very representative of Him of the Sorrowful Countenance. He willingly agrees to accompany the rovers to their master. Robin entertains him at dinner sumptuously; swans, pheasants, and other delicacies, smoke upon the outlaw's board. The feast being concluded, the knight prepares to depart. "Pay ere you wend!" says Robin; "it was never the custom for a yeoman to pay for a knight." The knight confesses, with humiliation, that he has but ten shillings in his coffers. "Go look," says Robin to Little John, and then addressing the knight, "if you have no more, I will not have a penny." The search confirms the knight's veracity; and leads to friendly inquiries on the part of Robin Hood as to the cause of the knight's poverty. "For a hundred winters," the unhappy man explains, "his ancestors had been knights," and, within the last two or three years, he himself had possessed an income of four hundred pounds a year, as his neighbors well "kende."

* A copy of this book, believed to be unique, exists in that library which we have already several times had occasion to mention, and which is preëminently rich in matters relating to Robin Hood—the public library of the University of Cambridge. It has been reprinted twice; by Ritson in his Robin Hood collection, and now again by Mr. Gutch, who gives also a modern version by the Rev. John Eagles.

But his son had the misfortune to kill a Lancashire knight, and also a squire, in a joust; and the father's goods had been "sette and solde," and his lands pledged to the abbot of St. Mary's for four hundred pounds, to pay the penalty of his son's mishap. The day for repayment of the loan was close at hand, and the knight, being unprovided with the money, already sees his estate pass from him. Robin inquires, who would be the knight's surety if he were to advance the sum. The knight acknowledges that he is as much at a loss for friends as money. He can offer no surety save Our Lady, who had never failed him before. Too much cannot be done for a friend of Our Lady's! Robin protests, that, if all England were sought through, a better surety could not be found; and the knight is immediately provided not only with money, but with garments, a horse, and a trusty squire in the person of Little John. The whole band enter heart and soul into their master's feelings. They weep over the knight's misfortunes, and supply his wants with more than their master's liberality. Thus drops the curtain at the end of fytte the first.

The second fytte transports us to St. Mary's abbey; where the abbot is chuckling over the absence of the knight, and the anticipated forfeiture of his lands. The prior entreats his superior to show a little pity, but his merciful promptings are scornfully rejected by the abbot, and by a fat-headed monk, no less a person than the high cellarer. The fatal day arrives; and a court is held for the condemnation of the land with proper legal formality. In the midst of the proceedings the knight knocks at the gate. He enters clad in simple weeds, and humbly entreats the monks to grant him a longer day. The abbot insists upon his bond; he will have his money or the land. The high justice interferes as mediator—

"What wyll ye gyve more?" said the justice,
"And the knight shall make a release;
And elles dare I safly swere
Ye never hold your lande in pees."

"An hundred pounde," sayd the abbot,
The justice said, "Give him two."
"Nay, be God!" sayd the knight,
"Yet gete ye it not soo:

Though ye wolde gyve a thousande more,
Yet were ye never the nere;
Shall there never be myn eyre
Abbot, justyse, ne frere."

He sterte hym to a borde anone,
Tyll a table rounde,
And there he shoke, out of a bagge,
Even four hundred pounde.

His debt thus paid, the knight takes leave of the chagrined abbot—"he went hym forthe full mery syngynge, as men have told the tale," and living to himself at home, contrives in time to get together the sum which his benefactor had advanced. He equips himself also with a splendid present of bows and arrows, and on the appointed day, rides out, with "a light song" and a merry heart, on his way to Barnsdale.

The third fytte relates the adventures of Little John, who, straying into Nottingham, attracts the attention of the sheriff by his skill in archery, and, with the knight's consent, enters into the sheriff's service for one year, under the name of Reynold Greenleaf. After a time, "it befel upon a Wednesday," that, in the absence of the sheriff, Little John

Digitized by Google

raises a disturbance in the house, and, after a certain amount of quarrels and broken heads, the sheriff's cook and Little John run away, and betake themselves to the green-wood, carrying off with them their master's plate and ready money, "three hundred pound and three." They have scarcely joined Robin Hood, when Little John bethinks him of a "wile." The sheriff is encountered on his return home, beguiled into the forest, and delivered over to the enemy's party. He is served at supper off his own plate, stripped to his breech and shirt, kept all night in most uncomfortable plight, and is dismissed on the morrow upon taking an oath never to lie in wait for Robin Hood "by water ne by londe," and, if any of the troop fall into his custody, "to help them that he may."

In the fourth fytte the fat-headed high-cellarer of St. Mary's, while travelling with a large sum of money in his mail, is unlucky enough to fall into the power of these outlaws, who lose no time in exercising, at his expense, the ancient equitable jurisdiction by which they were wont to give relief against the hardships of the law and the abuses of property. The cellarer protests that he has but twenty marks. Little John searches and finds eight hundred pounds on him. Robin Hood declares that the money is sent by Our Lady; who, with her accustomed goodness, has doubled the sum which he had lent the knight. The monk is dismissed in high dudgeon, refusing a stirrup-cup at his departure, and vowing that he might have dined "better cheap" at Blyth or Doncaster. The fytte concludes with the arrival of the knight. Robin accepts his presents; but tells him that Our Lady had already paid back the amount of the loan by her cellarer, together with another four hundred pounds, of which he begs the knight's acceptance in return.

With the fifth fytte there commences a new story. The sheriff of Nottingham proclaims a shooting-match: Robin attends, and bears off the prize. As he leaves the town, the cry of "Robin Hood!" is raised; "great horns gan they to blow;" the townsmen assemble, a sharp encounter ensues, and Little John is wounded in the knee, so that he can neither go nor ride. He entreats his master to smite off his head with his "brown sword," and make his escape. The proposal is indignantly rejected. Little Much takes his wounded companion upon his back, lays him down from time to time, "to shoot another while," and, in the end, they all escape to the castle of their friend the knight.

The sixth fytte opens with a complaint by the sheriff to the king, against the knight, for harboring outlaws. His majesty determines to visit Nottingham, and himself suppress these outrages. Without waiting for the arrival of his sovereign, the sheriff waylays the knight. His lady appeals to Robin Hood, who instantly summons his men, proceeds to Nottingham, slays the "proud sheriff," and carries off the knight into the green-wood.

The seventh fytte presents us with the arrival of Edward, "our comely king," at Nottingham. For half a year all his endeavors to take Robin, or the knight, are vain. At length, a forester offers, that if the king will put on the costume of an abbot, he will lead him to Robin's retreat, "a mile under the lynde;" in the very depths, that is, of a wood of limes. The offer is accepted. Robin received the pretended abbot with courtesy, and of forty pounds voluntarily offered by the king, took but one half, which he doled out among his men, and "bad them merry be." The king then produces a summons under the royal seal, inviting Robin to Nottingham, "both to meat and meal." Robin bends upon his knee before the royal missive, and entertains the messenger in his noblest fashion; feasts him off his own fat venison—

"With good white bread, and good red wine,
And therto fine ale brown."

After dinner he entertains him with the accustomed forest sport, a shooting-match; the condition being, that whoever misses a rose garland suspended between two poles, should forfeit his archer's "tackle," and submit to receive a buffet on his head. Robin misses by "three fyngers and mare." The king is to enforce the penalty. He hesitates. "Smite boldly," said Robin, "I give thee large leave." Thus encouraged, the king folds up his sleeve, and with one blow of a stalwart arm, makes the outlaw reel almost to the earth. Such an exhibition of "pith in the arm," opens the eyes of Robin and his friend the knight. The *bras de fer* was an acknowledged attribute of sovereignty. Down kneel the outlaw band before the recognized majesty of England; and peace and pardon follow.

The eighth fytte hurriedly concludes the history. Robin and his men follow the king to the court. But within a year the inextinguishable love of the forest had lured away all his companions save two, and Robin himself was pining after his "tortyll tree." On a certain day he chanced to behold an assembly of young archers practising. This brought his home-sickness to a height.

"Alas, and well-a-woo!
Yf I dwell longer with the king
Sorowe wyll me sloo."

He hied back to the green-wood, and dwelt there for "twenty yere and two;" but, in the end, was betrayed by his kinswoman, the prioress of Kirkesley. Going to the priory "to be leten blode," the prioress and Sir Roger of Doncaster, "that was her own special," procured his death "through theyr false playe."

The poem concludes with the charitable aspiration—

"Cryst have mercy on his soule,
That dyed on the rode,
For he was a good outlawe
And dyde pore men much god."

The Lytell Geste is the most skilful and complete of all the Robin Hood poems. It has, indeed, a kind of epic regularity of construction, which has no parallel in any of the nearly fifty subsequent ballads which Ritson and the present editor have brought together. These are all founded upon the incidents of the Lytell Geste, or upon those of the earlier "rhymes," or upon incidents common in ballad literature; and the majority are rude compositions, of little merit or value, except as proofs of the way in which a story, once admitted into the popular mind, will gradually enlarge and spread on every side. In the instance of Robin Hood, there were two peculiar sources whence the facts, which were ultimately engrafted upon the original story, were derived. The first, was the adoption of Robin Hood as an actor in the popular festival in honor of May Day. In this old observance, which was a relic of the ancient festival of Flora, a lady or queen of the May was a necessary character, as the representative of the Goddess of Flowers. From an early period the lady of the May was termed in England, and perhaps also in France,* Maid Marion.

* See Douce's *Illustrations of Shakspeare*, p. 588, edit. 1839. Roquefort, de l'etat de la Poésie Françoise, p. 261. Warton's *Eng. Poetry*, i. 80, edit. 1824.

Digitized by Google

At a more recent date, when the original meaning of the festival was altogether disregarded, a lord or king of the May either superseded the queen, or was added to the customary actors; and, finally, the lord or king came, in many places, to be termed Robin Hood, and was brought upon the scene in archer's habiliments, and with some of Robin Hood's usual attendants. In this way the names and stories of Robin Hood and Maid Marion came to be blended; and Robin acquired an additional hold upon the hearts of the people. The second source to which we have alluded, is intimately connected with the first. May Day games fell out of fashion; archery was remembered only in the famous feats of English bowmen; old faiths and superstitions began to wax dim; Maid Marion, who used to be personated by a boisterous "lubberly boy," was turned over to some woman less attractive still, and became an object of contempt even with Falstaff; Robin Hood's quiver hung useless at his back; Friar Tuck could no longer raise a laugh by pattering an Ave, or repeating scraps of the old Latin service; the joke and the merriment were now dependent, not upon a Little John of six feet two or three, but upon some low-life Jack-pudding, or upon the coarse vulgarities of some make-believe Moor or Ethiopian—for there is nothing new under the sun.

Such was the state of things with the story of Robin Hood, when, some two hundred and fifty years ago, Anthony Munday and Henry Chettle contrived to unite it with a semi-historical narrative of an interesting character, and to bring it upon the ordinary stage in the drama of "The Downfall of the Earl of Huntingdon," Robin Hood being the outlawed earl, and Maid Marion "the chaste Matilda, the Lord Fitzwalter's daughter." The play was extremely popular, and not undeservedly so. The plot is well developed; the *dramatis personæ* comprise many names of traditional interest; the familiar incidents of the ballads are skilfully adapted to a quasi-historical end; and, finally, that portion of the play of which the scene is laid in the greenwood, possesses a sylvan freshness and sunny light, which no man that has a living soul in him, or the least feeling for country life, can possibly withstand. Munday and Chettle's play gave new life to the decaying legend. But it was not a true life. To convert the old popular favorites into lords and ladies in disguise, was to communicate a galvanic semblance to them rather than a real existence. They, however, became fashionable; and the supposititious nobility of Robin and Marion passed from the play into new ballads, and was accepted as an integral portion of the original history.

"But time is like a fashionable host,
That slightly shakes his parting guest by the hand."

New favorites arose. "The old Robin Hood of England," as Shakspeare terms him, now no longer a popular hero, was soon overlooked in the artificial world of polite letters. He gradually faded away into a memory and a tradition, a thing for antiquaries and refuse-mongers; and they strove to make something of him after their own fashion. One gentleman invented a pedigree of the poetic earl, which is an outrage upon all history; and another an inscription upon his tombstone, which is a burlesque upon all language. Finally, Ritson, with most astonishing carefulness, gathered up all the crumbs of information respecting him, the allusions, the scattered disjointed references which lie strewn over the surface of our literature,* and brought them all together into two octavo volumes. Mr Gutch has republished almost the whole of Ritson, with additions; but without Ritson's care. He holds Ritson, we can see, in some contempt. Yet it would not please him if any one were to institute a strict comparison between the antiquarian acquirements of Ritson and those of Ritson's successor.

And now, throwing aside the poetical earldom, and the popular *liaison* with Maid Marion, and the ballads clearly subsequent to the Lytell Geste, we arrive at the question—Who and what, after all, was Robin Hood? Where and when did he really live? This is a question which it will take a bolder man than we can make up amongst us, to answer distinctly. What do contemporary English chroniclers say respecting him? Not a word. What evidence does any contemporary author afford concerning him? None at all. What proof is there, in short, that he ever existed, or did any one of the feats attributed to him? The testimony only of ballads and popular tradition. Nothing else. For, although he is mentioned in two *Scottish* chronicles, written several hundred years after the most recent of the periods at which he is supposed to have lived, it is plain that the authors of the chronicles in question knew nothing of him beyond the ballads; and merely assigned a speculative date to the life and adventures of the person whom the ballads celebrated. The first of these chronicles is the *Scotichronicon*, partly written by Fordun, a canon of Aberdeen, between the years 1377 and 1384, and partly by Bower, Abbot of St. Columba, about the year 1450. Bower's labors, in connection with the *Scotichronicon*, are said to have been of three kinds. Fordun completed five books; these Bower interpolated with new matter. Fordun also left various collections for a continuation of his work, from 1153 to 1385: these Bower arranged, eking them out with materials collected by himself, and he digested the whole into books, extending from Book V. to Book XIII. cap. 33; while the latter part of Book XIII., and the continuation down to the end of Book XVI., are attributed to him entirely. Although there was this distinction between the books before and after Book XIII., Bower himself claimed the whole chronicle subsequent to Book V. as equally his own. In some concluding valedictory lines, he says—

"*Quinque libros Fordun, undenos auctor arabat.*"

Now it is in Book X. that the passages relating to Robin Hood occur; but it is a mistake to say that they occur only "in one of the late manuscripts" † of the *Scotichronicon*. They are to be found in all the manuscripts that we have had opportunities of consulting; in the Edinburgh MS., from which Goodall printed; in the famous Black Book of Paisley, which is now in the king's library in the British Museum; in the Harleian manuscript 712, which is a copy made in 1483 for an archbishop of St. Andrews; and in the Harleian manuscript 4764, which is also a manuscript of the fifteenth century. In all these manuscripts the passages

* Ritson's diligence in this respect was singular. Some few allusive passages have been turned up since his time, but the number is very small. We can add but one which we believe has not been noticed. It occurs, of all places in the world, in a petition to parliament, presented in the year 1439, against one Piers Venables of Aston in Derbyshire, who "having no liflode, ne sufficeante of goodes, gadered and assembled unto him many misdoers, beynge of his clothynge, and, in manere of insurrection, wente into the wodes in that countrie, like as it hadde be Robyn Hode and his meyne."—(Rot. Parl. v. 16.)

† Wright's *Essays*, ii. 84.

Digitized by Google

exist as printed by Hearne or Goodall; but it is clear that there cannot be any certainty that they were written by Fordun. Their disjointed character, as compared with the passages which precede and follow them, gives them very much the appearance of having been interpolated, but, whether interpolated or not, the facts that are stated in them are evidently derived from the ballads, which are distinctly referred to, and are said to be more attractive "to the silly people" than any others of their kind.

The other Scottish writer who mentions Robin Hood is Major or Mair (*Joannes*, as Buchanan designates him, *solo cognomine Major:*) in his *Historia Majoris Britanniæ*, which was first published in 1512, and appears to have been written a very little while before. Under the reign of Richard I., that is, between 1189 and 1199, he observes—"About this time, *as I conjecture*, the famous thieves, Robert Hude of England and Little John, lurked in woods," &c.; and then he relates various particulars, evidently taken from the ballads, which, he says, were sung throughout England and Scotland.

It is quite unnecessary to offer any comment upon the contradictory statements of two writers, neither of whom had any means of ascertaining the truth. It is clear that they wrote from the ballads and from common tradition; and that what they say adds nothing whatever to the information derived from those sources. They relied upon those sources alone, and so must we. And what can we learn from them? What is the testimony of tradition? It confounds, as we have seen, the monuments of different periods and different races—monuments between the erection of which many ages and many revolutions must have intervened; it huddles together things natural and things artificial; remains British, Roman, Saxon—relics in all parts of the kingdom; and assigns them all to Robin Hood. Sometimes, as Mr. Wright has well remarked, he is identified with the dwarfs, and sometimes with the giants, of the popular creed.—(Wright's *Essays*, ii. 209, 210.) Wherever an old memory or an old tradition was lost, Robin Hood was appointed to fill the vacant place: a clear proof that the popular mind was full of the exploits attributed to him, but none whatever that he performed them. And what of the ballads? Far be it from us to depreciate these interesting and valuable remains. Our ancient ballads constitute a kind of literary heaven, into which we must peer with anxious eyes when we are looking for the morning star which ushered in our poetry and romance. But ballads are founded upon fiction as well as upon facts. With all respect for Mr. Sharon Turner, we should as soon think of building upon the historical authority of *The Lays of Ancient Rome*, or of Scott's *Lady of the Lake*, as upon that even of the Welsh triads: and before we can admit the ballads of the fourteenth century in historical attestation or explanation of the achievements of a hero whose name is traditionally placed two or three centuries earlier, and is associated with monuments many ages anterior even to the period assigned to his existence, surely we ought to have the testimony of some one who avers in plain prose, that at one time or another he really was a living and not an ideal person. So long as all contemporary history continues to be an absolute blank respecting him, we may accept the ballads and the traditions as evidence of the widely diffused popularity of *the story;* but for anything we can see to the contrary, they rather show that it ought to be placed among our national fictions than among our national facts.

We are aware that two French writers have recently endeavored to fix the wandering Robin within certain definite limits both of time and space. Thierry in his "History of the Norman Conquest," and the author of a *Thèse de Littérature sur les Vicissitudes et les Transformations du cycle populaire de Robin Hood*, (Paris, 1832,) would throw him back to the reign of the first Norman kings. They discover under his disguise one of the Saxon patriots who so long resisted the Norman rule.* These writers differ a little with each other, but their theory is in principle the same; and it is no more than a theory, a picturesque imagination, very taking and romantic, but totally at variance with the spirit of the Robin Hood ballads, which is one of loyalty to the sovereign, not of opposition to his sway. Besides, the silence of contemporary historians is, what lawyers call in their grotesque language, a negative pregnant. These historians name the most distinguished Saxon outlaws; but they are all ominously silent regarding Robin Hood. It is easy to dovetail the existence and adventures of the hero of the green-wood upon any passage which indicates the existence of a band of outlaws.

* Ancient ballads and modern theories would, by this time, have brought into question (had it been possible) another celebrated outlaw of another kind. We mean Thomas à Becket. But however questionable may be the condition in which his historical character has come down to us, his historical existence is beyond dispute. And there was sufficient in it evidently, of what was extraordinary, to provoke fiction to give a little more color to the story, and add an inch or so to the stature of its hero. Not only did ballad writers, anticipating Mr. D'Israeli, provide Becket with a Syrian mother, whom Thierry and Sharon Turner have accepted as a truth; but the ground and popularity of his opposition to his sovereign are accounted for in the romantic school of *Angleterre Poëtique*, by representing it as a personification of Saxon and Norman jealousies, as well as of the more lasting rivalry between church and state. We do not venture ourselves to determine whether Becket was or was not a Saxon. We wait till criticism has the means either of reconcilement or of preference, on a comparison of the apparently opposite statements of Becket himself, and of his almost other self, Fitzstephen.

Becket's words are few and general, and were uttered in scornful answer to his enemies. The *Clerus Angliæ* had reproached him with ingratitude to the king, who had promoted him *in gloriam ab exili;* but nothing is said on either side about race, or of the wonderful circumstance of a Saxon primate. Becket replies: "Non sum revera, *ataris editus regibus*. Malo tamen is esse, in quo faciat sibi genus animi nobilitas, quam in quo nobilitas generis degeneret. Forte natus sum de paupere tugurio!" In his remonstrance with Foliot, Bishop of London, the ablest and most prominent of his opponents, he enters more into particulars. "Quod si ad generis mei radicem, et progenitores meos, intenderis, cives quidem fuerunt Londonienses, in medio concivium suorum habitantes, sine querela nec omnino infimi." Supposing this to be literally true, how far back must the words (*radix* and *progenitores*) necessarily carry us? And were all citizens of London, necessarily of Saxon origin?

On the other hand, Fitzstephen's statement is precise, designating the very birthplace, in Normandy, of Becket's father. The circumstance, too, is mentioned by him incidentally, with no further object than that of accounting, by reason of the ancient neighborhood of the families, for the early favor shown to Becket by Archbishop Theobald. "Præfatus Gilbertus (pater Thomæ Becket) cum domino archipræsule di propinquitate et genere loquebatur; ut ille, ortu Normannus, et circà Tierci villam, de equestri ordine, natu vicinus."

The account of Fitzstephen is, to a certain extent, confirmed by the circumstance that *a family of the name of Becket* appears on the earliest of our Norman Records. Thus A. D. 1180, a hoard of coins, which were sold for £49, money of Angiers, was found in the earth in the house (*in terra in domo*) of Mauger de Becket, under the White Cliff, (Rot. Scacc. Norman. i. cxvii. and 79;) and in the 4th John, a grant was made of the lands which formerly belonged to William Becket at Welleboe."—(Rot. Norman. i. 57)

This is what the *Scotichronicon* has done in the reign of Henry III., and Mair in that of Richard I., and Thierry and Barry at other periods: but until some real authority can be produced for Robin Hood's existence, at some one period or other, he must remain historically a dream; or, if scholars please, a myth—"the hunter and the deer a shade:" but, in the mean time, he may be just as useful and renowned. The old giant-killer of Greece, commonly called Hercules, will astonish schoolboys by his labors to the end of time; and Robin Hood will have home and shelter in the very heart of English song and fancy, as long as there is pleasure in freshness, freedom, and adventure, in birds and ballads, in green woods, and the air that blows over the early morning of a nation's being.

CORRESPONDENCE.

With very great satisfaction we announce to our subscribers and the public, that we have succeeded in making an engagement with an American gentleman living in Paris—holding a high office under the United States; enjoying the best political and literary society of the continent; of long experience and high reputation as a writer upon books and public affairs—to prepare for each number of the Living Age a full account of the Politics of Europe, and the Literature and Science of France. We expect to begin the series in November.

The heavy ground-swell which seems to announce vast changes in Europe, makes such an arrangement a matter of especial importance at this time; and we have unbounded pleasure in the prospect of carrying out, in so admirable a manner, an important part of our plan. We do not yet feel at liberty to give the name of our correspondent. When we do so, the well-informed reader will agree with us in the opinion that no other man has shown himself able to do the work so well.

☞ Papers which exchange with us, will oblige us by copying the above.

Dr. Sprague on Dr. Chalmers.—The Edinburgh Witness says:

"Among the numerous funeral sermons of which the death of Chalmers has proved the occasion, we know not a finer, abler, or better-toned, than one of the transatlantic discourses, which has, we are happy to find, been just reprinted in this country by our friend Mr. Johnstone. It is from the pen of Dr. Sprague, Albany, United States, so well known in this country by his work on revivals. Dr. Sprague's estimate of the intellectual character of Chalmers seems eminently just, and, formed at the distance of more than three thousand miles from the more immediate scene of Chalmers' personal labors—for distance in space has greatly the effect in such matters of distance in time—it may be regarded as foreshadowing the judgment of posterity."

We make our first importation of poetry from the Pacific coast. It is gratifying to see that the Anglo-Saxon race expresses itself so nearly in the same way as it does in a more eastern country. Major Sullivan may perhaps become the "Moore" of that distant region.

From the Oregon Spectator

TO THE EMIGRATION OF 1845.

BY MAJ. SULLIVAN.

Tune—"*The girl I left behind me.*"

As slow our wagons rolled the track,
Their teams the rough earth cleaving,
And drivers all still looking back
To that dear land they 're leaving—
So loth to part from all we love,
From all the links that bind us,
To turn our hearts, where'er we rove,
To those we 've left behind us!

When round the bowl of vanished years,
We talk of joyous seeming,
And smiles that might as well be tears,
So faint and sad their beaming,
While mem'ry brings us back again
Each early tie that twined us,
Oh, sweet the cup that circles then
To those we 've left behind us!

And when, in other climes, we meet
Some isle or vale enchanting,
Where all looks wild, flowery and sweet,
And naught but love is wanting,
We think how great had been our bliss,
If Heaven had but assigned us
To live and die 'mid scenes like this,
With some we 've left behind us!

Yet we have made a home once more,
In the Willamette valley,
And all the boys, both rich and poor,
May go and court Miss Sally;
As to myself, I count me blest,
If you will all excuse me;
To ease the pain that 's in my breast,
I 'll go and court Miss Susy.

From the Albany Citizen we copy a notice of Capt. Hale, and his very excellent letter:

Capt. Nathan Hale.—The name of this brave but unfortunate officer, who was hung by the British as a spy in the early part of the revolution, has loomed up in latter years into a star of the first magnitude in our American history. At the time when he resolved on entering the army, he was engaged in teaching a school in New London, and we have the pleasure of giving below the identical letter, which accidentally came to light not long since, in which he first intimated to the proprietors of the school his intention to relinquish his place as teacher, and join the army. We have seen the original MS., which is in an uncommonly fair and beautiful hand. It is in the possession of one of our citizens, and is a valued relic.

"*To the Proprietors of Union School.*

"Gentlemen:—Having received information that a place is allotted me in the army, and being inclined, as I hope, for good reasons, to accept it, I am constrained to ask as a favor that which scarce anything else would have induced me to, which is, to be excused from keeping your school any longer. For the purpose of conversing upon this, and of procuring another master, some of your number think it best there should be a general meeting of the proprietors. The time talked of for holding it is 6 o'clock this afternoon, at the school-house. The year for which I engaged will expire within a fortnight, so that my quitting a few days sooner, I hope, will subject you to no great inconvenience.

Digitized by Google

"School-keeping is a business of which I was always fond; but since my residence in this town, everything has conspired to render it more agreeable. I have thought much of never quitting it but with life, but at present there seems an opportunity for more extensive public service.

"The kindness expressed to me by the people of the place, but especially the proprietors of the school, will always be very gratefully remembered by,

"Gentlemen, with respect,
"Your humble servant,
"NATHAN HALE.

"*Friday, July 7th*, 1775.
To John Winthrop, Esq., Rich'd Law, Esq., &c., &c., &c."

WE should like to travel *cum privilegio*, the following story notwithstanding. It is told by the editor of the Dayton Transcript, as part of his own experience.

We have travelled some 1500 miles within the last few days, by land and by water. The tavern-keepers, steam captains, &c., &c., have uniformly chalked our hat and indignantly refused to permit us to pay our way. In short, upon the raging canawl, upon the expansive lake, in the packets, hotels and floating palaces of Lake Erie, we have had a great "free blow," and have uniformly been regarded among the "*dead heads*." This you will regard as a very pleasant, and certainly very agreeable and advantageous way of travelling. But there was one "free blow" we received, which came near knocking us into the middle of next week. The incident is so comical that we will relate it if the joke is at our expense.

While on board one of the splendid steamers which ply between Buffalo and Chicago, the fuz on our chin grew rather longer than was agreeable, and we repaired to the barber-shop on board to have it taken off. The fellow did it up in first-rate style. After he had combed and oiled our head, brushed our clothes, and slicked us up fine, we felt gratified —pulled out a dime and proffered it to him as a reward for his services. He drew himself up with considerable pomposity—

"I understands," said he, "dat you is an editor?"

"Well! what of it?" said we.

"We never charge editors nofin," said he.

"But, my woolly friend," said we, "there are a good many editors travelling now-a-days, and such liberality on your part will prove a ruinous business."

"Oh, nebber mind," said he, "we makes it all up off de *gemmen*."

We incontinently sloped.

WE are indebted to the Merchants' Magazine for the following illustration and suggestion. A few years of extended commercial intercourse may bring about greater wonders than are asked for:

TRAVELLING VALUE OF TWENTY FRANCS.—The following paragraph is translated from the "Courrier des Etats Unis." It strikingly illustrates the evils of a want of unity in the currencies of the commercial world. We agree with the editor of the New Orleans Bulletin, that there would be some sense and great advantage, if, instead of holding a European congress to settle or preserve "the balance of power," or some other political humbug, they would convene one for establishing a uniform system of weights, measures, and money, throughout the world. To such a congress, the United States would make no objection to send representatives, or to enter into a system "of offensive and defensive alliance" with the old monarchies of Europe, on the subject:

"If a man gains by travelling, it is not so with a piece of gold. Mr. Alfred de Vigny, who is gifted with a good financial organization, the other day determined to arrive at an exact account of the loss produced by a constant necessity for exchange. He set forth on that trip beyond the Rhine, which all politicians and thinkers, now-a-days, are wont to make. In leaving France, he went first to Frankfort. There he applied to a rich merchant, to whom he had been recommended, with the request that he would change for him a twenty franc piece ($3.84) into the appropriate coin of the country. The poet took this coin and placed it in a purse by itself. When he arrived at Munich, he changed the Frankfort money into an equal sum in the Bavarian currency. At Berlin, again, he changed the silver he had obtained at Munich into so much Prussian. At Vienna, he went through the same process; then, again, at Milan; once more, at Naples; and finally, arriving at Rome, he did the same thing there.

"After having gone over the whole of Italy, he passed into Switzerland, descended the Rhine, and travelled through Holland and Belgium, always changing the money of the country he left, for that into which he came—never failing to go to people on whom he could implicitly rely, who would neither deceive him nor take any discount. Still, as he travelled on, the twenty franc purse seemed always to be losing weight. From country to country the pieces were becoming lighter and less numerous. At last, at the end of his journey, (say on the 16th of last March,) the author of *Stello* changed the value of his gold Napoleon back again into French currency, and what do you think remained of that gold piece, of which nothing at all had been spent? He had just sixty centimes left! Whereupon the said Alfred took occasion to write upon his tablet the following aphorism: 'For a travelling artist, a Napoleon is worth only twelve sous.'"—*Merchants' Magazine.*

SWITZERLAND.—The Morning Chronicle, Lord Palmerston's paper, says:

"*Switzerland is, in fact, a European Yankeeism, a miniature United States, not severed from Europe by the friendly breadth of the Atlantic, but entrenched on a fortress of impregnable rock, amid the frontier and debatable ground of European liberty and despotism.*

"In that position, in spite of all her perpetual internal divisions, she has maintained her unity and independence for five centuries. All Europe, and no country more than England, is deeply indebted to her for many a precious precept and example. The overthrow of feudalism, and the assertion of man's right to self-government, as a thinking and responsible agent, were first commenced by Switzerland. There could be no better title to the gratitude of mankind, or claim for support when Switzerland is right, and for forbearance when she is wrong. Europe has not forgotten it. *England, above all, will not forget it.*

"The question how far the federal constitution of Switzerland requires or admits of amendment, is one of which foreign statesmen cannot correctly

Digitized by Google

judge, and in which they have no right to interfere. The degree to which the constitutions of the cantons have been altered since 1831, may necessitate a reconstruction of the federal system, to an extent of which none but natives can know the urgency. We would gladly see the formation of the new constitution committed to parties of more moderate opinions, and more likely to conciliate the support of all the cantons than the present dictatorial canton. But, we repeat, it is not our wish, nor the wishes of any foreign state, but the will of the Swiss people, which, after it has unmistakably declared itself, will have to be carried into effect. The position of Switzerland is unique in Europe; the internal remedies she requires may be so likewise; *but come what will, the independence of Switzerland must be preserved inviolate.*"

Italy.—The Journal des Debats, M. Guizot's paper, expresses its opinion of the occupation of Ferrara by the Austrian troops in the following terms:

"We cannot yet properly appreciate the meaning and the bearing of the facts which have taken place at Ferrara, but we have every reason to believe that they will have a satisfactory solution. Pius IX., as we observed some days since, possesses all the means necessary to cause his rights to be respected. It is not only according to the extent of his dominions that the power of a sovereign is at present to be measured, and the chief of the Christian world, the prince who by sagacious reforms has rendered himself the idol of his subjects, possesses a moral force which is equivalent to battalions. If necessary, all Europe would lend its assistance to Pius IX., if his independence should be seriously menaced. We do not believe that such a case will arrive; but if it were otherwise—if, as the opposition papers state, and as many persons believe—that the occupation of Ferrara is but a provocation intended to excite passions and to foment disturbances in the pontifical states, the best mode as appears to us to reply to such a provocation would be to remain dignified and calm, and to show that the snare has been discovered."

La Presse observes in reply, that Casimir Perier had availed himself of a less serious act, to order, in 1832, the expedition to Ancona. "We shall see," adds the Presse, "what M. Guizot will do under existing circumstances. He discredited the intervention of Austria on the 4th instant, and flattered himself that it would not take place, when a thousand symptoms made it obvious in the eyes of the least clear-sighted. His usual optimism prevented him from taking serious steps to prevent it, which would have been a course far preferable to the obligation of repressing it. Now, for having wanted activity or authority, he is compelled to execute an act of vigor which is contrary to his habits, and for the accomplishment of which he has moreover placed himself in a false position, by his participation in the intervention in Portugal. Will he abstain? There would be danger in doing so. The conservative party cannot for its honor allow it to be said, that it is incapable to achieve in 1847 what it effected in 1832 under circumstances far less imperious. Will he act efficiently? What might be possible for others is no more so for M. Guizot, who, voluntarily and for the most frivolous satisfaction, trampled under foot principles which France is bound openly to maintain. The Journal des Debats, conscious of those difficulties, which are entirely personal, insinuates that it will suffice to oppose the virtues of Pius IX. to the Austrian bayonets, to compel them to recede. But, should the virtues of the holy pontiff not produce that effect on Field Marshal Radetsky, what will you do? Such is the question everybody addresses to you to-day, and which it will not be possible for you to elude."

The Warehousing System.—We find in the London Times the following notice of the mission of two agents of our government employed to inquire into the working of the bonding system in England. We have not seen any notice of the appointment of commissioners for this object.—*Daily Adv.*

The United States.—We have very great pleasure in mentioning a matter of considerable commercial importance, and which evinces in a remarkable manner our friendly relations with the government of the United States, and at the same time that we have reason to feel proud of being so far complimented by our transatlantic brethren as to be looked up to as a model in commercial matters. Two gentlemen have arrived in the British metropolis from the government of the United States of America, and, as we understand, missioned by the American powers, for the purpose of making themselves officially acquainted with the machinery and conduct of our bonding system, with the view of introducing it into the United States, as a branch of commercial policy. By the term "bonding system" is signified the scheme, adopted by Mr. William Pitt in the reign of George III., but since brought gradually much more completely and fully into practice and to perfection, as a system of permitting goods and merchandise, the produce of foreign countries, to be placed, on importation from foreign and distant places beyond the seas, in warehouses under bond, and instead of compelling importers and merchants to pay the duties at once on importation and take the same into their private stock, allows them to leave their goods in the said bonded warehouses until a sale or other adventitious and sufficient reason render it politic for them to discharge the duties due to the crown and take them home. This is the outline of the meaning of the term "bonding system," and commercial men, to whom we address this article, will be too well acquainted with the whole intricacies of the system and the great boon conferred on the trade by the vast extension of privileges which have been from time to time conceded by the executive government for the time being in the matter with respect to every description of merchandise introduced from all parts of the world, to require any further comment on the subject. These American gentlemen, who have credentials, we believe, as before remarked, from the United States, have been introduced by his excellency the American ambassador to our board of customs, and, although we have no positive information on the subject, we believe we may venture to state that the principal members of the board have received an intimation from the foreign secretary or the prime minister to pay the gentlemen every respect and attention, and to render them every practicable assistance in their commercial researches. The gentlemen were a few days since accompanied by the Right Hon. G. R. Dawson, the deputy chairman of the board of customs, to some of the great dock establishments, and intro-

Digitized by Google

duced to the superintendents and managers of those vast marts of commerce, at the same time being conducted by Mr. Dawson through the docks and warehouses, and receiving such explanatory information on the various matters and movements of the practical working of those huge establishments as he is, from long practice and a perfect knowledge of details, eminently competent to give; and we believe that they have been accompanied on several subsequent occasions by one of the principal practical officers of the department, to whose care and attention they have been assigned by Mr. Dawson, and from whom they will also receive every requisite information on the subject.

THE IRISH IMMIGRANTS' FEVER.—This picture, copied from a letter from Dr. D. Drake, dated Gros Isle, thirty-three miles below Quebec, is extracted from the Boston Medical and Surgical Journal. It gives a more forcible impression than a long statistical account of the physical, mental, and moral destruction caused by hunger and sickness. Like the sketches of Elihu Burritt, it will never be forgotten.

"Men, women and children, in all stages of the disease up to dissolution, are huddled together, and lying in the same foul and infectious clothes with which they started from Ireland; and which, no doubt, they had worn without change, for weeks or months before. The quarantine officers must not be blamed for this, since the means of classification and attending to personal cleanliness of the sufferers are not within their reach. As to nursing, it is evidently in the lowest degree. Nearly all the nurses from Quebec have sickened, and the immigrants furnish but few from their own body. Their sympathies for each other are manifestly small—either never had an existence, or have perished under the combined influence of famine and filth. Examples of the well members of a family refusing to wait on the sick, are familiar to all the medical gentlemen; and a total indifference to the death of nearest relatives is witnessed every day. Following their remains to the grave, or in any manner assisting in their interment, is not thought of. But one idea seems to be present with them, that of getting up the river.

"A man who had recovered, on being asked by some one, whether he was going to Montreal in the next steamboat, replied that he wished to do so, but was afraid his wife would not die in time. The family of a young woman who was ill, *sent* to know how she was before they started. On being expostulated with, they said it was not worth while to stay any longer, as she would no doubt die. Mr Barter, the apothecary to the hospital, who is now by my side, going to Quebec on official business confirms all that has been told me by others, and adds, as the results of his own observation throughout the summer, that the living seem more pleased than grieved by the death of their friends. My own limited opportunities suggest the same unwelcome conclusion; for I saw no aspect of sorrow; but a stolid indifference, or inquisitive gazing, at what might be passing around, both in the crowds of convalescents, and in patients not very ill, who lay in the midst of the dying. It is painful to record this testimony against human nature; but we ought to know to what depths of degradation large masses of people may be sunk by superstition, ignorance, bad legislation, famine and fever. The interests of political economy, religion and medicine, are equally involved in the contemplation of such revolting facts."

POETRY.—Flight with Russell, 72.

SCRAPS.—Imitative power of Birds; A Friend in Need; Criminal Courts, 53—Cultivation of Conscience; Porridge; Death Damages, 59—Musical Novelty, 71—Sir R. Peele and the Bible; Advertising in Germany; Dr. A. Combe, 86.

The LIVING AGE is published *every Saturday*, by E. LITTELL & Co., at No. 165 Tremont St., BOSTON. Price 12½ cents a number, or six dollars a year in advance. Remittances for any period will be thankfully received and promptly attended to. To insure regularity in mailing the work, remittances and orders should be addressed to the office of publication as above.

Twenty dollars will pay for 4 copies for a year.

COMPLETE SETS to the end of 1846, making eleven large volumes, are for sale, neatly bound in cloth, for twenty dollars, or two dollars each for separate volumes. Any numbers may be had at 12½ cents.

AGENCIES.—The publishers are desirous of making arrangements in all parts of North America, for increasing the circulation of this work—and for doing this a liberal commission will be allowed to gentlemen who will interest themselves in the business. But it must be understood that in all cases payment in advance is expected. The price of the work is so low that we cannot afford to incur either risk or expense in the collection of debts.

POWERS, THE SCULPTOR.

[The renewed interest in Powers and his works excited by the arrival of his "Greek slave" in this country, induces us to copy the following account of him and them, written some time since for a Magazine by Mr. Edward Everett.—*Daily Advertiser.*]

Having spoken of Mr. Greenough and his productions in a former number, we propose to devote the present to some remarks on the works of Mr. Powers, another distinguished American sculptor, residing in Italy. Although it is but a few years since Mr. Powers can be said to have commenced the pursuit of his art, he is already to be regarded less as a sculptor of the highest promise, than as one of the highest reputation. It is but about three years since he went to Florence. Before that period, he had scarcely executed anything in marble; and since his arrival in Italy, he has given much of his attention to the busts which he had modelled in America, and yet he has already attained the name and standing of a master. We do not know any way in which we can do justice to Mr. Powers, and convey to our readers a just idea of his merit, and of the estimation in which he is held by good judges abroad, so effectually, as by translating an article from the *Giornale Arcadico*, for the month of October, 1840. This is a highly respectable scientific and literary journal, published at Rome. The article which we propose to lay before our readers, is written by Professor Migliarini, of the Grand Ducal Gallery at Florence, one of the most learned archæologists of the day. The biographical facts were probably furnished to him by some well informed American, and are in the main correct. We translate the article for the most part literally, but have occasionally added a few words, for the sake of rendering the sense more apparent. It is entitled

"The Young American Sculptor, Mr. Hiram Powers.—The history of the fine arts, expatiating in a region most delightful to the human mind, has constantly awakened more and more of the attention of observers, presenting them a succession of pleasing results, almost entirely free from the sources of painful reflection so frequently encountered in other narrations. The portion which regards the preliminary training, designed to put the pupil on the road, which will conduct him to the desired goal, was early attended to for the direction of studious youth; and among the various suggestions to this end, we find expressions of the admiration excited by some rare geniuses, who have attained celebrity without the guidance of a skilful master. I propose at present to treat this last topic, in reference to sculpture exclusively.

"Pliny,* upon the authority of Duris, relates of Lysippus, that he became a great master without having been the disciple of any one, although he informs us that Cicero differed on this point. If the passage of Cicero which Pliny had in his mind, is that with which we are all familiar, we must suppose Pliny to have misapprehended its purport. Cicero says that Lysippus recognized the *lance bearer* of Polycletus as his master.* He could not, however, have intended that a single statue of a young man had served him as a guide in the great variety of characters required for his very numerous productions. Neither is there reason to suppose that in any of his lost works, Cicero expressed a different opinion on the subject of Lysippus from what he has done in this passage, which, as far as it bears on the question whether Lysippus had a master, in the ordinary sense of the word, would rather lead to an inference directly opposite to that which Pliny drew from it.

"It may be advantageous, meantime, to retrace the few traditions which remain to us of Lysippus.† In the first place, we know that in his youth he was employed in the establishment of a bronze founder; here we may suppose that he was led by inclination to make a commencement in sculpture. Doubtful, however, as to the choice of a preceptor, he determined to take counsel of a competent and unprejudiced adviser. For this purpose he applied to Eupompus, an aged painter, the master of Pamphilus, who was at that time the teacher of the young Apelles. Eupompus was probably acquainted with the disposition of Lysippus, and when asked by the latter whom he should follow of preceding masters, Eupompus replied by pointing to a group of men who stood near; wishing to teach him that nature herself was to be imitated in her immense variety, and not artists in their peculiar manner. 'He who follows another,' says the great Michael Angelo, 'will never get before him.' It may be considered, therefore, as a principle, that the imitation of any former master, however excellent, is to be avoided, in order that the artist may not become the grand-child, rather than the child, of nature. This rule, however, is not to prevent the young artist from learning of masters how to imitate nature in the best and shortest way, taking advantage of their long experience.

"This principle, at the present day, requires a little further explanation to guard it against the misconceptions of those who recommend an imitation of nature as it is, without choice or judgment, not to mention that there are some who even extol nature in her defects. But we are not to lose sight of what has been so often mentioned as to the great diversity between the Greeks and ourselves—between their manners and ours; and how much more easy it was with them to procure models than with us; and consequently how much less difficulty attended the imitation of nature's choicest forms. But let us look a little further, and see the sort of imitation of nature which Lysippus practised. He reached such celebrity, as to be included in the trio that had the exclusive privilege of making the likeness of Alexander the Great.‡ He himself was

* Lysippum Sicyonium, Duris negat, Tullius fuisse discipulum affirmat. Plin. H. N. xxxiv. 19, 6.

* Polycleti Doryphorum sibi Lysippus aiebat magistrum fuisse. Cicero in Brut. 86.

† Sed primo ærarium fabrum audendi rationem cæpisse pictoris Eupompi responso. Eum enim ihterrogantem quem sequeretur antece dentium, dixisse demonstrata hominum multitudine, Naturam ipsam, imitandam esse non artificem. Plin. loc. cit.

accustomed to say, 'that his predecessors had represented men as they are, but he had represented them as they ought to be'*—a description of his style which has passed without contradiction. We are not to infer from this description of his own manner that Lysippus was not a diligent student of nature; but that, in his study of nature, he sought the *ideal*—that perfect form of which nature is too avaricious to bestow it, in all its parts, on any one individual. The reader will pardon this digression while I return to my theme.

"It is also narrated of Silanion, that he acquired fame without the guide of a master.† To this proposition Falconet subjoins the following judicious observation. 'In order to make this circumstance astonishing, it would be necessary to suppose that Silanion was born and lived in a corner of the earth where he had never seen statues or pictures; but in the centre of Greece, and among the chef d'œuvres of art, in the age of Alexander, when he was surrounded by the most famous artists, there is nothing to be surprised at in such a fact.'

"But the example which I am now going to relate, includes the conditions required by Falconet, and may be considered as without a parallel, and therefore worthy of all attention.

"In a remote, and as far as the fine arts are concerned, uncultivated part of America, inhabited by husbandmen and shepherds, in the village of Woodstock, in Vermont, Mr. Hiram Powers was born, about the year 1805. It happened to him in his youth to be removed to the neighborhood of Cincinnati in Ohio, then a village, but now a considerable city. By this change of place, he gained little or nothing, in reference to the development of his latent capacity. On the contrary, he soon had the misfortune to be deprived of his father, and left without means of support. Constrained by this disaster to embrace whatever mode of livelihood first offered itself, he engaged in the construction and superintendence of the mechanism of a public exhibition at Cincinnati.

"An inward feeling, however, convinced him, that this was not his destiny; he formed a conception in his mind of something like sculpture, while yet ignorant of the very existence of that art. So strong was this passion, that if he had not afterwards found the art in use, he would himself have invented it. The flexible materials on which he made his first experiments, particularly wax, did not give him full satisfaction. He reached the age of seventeen years, in this state of restless desire; when he saw a single bust in plaster, the head of Washington, an ordinary work, which, however, attracted his profound attention.

"After a considerable interval and many struggles, he met, at Cincinnati, with an individual who possessed some knowledge of the art of sculpture, and modelled in clay the likenesses of one or two public characters. He learned from him the general method, the material adapted to it, and the mode of taking a cast from a model. This was for Powers a most happy discovery, and one that seemed to realize his vision.

"Eagerly to endeavor to imitate the works of this individual; then to make an attempt from life, first with a view to equal and then to surpass what he had seen; finally to succeed in making beautiful liknesses, such certainly as he had witnessed no example of before; all this was so rapidly accomplished, that it is not easy to relate the steps of the progress, so swift was his flight, borne on the pinions of a happy genius.

"If this artist, urged by native inclination, had succeeded in imitating nature servilely, though with exactness, it would not have been matter of great astonishment. But at the very first glance, Mr. Powers rose to the just conception of a kind of representation which should contain, in union with all the characteristic parts, the natural and expressive spirit of each individual. He has dedicated himself to the preservation of the whole character, while at the same time he imitates the porosities and habitual wrinkles of the skin; so that he might be called the Denner of sculpture. He spares no pains to make every head preserve, in every the smallest part, that harmonious type—composed at once of unity and variety, which belongs to itself; a special quality of nature which escapes the eye of many. Such a union of rare capacities becomes marvellous in one who could have no previous knowledge of the labors of the Greeks, nor of the works of Donatello, of Mino di Fiesole, and Gambarelli.

"Employing himself with ever new delight in modelling in clay, he passed through several considerable cities of his native country, and reached Washington at a fortunate moment. Congress was then in session, composed of some of the most respectable persons in the United States. Among its members and the men of distinction collected at Washington at the same time, Mr. Powers had ample opportunity to exercise his talent in making busts. Among those whose acquaintance be made at the seat of government, were persons who had visited Europe and possessed some notions of the fine arts. This is equivalent to saying, that he met here with those who were competent judges of the merit of his labors.

"Perceiving that he was not likely to want employment, he wisely determined to repair to Italy, for the purpose of executing his works in marble, and perfecting himself in his art. Arrived at Florence, he applied himself to the management of the marble with the same zeal which had animated him in the previous steps of his progress. When the accustomed instruments employed by sculptors seemed to him not as perfect as they might be, he contrived others. He proceeded rapidly in executing the busts which he had brought with him, in a style which commanded the admiration of the connoisseurs who beheld them.

"The reputation of the portraits of Apelles is well known.* They were considered so like their originals, in all respects, that the physiognomists of that day were able to form their prognostics upon them as accurately as on the examination of the living individual. In like manner the busts of Mr. Powers challenge a similar scrutiny, on the part of those, who, under other names, and with other objects, employ themselves in similar judgments of character, at the present day; and who will find great reason to maintain that his heads may be studied like the portraits of Apelles, though destitute of those indications of character which depend on changes of color.

"In fact, on a certain occasion, when I was care-

fully examining the busts of Mr. Powers, there was an individual present who had perhaps some tincture of this science,* and who said to me with enthusiasm, 'Do you see that head! What penetration! How expressive those features! That must be a new Demosthenes! This has the undoubted likeness of an incorruptible guardian of the laws. That face, full of calm, though mixed with energy, has the qualities of a dictator,' &c. As I was occupied solely with the art, I listened with little attention to these remarks, and took but little interest in them, as I was unacquainted even with the names of the individuals whose busts I was contemplating. If the conjectures of character made by this person in my hearing, and by others who have examined in the like manner the heads of Mr. Powers, approach the truth, the fact would furnish a new illustration of Pliny's remark, that it is the admirable prerogative of the art of sculpture, that it gives greater celebrity to famous men.†

"There are few examples of works like these at the present day, because many artists have thought it best to execute busts in the heroic style, (as did many of the ancients,) without seeking extreme individual likeness. Though rare, however, there are some distinguished modern instances. And in this connection, I cannot pass in silence the magnificent and I may say colossal likeness of Pope Rezzonico, in St. Peters, by Canova. With the permission of the detractors of that celebrated artist, it cannot be denied that he has surpassed himself in this venerable image, where devotion is identified with the character of the head on whose vast superficies the artist had ample room to express the most fugitive movements of the skin, preserving, however, the *grandiose* character of the whole, in a manner that makes it rather seem the work of the pencil of Titian, than that of a sculptor's chisel.

"I will endeavor, in conclusion, to anticipate the timid judgment of those sophistical critics, who, admitting—what many connoisseurs have cordially granted—the superiority of Mr. Powers as a skilful maker of busts, may yet be slow to allow him the name of a perfect sculptor, in consequence of his not having produced works in the more important branches of the art. To such objectors I would reply, that they must consider that his progress has been so rapid and impetuous, in the field in which he commenced, as to have left him no leisure as yet for other labors. Meantime he no longer inhabits a distant region, where the arts are in their infancy; nor does he any longer want the aid of examples of excellence, and the necessary information. He who has been able to make such progress without a master, will easily achieve whatever is yet wanting, now that he is placed in a situation more favorable to his progress. It may be also added that he has already commenced the model of a nude statue, which we may well flatter ourselves will be carried on to its perfection, equally with any other work which Mr. Powers may undertake.

"Wherever there is the gift of a happy genius, joined with assiduity and a passion for the chosen art, together with the modesty necessary for a constant search after improvement, there it is safe to predict a complete and easy success."

A. M. MIGLIARINI.

The foregoing estimate of the talent of our distinguished countryman becomes still more satisfactory, when we reflect that it is a characteristic of the Italians, remarked upon two centuries ago, by Milton,* not to be forward to bestow written encomiums on men of this side the Alps. We have not the least wish to receive ungraciously the praise of Mr. Migliarini, which, we are sure, is bestowed in good faith and with good will; but it is not only not the language of a panegyrist, but evidently framed with some care to avoid shocking national partialities and the sensibility of eminent contemporaries, among his own countrymen. He weighs every word in the golden scales of a learned criticism; and yet not only institutes an elaborate comparison between Mr. Powers' case and that of Lysippus, but justly states that the case of our countryman, in attaining so high a degree of excellence not only without a master properly so called, but without the advantage of a general contemplation of the works of other sculptors, is *without a parallel.*

A few statements in Mr. Migliarini's article invite one or two words by way of explanation.

The mechanical exhibition at Cincinnati in the construction and superintendence of which Mr. Powers passed some years of his youth, though seemingly an humble field, required a high degree of talent. Nothing could be more successful in its way, no great proof, it is true, of merit. Mr. Powers lavished on the wax-work figures and groups, the first energies of that plastic skill, which will live forever in his marble. Some of his moving figures were brought to perfection by months of assiduous labor, and the application of the most ingenious mechanical contrivances. There is no doubt that his noviciate in this humble sphere was an excellent school for the development of the mechanical skill, which he possesses in an eminent degree. He was at a later period employed by Maelzel to repair some of his automata. Mr. Migliarini alludes to the readiness with which Mr. Powers contrived new instruments of sculpture, when those in common use failed to give him the effect which he desired to produce. He has invented and manufactured several such instruments both for the clay and marble, to the use of which may be ascribed a portion of the wonderful softness which he gives to his flesh.

It is stated by Mr. Migliarini, that Mr. Powers represents in his marble the porosities and habitual wrinkles of the skin. Without explanation, a statement like this would convey an erroneous idea of his manner. Should Mr. Powers become—as he already is to some extent—the acknowledged head of a school of art, his injudicious disciples might run into *such* an imitation; as the characteristic excellence of every great master is sure to be pushed by his followers to extremes. His principle, as practised by himself, we understand to be to reproduce the man in the best and most accustomed expression of his character. To attain this end, whatever is essentially characteristic in the original, must be preserved, whether it be great or small, feature or wrinkle. The consummate skill of the artist is shown in thus selecting what is thus characteristic; however seemingly inconsiderable, and still more in making these innumerable details work together toward the uniform and appropriate expression and life of the whole. The affair of "porosities" reduces itself to this;—many of the ancient sculptors, and perhaps most of those who flourished at the revival of the art, polished the surface of their statues and busts. However appropriate this may be to the conceptions formed of the bodies of the an-

cient heathen divinities, the glassy effect impairs the resemblance of works representing human originals. Some modern artists accordingly do not polish the surface of the marble, although they give it a smoothness unlike the natural appearance at least of those portions of the skin exposed to the air. Mr. Powers, with instruments of his own contrivance, gives to the surface of his marble a delicate roughness (if roughness it can be called) which absolutely counterfeits flesh, and produces an illusion not merely beyond anything we have seen in the works of Donatello, Mino di Fiesole, or Gambarelli (whom Mr. Migliarini names in this connection,) but beyond anything we have witnessed from the chisel of any other artist.

Since the article we have just laid before our readers was written, Mr. Powers has very nearly completed the model of the statue, alluded to in its conclusion; he has executed in marble an ideal head of great beauty, and has projected two or three other works. The first statue represents the mother of mankind, contemplating the apple which she holds in her right hand, after having so far listened to the tempter as to pluck the fruit. It is a moment not dwelt upon by Milton; but it seems to us a fine conception to establish an interval between plucking and eating the fruit. The face and form, as becomes the parent of our race at this period, before the fatal act is consummated, are intended to exhibit a specimen of perfect symmetry and beauty. The countenance combines the expression of an ardent desire to enjoy the forbidden fruit, with that of thoughtfulness at the consequences which had been denounced. The left hand holds the fruit which she reserves for Adam. The hair falls partly down the back, and is partly arrested on the right shoulder; and in the plan of the work, the insidious foe —not yet modelled—pressing close to her person, but not full in her view, watches with devilish eagerness the workings of her mind. We conceive that it would be improper, in the present state of this great work, to make it the subject even of a complimentary criticism. We will only add, that it is thus far the fruit of the most laborious study, the acutest observation, and profound thought. It contains nothing traditional—nothing copied from the Grecian or the Italian antique. It is a fresh conception, an original study of nature, examined with the most unwearied attention, with the purest taste and a sound judgment.

The ideal head named above, of which Mr. Powers has executed more than one copy in marble, was undertaken by him as the most effectual answer which could be given to those who questioned his possessing any other talent than that of a maker of busts. It is usually called "Ginevra," and the conception was suggested by the lovely and well known description in Mr. Rogers' Italy. Mr. Powers has preserved as much of the picture sketched by the Nestor of the English Parnassus, as is adapted to representation in marble, and could be introduced into a bust:

"She sits, inclining forward, as to speak,
Her lips half open, and her finger up,
As though she said 'Beware!'
And on her brow, fairer than alabaster,
A coronet of pearls.

"But then her face
So lovely, yet so arch, so full of mirth,
The overflowings of an innocent heart,
It haunts me still, though many a year has fled,
Like some wild melody.

"She was an only child, her name Ginevra,
The joy, the pride of an indulgent father,
And in her fifteenth year became a bride.
She was all gentleness, all gayety."

There is nothing in the sculpture intended to recall the tragical part of the story. Faultless beauty, bridal gentleness, the gayety of the only daughter of her father, the sweet innocence of the morning of life, these are the elements of Mr. Powers' idealization of Ginevra.

Mr. Powers has planned some other works, among them a sea-boy on the shore, holding a shell to his ear, and listening to the forebodings which it gives of the storm. This is not a recent conception on his part, which we mention by way of establishing his claim to the originality of the idea, as the subject of a work of art. He has also projected a work representing a Grecian maiden, exposed for sale in a Turkish slave market. Our readers will perceive, at once, the extreme beauty and capacity of these subjects.

Our country has much to boast of in Mr. Powers; we hope he will have as much to be grateful for to his country. The bust of the late Chief Justice Marshall, of heroic size—a most splendid work—for which the price paid by congress was but little more than the value of the marble, labor and time, at journeyman's wages, bestowed upon it, is hitherto the extent of the public patronage accorded to him. We are sure this can only be, because opportunities have not presented themselves for more important commissions. It is not thus that America means to encourage her Lysippuses. It is really cruel to keep a master like this on the drudgery of private bust making, which, after all, at the usual prices, is labor poorly paid.

Meantime, and till something more worthy of Mr. Powers' talent is proposed, we would observe that he has now on hand very perfect models of the busts of presidents John Quincy Adams and Van Buren, and an admirable bust of General Jackson in marble, of heroic size. What could congress do better than order these three busts on suitable pedestals, at handsome prices, for the rotunda of the capital, with Clevenger's bust of General Harrison to accompany them? A row of the busts of the presidents of the United States, to be placed around that magnificent hall, between the pictures, or at a proper distance in front of them, would furnish a very appropriate ornament for the rotunda, and surround, in a very becoming manner, the statue of Washington in the centre. President Jefferson's bust, by Caracchi, might be removed from the library to the rotunda, to take its place in the row. The other presidents—Adams the elder, Madison and Monroe, could at any time be added. As to the four named—one of which, Jackson, is already finished, and the other three modelled, they could be furnished in three months. This we trust is an affair which could in no case awaken any political feeling; but it happens luckily that the four presidents are equally divided between the two parties.

Will not the state of Vermont assert her peculiar interest in Powers, as the state which gave him birth? North Carolina has gained herself the highest praise by employing, at great expense, the chisel of an Italian artist to furnish her a statue of Washington. If Vermont should call upon her gifted son to execute for her state-house statues of the heroes of Ticonderoga and Bennington, she would both do herself lasting honor, and bestow upon the country works of art, which would do no discredit to the studio either of Canova or any living sculptor.

From the Morning Chronicle, Sept. 3.

SHUTTING UP THE HIGHLANDS OF SCOTLAND.

INVERNESS, MONDAY—Since I last wrote the royal doings at Ardverikie have not soared beyond the level of court circular movements. Wonderful as it may appear to common people, the queen and the prince are amusing themselves very much in the fashion in vogue amongst ordinary English ladies and gentlemen making an autumnal sojourn amongst heather.

There is shooting, fishing, walking, riding, and driving, pleasantly and profitably varied by breakfasting, lunching, dining, supping, and sleeping.

What have the world to do with the exact number of grouse which have tumbled before the prince's double-barrel, and is it a matter of historic import to know whether the steps of her majesty's highland pony have been traced upon the green sward round the lodge, or amidst the purple heather on the hills above it?

Let me rather try if I cannot now, while people are thinking and talking of the hills, strike out some topic more or less connected with them, and which may prove at least as profitable to your readers as the outgoings and incomings of Gen. Wemyss, or the nursery evolutions of the little prince and princess of the blood.

Well, to make the effort. In approaching Loch Laggan from Fort William the traveller will not fail to notice the two huge mountains which fling back their dun masses from the lower extremity of the lake. These great hills form part of the hunting grounds of the Marquess of Abercorn, and Prince Albert has, I believe, been playing at deer-stalking on their misty sides. They are, in fact, a deer forest.

"Ah, I see," says the English reader; "nice trees and glades, with antlered stags trotting about on the grass—a big gentleman's park, with drives, and avenues, and neat gateways and railings, and a trim porter's lodge."

Not so. A Highland deer forest means a mountain district—a waste wilderness, among which lie lakes, through which torrents go foaming for miles and miles—a range of savage country, stretching further than a good pedestrian would toil between early summer dawn and late summer sunset—a dreary territory of heathy slopes and sterile uplands, of awful gorges and ravines, of icy mountain peaks, of black heath and gray whinstone. And all this vast domain is sacred to the deer. Cotters—the old hardy people of these hills—were long ago turned adrift to make way for sheep and lowland graziers; now, men and mutton are cleared equally out before the stag and his hinds. The deer will not brook a two-legged intruder. They would see him miles away upon the sky line, or snuff the odor of approaching humanity from one end of a glen to the other; and therefore the hills are to be unprofaned by shoe-leather. Not a shepherd, not a tourist, not a wandering peasant dare break the magic circle, and tread the heather tabooed by our North Sea islanders. *Solitudinem faciunt*, deer-forest *apellunt*. Not a living thing may venture on the haunts of these lonely creatures, until mayhap the ducal renter of the forest, with his Highland gillies and English keepers, chooses to decree a week's slaughtering of the animals so carefully preserved to be so ruthlessly destroyed.

"But," says the English reader, "by what right dare one man stop another upon those savage wilds, lying uninclosed and unreclaimed, just as they were ere the Romans landed at Deal!"

By the right of might, reader. Just try it yourself. Put yourself on board a Scotch steamer—thence get into a stage-coach—there are still such things in this part of the world—and in due time you will arrive near the foot of—say the Cairngorm mountains. These are the highest and most awfully savage group in our island. You will not find more stupendous precipices, more ghastly ravines, round Mont Blanc or the Jungfrau, than encircle Ben Muich Dhui. Loch Anen lies in black torpid gloom, girdled in by hills and rocks which are desolation personified. Amid their recesses you might starve as comfortably and completely as in Nova Zembla, and, stretched on a mass of icy snow, you might be frozen during a midsummer night's dream. Braving those perils, however, off you go—your sketch-book in your hand and your knapsack on your back—to visit a district which Highland legends have always pointed to as one of the very wildest in this country, by peopling it with all manner of spirits of desolation—rulers of the wind, the storm, the rain, the mist.

But Cairngorm now owns a different potentate. The Duke of Leeds is the monarch of the waste, and just as some of the most gloriously savage bits of glen and hill begin to open up before you, an insolent gillie will start from some clump of heather, or from behind a rock, and order you back in the name of his gracious grace. There is no alternative. Show fight if you like, your umbrella against the flunky's gun, but the odds are that you are not so valiant, and that you turn your back upon the group of the Cairngorms in no complimentary disposition towards the keepers, or

"The lord—their god—his grace."

But there is the road, you think—the road, the immemorial way, which all the world had a right to long before the duke was ever heard of, and which they will have a right to long after he is forgotten.

Heaven bless you! a duke is a bigger man in the Highlands than you think of. What is a road to his grace? What is a right of way to his grace? What is a path—belonging for a thousand years to the public—to his grace? Nothing! He barricades it. He sentinels it with his gillies. No passage this way. The most glorious scenery in Britain is barred to the British—the free roads of this free nation are stopped to its free men; the artist in search of a landscape—the tourist in search of the picturesque—the peasant seeking to cross from one strath to the other, to see one of the countless Macs, his kith and kin—all are turned back. The duke wills it, because one passenger out of fifty might perchance stumble upon a red deer, which would gaze at him a moment, toss its antlered head, canter over the shoulder of the hill, and in half an hour be couched in the green wet breckans.

The grand plea of these gentlemen—who for the payment perhaps of some fifteen hundred a year arrogate to themselves the right of isolating a waste country as big as half a good sized English county, shutting up the roads, and refusing passage to a single being throughout it—is simply that pedestrians disturb and frighten the deer. I doubt it. A stag may look at a cockney—and in my humble opinion the cockney is very likely to be the most frightened animal of the two. But granting the discomfiture of the four-footed gazer—what of it? He will not be so frightened as to vanish into thin air. He will trot off, one, two, or three miles; and then when it is his good pleasure stop to crop the

Digitized by Google

herbage, until another cockney appears, who will probably frighten him back again to his original position. No one wants to put the duke's deer in his pocket. There they will be when the tourist leaves, just as they were when he came, barring a trot of perhaps a dozen miles, which, to animals of their reverse of sedentary habits cannot be a matter of much personal inconvenience. But even granting that a wandering tourist would frighten every stag in the hills into fits, I do not at all see why they should not be frightened into fits. Men before deer—scenery before dukes. We are not to be shut out of the finest passes, warned away from the most glorious scenery of our own land for either dukes or deer. His grace of Leeds must throw open Glenlui-beg, and his grace of Athol must withdraw the blockade of Glentilt. A modern lord of the Isles once tried to draw a chain across the entrance to Fingal's Cave in Staffa, only to be removed when each passenger in the boat had tabled down his sixpence. We shall have none of these chains either of men or metal. The unenclosed hills are men's property to walk on. The glories of rock and torrent, and mountain mist, are for all to see, and wonder, and admire. The queen is now amongst them. I don't know if the Duke of Leeds would permit her to thread Glenlui-beg; but if a hint would be taken by the ducal autocrat, I do think that nothing would be a more grateful *souvenir* of the queen's visit than the expression of the royal wish, which would in all probability again unlock to all her majesty's peaceful subjects the glorious scenery of Athol and Braemar. A. B. R.

FROM THE ARMY.

Letter from a distinguished officer to his correspondent in Washington.

TACUBAYA, Aug. 22, 1847.

* * * * *

WE are now located in one wing of the Archbishop's palace. Chapultepec, with its magnificent grove, is before us, and we overlook the great city, surrounded by its lakes, and embosomed in its mountains. I never realized the beauty of the valley of Mexico until I reached this spot. To see it now, lighted by the soft bright moon, with every village, spire, hut and mountain reflected in its silver lakes, you would think it even surpassed the descriptions we read of it. There are also some stupendous works of art around us. But I can tell you nothing, for I have not yet been in the city, though I have knocked at its gates. In the absence, then, of something more interesting, I shall have to tell you of the operations of the army.

On the 7th instant Gen. Twiggs' division left Puebla. It was followed on the 8th by General Quintman's, on the 9th by Gen. Worth's, and on the 10th by Gen. Pillow's. Gen. Scott left on the 8th, and overtook Gen. Twiggs that night at San Martin. Our march over the mountains was undisturbed, except by rumors of guerillas and resistance. Both disappeared as we approached, and we left their abandoned works as we found them. On the 11th Gen. Twiggs encamped at Ayotla, 15 miles from Mexico, on the direct road. The other divisions, on each succeeding day, came up in order, and took position in the rear—Gen. Worth occupying Chalco. The reconnoissances of the 12th and 13th satisfied us of the strength of the enemy's defences in our front. Their principal defence was at El Penon, commanding the causeway between the lakes of Tezcuco and Chalso. The hill of El Penon is about 300 feet high, having three plateaus of different elevations. It stands in the waters of Lake Tezcuco. Its base is surrounded by a dry trench, and its sides arranged with breastworks from its base to its crest. It was armed with thirty pieces of cannon, and defended by 7000 men, under Santa Anna in person. The causeway passed directly by its base—the waters of the lake washing each side of the causeway for two miles in front, and the whole distance seven miles to the city. There was a battery on the causeway about four hundred yards in advance of the Penon, another by its side, a third about a mile in front of the entrance to the city, and a fourth at the entrance. About two miles in front of the Penon a road branched off to the left, and crossed the outlet of Lake Hochimilco, at the village of Mexicalcingo, six miles from the main road. This village, surrounded by a marsh, was enveloped in batteries, and only approached over a paved causeway a mile in length. Beyond, the causeway continued through the marsh for two miles further, and opened upon terra firma at the village of Churubusco, which was also fortified, and which we shall see more of presently. The reconnoissance of the 14th satisfied us that the route south of Lake Chalco was practicable for our wagons, or could be made so. That day Gen. Pillow's division closed upon the village of Chalco, and the next morning (15th) Gen. Worth led off south of the lake. The divisions took up the line of march in succession, Gen. Twiggs bringing up the rear, and we turned our backs upon the fortifications of the Penon and Mexicalcingo. Gen. Valencia, with 6000 men, made an attempt to annoy our rear as it turned Lake Chalco; but Gen. Twiggs having his train in front, and his division well in band, wheeled into line to the left, and, with one discharge of Taylor's battery, tumbled over some men and horses, and sent the rest flying over the hills like the wild ducks from the lakes. He then broke again into column, and resumed his march. The rancheros and guerilleros hovering about our front gave us little trouble; and the working parties filled up the trenches and rolled away the rocks that had been placed there to retard us, without stopping our march.

On the 17th General Worth encamped at San Augustin, on the Acapulco road, and moved down on the 18th, two and a half miles, in front of San Antonio, to make room for the other division to close upon him. The 18th was devoted to reconnoissances. San Antonio was situated similarly to Mexicalcingo. Batteries commanded the courseway in front and swept over the marshes to the left as far as the lake. The *pedregal*, or volcanic rocks, rendered the right impassable for everything but infantry, and difficult for them. One and a half mile in the reals were situated the defences of Churubusco, commanding the approach over the *pedregal*, and by the way of Mexicalcingo. A route was discovered west from San Augustin over the spurs of the mountain, to the San Angel road, by which these positions could be turned. Gen. Twiggs' division, coming up on the morning of the 19th, was thrown forward on this route, to cover the working parties formed from Pillow's division. By 1, P. M., we had surmounted the hills, and approached the two divisions of the army, with their field batteries, &c., within cannon range of Valencia's entrenchments, situated on the San Angel road, and commanding the only approach through the *pedregal* or volcanic rocks. The working parties were returned to their regiments, the tools

Digitized by Google

repacked, and preparations made to dislodge the enemy, before continuing the road further. On approaching his front within canister range, and driving in his advanced parties, posted behind breastworks across the road, with Magruder's and howitzer batteries, it was found that the ground on his left offered the greatest advantages for the attack. He lay entrenched on rising ground, behind a deep ravine, about midway between us, to which the ground gently descended from both directions. His front was defended by four 8-inch howitzers, and three long 16-pounders, one 18-pounder, and some of smaller calibre. His right was almost equally strong; and, after crossing the ravine, approached over smooth ground in the form of a natural glacis, and taken in reverse by a body of rancheros and lancers. The heads of the different divisions were accordingly changed to the right; and, each leaving their horses and batteries behind, slowly wended their way, among the volcanic rocks, to the ravine, which they passed in front of the small village of San Raymond, out of gunshot of Valencia's batteries. They were now on the firm San Angel road, between Valencia and relief; but Santa Anna coming out to his support with seven thousand infantry and cavalry, drew up in battle array on the hills of Contreros, to our right. Col. Riley's brigade, that had been moved to the right early in the day, to coöperate with the front attack, and had passed beyond the San Angel road, now falling back upon the village which we had taken possession of. General Smith at once determined to drive away the force threatening our right. By the time his dispositions were made, the sun had set; and night drawing on, it was feared we should not have light enough for our work. The attack was therefore suspended till morning. The troops bivouacked around the village, without food, without shelter, and without fire. It was afterwards determined to return to the original intention of assaulting Valencia's entrenchments as the dispersion of Santa Anna's force affected but little our principal object.

At 3, A. M., Col. Riley's brigade was put in motion, followed by Gen. Smith's and Gen. Cadwallader's; General Shields holding the village. During the night, the 8th and 12th regiments, with a company of rifles and some detachments that had been thrown out the previous day, were moved to the ravine, in front of the enemy's position, and, after driving in their piquets in the gray of the morning, filed off to the right and took a sheltered position on their left, ready to coöperate with the attacking force in rear. This force moving around the base of the hill on which the battery was placed, covered from their view and fire, began about sunrise to show themselves over its crest. Col. Riley's brigade, sweeping around their rear and right, moved down with great impetuosity, while Gen. Smith attacked their left from the rear. In the mean time Col. Ransom, pushing across the ravine the force in front, opened his fire upon their front and left. The enemy finding himself thus attacked, and apprehending the main attack from the direction in which we approached the previous day, opened his heavy battery on his front. But Riley's brigade, carrying everything before them, drove them out between the fires of Smith and Ransom upon that of Shields. They broke at all points, abandoning the artillery, pack train, ammunition, &c. We took 800 prisoners; 4 generals—Salas, Mendoza, Blanco, and Garcia; 4 colonels; 2 commanders of brigades and squadrons, and other officers in proportion. Among the twenty-two pieces of artillery taken, were the two belonging to Washington's battery, taken at Buena Vista. They were retaken by the 4th artillery, the regiment to which they originally belonged. We buried 600 of their dead found on the field. Our loss did not exceed 60. After allowing the troops a little time for refreshment, they were put in march down the San Angel road, to take in reverse the positions of San Antonia and Churubusco. The enemy, finding himself turned, immediately commenced to evacuate his lines at San Antonio; but we moved upon him so rapidly that he had to abandon his guns. Gen. Worth's division, that had masked him in front, followed so closo upon his heels as to drive his rear into the defence of Churubusco. In the mean time Gen. Twiggs had taken his position in the front on the battery surrounding the convent, while General Worth seized upon that defending the bridge, and blockading the main road to Mexico. The battle opened fiercely on that side. Generals Shields' and Pierce's brigades were sent to attack in rear. Advancing towards the city of Mexico until they had passed the stream in rear of Churubusco, they crossed a cornfield on their right, and made for the causeway leading from Churubusco to the capital. This causeway was defended by a large body of infantry and cavalry, the latter extending apparently to the gates of Mexico. The number of infantry was said to be 5000, and of cavalry 4000. Gen. Shields, forming his line obliquely to that of the enemy, resting either flank upon some buildings on his right and left, and gaining as much to their right flank as possible, brought his men promptly into action. General Pierce, following quickly up, took position to his left, and the howitzer battery opened on his right. The Mexicans made a stout resistance, and the reserve under Major Sumner, composed of the rifle regiment and squadron of dragoons, was brought to their support. By the time they broke into the cornfield, the enemy began to give way. Worth and Twiggs had forced their front, and they were being driven upon the capital. As soon as the way was clear for the dragoons, they swept over the causeway, charging up to the very gates. Many a fine saddle was emptied by the discharge from their last battery. Captain Kearney, whose troop was leading, lost his left arm, and the rest of his officers were wounded. Our men had done their work well and faithfully. Their exhaustion required rest. The recall was sounded and we returned to the care of the killed and wounded. Of these we have a goodly number. I fear they will reach nearly 1000. Many gallant officers are at rest. Col. Butler, of the South Carolina regiment, bringing his regiment into action, had his horse shot under him; continuing the charge on foot, he was wounded in the leg, and finally shot through the head. Of the regulars, Capt. Thornton of the dragoons, Capt. Burke, 1st artillery, Hanson, Lieut. Irons, Easly, Hoffman, and Johnson. About 40 are wounded more or less severely. All the engineers are safe. We cannot be sufficiently thankful, nor repay the interest or prayers of our friends in our behalf. The greeting of General Scott by the troops after the action, on seeing the success of all his plans, was loud and vociferous. It must have shaken the "Halls of the Montezumas." Their enthusiasm seemed to cheer the Mexican officers in their captivity. The army has implicit confidence in him, and apprehend nothing where he commands. He sees everything and calculates the cost of every measure; and they know and feel that their lives

Digitized by Google

and labor will not be uselessly expended. During the day, we took 2,700 prisoners, 8 generals, 37 pieces of artillery, and ammunition enough for a whole campaign. Their defences were completely turned, and their plans upset. We could have entered Mexico that evening or the next morning, at our pleasure, so complete was the disorganization of their army of 32,000 men. We learn that 27,000 men were opposed to us at all points, on the 20th, and they acknowledge in killed and wounded 5000. On the 21st, as the army was in motion towards the city, General Scott was met by a proposition for a cessation of hostilities, for the purpose of taking care of the killed and wounded. This he refused; but in the evening agreed to an armistice, to enable commissioners to meet Mr. Trist, and to treat for peace. This armistice has been officially ratified. It is difficult to foresee the result; though I can very well see that it is for Santa Anna's advantage to make peace. So far I can trust him.

The Lieut. Johnson killed, was the nephew of Lieutenant Col. Johnson, of the voltigeurs. I was standing by him when his leg was carried off above the knee by a cannon ball. He was a gallant little fellow, and as merry over his work all the morning as a boy at play. He fell by the side of the gun he had been effectively serving, and died that night, 19th inst. The colonel did not hear of his death until next morning. He was standing in Valencia's captured entrenchments, flushed with the recent victory; his frame shrunk and shivered with agony, and I wept to witness his grief. It is the living for whom we should mourn, and not the dead. The engineers did good service on both days, nor was the engineer company behind in any undertaking.

GEN. TAYLOR AND HIS STAFF.—Mr. Brown, the artist who has recently passed several months near the headquarters of Gen. Taylor, has brought home with him the rich fruits of his diligence, among which are two admirable portraits of Gen. Taylor, portraits of his staff and several other distinguished officers, and a great variety of sketches of interesting localities connected with the war, and studies for pictures yet to be completed.

Of the two principal portraits of Gen. Taylor, one presents a profile view of him and the other a front view. The former is the more striking picture, representing the general in his uniform—the artist intending this head for the design of the medal to be struck by order of Congress. The other portrait gives the veteran in the same brown dress he wore on the battle-field of Buena Vista. His costume is of the plainest description. The head of the general is a noble one, full of character, his energy and firmness being conspicuously traced in the deeply marked lines of the face. The fire of his eye gleams from the canvass, this feature being very peculiar in his family and very fine. We should not do justice to Mr. Brown did we not declare our high admiration of each of these portraits. They are noble pictures, and would alone amply repay him for the toil and danger he has encountered.

But Mr. Brown has executed another and very interesting picture, which he calls Gen. Taylor's Headquarters. In this the hero of Buena Vista is represented at full length, standing under an awning in front of his tent, and surrounded by his staff and other officers. The old man appears here in the unaffected simplicity and even homeliness of his usual bearing—dressed in the least pretending garb, with an eye to perfect comfort, while he is surrounded by some of the most brilliant men of the army, most of whom are quite young. The general appears like a father among his sons—himself all plainness and simplicity, but proud of the boys about him. We cannot recall all the faces in this picture, but they are all faithful portraits from life, and their friends recognize them at a glance. The names of the following occur to us as we write:—Maj. Bliss, Maj. Eaton, Capt. Garnett, Maj. Mansfield, Col. Whiting, Dr. Craig, Capt. Linnard, and Maj. Bragg; there must be others, but we cannot at the moment recall them. Of most of these gentlemen and of several other prominent officers, as Gen. Wool, Col. Belknap, &c., Mr. Brown has finished portraits of the size of life, which will make his collection most interesting to those who delight to study the lineaments of the soldiers who have won renown in war. The portraits will be used by the artist in any future historical picture he may paint of the scenes of Monterey and Buena Vista. He showed to us one sketch full of life and spirit, from which he designs to paint a panorama of a scene in the battle of Buena Vista. It represents Bragg's battery at the moment it was put into action at the most critical part of the day. The general is seated on *that* white horse, and directing Capt. Bragg where to give them "a little more grape." We think this picture should be finished on its present scale and engraved. It embodies the popular idea of the most eventful scene of the ever-glorious field of Buena Vista. If faithfully executed, it would redound to the honor of the artist and go far to make his fortune.

Mr. Brown carries with him letters from Gen. Taylor and a large number of officers testifying to the unwearied pains the artist took to secure fidelity in all he did. Officers sat and stood for him in all positions, and squadrons were "set in the field" that he might copy them. That his portraits are indeed likenesses none will doubt for a moment. We saw them in company with those who know many of the gentlemen represented, and they bore instant and hearty testimony to their fidelity.—*Picayune.*

MR. MACAULAY.—The question has been repeatedly asked, will no new seat be found for Mr. Macaulay? Report answers it by saying, that he has been for some time anxious to be released from the labors of parliament; and that the intention he has stated of retiring into private life is as sincere as the contempt for bigotry which the burgesses of Edinburgh call haughtiness. Nor is the report improbable; for it can scarcely be without his own consent that his contemporaries have unanimously assigned to him the task of writing the modern history of England. So gigantic a work will need retirement; nor can Mr. Macaulay forget those historical parallels which resemble his own case too closely to escape comparison. It was during his exile that Thucydides wrote his account of the Peloponnesian War. The history of the Great Rebellion was the solace of the lonely hours which Clarenden spent in Jersey and Montpellier. The Decline and Fall of the Roman Empire would have been confined to the dwarfish limit of three volumes, had not Gibbon been content to forego "the profuse and philosophic fancy of Burke, and the argumentative vehemence of Fox," for the solitude of Lausanne. The stern law of the historic order allows of no exception; and if Mr. Macaulay aspires to be admitted into its ranks, it would be short-sighted selfishness in his generation to compel him to spend all his life in their service.—*Morning Chronicle.*

THE MAIDEN AUNT. NO. III.

CHAPTER I.

"PEGGY," said Owen to me, one morning, as he threw himself back in his easy-chair after completing the perusal of the newspaper, "did you know that poor Kinnaird had left a daughter?"

What an inexplicable creature I am! I have passed my forty-fifth birthday, but I cannot yet hear that name uttered without emotion! However, Owen is the last person in the world to suspect such a thing, and the last person I should wish to suspect it; so, after a moment's pause, I answered, in my usual tone,

"Yes, I remember to have heard it. And is she your ward, as well as the son?"

"Even so," replied he; "and an immense heiress she is—a beauty too, they tell me. She is past eighteen, and cannot be kept any longer at school, so I have now the agreeable task of finding some one to take care of her till she is pleased to relieve me of the responsibility by her marriage, which I should think will not be a very distant event. I wish *you* would take her off my hands in the mean time."

"My dear Owen, you are not in earnest. I cannot fancy any one less fitted than myself for such a charge."

"Don't be modest, sister. You know, without compliment, you are the very best manager in the world, and you have that kind of knack at discovering and indulging the peculiarities of those with whom you live, which would make you an invaluable companion."

"Yes, yes," interrupted I, in a bantering tone, "you made that discovery when you and I tried the experiment of living together eight years ago. I suited you to a nicety."

"Oh, then indeed," returned Owen, making a long face and looking a little embarrassed, for the experiment alluded to had been a complete failure, and had been abandoned by mutual consent at the end of the first month; "but that, you know, was a peculiar case; and after all, when I think it over, I am convinced it was more my fault than yours—wholly my fault, I may say. I am not *now* exactly what I was *then*."

"Of course not," replied I gravely, "eight years have been allowed to you since then for the study and improvement of your character, and you are doubtless an altered man. Suppose we try the experiment again—I am perfectly ready, and I have no doubt it would come this time to a widely different issue."

Owen's candid and complimentary humor was a little at fault here; he had not expected to be so immediately taken at his word. "Why, to say the truth," began he, with some confusion, "my confirmed bachelor habits——"

"What are you saying about your confirmed bachelor habits?" cried our friend, Mrs. Alvanley, entering the room, and proving, to Owen at least, a very welcome interruption to the conversation. "I will not allow any such high treason to be talked in my house."

Mrs. Alvanley was a lively, handsome widow, about Owen's own age; that is to say, somewhere on the verge of five-and-thirty. She was not deficient in ability, though extremely fond of dress and amusements—tastes which her small means gave her very few opportunities of indulging. Before her marriage she had received considerable attention from Owen, who, it must be confessed, had always been a great flirt, though I do not think that he had ever fairly committed himself with any one; certainly not with Mrs. Alvanley. She was now suspected of a design of reconquering her former vassal, with how much reason I cannot pretend to say; but it is certain that she liked and sought Owen's society, while he, on his part, appeared, to a cool looker on, quite willing to resume the footing, half playful, half sentimental, on which he had formerly stood with her, and quite determined not to advance an inch beyond it. The usual residence of this lady was near Alford, a country town in Devonshire, in the neighborhood of which the happy years of my youth had been passed, and where I had many friends. At present, however, a cousin who lived at Teignmouth had lent her a house for the month of October, and she had invited Owen and myself to become her guests.

Owen turned towards her with that air of ready deference which, sometimes mingled with a shade of sarcasm discoverable only by a quick observer, characterized his demeanor towards women, especially towards those in whose good graces he thought it worth while to secure a place. "It would indeed be a rash man who should venture to celebrate the praises of single blessedness in *your* presence," said he, with an equivocal smile. "But you are come in the very nick of time. I want your advocacy. We were talking about the Kinnairds."

"No such thing," cried I, "we were talking of the time when Owen and I tried to live together, and found that we could n't bear each other. Do you remember it, Mrs. Alvanley?"

"To be sure I do," replied she laughing. "All the world said there would be a permanent coolness in consequence, but I knew you both better. Let us call upon your brother to justify his share in the transaction, and afterwards we will hear your defence. Now, Mr. Forde, what have you to say for yourself?"

Mrs. Alvanley wanted the fine perception and quick feeling which constitute tact, or she would have seen that Owen found the subject irksome and wanted to get away from it. He, however, fell readily enough into her playful tone for the moment.

"I will be judged by you," cried he, "no man could begin with better intentions than I did—I might almost say that no man could have endured more. Patiently did I suffer myself to be initiated into the mysteries of housekeeping. I knew when we had lamb in the house, and when we had mutton hanging up, and when the cook had tried all over the market and there was not such a thing as a bit of fish to be heard of. I was acquainted familiarly with the statistics of disease in the poultry-yard, and learned gradually to distinguish between pip and croup. Once I labelled a dozen jars of raspberry jam in a single morning; another time I voluntarily reprimanded the housemaid when Peggy was afraid to speak to her."

"Owen, how can you be so absurd?" interrupted I, laughing, though inwardly annoyed.

"Well," continued he, still addressing Mrs. Alvanley, "all this and more I encountered like a man; but at last one morning—I think we had been living together about three weeks—my sister suddenly and without preparation, without breaking it to me, but as if it were the pleasantest and most natural thing in the world, proposed to me to give a children's party!"

"Now, Owen, how can you exaggerate so dreadfully?" cried I. "You know very well I only

Digitized by Google

wanted to have Emily Drew's two sweet children, to spend the day with me."

"Sweet children, I have no doubt they were," returned Owen, "breathing the very essence of lollipops. But you were to have the little Harrisons to meet them. I stand to that. I have a vivid recollection of having a distinct, separate horror of the little Harrisons, over and above those two sweet Drews."

"Well, I believe I did talk of it," said I.

"There now!" cried Owen, "you see how far she is to be depended on! And there are five of the little Harrisons! Now I leave you to imagine my feelings on such an announcement. At first, I thought it was impossible, and then I thought she was insane; or, said I to myself, have I been living all this time in a dream, and am I not a bachelor after all, but am I a married man, and is this my wife? For you know it was inconceivable that any woman, kindly exempted by nature from the trouble of children, should endeavor to procure an artificial offspring for herself. That was out of the question."

"Owen, you really anger me," said I; "Mrs. Alvanley, how can you let him talk in that manner? There is no feeling in the world so natural and so pure as the love of children, and I never can bear to hear him pretend to despise it; dear little innocent creatures!"

"Dear little innocent creatures!" echoed Owen. "Yes, there they sit, in their clean pinafores and best frocks, looking like a row of complete innocents, unable to give you a rational answer to the simplest question. And when they warm a little, and begin to play, they are always hitting their own heads, or kicking your shins by accident; and, if they are well brought up, they roar equally at both. Your best-meant schemes for their amusement are generally humiliating failures, rendering you ridiculous in the eyes of the bystanders. You begin to tell them a story, and harangue for five minutes, and then find they are not listening to you, or something equally unpleasant. I have myself seen Peggy steadily going to sleep in a corner for an hour together, with three hard-hearted urchins at play round her, not one of whom had the charity to go up and startle her, though she had shut her eyes only to induce them to do so. I never gave a child a sugar-plum in my life, that it did not begin to choke immediately."

"All single men talk in that manner," said Mrs. Alvanley, when she had recovered from her laughter; "wait till you have children of your own."

"Yes, I *will* wait—very patiently too," answered Owen; "I would much rather have half-a-dozen kittens than those two sweet little Drews that Peggy is so fond of. A kitten is at least pretty, and graceful, and amusing, which a child is not; and you can always take it by the nape of the neck, and drop it into the cellar when you are tired of it—a thing which I should like to do in a similar case with a child, if it were not for the tumult which mothers and nurses would be sure to make about it."

"I cannot understand how you can laugh at him, Mrs. Alvanley," said I. "To me it is perfectly shocking. I have heard him say before, that he likes animals better than children, and I never can bear it. It is degrading to think of those dear little immortal souls, and then——"

"Now, Peggy," interrupted Owen, "what *can* you know about the size of their immortal souls?"

"Come, don't teaze her so," said Mrs. Alvanley; "and my dear Miss Forde, how can you take everything so entirely *au pied de la lettre?* You do not understand your brother; yet, after all, he is not so very enigmatical. But it certainly is necessary to comprehend a person's character thoroughly, in order to live happily with him, and so I think it was very well that you two gave up keeping house together."

"And left me at liberty till I should meet with some one who can and does understand me," said Owen, with a bow and smile, which rendered the compliment so broad as effectually to destroy its point. "But don't be wrathful, Peggy, I am only plaguing you. Let us go back to the Kinnairds."

"I had forgotten them," said I.

"Who are those Kinnairds?" inquired Mrs. Alvanley.

"Frank Kinnaird was a great favorite of my father's," replied Owen. "He was ten years older than myself, or more; and many and many a tip has he given me when I was a schoolboy and he a young man. Poor fellow! He married a great heiress, to pay his debts, I believe, for he was imprudent enough. She had a temper which made his house an absolute Pandemonium; and he had not been married to her above a twelvemonth, when some distant relation died and left him a hundred thousand pounds—so he need not have sacrificed himself after all. How many years is it since Kinnaird died, Peggy, do you recollect?"

"Six years this summer," returned I, without lifting my eyes from my work. *Did* I recollect!

"So it is, I declare," said Owen. "How time slides away! Well, he left me sole guardian to his children. Mrs. Kinnaird, I forgot to say, had died a year before. The boy went to college, of course, and had a commission in the guards afterwards. He is the very counterpart of his father in character; but, luckily for him, he had money enough to waste, so I was not forced to interfere with his amusements, and he has now been several years off my hands. The girl was younger. She was taken, at first, by a Scotch aunt, Kinnaird's sister, who lived in the Highlands; and, just as I was beginning to think that a young lady of her expectations must necessarily acquire a few more accomplishments than she was likely to get in the region of gray mountains and oat cakes, this aunt very obligingly died, and I ran down there for a month, got some capital grouse-shooting, and brought my fair ward up to a first-rate London establishment to finish her education."

"Was she an engaging girl?" asked I, with irrepressible interest.

"She was rather under fifteen at the time," replied Owen, "and I have Lord Byron's horror of budding misses. Besides, she cried without intermission during the whole month, so that I had really no opportunity of judging of her personal appearance, further than that she was tall of her age, and had a most splendid head of dark brown hair: I remember noticing that particularly."

"I dare say she is well-looking enough to pass for a beauty when seen through the flattering medium of—how many thousand pounds?" observed Mrs. Alvanley.

"Seventy," returned Owen; "a pretty little fortune, is it not? But now comes the difficulty: this young lady is eighteen years old: a woman grown, as you see."

"In her own estimation, doubtless," interposed Mrs. Alvanley; "but most girls are little more than children at eighteen. She must be classed for a few years more among those budding misses of

Digitized by Google

whom you and Lord Byron have so great a horror."

I was inwardly amused as I thought of Mrs. Alvanley's five-and-thirty years. Owen, who was growing rather cross as he found himself so repeatedly interrupted in his approaches to the point he was resolved to carry, answered her by saying in his blandest tones—

"Nay, Mrs. Alvanley, would you have me believe that the mind does not attain to maturity till the person has begun to lose its first bloom? Forgive me for differing from you; but, I remember *you* at eighteen."

The lady was effectually silenced, and quite uncertain whether she had received a compliment or an affront. Owen, who had intended to produce this very effect upon her, went on triumphantly, and finished his history without further disturbance.

"Well, as I was observing, Miss Edith Kinnaird —(it is exactly the name for a heroine of romance) —was eighteen three months ago, and can't be kept at school any longer. My friend, Lady Frances Moore, has undertaken to superintend her *début* in the spring, so that trouble is off my hands: but here is October, and what in the name of ingenuity is to be done with her in the interval? Now I appeal to you, Mrs. Alvanley, whether it would not be an extremely pleasant thing for Peggy to pass the next five months in an elegant mansion, surrounded with all the luxuries of life, with no other drawback than the society of a high-born and highly-educated girl, in whom she may be supposed to feel some interest for her father's sake?"

"Were I your sister," replied Mrs. Alvanley, with animation, "I should consider such a suggestion as a very great favor. It is exactly the position I should like; and I also think it is that for which I am best fitted. What say you, Miss Forde?"

A sudden horror here came over Owen, that Mrs. Alvanley was going to propose to take charge of Miss Kinnaird herself. With his characteristic caution, he felt in a moment that such an arrangement might lead to numberless inconveniences, not the least among which he deemed the appearance which it would have in the eyes of the world. It was far from his intention to have it supposed by any one that he meant to marry Mrs. Alvanley; so he turned to me with an appealing eagerness of manner, very unlike his usual nonchalance, and very difficult for a sister to withstand, saying—

"My dear Peggy, I am thoroughly and anxiously in earnest, and it is not like you to persist in trifling when such is the case. It would be still less like you, to let any petty obstacles stand in the way of an arrangement so rational, so natural, so thoroughly unobjectionable. Your consent will confer the greatest possible favor upon me, and upon your old friend's child; while it would really be affectation to suppose that it will entail any sacrifice upon yourself. Were it likely, or even possible, that it should do so, I would be the last person in the world to ask it of you; but I do assure you that in suggesting the plan, I was very considerably influenced by the idea of the pleasure that it would be the means of procuring for you."

I was touched—impressed—gratified; in short, I gave my consent. And when it was irrevocably pronounced, I was a little surprised by discovering the advanced state of Owen's arrangements, which seemed to prove that he had counted upon me as an auxiliary long before he named the subject to me. He would at least—so he said—spare me the trouble of discussing and deciding; an occupation which he knew to be peculiarly unsuited to my natural taste. So he named the house in which Miss Kinnaird and I were to take up our abode, and which he appeared so sure of obtaining that I could not help suspecting that he had already opened negotiations for it; and he even fixed the day on which the young lady was to be summoned from the academic shades of her abode in the Regent's Park. He kindly left it to me to determine the precise number of weeks, days, or hours, by which my arrival at Enmore Hall was to precede that of Miss Kinnaird; only suggesting that it would be as well if, for the sake of my own comfort and convenience, I could manage to have about a fortnight quietly to myself, in order that I might get thoroughly settled in my new residence, acquainted with my new household, &c. &c.; so that I should be ready to receive the young lady in a manner satisfactory to myself;—and this modicum of liberty was pretty nearly all that was allotted to me in the matter. I did not, however, quarrel with this specimen of Owen's diplomacy; for I have a natural horror of responsibility at all times, and a special horror of it when Owen is the party to whom I have to answer; so I comforted myself for any little injury that my dignity might have sustained by reflecting, that since he had made every arrangement himself, he would have no one but himself to blame if the results should prove unsatisfactory. Thus I was able to delight my brother by the cheerfulness of my acquiescence in all his proposals; and in the plenitude of his triumph he deigned to delight Mrs. Alvanley by reminding her that Enmore Hall was only three miles from Alford; and assuring her that he trusted much to her well-known kindness for rendering Miss Kinnaird's sojourn in that part of the country agreeable. It was settled that I should proceed to Enmore immediately after my departure from Teignmouth, and that my young charge should join me about a fortnight later, under the escort of her brother, who, Owen believed, had taken a shooting-box somewhere in the neighborhood, and who was described as passionately fond of his sister, and impatiently anxious to enjoy every available moment of her society now that she was passing from childhood to womanhood. Owen hoped to come down himself after Christmas, but was too full of engagements, for the present, to determine the precise time at which he would join our party. And so the matter ended; and I was left alone to reflect, as calmly as I could, upon the singular series of trifling circumstances which had at last placed me in the position of guardian to the daughter of the only man I had ever loved, and who—the *thought* is present to me, so why should I shrink from the *word*?—had slighted me. I was eighteen again, in imagination, so buoyant, so happy, so energetic—pursuing a thousand fancies, busied with a thousand studies; and he was at my side to guide all by his judgment, to give zest to all by his sympathy, and to make my heart beat quick, and my cheeks glow, by those admiring looks and approving words, so immeasurably different from *compliments*, because they are always involuntarily, and often unconsciously, offered—so sweet, I must *now* write—so dangerously sweet, when they come from one whom we love as a friend, and look up to as a superior. Was it wonderful that I mistook all this for the indication of a feeling which I have now no right to believe that he ever entertained? Yet I am acting a part, even to myself, when I say that I do not believe it. I thought of our parting, of the warmth, the devotion of his manner, so far outstripping the mere *intimacy* which, in some sort,

Digitized by Google

justified its expression. I never saw him afterwards. Tidings came, first of imprudence, then of extravagance—repeated, reckless, unpardonable extravagance—and three years after that parting, I heard of his marrying, as Owen said, "an heiress, to pay his debts!" What those three years were to me I do not wish to remember, and it would be useless to describe. The beauty of my life had departed from me. But, thank God, it went but for a season, and has returned, though in another and less radiant shape. In the expansiveness and activity of those affections which I once thought I would never again suffer to cling around aught upon earth, I have found health and happiness for my wounded spirit. Of the holier discipline, under which I trust that I am learning to chasten those exuberant affections, or rather to guide them into a channel where there can be no overflow, and fasten them upon an object where there can be no disappointment, I dare scarcely presume to speak; yet incomplete indeed would be the record of my thankfulness for what I have endured, and for the peace which has been vouchsafed to me, did I omit all allusion to my true remedy, my real strength, my only sure hope. But enough, and more than enough, of this; the more deeply I feel that the concerns of daily life ought to be pervaded and sanctified by a spirit of devotion, the more reverenently do I desire to separate and to solemnize all distinct expression of that spirit—that so we lower not our religion to the level of our habitual thoughts and common words; but rather jealously guard its elevation, and seek, if we may, gradually to lift them to it.

* * * * * *

CHAPTER II.

I sat alone in the pretty drawing-room of Enmore Hall, for I had *not* invited Mrs. Alvanley to assist me in receiving Miss Kinnaird, though she paid me a morning visit of two hours' duration, on the day which Owen had fixed for his ward's arrival. It was perhaps churlish of me, but my feelings were really and deeply interested, and I did not want either to make conversation, or to have it made for me. I don't think I am by nature sentimental, and I am quite sure that, in the present instance, I have neither sought nor permitted the peculiar state of mental self-indulgence, to which the world satirically affixes that epithet; but I was quite surprised at the degree of my own emotion when the sound of wheels on the frost-crisped gravel—as quick, as light, and as traceless as the passage of feelings across a world-hardened heart—announced that my visitor was actually come. I never can sit still on the sofa in the drawing-room, when I know that a person whom I wish to welcome is entering the hall-door. I have been repeatedly told that it is a weakness, and that it cannot hasten the meeting by more than half a minute, and I admit the truth of the objection; nevertheless, it is one of those cases in which I would not, if I could, be otherwise than weak. Heaven help poor human nature, if the *cui bono* question is to be asked in matters of affection! Those little exuberances, those delicious exaggerations, are just the very touches on which its beauty depends—the bloom on the butterfly's wing, needless to it, perhaps, as a mere flying machine, but everything to it as a butterfly. I remember once stopping in a diligence, at night, to take up a Norman countrywoman; she was parting from her husband and child; and many were the long farewells which they exchanged ere she entered the vehicle. But when she was fairly in, and we were beginning to move, she nearly dislocated her own neck and my shoulder by stooping out of the window to give an extra and most inconvenient kiss to the little boy, who was held up by his papa to receive it. She had been hugging him to her heart's content the moment before—but all the *sweetness* of her affection was concentred in that last unnecessary salute; I positively loved her for it; and though I travelled in her company during thirteen sultry hours, and she chewed garlic and shut the windows, such was the potency of that little indication of heart, that I had not arrived at hating her when we parted. But all this while Miss Kinnaird is on the carriage steps; I must hasten to assist her in descending. She returned my greetings with a warmth that was more than merely polite, and an ease which seemed to me scarcely natural at the shy and girlish age of eighteen. Her bonnet and veil nearly hid her face, but her unusual height, and singularly graceful figure, struck me at once; I had no time to analyze my impressions, for she passed quickly up stairs, attended by her own maid, and pioneened by mine, to make a hasty toilette after her journey, while I was left to receive and entertain her brother.

Captain Frank Kinnaird, an elegant-looking young man, with very pleasing manners, and with no importunate resemblance to his father in look, tone, or air, first introduced himself to me, and then performed the same ceremony by his friend Captain Everard—a tall, stiff-looking person, whose apparition surprised me not a little—and the two gentlemen then followed me into the drawing-room.

"We trespass on your hospitality rather unwarrantably," said Frank, as he established himself on the corner of the sofa; "but the lights in your windows suggesting visions of fire and sofa, tea and muffins, were really too tempting to be resisted by two travelworn and frost-bitten mortals at this hour of a November night."

I said something civil about hoping to see him at Enmore Hall while his sister continued to be its inmate, as often as his leisure would permit: and I concluded with a half-dubious bow to his silent friend, who immediately acknowledged the compliment.

"You are very kind," said he, with grave politeness; "and the prospect is peculiarly agreeable when contrasted with our bachelor establishment at Acton Cottage. Neither of us can trust the other to make tea; and, as we have only one tea-pot, and the cook refuses to boil water for us more than twice a day, we are obliged to take it by turns to go without 'the cup which cheers but not inebriates.'"

I was puzzled by the extreme quietness of manner with which this speech was delivered, and scarcely knew whether to laugh or not. My instinct, which is seldom at fault in detecting at once those who are likely to prove uncongenial on further acquaintance, had inspired me with an impulse of dislike to Captain Everard at the moment in which he was so unexpectedly introduced to my notice. I cannot deny that he looked like a gentleman, and some people might even have thought him good-looking; but he was pale, grave, and erect; and I made up my mind that he would prove to be sickly, stern, and formal; and I was not to be shaken in this determination by an ease of manner, and an expression of humor about the mouth, which seemed to indicate better things. Accordingly, I addressed myself principally to Frank Kinnaird, and expressed a charitable hope that his sister was not over-tired with her journey.

"She will be quite restored to-morrow," was his

Digitized by Google

answer, 'and you will then be able to make acquaintance with each other—a process which I fancy that ladies can accomplish far more rapidly than gentlemen. I think I may venture to say, that Miss Forde will find no reason to regret the kindness which has induced her to take charge of Edith—eh, Everard!"

"Miss Kinnaird is perfectly faultless in person, manners, mind, and heart," returned the gentleman thus appealed to. "I am qualified to pronounce this opinion, for it is full twenty-four hours since I was introduced to her."

"Ah, you laugh at me," cried Kinnaird, good-humoredly; "but I have the satisfaction of feeling sure, that if you had such a sister of your own, you would be just as proud of her as I am."

"There can be no doubt of that," answered Captain Everard. "Short as our acquaintance has been, I am beginning to feel proud of her already."

"We won't attend to him, Miss Forde," exclaimed Kinnaird, turning to me; "he is an incorrigible cynic—a fellow that does n't believe in the existence of anything good upon the face of the earth."

"A comprehensive assertion that," coolly remarked Captain Everard, by way of comment.

"But," proceeded Frank, without minding him, "I am afraid of saying too much about Edith beforehand, you know, lest you should be disappointed; and I know I may naturally be supposed to be partial. I dare say she is nothing wonderful—much like other young ladies; but she has had many advantages in education, and she has certainly made the most of them—not that she is a blue-stocking—(I hate blue-stockings!)—nor one of those moving automatons of accomplishments that one dares not come near, for fear one should touch the spring by accident, and they should go off into a bravura, or a German drama: no, she has no pedantry or affectation about her, of any kind; but," and here he lowered his voice, and assumed a confidential air, "I can't help speaking to you as an old friend, because I have heard so much of you and yours in days long gone by. She really is a very attractive sort of girl; and when she is presented next spring, we really do expect that she will make a sensation."

"Don't be afraid of speaking too warmly to me," cried I, delighted at his animation in his sister's behalf. "I am a very old-fashioned person in most of my opinions, and I always suspect the genuineness of an affection which is afraid to show its face."

Captain Everard gave me a peculiar look, which seemed to express, "How much I *could* say in answer to that sentiment; but I am not going to say anything." (I have often observed this kind of expression in the eyes of highly argumentative persons, when their acquaintance with you is as yet too recent to justify their attacking you for every word you utter, and when, consequently, they are just endurable—which, when the compassionate restraints of good-breeding drop away, they are *not*.) He then turned to his friend, and said—

"Miss Kinnaird is highly accomplished, I know; yet I own I did fancy that her touch on the piano——"

"I don't know what fault you can find with her touch on the piano," replied Frank, shortly. "That fellow Thalberg said it was excellent, when he heard her, and I should think he knew rather more about it than either you or I. But how absurd I am!" added he, checking himself, "or rather, how absurd you are! Why, you have never heard her play at all."

"Of course not," answered Everard; "for even you would hardly reckon among her perfections the power of introducing a pianoforte into her travelling-carriage. Neither did I find fault with her touch: I only just mentioned it—and lo! you hurl aside that poor inefficient mask of polite indifference directly, and show a scowling face, with defiance in every line. And I am sure Miss Forde will approve of me for having produced this effect, for I have just heard her say that she likes affection to show its face boldly, and go flaunting and shouting about the streets and markets to the tune of 'I love her, *how* I love her!'"

His emphasis was so gravely comic as he pronounced these words, that I could not help laughing, though it was at myself. I had no time to undertake my defence, for, at this moment, Miss Kinnaird entered, and the attention of two of the party, at least, was immediately absorbed by her.

I was absolutely astonished at the splendor of her beauty. Descriptions of person are proverbially ineffective, yet I must try to give some idea of her peculiar characteristics. I have already said that she was more than usually tall; but the moulding of her figure was at once so round and so delicate, that whilst her worst foe could not have dared to call her lanky, her most injudicious admirer would never have thought of describing her as "a fine woman." Her head was small almost to a fault, covered with that abundance of dark hair which had made such an impression upon Owen, and which was drawn back from her brow, and braided together in one interminable length of glossy plait, arranged so as to form a natural coronet. Her forehead was low and wide; the eyebrows and eyelashes nearly black; the eyes deep-set, almond-shaped, and of the darkest possible gray; the nose high and exquisitely chiselled; the mouth small, full, and with that peculiar curve of lip which is almost disdainful when in repose. She moved like a queen of nature's making, and it was impossible to look at her without mentally agreeing with her brother's opinion, that a creature so gifted, both by nature and fortune, would, indeed, "make a sensation" when she should appear in the gay world for which she was intended. I found that I was losing myself in melancholy wonder whether she would not be utterly spoiled by the dangerous admiration of the multitude, and what would be her final destiny: so I shook off my meditative humor at once, and set to work in good earnest to make myself and my tea as agreeable to my visitors as I could.

We naturally fell into conversation upon Alford and its neighborhood, Miss Kinnaird inquiring into the nature and number of its picturesque attractions, with the eagerness of a London-bred girl, whose conceptions of country enjoyments derive their beautiful coloring from the recollection of a happy childhood spent among woods and waters, flowers and birds. This was a point on which I could be eloquent, and I counted up, with animation almost equal to her own, the walks and views to which I hoped to introduce her, lamenting all the while that her first acquaintance with the soft and various loveliness of Devonshire should be made in the leafless month of November.

"Edith does not ask you about the men and women of the place, you perceive," cried Frank Kinnaird, mockingly, yet with an evident wish to call my attention to the simplicity of his sister's

Digitized by Google

tastes. "She is a very romantic young lady; all her sympathies are for hills, meadows, and waterfalls. But I—who am a matter-of-fact person, who live by eating, drinking, and talking, and am resolved to obtain as many pleasant helps to those three grand occupations as I can for the next month or two—I may perhaps be permitted to inquire what kind of society is attainable at Alford?"

"Your sister is infinitely indebted to you, Kinnaird," said Captain Everard. "She was just coming to that question. She, however, would have been compelled to ask it in a circumlocutory manner, and with an air of nonchalance, as if it dropped out by accident, so as not to incur the reproach of feeling any interest in her fellow-creatures; while you are able to obtain the information she wants openly, without the trouble of manœuvring, or the danger of disguise. You are an invaluable friend."

"That is a part of your system of having no faith in anybody," said Miss Kinnaird, quickly.

"My system of having no faith in anybody!" repeated he, with an air of astonishment; "I did not know I had such a system. Pray how did you find it out?"

"I dare say," exclaimed she, evading the question, "you do not believe in the reality of my love of beautiful country; you think I say it for effect, and that I am ashamed to express my true opinions, and think it very fine to assume indifference to everything except the beauties of nature, and, perhaps, books. But you are quite mistaken. I am not in the least ashamed of owning that I am very fond of society; that I delight in balls, and that I shall be excessively glad to hear that there is any chance of my going to one at Alford. Only you know," she added, turning to me, "that is no contradiction to my loving a fine view, and enjoying a country walk."

"Far from it," answered I; "the more keen one's perceptions of pleasure are, the more comprehensive they are likely to be—at least, that is my idea."

"Your *system*, you mean, Miss Forde," said Captain Everard. "We have all got systems, only we don't know what they are till this lady is so good as to find them out for us. If I chose, I could dispute every assertion which Miss Kinnaird made in her last speech, especially the closing one; but I am so much interested to know how she discovered my system, that I cannot rest till she has told me. You won't refuse to explain, will you?" added he, addressing himself directly to her.

The young lady blushed, but did not seem at all disposed to retreat from what she had said. "Oh," she replied, "people who have the sort of views that you have, cannot conceal them if they would. One sees it all immediately. The manner in which you listened to Frank's account of his two friends, at dinner to-day, showed me at once what you thought."

"Indeed!" said he, apparently much amused. "Miss Forde, I am afraid you will find your companion very dangerous. You will stand committed to unknown and elaborate systems, not by the words you speak, but by the manner in which you listen; and at dinner too, when one is apt to fancy that observation is at rest, and the stricter restraints of society may be a little relaxed. You will never be safe; and I really know not what advice to give you, for the last refuge of a cautious mind—silence—is converted into an ambush of the enemy."

"Listening is often a great deal more expressive than talking," said Miss Kinnaird, with playful determination; "besides, you were not wholly silent."

"I spoke, did I?" cried he. "I feel infinitely gratified to think that my words should have made so deep an impression."

I came to Edith's assistance here, for this last stroke evidently disconcerted her a little. "What is the story of Captain Kinnaird's two friends," asked I, "which has given rise to this war of words? I cannot decide which of you is wrong till I know the whole history."

"Oh! I'll enlighten you," cried Frank: "Everard, you know, is not in our regiment now; he exchanged more than two years since, and has been to the West Indies, and had the yellow fever, &c. &c., and that is why he is down here with me, on sick leave, recruiting a little. So he was asking me after some of our old friends to-day; and, among other histories, I told him of a fellow of the name of Harrison, whom we both knew very well, and who has just sold out, and bought land in Australia. A strange fancy it is, to be sure, and he has persuaded another fellow of ours—Milford (Everard, you did n't know Milford, he was after your time)—to join him, and they sunk the price of their commissions, and such private property as they had besides, in the purchase of I don't know how many acres, somewhere beyond Sydney, and they sailed last month, and are gone to set up farming together: the only wise part of the plan seems to me to be their going together, for they were always uncommonly great cronies; and it will certainly be better for them to have each other to talk to, instead of settlers and natives, and those sort of people."

"And I believe the head and front of *my* offending," said Captain Everard to Miss Kinnaird, "was, that I ventured to think it the only, or the most, unwise part of the plan! Did I do anything worse than that—except listen?"

She laughed, and replied—"Oh yes, you did much worse. When Frank told you that there was a *real friendship* between them, you said you hoped it might last."

"Upon my word, Edith," cried her brother, joining Captain Everard and myself in the laugh which these words elicited, "it was a very charitable hope of Everard's, for I am sure if it does not last, the poor fellows will be in pretty nearly the most uncomfortable situation that I can imagine. Would you have had him hope that it might not last?"

"Yes, I think I may retort upon my assailant," added Everard. "I won't be so very general in my assertion; but it is pretty evidently Miss Kinnaird's system to have no faith in *me*."

"Oh, the *tone* in which you said it!" persisted she; "it implied such a disbelief in the possibility of its lasting. You may laugh, if you please, but I am sure it did. Now, can you say—truly and honestly—that you do not expect them to quarrel almost immediately?"

"I believe, on my honor and conscience," replied Captain Everard, with solemnity, "that by this day six months—I say six months, because I like to be on the safe side—they will not be upon speaking terms."

"There!" cried Edith, in triumph. "Was I not right! But *how* I pity you!"

"You pity me," rejoined he, "because I have a little more experience in human nature than it is possible or natural that you should have. Well,

Digitized by Google

if such experience be profitable, I will allow that it is not very exhilarating. But I have this great advantage, that I am not undergoing perpetual disappointments. Knowing the truth of that wise old saying, that 'every man has his price,' I am neither exuberantly confident nor jealously suspicious; but I pay for what I get, and never consider myself ill-used, unless, as sometimes happens, I don't get what I have paid for."

"Is it really possible?" exclaimed Edith, casting up her eyes, while her face glowed with generous and indignant astonishment. "Can I be hearing such words said in earnest? Oh, how glad, how thankful I am that there is not one spark of truth in them—that there are such things as friendship, and honor, and nobleness—that there are, have been, and will be, men who would die sooner than do what their conscience disapproved, though they might gain kingdoms by doing it! But it makes me uncomfortable to hear it said—though I know how false it is."

She stopped, seemingly quite abashed at her own warmth. "Everard is quizzing you, Edith," said her brother; "he is only trying to put you in a passion, and I must say he has succeeded."

"He is putting me in a passion also," said I, "and I dare say that is more than he intended. Captain Everard, we cannot allow these assertions to pass. Surely you are not in earnest."

He turned to me with a half-laugh, as though he had scarcely expected me to interpose with so much animation, and felt that a little more seriousness was necessary in replying to me than he had thought it incumbent on him to assume towards the younger lady, with whose undisguised warmth of feeling he seemed to be amusing himself a little unguardedly.

"Why, I am not going to maintain," he answered, "that the *literal* sense of the words is true.—I don't say, that every man has his price actually in pounds, shillings, and pence. But I think we can scarcely confute the assertion taken in a wider signification. I don't think we find many men who can resist temptation if only it assail them on their weak point, whatever that may happen to be. Most of the instances of heroic virtue concerning which society is eloquent seem to me to resolve themselves into this, that the man was tried where he happened to be strong, and so withstood the trial easily enough. A generous man is tempted to do a mean action—tempted, that is, by some arrangement of external circumstances which makes such an action easy and profitable. He does not do it, simply because he does not feel the slightest inclination to do it, and the world cries out in admiration. But let the same man be tempted to fly into a passion, and ten to one, he yields to the impulse without a struggle. The tempter has only to pay *his price*, and he wins his prey immediately."

"This seems to me sophistical," said I; "but I am not logician enough to argue with you. According to this reasoning, I suppose that a man who had so schooled his mind as to make his impulses good instead of evil, would possess no merit at all."

"Pardon me," cried he, "I was speaking of real, modern, living men, such as we see around us. The character you describe is not to be met with among them—I was speaking of a man who is governed by his temperament—I should hardly venture to speak at all of one who had learned to govern it."

"You have a bad opinion of human nature."

"I have indeed," replied he, gravely, "a very high opinion of what it might be—a very low opinion of what it is."

"And you do not believe in friendship?" exclaimed Miss Kinnaird; "that seems to me the strangest of all your opinions. I always thought there was so much real friendship among military men; there is such close and constant companionship, such unrestrained intimacy, such mutual dependence and forbearance. Why do you smile? I am sure it is the general rule—I am sure Frank thinks so."

"And so the tie which unites two red coats is in your eyes a holy and romantic thing! Forgive me if I say 'that seems to me the strangest of all your opinions.' I should like to hear your notions of a military life."

"I ought to know something on the subject," answered she, coloring a good deal. "I am a soldier's sister."

"In the days of chivalry—in which you *ought* to have lived (you will at least agree with me in that)—such friendships as those which you are imagining to yourself, may have been common enough," observed Captain Everard. "Men to whom the profession of arms was a sacred thing, to be entered on with fast, prayer, and vigil, who had again and again faced death side by side, not with the bravado of physical indifference, but with the reverent fearlessness of Christian faith, whose vow of brotherhood was assumed before God, and blessed by the church—don't you think such men as these must have been very nice?" added he, with a sudden change of tone and manner, as he encountered Edith's kindling eyes.

She made him no answer at all, and after a moment's pause he proceeded, "But what do you suppose is the progress of a friendship between two knights of modern times—degenerate creatures that they are? It begins over the mess table, when the heart is warmed by a few additional glasses, and is in the most favorable state for the reception of a deep and lasting impression; it is cemented by sympathy and mutual assistance in practical jokes, and the noble contention of singlestick; and, in the higher cases, though even these are by no means rare, the *friend*, emphatically so called, seals his devotion by becoming second in that rational and Christian recreation, a duel! A bond thus hallowed may naturally be expected to outlast time itself."

"Come, come, Everard, this won't do at all," cried Kinnaird, taking up the cudgels; "why, my dear fellow, your arguments are as flimsy as possible. I'll say nothing about your knights of old, though, if they began their friendships, as I dare say they did, over noble wine of Xeres, and cemented them at tilts and tourneys, I don't see why they need despise our mess tables and singlestick. But if you mean to say, that there does not often exist between brother-officers a friendship as true, as refined, and as lasting, as can ever be met with in the world, I say you are mistaken. Why, you are yourself a proof to the contrary. Think what you have been to me!"

"My dear Frank," said Everard quickly, "I am arguing with the ladies; you are not to interest yourself in the matter at all. Besides, I am quite sure that I shall have Miss Kinnaird on my side here. I know, if she will only be so charitable to confess it, that she has a much higher opinion of the knights of old than of her majesty's army at the present day. Now have you not, Miss Kinnaird?"

"If Edith would rather have a great murdering

Digitized by Google

baron who could neither read nor write, than an accomplished, educated, rational man, I can only say she is very foolish," observed Kinnaird.

"You could not possible say anything milder under the circumstances," returned his friend. "But I see I must take you home, where we can argue the question at our leisure. We are keeping the ladies up unconscionably late after your sister's fatigue."

Frank rose at this hint, and the gentlemen took their leave. "I am afraid I go away in disgrace," said Captain Everard, as he shook hands with me, "but you have a very charitable expression of countenance, and I shall trust to you, first to forgive me yourself, and then to make my peace with that young lady, with whom I can scarcely venture to shake hands."

"If I thought you were really and thoroughly in earnest," rejoined she, doubtfully, "I should think a great deal worse of you than I do."

"Then I beg you will continue to suppose me in jest," cried he, as he quitted the room.

"That is a singular person," said I, when we were left alone. "Is he a very intimate friend of your brother's?"

"The dearest friend Frank has in the world," replied Edith; "I have been hearing Captain Everard's praises ever since he got his first commission; I believe he has a great many good qualities, and he has been invaluable to Frank—and his conversation is interesting—one could not go to sleep over it as one so often feels inclined to do with commonplace people—but I cannot say that I like him."

"I should not like him for a friend," I observed cautiously.

"I dislike him excessively," cried she, with energy. And so we parted for the night.

What a number of little worlds revolve, unsuspected, under the uniform surface of that complex and mysterious thing, society! The only words spoken that evening which had penetrated into my heart, and which remained there, were the careless expressions of Frank Kinnaird, "that he looked upon me as an old friend *because he had heard so much of me in his childhood.*" Amid the interminable musings which arose out of this little sentence, I fell asleep.

CHAPTER III.

Edith and I had scarcely finished breakfast, the following morning, when Mrs. Alvanley arrived. I was not disposed to thwart her evident wish to be considered "one of the family," and I allowed her full scope for ingratiating herself with my fair young charge, of which she proceeded to avail herself by paying Miss Kinnaird the most marked attention, implying rather than expressing (every young lady will understand how this may be done) a very lively degree of admiration of her personal charms, and volunteering a description of the principal families of the neighborhood, which she gave with some spirit and piquancy, and a little ill-nature.

"You are new to this style of society, my dear," she concluded, "and you will be not a little amused as its involved and nicely-balanced machinery gradually opens to your observation. Happy girl! You don't even know the difference between the 'town set' and 'the county families'—the brand of disgrace and the badge of honor; neither are you aware of that mysterious system of progression by which you rise in gentility as you retreat from the baleful precincts of the town. Now, the wife of a gentleman farmer who lives in a 'place of his own'—Heaven save the mark!—three miles up the country, is too elegant to visit the lady of an officer, whose family is ten times better than her own, but who is so unfortunate as to dwell within the turnpike. Then you must learn to distinguish the gradation of costume, which delicately marks the various classes, from the Parisian capote and gaudy satins of the attorney's lady, to the straw bonnets and sober-tinted garments of the member's wife and daughters, aristocracy increasing as outward show of it diminishes. All this you will see with your own eyes next Sunday."

"Next Sunday!" repeated Edith innocently. "What happens then?"

"Why, you go to church, to be sure," replied Mrs. Alvanley, "and you will then have an excellent opportunity of seeing all the varieties assembled together, and, if you class them according to bonnets, remembering the rule I have given you, you can't fail of discovering the two extremes at once, though you will require a little practice to discern accurately the intermediate grades."

"I will be very attentive," said Edith, with a glance of extreme amusement at me, "and I dare say, by the third or fourth Sunday, I shall know them all asunder, and be able to reckon them over separately in my mind while the sermon is going on. Don't you think so?"

"Oh fie!" cried Mrs. Alvanley, playfully; "don't let Miss Forde think that I am corrupting your principles. You must listen to the sermon, of course; Mr. Lymes is a very fine preacher."

"Then am I to count the bonnets during prayers?" demanded Edith pertinaciously.

Her instructress seemed a little embarrassed. "Nay, you are rather severe," she said; "I did not of course mean that. But one has plenty of time for such things during the going in and coming out."

"Preparation for service—and practical result produced by it—I understand exactly," said Edith; and then added quickly, as if afraid she was being too satirical, "but Mrs. Alvanley, that is the regular conventional description of vulgarity and gentility which you have given—that classing people by their dress. I don't think it holds good in reality—at least I 'm sure it would not with me, for I would never put on an unbecoming poke bonnet for the sake of looking aristocratic in a country church."

"I admire that sentiment," cried Captain Everard, entering the room with Frank Kinnaird; "it is as genuine as it is boldly expressed. No higher principle can be proposed to a young lady than that of always doing, thinking, and wearing, whatever is most becoming."

Miss Kinnaird was a little out of countenance, but laughed heartily.

"Well," she said, "it is what we all do, only we are not all brave enough to confess it."

"Very true," returned he; "and it is a fine thing to do what you have done—namely to bring your avowed principles to the same level as your actions. We won't inquire *how* you have achieved it, but will leave the imagination to conclude that it was by raising the one—not by lowering the other."

"Oh, I can't contend with you," exclaimed Edith. "But I was in hopes that a night's rest would have produced a happier frame of mind. I

Digitized by Google

laid your misanthropy last night to the account of your fatiguing journey, but I begin to be afraid that it is inherent."

"Yes," he replied, "I was born with a cold heart and a sour temper, and I am glad of it. It saves a world of trouble. All those sentiments which you will have to learn by a tedious and afflictive process, which I won't pain you by describing, come to me naturally."

"They are not sentiments at all," cried Edith. "Don't degrade the word by such an application."

"Give them a name, then," said he. "What shall I call them?"

"*You* may call them prejudices and mistakes, if you please," answered Miss Kinnaird smiling; "*I* dare not, you see, because I have not known you long enough."

I interrupted the combatants by introducing Captain Everard to Mrs. Alvanley. After the usual civilities had been exchanged, he said, addressing himself to me, "I have had an adventure this morning, and I am eager to tell it."

"Indeed!" cried I, "pray indulge yourself. We are all anxious to hear."

"We were alone in the drawing-room at Acton cottage," he began. "I was studying; Kinnaird was smoking a cigar."

"*I!*" cried Frank indignantly, "I was not doing anything of the sort. And as to your *studies*—"

"My dear fellow!" interrupted Everard, "these little graphic touches give life to my narration. If you were not smoking a cigar, you might have been; and so there is no harm in handing you down to posterity as having been actually so engaged at a given time. But let me go on. A thundering knock at the door disturbed us—we foreboded visitors; and Frank, who is apt to indulge in a few graceful *ad libitum* variations of costume during a morning at home, was forced to beat a hasty retreat."

"This is the most unfair mode of telling a story that I ever heard," interposed Kinnaird.

"You shall set it all right when I have done," said his friend; "you shall supply a commentary, like the notes to a ghost story, in which the editor takes pains to let his readers know that he is not such a fool as to believe what he is telling, though his teeth chatter, and his hair stands on end, all the while. Well, my teeth chattered I assure you; no ghost could have been so awful as the apparition which followed that knock at the door, and came upon me, deserted and solitary as I was. A lady, enveloped in a perfect haze of gauzes and laces, and the like unsubstantial investments, glided into the room, and addressed me with a degree of warmth that would have overcome a man less acquainted with the amiable impressibility of the sex than myself."

Mrs. Alvanley, Miss Kinnaird, and I, all exclaimed at this, and insisted on his retracting before he could be allowed to proceed.

"Well, then, I recant," cried he; "they are not generally impressible. It is only where I am concerned. Now, don't interrupt me again, pray. You shall be allowed your commentary, as well as Kinnaird, when I have finished. This fair lady addressed me as follows. I shall try to give you her exact words: 'You will excuse this unceremonious visit; but I am so very anxious to make your acquaintance, that I resolved to dispense with etiquette, and come in person to secure you for my party on Thursday evening.' I bowed, and said I should be very happy to come. I always accept invitations, how inexplicable soever they may be. She proceeded—'I am afraid there was a mistake about the note I sent you; I am afraid it was left at the wrong house. But I felt justified by my intimacy with your lovely sister—' Miss Kinnaird, I beg your pardon, I forgot you were in the room. The unknown continued to talk about you for some time. 'To be sure,' she justly observed, 'that girl *is*——'"

"How can you be so absurd?" cried Edith, laughing and coloring. "But who was the lady? She mistook you for Frank, of course; and she must be some friend of mine. Do tell me who she was."

"Oh, he 'll never tell you!" said Kinnaird. "When he is in this humor there 's no getting a word of sense out of him. It was Lady Vaughan. You know they have property in this neighborhood, and young Lord Vaughan came of age two months ago, and is come down with his mother to winter here. I expect they will be uncommonly pleasant neighbors."

"Lady Vaughan!" repeated Edith, her color deepening as she spoke; "oh, I know her very well. I spent five weeks in the same house with her last midsummer, and she was very kind to me. I am glad they are here."

"Was Lord Vaughan of the party also?" inquired Captain Everard quietly.

"Yes!" replied Edith, looking down; "they were both there."

"Lord Vaughan is an extremely good fellow," said Frank. "I saw a good deal of him at Weymouth last autumn, and I liked him very much. They will be great acquisitions. They are coming to call here to-day, Miss Forde," added he, turning to me, "as they are most anxious to bespeak you and Edith for this ball of theirs next Thursday. And Lady Vaughan begged me to break the ice for her, and induce you to excuse such short notice; it was only the day before yesterday that she knew we were all coming here."

I said nothing of the three weeks which I had passed at Enmore without receiving a visit from Lady Vaughan, who unfortunately had not suspected that the beautiful heiress, whose acquaintance she was so anxious to cultivate, could be coming to reside with a person so unimportant as myself; but I made haste to answer the eager inquiry in Edith's eyes by saying that I should certainly accept the invitation.

"How good of you!" cried Mrs. Alvanley; "you who hate gayety, and go so little into society! Remember, dear Miss Forde, whenever you find the duties of a chaperon at all too much for you, I shall be most happy to relieve you."

I knew that Mrs. Alvanley would have given her ears to have obtained the *entrée* into Lady Vaughan's house, so I took the self-sacrificing offer for just as much as it was worth, and replied coolly that I had always contemplated accompanying Miss Kinnaird into such society as Alford could afford her, and that I rejoiced for her sake in having to begin the duties of a chaperon so early and so auspiciously.

We were interrupted here by the announcement of the very persons who formed the subject of our conversation; namely Lord and Lady—or, as I suppose I ought to say in the present case—Lady and Lord Vaughan.

Lady Vaughan was a lively, elegant woman, still on the sunny side of fifty, with easy manners, and an abundance of small talk. She contrived to keep

Digitized by Google

the two young men, Mrs. Alvanley, and myself, thoroughly engaged in conversation with her; while her son devoted himself to Miss Kinnaird in that direct, immediate, and business-like manner, which marks the flirtations of some men, and which seems to say, "I came here solely for the purpose of seeing you, and I mean to make the most of my time." This kind of wooing leaves no room for the timid flutter, the sensitive doubt, or the consciousness which detects secret engrossment under assumed indifference; it is resolute and undisguised throughout, and seeks no shadier spot wherein to pour forth its sentimentalities than the ball-room staircase, or the opera lobby. And the character of such a lover, consistently enough, is generally marked by a disposition to seize the prominent features, and overlook the finer details, of whatsoever is submitted to his consideration; you shall find that his enjoyment of Shakspeare is confined to an interest in the story of the play, and that his admiration of the country centres in an intense appreciation of pic-nics. Lord Vaughan, however, was a very favorable specimen of his class. Good-looking, gentlemanlike, and fluent, he amused Edith so well, that there was not a single pause in their conversation, while his merest nothings were rendered interesting by the tone of deference and the look of admiration with which he uttered them.

I watched my fair charge closely, but could not satisfy myself that her symptoms indicated any feeling deeper than the gentle charity wherewith a girl invariably judges her first admirer. Still her state was, to say the least of it, promising; she blushed, smiled, and did not look him straight in the face; there was no saying to what it might come. I knew that Lord Vaughan bore a very high character, and that, in point of circumstances and position, he was an unexceptionable *párti*, so I resolved to give him every assistance in my power, and I could not help indulging a little triumph as I remembered Owen's exceedingly low opinion of my capacity as a manœuvrer, and anticipated his perfect contentment with the engagement into which I expected that his ward would enter while under my charge. Only two things specially worthy of note occurred ere the lady and her son took leave, viz., Edith was engaged for the first polka on Thursday evening, and Mrs. Alvanley was expressly included in the invitation to the ball. She owed this little piece of good fortune to the foresight which had induced her to take off her bonnet and shawl immediately after her arrival: Lady Vaughan having concluded, naturally enough, that she was a visitor in the house.

"Well, Edith, I congratulate you!" cried Frank, when we were alone again. "A ball and a conquest so soon after your debût—it is more than you could have expected."

"Yes," replied his sister, "is n't it nice?"

"Is n't it nice?" repeated Captain Everard, inquiringly. "Which?"

"Neither is to be despised, I assure you," observed Kinnaird. "Lord Vaughan is a most agreeable fellow, and what is more, he bears the highest character possible."

"Indeed," said Everard drily, "what has he done?"

"Done!" reiterated his friend, half puzzled, half indignant. "I don't know what you mean, Everard. What whim now is it, that induces you to run down Lord Vaughan?"

"Run him down!" cried Captain Everard, a little indignant in his turn; "I never had such an idea; only you are running him up so confoundedly, that it makes a man look about to discover what he has done. 'The highest character, possible,' simply means that this promising youth of twenty-one is neither a gamester nor a drunkard; at least, I believe that is the plain English of the phrase."

"Nay," interposed I; "you must not deal so strictly with mere conversational expressions. Moreover, I think that a man's merits ought to be judged according to his temptations; and you will allow, that, to a young man entering life under Lord Vaughan's circumstances, temptations are neither few nor trivial."

"My dear madam," exclaimed he with earnestness, "Lord Vaughan may be an angel for anything I know, and very probably is. Pray don't fancy that I want to depreciate him."

"No," said Edith, "it is human nature in general that you want to depreciate. You want to renew the argument of last night."

"I did not remember that there *was* an argument last night," observed he quietly—"who argued?"

I felt absolutely enraged at this rudeness, but Miss Kinnaird only laughed and said, "How insulting!"

"I thought," replied he, "it would rather be an insult to a lady to suppose her capable of arguing. Surely it militates a little against that ethereal gentleness which characterizes all the females in your ideal world, and which endears them so much to the high-souled generous men, as companions for whom they were created."

"I wish you would not pretend to know anything about my ideal world," exclaimed she, "you make dreadful mistakes about it. Besides, I should like to know which is most to be reprobated—a woman who cannot argue, or a man who cannot believe?"

"Don't reckon me in the latter class!" cried he, catching for a moment the eagerness of her tone.

"How delightful!" said Edith. "For once you have said what you think."

He laughed. "You don't know me," was his answer, "or you would know that I always speak as I think. You charitably give me credit for being a vast deal better than I seem; on the contrary, like most of my fellow-creatures, I am a vast deal worse."

"I don't think that is possible," cried Edith. "Nay, you need not laugh; I assure you I am in earnest. According to your own profession, you have neither faith, hope, nor charity."

"That is a tremendous accusation," he replied; "of course you are prepared to substantiate it."

"You cannot deny it," persisted she; "you have no faith in human nature, no hope that it will ever become any better than it is, and therefore, of course, no charity."

"You have described me exactly," said he, bowing; "your insight into character is wonderful; you ought to write fashionable and domestic novels."

But Edith was not to be bantered out of her severity. Whether it was that she was genuinely interested in the subject, or that she was a little angry at the disparaging tone which Captain Everard had adopted about Lord Vaughan, I cannot say, but she proceeded with increased animation. "Do you know that I think your opinions are, if sincere, the most wonderful and the most miserable that I ever met with? Have you never in all your life met with affection—real, true, unselfish affection, that can overcome and endure everything?"

There was a momentary expression of pain in his face, as if he shrank from the subject—at least

Digitized by Google

so I fancied—but it passed away in an instant, and he answered in his former enigmatical tone, in which neither Edith nor I were able to separate the jest from the earnest, the assumption from the reality: "Oh! yes, often! It is a very pretty thing to play with when the sun shines."

Edith looked at him with an expression of genuine horror; he laughed, and after a moment's pause she continued. "Well, then, we won't talk about yourself. Of course you must know yourself better than I do, and if you say that you are incapable of feeling anything, I am bound to believe you. But I will maintain that you have no right to judge other people by the same rule. You must look upon yourself as an exception, and when you want to understand others, you must take it for granted that they have minds and hearts unlike your own. Now, there is Frank, for instance—pray don't fancy that his friendship for you is like yours for him."

"Frank is a very good fellow," said Captain Everard, with the same provoking smile, looking towards his friend, who had withdrawn to the further end of the room to write a letter; "and I am so well satisfied with his friendship that I would not wish to look too closely into it."

"Do you mean to say that *his* affection is only a plaything for a sunshiny day?" exclaimed Edith, indignantly; "do you mean to say that if you were in trouble he would not make sacrifices in order to serve you?"

"I would never ask him," returned Everard.

"Why not? Would you be too proud to ask a service, even of a friend?"

"No," said he, "but I like to keep a few little snug illusions as long as I can; at any rate I wouldn't disperse them with my own hand. But it is a shame to talk to you in this manner. Your faith in your own illusions is so zealous that I would not disturb it for the world."

"You *could* not," cried she. "My illusions, as you call them, are *truth*, and that is my great comfort. It is not because I am young and a woman that I think in this manner—the older I grow, the more steadfastly I hope I shall believe in the reality of everything which you despise! I would rather die this moment than think as you do!"

He looked at her an instant with a half-amused, half-admiring expression, and then replied—"*Di chi mi fido, guardami Dio! Di chi non mi fido mi guarderò io!** You know the proverb, doubtless. Kinnaird, is n't it time for us to be moving?"

"I'll follow you," replied Frank, looking up; "I must finish this letter."

Captain Everard bowed and took his leave.

CHAPTER IV.

"Oh Frank!" cried Edith, throwing herself on the sofa beside her brother, "I don't like your friend at all!"

"Not like him! Now my dear Edith, that is so like a school-girl—making up your mind that you don't like a man, after two days' acquaintance!"

"I never could like him, if I were to know him for years—besides, I think one knows very well by the end of two days how far it is possible to like a person."

Her brother laughed.

"Now don't teaze me, Frank," she pursued; "I am not school-girlish; and really your friend's opinions are so very dreadful, that it would be impossible for me to like him."

"My dear child, he only talks in that manner for the sake of argument. A man always tries to provoke a girl when he wants to draw her out."

"But I do not like to be played with in that manner. Besides, I am quite sure he was in earnest in a great deal of what he said."

"What! in his misanthropy?" asked Frank. "Poor fellow! it is no wonder that he is a little soured; when you know his story, you will understand directly that it is almost impossible for him to take a cheerful view of life. His father died some four and twenty years ago, leaving a widow with three young children, of whom Philip, scarcely then eight years old, was the eldest. Mrs. Everard was a very attractive woman, and her children idolized her. I remember her well—there was about her that sort of undisguised warmth, nay, almost excitability of manner, which people are apt to consider a sign of deep feeling, and which, when it is accompanied by grace, fluency, and gentleness, makes a woman absolutely irresistible. But, after all, I distrust the sort of thing myself—there 's no substance in it. She was the kind of woman that would go into hysterics one hour because something reminded her of her husband, and be the life and queen of a gay circle the next."

"She must have been a hypocrite," said Edith, with the unhesitating decision of eighteen.

"No," replied I; "I have known characters of that stamp in the course of my life, and should say of them, with Byron, 'They are not false, but they are fickle.' There is a fascination in the freedom and nature with which such a woman displays the very feelings which, when real, are reserved and retiring—a fascination which perhaps at first would only be resisted by a mind of unusual refinement; but, as your brother says, 'there is no substance in it.' Shakspeare, who touches everything, has given us the model of such a character in his Lady Anne, 'inconstant, shallow, changing.' Those who quarrel with the picture as *unnatural*, or who would destroy its truth by explaining away either the genuineness of her tears over her husband's corpse, or the sincerity of the weakness with which she yields to the wooing of that very husband's murderer, mistake the intention of the portrait altogether. Its very nature consists in its contradictions, which, to the merely theoretical observer, make it appear unnatural—but pray, Mr. Kinnaird, go on with Mrs. Everard's history."

He resumed: "Philip was a boy of unusual talent, and excessively warm affections—you may look incredulous if you please, Edith, but I have all these particulars from the very highest authority. He positively worshipped his mother. He was sent to school early; and therefore it was not to be expected that, as he grew old enough to observe, the true shallowness of her character should be discovered by him. To him she was enthusiastically affectionate; welcoming him and parting from him with floods of tears, loading him with caresses, insisting on receiving a letter from him at least once a week while they were separated, and indulging him to the very uttermost when they were together. The family arrangements were rather peculiar. Mr. Everard was a poor man, and the property which he left behind him did not amount to more than four hundred a year; this he divided equally between the widow and the eldest son, leaving the sole guardianship of the boy in the hands of a friend of tried discretion, and recommending to both, in the most earnest and affectionate terms, the charge of the two younger children.

* "God protect me from the man I trust! I will protect myself from him whom I trust not!"

Digitized by Google

Philip was destined for the church; he was a remarkable boy, and, even from a very early age, fully comprehending the position of the family, he habituated himself to the practice of the strictest personal self-denial. His guardian, from whom I learned these circumstances, told me, that, during a vacation which the boy passed under his roof when not more than twelve years old, his economy was so strict as to attract attention. He was evidently living by system—he refused steadily all the petty luxuries of the table, and either had no pocket-money at all, or, if he had any, never spent it. Mr. Gray, who had no very high opinion of Mrs. Everard, began to suspect that the allowance which he made her for her son's use, was partly appropriated to other purposes—or else that the boy himself was naturally stingy—a thing almost inconceivable. So he called Philip into his study one morning, and questioned him, kindly but closely. The little fellow answered with the utmost simplicity, 'that he had lately read for the first time the letter which his father had left for him, and that, now that he understood exactly how they were all circumstanced, he was trying to accustom himself to live upon as little as possible, in order that there might be money saved to pay for the education of his brothers,' (twins, seven years younger than himself.) 'For you know,' he added, 'Mamma must of course have her two hundred a year to keep house with, and I must pay for Ralph and Harry's schooling.' Mr. Gray was touched, and promised his assistance in the education of the younger boys; but though Philip thanked him warmly, he appeared to consider the responsibility inalienably his own, and did not relax the strictness of his self-imposed rule. As he grew older, he showed the most passionate love of study, and his soul seemed to be entirely absorbed in the profession for which he was preparing himself. He went to college, and there his merit was great indeed, if it is to be tried by your rule, Miss Forde, and praised proportionately to the temptations which it had to withstand. I believe I may say, speaking plain and unvarnished truth, that he never allowed himself in the smallest expense that was not absolutely necessary—and you must know what that implies, when it describes the life of a youth during his first term at college. He had to contend not merely against the vulgar weapons of ridicule, which have ever found him proof, but against the more dangerous assaults of courtesy, kindness, and friendship. For he had all the qualities which make a man popular—person, manners, conversational power both grave and humorous, high spirits, and love of adventure. Moreover he was by nature peculiarly susceptible of the attractions of society; he never could do anything by halves—he liked in the morning to shut himself up in his rooms and read for six hours without intermission, and then to spend the rest of the day either in vehement bodily exercise, or complete relaxation and reckless merriment. Think what it must have been to a character of this stamp, to lead a life in which the stern monotony of self-denial and seclusion was unvaried by a single indulgence! yet I do believe that at this time he was happy—happier than he has ever been since, poor fellow! Every energy of his nature was engrossed and occupied by one object—he was living for a purpose worthy of his entire self-devotion, and the fulfilment of which that self-devotion was sure eventually to attain. 'Every day,' as he once said, on the only occasion on which I have heard him allude to his early trials—'every day was a battle—but then it was a battle which ended in victory.'"

"Oh!" cried Edith, whose expressive countenance had kindled into emotion as her brother proceeded with his story; "you are describing a most noble character! I never should have given him credit for such heroism. And why did he change? Why did not he go into orders after all!"

Frank laughed. "Everard would tell you," said he, "that you are as exaggerated in your praise as you were in your condemnation; and that it is true young lady philosophy to spring from one extreme to another."

"Well, never mind," returned Edith, impatiently; "I don't want to hear Captain Everard's sharp speeches by proxy; and I do want, very much indeed, to know what happened next."

"He came home for his first vacation," said Frank, "after spending the college term in the manner which I have described to you—came for repose, affection, family comfort—and found that his mother had been married the day before to her younger boys' French master; that she had quitted her home with this scoundrel, and deserted the two poor boys, not only leaving them entirely dependent on their elder brother, but actually leaving unpaid debts for him to discharge! and this without a word of preparation or of farewell; only a note, left for Everard, full of hollow expressions of affection for himself and his brothers, and appeals to him not to resent her having taken the only step which could procure her happiness for the remainder of her life."

"What a woman!" exclaimed I. Edith was speechless with horror. Frank continued his narration.

"It appears that she was infatuated by her passion for this man; and that, devoting herself to him with a weak idolatry, she became a passive tool in his hands, and abandoned her children's interest for his without compunction. His object, of course, was to obtain exclusive mastery of her little income; and with that view he induced her to conceal her intentions till the marriage was actually completed, and they were beyond the reach of remonstrance. He carried her to France; and it is only charitable to conclude that he keeps her in the state of subjection which she deserves, for she has never answered a single letter addressed to her, nor testified the smallest desire to know whether her children are dead or alive."

"Inconceivable heartlessness!" said Edith; "she *must* be acting under compulsion, and I hope she is thoroughly miserable."

"By this time," pursued her brother, "I suppose Everard has your full sympathies, and you have transferred your hatred for him to his mother. He behaved admirably. Whatever he may have felt, he betrayed it not for a moment; he at once abandoned all his prospects, accepted a commission which was offered to him by a friend of his late father, gave up the whole of his own income for the use of the younger children, and lived upon his pay. He has never since mentioned his mother's name. Doubtless there is a stern and bitter feeling at his heart, all the stronger for being so resolutely suppressed. But now, Edith, is it wonderful that his nature should be a little soured, and his faith in his fellow-creatures a little shaken? For eighteen years of his life he believed his mother to be the very perfection of unselfish tenderness, and would have held it sacrilege to doubt her. Can such a

Digitized by Google

feeling as this be suddenly destroyed without the whole man undergoing a painful and irrevocable change?"

"And his hopes blighted, and his thoughts and course of life forced to a new and unnatural bent, and the source and spring of all affection in him dried up, as if by burning!—no, indeed! the wonder is that he did not become a misanthrope or a madman."

"I need not have feared your want of sympathy," said Kinnaird, smiling; "as to the rest, you know what a friend Everard has been to me; I owe it to him that I am not an utter scapegrace—most probably that I am alive at all; for you know how his steady friendship extricated me from the worst scrape I ever was in—the duel with that fellow Vincent. Without (I hope) being really ill-disposed, I was open to every temptation, ready for every mischief that came in my way; but for him I believe I should have become a confirmed gambler. I shall be grateful to him as long as I live, as I ought to be; and some day or other perhaps he will do more justice to my feelings towards him than I am afraid he does just now; though, mark you, I do not take all the nonsense he has been talking to you for his earnest opinion."

"Oh! I shall understand him now!" replied Edith; "his bitterness of tone is not only natural, but inevitable. How I hope," she added thoughtfully, "that he may be rewarded by happiness after all!"

The conversation dropped here, for Frank departed to put his letters into the post, and Edith fell into so deep a reverie that I did not like to disturb her.

The week which was to be endured (the expression is scarcely too strong, when applied to the feelings of a girl of eighteen awaiting her first ball) ere the important Thursday should arrive, passed away much as might have been anticipated. Frank and Captain Everard were perpetually with us; but, though Edith had become charity itself towards the latter, in consequence of the interest she felt in his history, I confess that my own feelings with regard to him were by no means softened. His agreeableness and conversational powers were undeniable; but the offensiveness of his opinions seemed rather to increase than to diminish, while his total indifference to Edith's charms absolutely annoyed me. He still maintained that tone of banter which rendered it difficult to separate jest from earnest in what he said, and well nigh impossible to discover how far the sentiments which he expressed were genuine, and how far they were merely assumed for the sake of drawing out his fair antagonist, whose enthusiasm seemed to increase in proportion to his levity, as though she were seriously bent on converting him to happier views. My dislike to him I think he perceived, but treated it with that contemptuous indifference which seems natural to the heart of man when the phenomenon yclept old maid is under consideration. With Lord Vaughan, on the other hand, I was every day more pleased; I say "every day," for he was literally a daily visitor. A message from his mother, a book to borrow or lend, a song to introduce and sentimentalize over, (for he had all that shallow gentleman-like enthusiasm about music which consists in an uncriticizing admiration of a pretty song from the lips of a pretty girl;) some pretext or other was sure to bring him up the garden-sweep, a little before the witching hour of luncheon; and then it was not his fault if arrangements were not made which ensured that the rest of the morning, if not the whole of the day, should be passed in the society of the beautiful heiress. All that I saw of him I liked. He was unaffected, lively, and good-humored; and, if not very refined in his tastes or intellectual in his pursuits, I was disposed to think that a sensible wife might make just what she pleased of him. That Edith was his superior in mental power there could be little doubt; but I persuaded myself that this was of no consequence—forgetting, or overlooking, the fact, that he was destitute of that ascendancy of character which alone can compensate for the want of intellectual superiority; and that an union in which the wife moulds the husband, and not the husband the wife, is one with which love, properly so called, can have nothing whatever to do.

CHAPTER V.

THURSDAY evening came, and I was not disappointed in Edith's appearance. The splendor of her beauty produced a sensation of which it was scarcely possible that she should be unconscious, and to which perhaps the deep blush which burned on her cheeks and lent double radiancy to her eyes, might be attributed. Her brother was in ecstasies, and watched the progress of Lord Vaughan's attentions to her with manifest satisfaction. I was in the boudoir which had been metamorphosed into a conservatory for the evening, making some *very* small talk about the flowers for Captain Everard—among whose sins of omission, that of never dancing may be reckoned—when Kinnaird approached us. He came evidently to be complimented on his sister's appearance; but he was in too great a hurry to wait for us to begin the subject, so he started with a leading question, cautiously suggestive.

"Edith looks well to-night, does she not?" said he.

I answered, as I felt, very warmly; but his appealing eye passed to Captain Everard, who, as though it had never before occurred to him to inquire whether Miss Kinnaird were ugly or beautiful, made a step forward, so as to command a view of the dancing-room, and, after a pause of provokingly quiet consideration, replied—

"Yes; Miss Kinnaird is certainly very handsome."

"You don't admire that style," said Frank, scarcely able to conceal his chagrin.

"Indeed I do," returned Everard, "I admire all styles."

"The most unsatisfactory answer you could possibly have made," cried I.

"I am unfortunate," observed he, with a half smile. "But here comes a gentleman, whose open raptures are likely to give more satisfaction than my quiet approval. Unhappily you know—or perhaps happily for myself—I am not made of inflammable materials."

As he spoke, the polka broke up, and Lord Vaughan sauntered into the conservatory with Edith leaning on his arm. They were in animated conversation, and came direct to us, the lady appealing to me with a mixture of playfulness and earnest to induce her partner to restore some flowers which he had stolen from her bouquet, while he on his part was manifestly determined to retain them. I could not make out whether Miss Kinnaird was pleased on annoyed at her companion's broadly-expressed devotion, but she wound up her oration by suddenly turning to Captain Everard, (who had taken no part in the discussion, though Frank and

Digitized by Google

I had interested ourselves in it as in duty bound,) and saying—

"I am only asking for justice. Why do you look so satirical?"

He roused himself to answer the challenge. "If I did look satirical," said he, "I suppose it was because I was amused at the modesty of your request. You *only* asked for—justice!"

"Well," she replied, "and could I ask for less?"

"Could you hope for more?" answered he. "Nay, could even your sanguine imagination hope for so much? I won't say that justice is a rare phenomenon in this world, because that would imply that it is occasionally to be met with."

"And do you mean to say," cried Lord Vaughan, in utter surprise, "that it is *never* to be met with? Really this is a most extraordinary idea."

"It is not in reality, so unwelcome as it seems at first sight," rejoined Everard, quietly. "Justice—which is all Miss Kinnaird asks for or needs," he added, with a bow, as if the necessity of the compliment had suddenly occurred to him, "would be to many people an object of fear rather than hope."

"And you think no one is ever really just to another," said Edith, thoughtfully, as though she had been pondering his words.

"I do indeed," he replied, "a man feels too much to be really just—a woman, too little."

"Your paradox is for once true," cried Edith with spirit. "A man does always feel his own wrongs very keenly, while a woman is apt to overlook hers, or ready to forgive them."

"Your ingenuity deserves the compliment of submission," answered he, "so I resign my arms."

"You are wise every way," rejoined Edith more gravely than was her wont, "for whether you win or lose, the contest is scarcely suited to a ball-room. So I will leave you to your misanthropy, and try whether it be possible to force a passage into the ice-room."

Lord Vaughan was only too happy to comply with the suggestion contained in her last words, and they moved away. Miss Kinnaird's praise of the ball, on the following morning, was rather more languid than I had expected, but I suppose this might fairly be attributed to fatigue.

* * * * * * *

Two months have passed since I wrote the last sentence, and I resume my pen to recount the occurrences of the closing week of the period, which has been anything but uneventful. Kinnaird entered the drawing-room where I was at work, and Captain Everard reading in a corner. His countenance was expressive of business, and that not of an agreeable kind; and he addressed me immediately, either overlooking or disregarding his friend's presence.

"I have been walking with Edith, Miss Forde. Do you know what has happened?"

"I have not seen her since breakfast," cried I. "What is the matter?"

"Why nothing to break one's heart about, certainly," he replied, "but I own I am a good deal disappointed. Lord Vaughan has offered to her."

"And does that disappoint you?" exclaimed I. "I have only been surprised that it has not happened sooner. May I go and wish her joy?"

"As long as you don't wish *him* joy," said Kinnaird, "it matters very little what you say to her. She has refused him."

I could only repeat his words, in profound amazement.

"Yes," he reiterated, "she has refused him point blank. I can't quite make her out about it; but one thing is very clear, that she is not to be shaken. The marriage would have been so agreeable to me in every way, that I own I had rather set my heart upon it; but her determination was so unhesitating that I could scarcely attempt to dispute it; and you know, to speak common sense, and put romance out of the question, Edith is so young and so pretty, that she may very well afford to wait a year or two before she makes her choice."

There was no questioning the truth of this assertion; still he was evidently disappointed, and I could not but sympathize with his feelings. I too had been indulging in anticipations and hopes, and it was not agreeable to have them annihilated when I least expected it. I had fancied that the intimacy between Edith and her lover was rapidly assuming a tender character on both sides; indeed, the idea that the offer had been already made and accepted, but was for some reason concealed, had more than once occurred to me. I could not understand it, and I did not affect to do so.

"Edith's manner has entirely misled me," said I, "and I fear she has been unintentionally misleading Lord Vaughan. I hope they did not part in bitterness."

"I hope not," was his reply. "She has not a particle of the coquette in her composition, and I conclude that the encouragement which she has unwittingly given arose from her consciousness of her own indifference, and her unconsciousness of any warmer feeling in him. Were she two years older I should fancy that her affections were pre-engaged—but, as it is, that is quite impossible—so it is altogether a mystery."

Nothing more entirely amazes and bewilders a man than the discovery that a woman who is disengaged has refused an unobjectionable offer. It is the greatest trial of faith to which he can be subjected; for it jars with all his preconceived ideas, and stands before him as a fact for which there is actually no place in his system, and in order to account for which the system itself must undergo a radical change. Few, however, are candid enough for this; such occurrences generally form a fresh illustration of the German aphorism, "so much the worse for the facts," and receive a shape or a color from the mind of the observer which so alters them as to enable him to explain them satisfactorily to himself.

But to return. My short conversation with Captain Kinnaird was succeeded by that grave and awkward silence which commonly occurs between two persons who have the same unpleasing theme to occupy their thoughts, and do not in the least know what to say to each other about it. This was interrupted by Captain Everard, whom we had both forgotten, but who now came forward, and addressed his friend somewhat hurriedly,—

"Kinnaird, have you any commands for London? I am sorry to say I 'm obliged to be off on very short notice."

"Obliged to be off!" cried Frank, in astonishment. "Why Everard, are you mad!"

"I don't see any proof of insanity in it," returned Everard, coloring immoderately; "I have letters which—in short, it don't admit of delay—and go I must."

"I hope you have not received bad news, Captain Everard?" said I, civilly.

Digitized by Google

"No, I thank you," rejoined he—"only urgent business."

"But Everard!" cried Kinnaird, who was still gazing at him in silent wonder.

"My dear fellow, there 's no use in talking about it. I am sorry to be obliged to close my visit so abruptly; but I do assure you—"

"This won't do," interrupted Frank, seizing him by the arm; "scarcely an hour ago you were talking of your plans here for the next six weeks; and, as for your being summoned away by a letter, I wonder you are not ashamed to offer me such an excuse. You know very well there has been no post since the morning. Everard, what does this mean? It is not friendly—it is not fair. Why do you change color so? What has happened? Has anything offended you? Have you quarrelled with anybody?"

Captain Everard was absolutely silent, and seemed to be overpowered by an embarrassment as unaccountable as it was unusual. After a moment's pause, Kinnaird proceeded with increased energy.

"I *must* have an explanation. You have altered your plans since I came into this room. It is not possible that Edith's refusal of Lord Vaughan can have affected *you*—Everard? Is it possible that Edith—"

He came to a pause here, in the series of breathless and bewildered questions which he had poured forth so rapidly that he scarcely seemed to comprehend them himself. Captain Everard, releasing himself from his grasp, answered in a low, quick voice, as he moved away—

"It would have been more generous, Frank, to leave the subject untouched. I expected that your sister's engagement to Lord Vaughan would have been declared: now that I find she has refused him, I feel that I had better go. Let us say no more about it."

"Do you mean to tell me that you love Edith?" cried Frank, following him.

"I have been in constant intercourse with her for more than two months; is not that answer enough?" returned his friend.

"But it is unnecessary for you to speak," he added, proudly, "you cannot be more fully conscious than I am of the impossibility—"

"My dearest Philip!" exclaimed Kinnaird, shaking him by both hands, and well nigh embracing him in his transport; "this is what I wished and hoped; but you were so impracticably cold, that I was forced to give up the idea. Edith and you were made for each other, and I want nothing but your union to make me the happiest fellow alive. What absurd scruple has kept you silent? Don't stare at me, man, as if your senses had taken leave of you! From the first moment you became my friend, my pet vision has been the thought of bringing you and my sister together, if only she should grow up worthy of you; and I rather think you won't deny that the condition is fulfilled. Where is Edith?"

"Frank! Frank!" cried Everard, vainly attempting to detain him as he darted from the room—

"For Heaven's sake, Captain Kinnaird, consider!"—exclaimed I, finding my tongue at last, and running after him in an absolute fever of alarm. But it availed not; he had seen Edith on the lawn, and had joined her before I got further than the steps of the drawing-room window. I saw him put his arm round her waist, and lead her away. Never was a hapless chaperon more utterly confounded. I returned slowly into the apartment, where I found Everard sitting, his face hidden in his hands—

"And this," murmured he, as I approached—speaking, however, to himself, not to me—"and this is the man I thought shallow-hearted—this the world which—oh, folly and presumption!"

The broken sentences were most expressive, and I stood contemplating him in silence, and involuntarily and unconsciously giving him all my sympathy, and losing sight altogether of propriety, policy, wisdom, my own outraged dignity, and——Owen, who having entered the room unperceived, speedily challenged my attention by saying—

"Well, Peggy! have you not a word to say to me?"

If a thunderbolt had fallen at my feet—(to use an expression not uncommon in modern novels, the applicability of which I will not pause to discuss)—if a thunderbolt had fallen at my feet, I could not have experienced greater terror or amazement. Scarcely retaining the command of my senses, I turned to him, exclaiming—

"Gracious Heavens! Owen! what has brought you here?"

"An affectionate reception, truly," returned he, apparently a little amazed—"I am sorry that my sudden apparition should disturb the even tenor of your housekeeping. I told you I would run down for a week or two, if I could; and yesterday I got a put off from Livingston, to whom I was going for the next fortnight; so, not conceiving it necessary to stand on much ceremony with you, I put myself into the mail last night—and here I am. One would almost fancy," added he, lowering his voice, with an expression of dry humor, "that I had interrupted a very interesting tête-à-tête."

"Of course I am delighted to see you," said I, recovering as well as I could from my bewilderment, and wishing him in the Queen's Bench, "only I was so excessively surprised. Pray allow me to introduce—Captain Everard—Mr. Owen Forde."

Captain Everard had risen from his seat, as soon as he became aware of the entrance of a stranger; he gave Owen bow for bow with due courtesy, but, apparently quite unable to compel himself to the ordinary civilities consequent on an introduction, murmured something about an imaginary appointment, and walked straight out of the room.

"Pray, who may Captain Everard be?" inquired Owen, "and, pray, where is my fair ward?"

"Where, indeed?" thought I. What a pair of questions! I grew desperate, yet was my position so ludicrous that I could almost have laughed. I could not tell Owen what had happened, or rather what was happening, for many reasons—two of which were that I understood it very imperfectly myself, and that I did not know whether Edith would accept or refuse Everard. In the latter case it would certainly be the best policy to say nothing whatever about it. Yet in my heart I felt almost certain that she would accept him—a sudden instinct seemed to have come upon me, and I marvelled at my own previous blindness. Had I answered Owen's two questions with plain sincerity, I might have said—"Who is Captain Everard?—A penniless soldier! Where is your ward?—In the garden accepting him!" I believe Owen would have screamed! And yet what was I to do? All this while it might be, and probably was, taking place, and nothing could be done to prevent it. Hurriedly reviewing the circumstances of all parties, and trying to conceal my perturbation from Owen's sur-

Digitized by Google

prised and inquiring eye, I resolved to get rid of him as quickly as possible, and to rush into the garden and obtain an interview with Miss Kinnaird, if possible, before she should see Captain Everard. So I answered my brother as indifferently as I could.

"He is a friend of Captain Kinnaird's, and is now staying with him. But, my dear Owen," ringing the bell, "you must be tired to death, and chilled to an icicle. Light a fire directly in the bay-windowed bedroom," I continued, addressing the servant who obeyed my summons, "get some hot water, and then let luncheon be ready for Mr. Forde. While you are making yourself comfortable, Owen, I will find Edith, and prepare her for the formidable introduction. I think she is walking in the garden."

"With Lord Vaughan, I hope," observed Owen, complacently.

Oh, with what compunction did I call to mind the triumphant letter which I had dispatched to Owen only a week ago, containing a rose-colored description of Lord Vaughan and his attentions! "I don't know," was my insincere rejoinder, and, as my eyes involuntarily wandered to the window, I fancied I could detect Edith's form in the shrubbery, on the further side of the lawn. Was she alone?

"I hope," continued Owen, lowering his voice to a confidential tone, "I hope, my dear Peggy, *that* affair is progressing as favorably as when you last wrote. Few things could give me more unmixed satisfaction. I think it quite a case in which a very short engagement might be permitted, and I should not wonder if, instead of troubling Lady Frances with the chaperonage of an unfledged débutante, I shall have to request her to undertake the presentation of a bride—a much pleasanter office, I take it. I shall win the lover's heart by my readiness to shorten his probation, and, between ourselves, I don't know any house that would afford me such good head quarters as his, during my London visit. The experienced Lady Frances herself could n't have proved a more judicious chaperon than you, my unsophisticated sister. *Je vous en fais mes complimens.* After all, you women have a prodigious advantage over us in that respect—your wit is inborn, and you don't require an apprenticeship to society to teach you how to use it. But what are you stretching your neck, and straining your eyes, at the window for? my dear Peggy, I do believe you have not heard a word I have been saying. What *is* the matter?"

No! Miss Kinnaird was *not* alone—and her companion was at least a head taller than Frank! Could I be expected to hear what Owen was saying? He reiterated his query—"What on earth is the matter?"

"Oh nothing," cried I, "I was merely looking for Edith. I perfectly agree with you—nothing can be more judicious."

"Than what?" demanded Owen.

"I really must go for Edith," exclaimed I. "Owen, your luncheon will be ready directly." And out of the room I ran, fairly unable to endure it any longer. As I closed the door, I heard Owen's natural ejaculation, "Very unaccountable, really!"

Almost on the threshold I met Captain Kinnaird, who, taking both my hands, thus greeted me: "Congratulate me, my dear Miss Forde! I 'm afraid I did n't manage the matter quite so delicately as I ought to have done—or as it would have been managed, had I left it in your hands—but all 's well that ends well, you know, and the end of this is perfect. They are engaged hand and heart! I 've just been guilty of the cruelty, however, of breaking up their tête-à-tête, for Edith was a good deal overcome—in fact, altogether—I agitated her excessively—so now I have sent her to her own room to be quiet, and I rather think it will be best if you will be so kind as to go to her."

"But, do you know what you have done, Captain Kinnaird?" answered I; "and what will be the end of it? I have not an idea that Mr. Forde will consent to so unequal a marriage."

"Mr. Forde!"

"Yes; my brother; your sister's guardian."

"I 'll be hanged if I ever thought of him for one single moment!" cried the young man, impatiently stamping his foot.

"I dare say not," observed I; "but I assure you he is not a person to be trifled with, and I do not see the slightest hope of obtaining his consent. I am afraid you have involved your sister's happiness very rashly. What is more, very unfortunately, my brother has arrived unexpectedly, and is this moment in the drawing-room!"

He stared in my face in blank discomfiture. I found myself fast losing the tone of rational remonstrance in which I had felt bound to begin the conversation. "I am excessively sorry," said I, answering his looks, for he did not speak a word; "but I really don't see what is to be done. I will go to Edith, and try to prepare her for an interview with her guardian. But I don't see that there is any use in deferring the evil hour; and, if I were you, I would go at once to Mr. Forde, and open the subject."

"Could n't it be concealed altogether?" suggested he. "She will be of age in three years."

"I cannot countenance any such arrangement," returned I, with unwonted resolution. "Just reflect for a moment on the duplicity which it would involve! your sister would be compelled to imply, if not to utter, a falsehood, ten times a day. The more fondly you love her, the more anxiously ought you to avoid placing her in such a position."

"You are right!" cried he, "and I spoke inconsiderately, as I believe I generally do. Thank you for your advice. I *will* go to Mr. Forde!" and, ever as rapid in his movements as in his ideas, before I had time to answer, he was in the drawing-room.

I stood still for a moment to collect my thoughts, and then went up stairs to Edith. I found her, as I had expected, in a state of great agitation. She hid her face on my shoulder, wept, and spoke in broken sentences of her happiness and her astonishment. It was presumption in her, she said—with the sweet exaggeration of a woman's love, truer than truth—even to think of one so immeasurably her superior; but her devotion must make up for her defects. At first I could do nothing but soothe and sympathize; gradually I tried to bring her to the contemplation of possible difficulties; and, at last, with some trepidation, I broke to her the fact of Owen's arrival, and certain disapprobation. It did not produce the effect which I had anticipated. She could scarcely be brought to entertain the idea of Owen as a person to be considered in the matter at all; seemed to regard his consent or refusal with profound indifference; and even, as far as I could gather, appeared to think that three, five, or ten years of delay would interfere but little with her happiness. She was absorbed by one feeling—filled with one idea—namely, that she was beloved; and everything else seemed unreal to her. She heard and understood the words, but they made

Digitized by Google

no impression; there was not room for them in her heart. I verily believe that, had she been told at that moment that she was never to see Everard again, she would scarcely have apprehended it as a misfortune. The consciousness of his love would have seemed to her enough for a lifetime. This, I knew, could not last; but, while it was thus with her, arguments were vain; so, having acquitted my conscience, by informing her of the truth, I did not attempt to stem the tide of her feelings, and had very nearly become as romantic as herself, when a tap at the door recalled me to sublunary affairs.

"Come in!"

"If you please, ma'am, you are wanted in the drawing-room."

The spell was broken; and I went down like a criminal to execution.

CHAPTER VI.

I FOUND Owen, as I expected, in great wrath. He was walking rapidly up and down the room, while Kinnaird, whose levity was unconquerable, stood on the hearth-rug, coolly regarding him, and looking ready to laugh—an inclination which good breeding scarcely restrained. My brother stopped in his angry walk as I entered, and, coming close up to me, said, with great vehemence, "Peggy, this is the most incredible piece of absurdity that I ever met with in my life. Of course, it cannot be permitted to go on for a moment, and I only wonder that you—but you have evidently been duped in the matter."

I saw Frank's color rise at the offensive word, and hastened to interpose. "I have been *mistaken*, certainly," I said, "and I am very sorry that I have misled you unintentionally." Here I stopped, for I was afraid to attack his opinions, and unwilling to acquiesce in them, so I resolved to stand on the defensive.

"Misled me!" replied my indignant brother. "Yes—but I have my own folly to thank for it, in not putting Miss Kinnaird under the charge of a person who knew something of the world—Mrs. Alvanley for instance"—(Oh, could Mrs. Alvanley have heard him!)—"Yet, even allowing you the simplicity of a pinafored girl of thirteen, I can't understand how you should have so completely lost your wits. The insanity of allowing this Captain Everard's perpetual visits is to me perfectly inexplicable.

"*This* Captain Everard," remarked Kinnaird, "is one of the most distinguished officers in the service—a man as superior to Lord Vaughan, in mind and manners, as Lord Vaughan is to a chimney-sweep—and, moreover, my most intimate friend."

"So be it," returned Owen, more calmly, but with intense obstinacy of tone, "nevertheless, his pretensions to the hand of Miss Kinnaird are simply ludicrous, and I do not intend that he shall have the opportunity of urging them again. Perhaps you will have the goodness to notify this to him."

"No, Mr. Forde," retorted Frank, "I must request you to be the bearer of your own messages—I cannot undertake the office."

"My dear Frank," said I, putting my hand on his arm, "it is not by irritating my brother that we have any hope of changing his resolution. You are naturally excited; now, do go away, and leave me to do the best I can with him. Go to Edith," added I in a whisper, urging him gently towards the door, "I think she ought to hear the truth at once."

He seemed, at first, disposed to resist my suggestion—but at that moment a step was heard in the hall, and with a half-laugh and a significant look to me, he quitted the room, leaving me with the consolatory impression that he had gone out to join his friend, and, not improbably, to conduct him to Edith!

By this time Owen had quite recovered his coolness, which, indeed, rarely forsook him, and turning to me he said, with a deliberation which left no room for hope, "There is no use in discussing the subject. The young lady will, I dare say, shed a few natural tears, and pout a little, as in duty bound—but in a fortnight she will be ready for another lover, and by the year's end she will congratulate herself on having some one to act for her who has the good luck to possess a little common sense. Only let this be distinctly understood, that I allow no interview, no engagement, no correspondence. I won't have an under-current of mystery to keep up sentimental nonsense in a silly girl's brain. Let it all be at an end, and, if she behaves well, I promise to say nothing to her about it. Tell her this, Peggy, and now let me get my luncheon."

"Owen, you are positively cruel. I do assure you this is no new girlish fancy that will pass away. It is unfortunate, I admit, but she is really and thoroughly attached to him."

My brother began to laugh. "I admire the real and thorough attachment of a girl of eighteen," said he. "A pack of nonsense! I beg your pardon, Peggy, but I certainly never made a greater mistake than in selecting you for a duenna—your manner of viewing things is so inimitably youthful. Take her to choose a new bonnet, or talk to her about her court-dress for the spring."

The tone in which he spoke was inexpressibly provoking, and I felt my temper beginning to give way. "As you say," I replied, "it is useless to discuss the subject—our views are so utterly opposite, that each speaks to the other as if in a foreign language. I consider you at least as much in the wrong as you consider me. Only, if you fancy it will be an easy task to induce Edith to give up her engagement, I can tell you you are completely mistaken."

"You are angry," he answered, "yet you can scarcely be surprised that I don't feel any very profound confidence in your judgment just at present. I know your intentions are the best in the world—but I can't forget that it is scarcely a week since you wrote me word that Miss Kinnaird was in a fair way to become Lady Vaughan. My dear Peggy, if you will walk through the world with your eyes shut, and resist every effort to open them, you must at least suffer yourself to be led by the hand."

I bit my lips and was silent, and Owen withdrew to his bedroom. I went slowly up stairs to Edith's boudoir, where, as I had anticipated, I found both Kinnaird and Everard. Edith herself was sitting on the sofa, her face bowed upon her hands, and her tears falling fast through the clasped fingers. Captain Everard addressed me at once:

"Miss Forde, before I go—and I feel that I must not remain—I am anxious that you should do me justice. Till this morning I was not aware of Mr. Forde's existence, much less of Edith's"—(he pronounced the word with a lingering hesitation of tone very unusual with him, and a most eloquent glance at the drooping figure on the sofa)—"much less of Edith's dependence on his will. I imagined that Frank and yourself were her sole guardians, and you know that, even when I thus thought, I was not guilty of the presumption of supposing myself an acceptable suitor."

Digitized by Google

"No, no—not presumption—don't use the word!" murmured Edith.

He looked at her for a moment in silence, and then proceeded, though in a less steady tone of voice, "I am as conscious as Mr. Forde himself can be, that a poor man, and a man of no family, is, as the world judges, without a right—"

But here Edith interrupted him. Suddenly clasping his hand between her own, and lifting her beautiful face, all burning with blushes and suffused with tears, she exclaimed, "Oh, hollow nonsense! it is *yourself* that I love. One unset diamond is more valuable than a tiara of glittering paste! What could family or fortune have to do with you, except to receive honor from you?"

Recovering himself with an effort, and still keeping Edith's hand in his, Everard continued in a low restrained voice, the calmness of which betrayed the intensity of the agitation which he was repressing, "I should despise myself forever were I capable of taking advantage of these feelings to involve her in a clandestine engagement; at her age—under her circumstances—it were unmanly and dishonorable. No! I must go—for three years we part, and she is as free as if she had never known me."

"*She* is free!" repeated Edith. "Ah! say it *of* me if you will; but you do not dare say it *to* me. You cannot mock me by telling me that I am free, at the very moment when you are riveting my chains. But Oh! such a happy prisoner!" she added, relapsing into tears, and speaking in a broken, faltering voice; "we have not time for all this conventionalism—this *acting*—Oh! speak *really* to me! —this once more—this last time—speak as you are, and as you feel!"

His stoicism was fairly conquered. "My *own* Edith!" said he, in a voice tender as a mother's to her first-born—reverent as a devotee's to his saint —"I will not wound you any more by false phrases. It is true; you are my own; and were we to part for ten years, instead of three, I should esteem it sin to suffer one doubt of you to trouble my peace. My faith in you comes next to my faith in God; God grant it be not the stronger of the two! Bear these three years, for my sake; knowing that I am with you the whole time, though the wide world be between us, and that, when we meet, we shall meet as though we had never parted!"

She subdued her emotion to listen to him; raising her head, and holding her breath, as though she feared to lose a word. What evil spirit brought to my mind at such a moment her vain and girlish love of general admiration and attention, and suggested to me that she would fail in the refined and impassioned constancy which he demanded of her?

"And, remember this, my beloved," he continued more hurriedly, "that I go from you a changed man, and that the change is your work. My misanthropy is gone from me. I feel that I have sinned against the world, and the race to which I belong. I feel and confess the folly and self-sufficiency of my distrust of others. Even at this moment, this thought makes me happy; for my faith and love are restored—or rather created anew. Frank," wringing his hand, "I have wronged you; forgive me; I know you now—ay, and I know myself too. Edith—but it is enough! God bless you!"

Silently returning my silent pressure of the hand, he hurried from the room, and the low sobs of Edith were the only sounds which disturbed the stillness.

* * * * *

And so ends the history of the first period of my acquaintance with Edith Kinnaird. A nervous fever was the natural result of that day of agitation; but it was neither long nor severe; and Owen classed it with the hysterics and fainting-fits which he believed that all young ladies were capable of summoning to their assistance at pleasure. When I resigned her to the charge of Lady Frances Moore, she had recovered her health, and, in some measure, her spirits; for she was of an elastic and energetic nature, and was now possessed by the one sole purpose of cherishing secretly the recollection of her lover, and endeavoring to employ the three years of separation in rendering herself more worthy of him. I knew how soon this enthusiasm would flag; how wearily the slow hours would struggle onward; but in very pity I would not disturb it. Like the eagerness of a young horse at the foot of a long, steep ascent, though transient, it was real, and would carry her forward unconsciously over a portion of the way. But the toil must begin; and, alas! how would she bear it?

With her tacit engagement Owen could not interfere—about the state of her feelings he did not trouble himself; and the next thing I heard was that she had been presented at court in white satin and diamonds, and all London was raving of her matchless beauty.

From the National Era.

THE ILLS OF LIFE.

BY MISS PHŒBE CAREY.

How oft, when pursued by evils,
We falter and faint by the way,
But are fearless when, o'ertaken,
We pause, and turn at bay.

When storms in the distance have gathered,
I have trembled their wrath to meet,
Yet stood firm when the arrowy lightning
Has fallen at my feet.

My soul in the shadows of twilight
Has groaned beneath its load,
And felt at the solemn midnight
Secure in the hand of God.

I have been with friends who were cherished
All earthly things above,
Till I deemed the death-pangs lighter
Than the pangs of parting love.

Yet with one fearful struggle,
When at last the dread blow fell,
I have kept my heart from breaking,
And calmly said, farewell!

I have looked at the grave, and shuddered
For my kindred treading near,
And when their feet had entered,
My soul forgot its fear.

Our ills are not so many
Nor so hard to bear below,
But our suffering in dread of the future
Is more than our present woe.

We see with our vision imperfect
Such causes of doubt and fear—
Some yet that are far in the distance,
And some that may never be near—

When, if we would trust in His wisdom,
Whose purpose we may not see,
We would find, whatever our trials,
As our day our strength shall be.

FEMALE FANATICISM IN SCOTLAND.

MESDAMES BUCHAN AND BOUVIGNON.

The Scotch are not reckoned a fanatical people, nor easily led away by the seductions of empirics and impostors. In spiritual matters, they are strongly prejudiced in favor of their own creed, and their Presbyterian form of church government; and of this tendency of their *perfervidum ingenium*, they have given the world abundant proofs, in many a bloody campaign and battle-field. Often have they drawn the sword, and marched under "the blue banner," in defence of their national worship. To that they have adhered with an unflinching constancy of attachment—with a determined resistance to alteration, or infringement from any quarter—that has scarcely been surpassed in any other country in Christendom. For the covenant and confession of faith, their ancestors were content to suffer torture and imprisonment, exile and martyrdom. On the front of their ecclesiastical standards, they seem to have inscribed the prickly motto of their emblematic thistle, "*Nemo me impune lacesset*"—for, whenever kings and nobles ventured to bring their prerogatives in collision with the kirk, they found cause in the end, as the two Charleses and the two Jameses did, to regret their temerity. Presbyterianism has always been viewed as the *palladium* of the kingdom—the symbol of the nation's independence—as much as the old patriarchal stone on which their Malcolms and Alexanders were crowned, and the loss of which was accompanied with the most direful prognostications of slavery and ruin. Nothing in the whole history of Scotland is more obvious than this indomitable spirit of adherence to the principles of John Knox, and the platform of church discipline which he erected. And it survives at the present day; for it is a remarkable fact, that amidst all the sectarian eruptions and secessions that have taken place down to the exode of 1843, the constant complaint of the dissentient parties has been, that the church was not holding faithfully by her original standards, was falling away from her genuine Presbyterian constitution, and, therefore, that they, the seceders, and not the establishment, were the true kirk.

But though we have ample testimonies to the zeal and veneration with which the Scotch have clung to their national faith, to their patient endurance in suffering for it, and their fiery controversies in maintaining their purity, we meet with rare instances in which they have allowed their zeal for religion to degenerate into fanaticism. Credulity, except in money-making speculations, like the Darien expedition, or the South Sea scheme, is not one of their national characteristics. To superstition they are not addicted. Saints, and holidays, and relics, and pilgrimages, (unless to London, in quest of situations,) and miracles, and festivals, have long been swept from their calendar. Impulses, illuminations, visions, gifts of the spirit, and other celestial pretensions, that have misled weak minds, and kept them in thraldom to designing hypocrites, have never been able to maintain a local habitation and a name north of the Tweed. To the yoke of clerical leaders they have always shown a willingness to bend, and to an extent scarcely reconcilable with the innate stubborn independence of their character. But then it was essential that these leaders should hoist Presbyterian colors, and draw the sword of eloquence against some reputed heresy or grievance, such as lay-patronage, secular domination, prelacy, Antinomianism, Bouvignonism, aggressions of the civil magistrate, &c., all of which have, in turn, been cast into the theological arena, to the imminent jeopardy of a new age of conventicles, and a second Bothwelbrig.

With all their religious enthusiasm, however, it is curious that the Scotch have seldom yielded to the artifices of impostors, or been duped by those impious blasphemies and extravagancies, under the mask of sanctity, that have often taken root and flourished in the neighboring kingdoms, and on the continent. Had Naylor and his Quakers in Cromwell's time, or the Fifth Monarchy Men, or the Brethren and Sisters of the Free Spirit, or the Munster Anabaptists, or Jacob Behmen the Mystic, or John Tetzel himself, with his wallet of indulgencies, ventured to pitch their tents by the Forth or the Tay, we question whether they would have gathered a single congregation. Peter the Hermit would have excited no crusade, unless against the Romish cathedrals, or the king's authority, and then he must have sworn to the covenant, and professed himself a disciple of John Knox and the "trewe kirke."

Strange as it may appear, the only fanatical pretenders that have acquired any celebrity in Scotland, were women; and, more surprising still, their doctrines were of the most visionary and extravagant character, outraging common sense and moral decency, surpassing in absurdity anything ever offered to the plainest understanding.

Of these two impostors in petticoats, the one, Mrs. Buchan, was a native—a person of dissolute habits and humble parentage, almost illiterate, but naturally clever, artful, and enthusiastic. The other, Madame Bouvignon, was a foreigner, a Fleming by birth, who claimed to be divinely inspired, set apart by the special interposition of Heaven to revive the true spirit of Christianity, which had been extinguished amidst the theological wranglings and animosities of the age. Her opinions, however, were imported into Scotland, and spread particularly in the shires of Perth, Aberdeen, Banff, Ross, and other parts of the Highlands, so as to call down the anathemas of the church and the general assembly, which passed various acts, between 1700 and 1710, for suppressing her writings, which were denounced as containing "a mass of dangerous, impious, blasphemous, and damnable errors."

Nothing could be more unlike than the personal character of these two fanatics, although in religious pretensions they bore a strong resemblance to each other. The Scotchwoman was gross, conceited and carnal; her followers consisting, with one or two exceptions, of ignorant people, chiefly of the working classes. Antonia Bouvignon, was lively, learned, and insinuating, possessing great order of mind and fluency of speech, so that she recommended her pernicious heresies not only to the imaginations of the unlettered multitude, but to the acceptance of educated and ingenious men, who were persuaded of their truth, and labored to diffuse far and wide the contagion of her fanaticism. Some of her works were translated and extensively circulated in the north of Scotland, and a clergyman in Aberdeen was deposed from the office of the ministry, for adopting and defending her errors. It is this circumstance of her "damnable doctrines" having been implanted in the spiritual soil of the country, and still required to be solemnly abjured by every clerical candidate for the kirk, that gives this famous impostor a title to take her place in the

Digitized by Google

same niche with Mrs. Buchan, of whose romantic history, lately published in Edinburgh, we now propose to offer a short account; and when we inform the reader, that this illiterate, sensual fanatic "gave herself out to be the third person in the God-head, and pretended to confer immortality on whomsoever she breathed, and promised eventually to translate direct to heaven in a body, without tasting of death, all who put unlimited faith in her divine mission;" that she also personified the woman described in the Revelation, as being clothed with the sun and the moon; and pretended to have brought forth the man-child who was to rule all nations with a rod of iron, in the person of one of her converts, a Rev. Hugh White, who had been a dissenting minister at Irvine; and when we further state, that these celestial claims and pretensions were mixed up with the most degrading and criminal practices, sensuality, prostitution, infanticide, our astonishment increases, that blasphemies so palpable, and vices so revolting, instead of being visited by the penalties of the law, should have found adherents and proselytes among the sober, pious descendants of the Scottish covenanters. Yet such is the fact.

The delusions of this female hypocrite drew after her a number of individuals (altogether about sixty) who preferred her society to the ties of domestic life, and quitted their homes and their relations to follow her, in the vain expectation of passing from this world to immortality, without being subject to the common lot of human nature. These ridiculous fanatics adopted the title of Buchanites, after the name of their founder, who was variously styled by her devotees, "Our Lady," "Friend Mother," "Luckie Buchan." They held her in great veneration, and such was her ghostly authority over them, that it was ascribed to the influence of demoniacal agency, or a familiarity with the *black art*. In this latter science, her proficiency was supposed to be such, that "she could cause any person on whom she laid her hand instantly to forget all earthly concerns, and follow her, though it were to the utmost limits of the earth, with the most implicit devotion." This belief, no doubt, was fostered by her arrogant presumption, and her extreme volubility of tongue, for she affected the air of an apostle, and spoke and wrote with a facility quite extraordinary in one who could scarcely have received more than the first elements of education.

But even when her personal influence declined, when her mission proved a ludicrous failure, and when this impious dispenser of immortality could not exempt herself from the stroke of death, her disciples clung to the delusive hopes with which she had indoctrinated them. They were firmly persuaded of her divinity; kept the coffined body for years unburied, and gave out that she had privately ascended to heaven as the precursor of their translation.

A sect professing such extravagant tenets could not be expected to gain many proselytes, and it is but justice to the people of Scotland to allow that Buchanism found no countenance among them. The odious rites were perpetrated within the walls of its own humble convent, and never ventured to show themselves in open day. Society received no taint from its contagion, and gave little heed to its visionary pretensions. With the business of life its doctrines never ventured to mingle, but remained isolated, shunned and detested in every neighborhood where it pitched its tabernacles. Nor was it formed or designed for perpetuity. By its rules there was neither marrying nor giving in marriage; the limit of its duration was the lives of its members, and accordingly, after an existence of a few years, it dwindled away to a solitary octogenarian couple, the last survivor having died in January, 1846.

The author to whom we are indebted for the memoir of Mrs. Buchan and her infatuated group of enthusiasts is Mr. Joseph Train, a name not unknown in Scottish literature, and worthy of a passing notice. Sir Walter Scott found in him one of his most valuable coadjutors, and makes frequent mention, in his works, of the assistance he derived from his indefatigable researches and contributions. Mr. Train belongs originally to the land of Burns, being a native of Ayrshire—of humble parentage, and indebted chiefly to his own diligence for his education, and his future success in life. He was early intended for some mechanical employment; but the drudgery of manual labor did not accord with his lively imagination and his taste for letters. The ardor of his love for the muses was such, that when a young man of twenty, and quartered, in 1800, with the Ayrshire militia, at Inverness, he accumulated a guinea and a half in sixpences, saved from his pay, to purchase a copy of Currie's edition of the works of Burns, published at Liverpool. The peace of Amiens having closed Mr. Train's services as a militia-man, his patron, the colonel of the regiment, Sir David Hunter Blair, obtained for him an appointment in the excise; and this has continued to be his occupation, since 1810, in various districts of Scotland, Largs, Newtonstewart, Perth, Fife, Kirkintilloch, Queenferry, Falkirk, Wigton, and Castledouglas, where he still resides, as a retired supervisor, cultivating his favorite antiquarian studies, and paying occasional court to the muse. His poetical effusions are numerous, and far above mediocrity. Like his illustrious countryman, Burns, who wrote many of his best lyrics while following the uncongenial profession of a *gauger*, Mr. Train was doomed to regale his poetic fancy from the odorous fumes of whiskey casks, malting vats, and illicit distilleries.

The bent of his genius, however, and the opportunities he enjoyed of an acquaintance with many of the interesting and picturesque localities in Scotland, inclined him to the prosecution of traditional and antiquarian researches; and it was in this capacity that he rendered himself so useful an auxiliary to Sir Walter Scott. Mr. Train was necessarily one of the twenty who was in the secret of the authorship of the "Waverley Novels;" and, in several instances, premature revelations were in danger of coming to light, in consequence of his communications bearing a suspicious resemblance to characters and events described in the fictions of the Great Unknown.

His first introduction to Sir Walter was the result of one of his earliest productions, "Strains of the Mountain Muse," published in 1814, consisting chiefly of metrical tales, illustrative of traditions in Galloway and Ayrshire, accompanied with topographical and legendary notes. Sir Walter at once procured a dozen copies and the address of the author, became his patron and friend, encouraged his antiquarian pursuits, and commenced a correspondence with him, which was only terminated by the death of the mighty minstrel. Mr. Train's contributions to the Waverley Novels, it would be out of our province here to enumerate: they are duly acknowledged by Sir Walter in his prefaces, and afterwards by Lockhart, in the third, fourth,

Digitized by Google

fifth, and seventh volumes of the "Life." When composing the "Lord of the Isles," the distinguished poet received from his new ally his description of Queensberry Castle, the landing of Bruce from Arran, and the hospital founded by the royal fugitive at Kingscase, near Presterrick.

It was upon this occasion that he transmitted to Sir Walter one of the *magus*, or drinking-horns, provided by Bruce for the use of the lepers. This interesting relic was among the first of the many valuable antiquarian remains afterwards presented to him; the extensive collection of which now forms one of the chief attractions at Abbotsford. A Roman battle-axe, found in the Moss of Cree; a razor of the fifteenth century; the *spleuchan* of the famous free-booter, Rob Roy; a fragment of the oaken bedstead that belonged to the Black Douglas; a curious brass visor, with movable projecting horns, where the eye-holes should have been; an Andrea Ferrara, said to have been worn by the notorious persecutor, the Laird of Lagg; the stock-bow of Sir John the Græme, who was killed at the battle of Falkirk in 1298; a drinking *quaigh*, made from Wallace's tree in the Torwood; the *ladle* of the last resident hangman in Dumfries, with an account of the manner of using it, as described in the 13th volume of the Waverley Novels. These, with a variety of other rare and time-honored curiosities, were furnished by the obliging exciseman during his intimacy with Sir Walter. "And," as Mr. Lockhart says in his life, (chap. x.,) "if ever a catalogue of the museum at Abbotsford shall appear, no single contributor, most assuredly, will fill so large a space in it as Mr. Train."

But valuable as his antiquarian pursuits were, the amount and value of his literary services were still greater. To most of the novels he made some contribution or other. When alluding to his first interview with the then Great Unknown, Mr Lockhart observes (vol. iii., c. 1):—

"To this intercourse with Mr. Train, we owe the whole machinery of the 'Tales of my Landlord,' as well as the adoption of Claverhouse's period, for the scene of some of its first pictures."

The very name of *Cleishbotham* was borrowed from the professional *soubriquet* of a Galloway school-master. The account of the wandering Astrologer, which formed the ground-work for *Guy Mannering*—the curious history of *Old Mortality*, and the hint to make Viscount Dundee the hero of the tale—the sketch of "Faithless Fanny," the prototype of Madge Wildfire—the traditions on which the dramas of *M'Duff's Cross* and the *Doom of Devorgoil* are founded—the first notice of the motley Morrice Dancers, so graphically portrayed in the *Fair Maid of Perth*—sketches of Skipper Hawkins, the original of Dick Hatterick—of Flora Marshall, the supposed Meg Merrilies—of Andrew Gummel, (a native of old Rumnock, in Ayrshire,) the Edie Ochiltree of the *Antiquary*—of Wandering Willie in *Red Gauntlet*—of the ravages perpetrated by the Earl of Derby in Kirkcudbrightshire, as described in *Peveril of the Peak*—of the story of the Fifeshire Surgeon's Daughter, forming the nucleus of the admired tale bearing that name in the *Chronicles of the Canongate*—all these, and sundry other anecdotes of curious manners and customs, family legends, superstitions, &c., embodied in the Waverley series, owe their paternity to the unwearied diligence of the devoted supervisor of excise. The death of Sir Walter in some degree removed the main stimulus that had urged Mr. Train on in his antiquarian and traditional inquiries. But he has not been idle for the last dozen years, "in his cottage pleasantly situated on the banks of the Carlingworth Lake, in the neighborhood of Castle Douglas." A short time ago, he published a "History of the Isle of Man;" and more recently appeared "The Buchanites from first to last," giving a detailed account of the founder and fanatical extravagances of that miserably-deluded sect to whose history we now return.

Mrs. Buchan, as her historian informs us, was the daughter of John Simpson, the keeper of a small hedge ale-house, or dram-shop, on the old road between Banff and Portsay, at a place called Fatmacken, where she was born about the year 1738, and received the name of Elspeth. Before she had completed her third year, her mother died, and the father having married again soon after, she was put under the charge of strangers. The wretched circumstances of her foster parents is described as such, that "her bedding consisted of a bag stuffed with straw laid down on the ground beside the fire at night, with an empty sack for a coverlet, which were removed in the morning, and stowed away till required again in the evening." Her earliest occupation was to herd her master's cows; but according to her own account she was not particularly trustworthy, for she confesses, "I had no pleasure in working, and ever forgot the directions given me." Her next employment was in the family of a distant relation of her mother's, by whom she was taught to sew and read. The husband of this woman was a Banffshireman, and a West India planter, and as they were about to proceed to Jamaica, young Elspeth was taken along with them to Greenock. It was here that her future prospects and the entire current of her life underwent a lamentable change. While waiting for the ship that was to convey them across the Atlantic, "she left her friends, to associate with idle company, and appears then to have contracted those depraved habits which she afterwards inculcated respecting matrimony." The streets of Greenock and the company of sailors, and other low vagabonds, were not certainly the most repectable nursery for the gifts and graces of a saint, and one, too, who aspired to such intimate relationship with the Deity. No doubt, some of her doctrines—perhaps the most popular—were learned in this school; and the most remarkable feature in her subsequent career is, that she contrived, after this discreditable noviciate, to get a single dupe to believe in her divine mission.

How long she followed her Greenock profession does not appear on the record. Her next movement was one contrary to the principles she afterwards inculcated; for it is stated that "she trepanned, at Ayr, a working potter, named Robert Buchan, to be her husband!" This union, however, does not appear to have been legally solemnized, as no voucher or entrance of it can be discovered in the parish registers. It soon proved to be not a happy one; for her licentious conduct a Ayr obliged the husband to remove with her to Banff, where he commenced a manufactory of earthen-ware on his own account. Not being successful in this speculation, he repaired to Glasgow in search of employment, leaving his wife with three children at Banff "to provide for themselves as they best could," by teaching children to sew. Her family, at this time a son and two daughters, were grown up, and having imbibed their mother's virtues, they afterwards joined the Buchanite Society. Humble as her occupation was, she might have earned a comfortable livelihood by it, had not her Greenock

Digitized by Google

propensities interfered with the sedate carriage expected from an instructress of youth.

It was at this period, in her thirty-sixth year, that her irregularities took a new direction, and assumed a religious form. Her family and her school were neglected. Her whole attention was absorbed with devotional exercises, disputing about theological subjects, and frequenting "fellowship meetings," at which she is said to have excelled as an orator, and an ingenious expounder of Scripture. Her views were not reckoned orthodox, nevertheless she made several converts; amongst others, the wife of a Captain Cook, of the revenue cutter on that station. Their chief occupation was to spend many hours together, "mourning for their own sins and the sins of others;" but the captain, not relishing this employment of his wife, and thinking her "mad with religion," kept her shut up in a dark room for three weeks, and was reported to have threatened Mrs. Buchan's life. The clergy also took the alarm, being offended both with her doctrines and her loose conduct, and became chiefly instrumental in raising the populace against her. But the more she was opposed, the more resolute she was "to carry out the details of a divine apocalypse, charging her with a heavenly mission." Her pretext, like Cromwell's when he wanted a reason to sanction his own earthly purposes, was, that she was "seeking the word of the Lord;" and so earnest was she in her inquiries that, she writes, "had a gallows been erected at every door, I would not have stayed from going there." According to her own account she went through a sort of refining process, before entering upon her apocalyptic duties, for she says—"In the year 1774, the power of God wrought such a wonderful change on my senses, that I overcame the flesh, so as not to make use of earthly food for some weeks; which made all that saw me conclude I was going to depart this life." This victory over the flesh must be understood as referring solely to the stomach; for in no other sense was it admitted as an article in Mrs. Buchan's creed.

The hostility of the clergy, the desertion of her school, and the imminent danger of her life, induced "our lady" to remove with her family to Glasgow, where she arrived in March, 1781, and was cordially received by her husband, then employed in a pottery in that city—the delf-work at the Broomielaw. Here she kept up a correspondence with her associates in the north—the members of the Banffshire Fellowship Societies; but her early propensities seem not to have been eradicated, for "an unfavorable report regarding her mode of life reached her native place," and drew from some of her friends there an advice "to mend her manners." To these insinuations she replied in a spirit of Christian forbearance; regretting the trouble her advisers took about her concerns, and promising "to plead for them night and day at the throne of grace."

During her residence in Glasgow at this time, (1782,) she formed an acquaintance with two persons, the Rev. Hugh White, and Mr. Andrew Innes, afterwards the two most zealous and most celebrated of her disciples. Mr. White was then minister of the Relief Congregation at Irvine, near Ayr. He had the reputation of being a popular preacher, and was certainly a man of talents, and a scholar. His native place was St. Ninians, near Stirling; but he had been professor of logic in an American college, and was reckoned a profound theologian. His besetting foible was vanity and self-conceit; and he must have been unsteady in his opinions, as he changed from the established church to the secession. His weakness in these respects rendered him an easy captive to the spiritual flatteries of Luckie Buchan. She had an opportunity of hearing him preach at a sacrament in the neighborhood of Glasgow, in December, 1782, and being taken with his oratory, she informed him by letter of the conquest he had made, and of his being "the first minister who had spoken effectually to her heart." The epistle is a curious specimen of artful compliment and blasphemous assumption. She tells him that before seeing him with the bodily eye, she had often viewed him by the eye of faith; that he was "a promised seed, actually born from above," the apocalyptic child, "that has lain in the womb of the everlasting decree from all eternity."

This communication was received at first as an effusion of genuine piety; and as such Mr. White showed it to several of his congregation, who were so pleased with Mrs. Buchan's religious views, that they wished her personal acquaintance. Accordingly, Mr. White invited her to Irvine, where she became his lodger, and met with a welcome reception from the whole sect, who seem to have paid her the utmost reverence.

"From her heavenly conversation and extraordinary gifts (says the narrative) they soon began to consider her a valuable acquisition to their party. Religion was her constant topic; in every company and on all occasions she introduced it. Her time was wholly employed in visiting from house to house; in praying and solving doubts, answering questions, and in expounding the Scriptures." It is not easy for Satan long to pass as an angel of light. Some of the congregation began to question the orthodoxy of her principles; they accused their minister of having imbibed them, and requested him to dismiss her as a dangerous person. With this peremptory demand he was obliged to comply. In a few weeks Mrs. Buchan quitted Irvine, and repaired to Glasgow, where she continued to correspond with her reverend neophyte, for the purpose of encouraging his "young faith," assuring him that her birth pains of heavenly love towards him far surpassed the love of woman: and rejoicing that her lot and his had been cast in the same land! Her correspondents at this early stage of her mission, amongst whom was the Rev. Francis O'Rely, of Northampton, were numerous, for one of her disciples says, "when Friend Mother came to Irvine, she brought with her a little hair-trunk filled with letters from various ministers and religious societies in the north of England."

Another of her converts at this time was Andrew Innes, the last survivor of the sect, who may also claim the honor of being its historiographer, as it was chiefly from materials furnished by him that Mr. Train drew up his narrative. This attached devotee, second only in Luckie's affections to the Great Man Child himself, was from Muthill in Perthshire. His parents were humble *cotters*, and he was bred to the business of a carpenter; but hearing of Mrs. Buchan's fame in the west, and the excitement caused by Mr. White's heresies, Andrew resolved "to cast in his lot with them, although most violently opposed by his mother and many of his friends." It was in 1787 that he first met our lady, to whose person and pretensions he afterwards adhered with romantic devotion. His exertions contributed much to the forming of the Buchanite society, of which he remained an effective member to the last, and in right of survivorship he

Digitized by Google

became possessed of all the property belonging to that community.

The trial of Mr. White for heresy before the Relief Presbytery at Glasgow, was the occasion for a general rendezvous of his friends at Mrs. Buchan's lodgings there. Although the reverend gentlemen had not openly declared his ghostly idol to be actually the woman prophesied in the Revelation, yet he boldly affirmed her to be a saint of no ordinary character, and the harbinger of a light that would expel the darkness of Antichrist which had so long overshadowed the earth. His congregation, however, offended at the delusions and blasphemous opinions he had imbibed, threatened him with deposition for propagating tenets contrary to the Confession of Faith. A paper being drawn up by his opponents, containing what was supposed to be the new doctrines, he acknowledged them as his principles and subscribed them as such; and with regard to his quitting Mrs. Buchan, "he was so enamored of her mystic views, that he declared he would sooner cut off his right arm." In short, Mr. White's vanity led him to believe that he was destined to be a second John Knox, the founder of a new church; and in this delirium his spiritual mother encouraged him. "Believe me, (she wrote,) my dear love, there is nothing in glory, grace, or providence but what is on your side. Although hell and earth, men and devils, be raging against us, they can only rage in their own ground, and cannot harm us. * * * * * You are on the Lord's side, therefore the enemies of the Lord are up in arms against you; but go you forward, fear not, for the *breaker* is come up before them. The great I AM will keep you like the apple of his eye."

Mr. White's friends regretted his infatuation, and judged of his prospects in a different light from the frenzied view of it taken by Mrs. Buchan. He had a young wife, and two children still in infancy. But all expostulation was in vain. His opinions and his whole deportment had undergone a change so marvellous, that people attributed the influence of Luckie over him to her skill in the black art. He would listen neither to the voice of reason nor the sympathies of domestic affection. His trial proceeded, and the Presbytery were obliged to eject him from the ministry. This was in August, 1783, the decision of the court being unanimous, finding him guilty "of entertaining a number of sentiments contrary to Scripture." While his relations pitied and lamented his delusion, the result was hailed as a triumph over Satan and the malice of the world, by the crafty woman by whom he was so unaccountably misled. She wrote both to him and Mrs. White, exhorting them not to fear their enemies:—

"Poor short-sighted creatures, they see nothing on the other side of death. They think that I have done all this; and many are praying that you had never seen me; but I am sure, if they knew how happy I would be to spend my last breath, and the last drop of my blood, for Hugh White, they would not give themselves so much trouble. I am glad to think you are so well prepared for this stroke; but it will do you no harm, for although the whole course of nature were set on fire, it would not singe one hair of your head!"

The deposition of Mr. White excited no small sensation in the west, especially in Glasgow, where Mrs. Buchan then resided, in her old lodging in the Salt Market, receiving visits from crowds of Irvine people, and disputing with her enemies on religious matters. A small remnant of Mr. White's congregation embraced the new doctrines, and resolved to adhere to him. These formed the nucleus of the sect; the most zealous and influential of whom, at this time, says the narrative, "were Mr. Peter Hunter, writer and town-clerk in Irvine, and John Gibson, builder there. Many individuals of both sexes followed in their wake. Mrs. Buchan had informed them of the apocalypse that had induced her to travel from sea to sea for the fulfilment of that holy revelation; but though thus employed for nearly ten years, she confessed she had been only a gazing-stock to the people, and the butt of the devil's wrath. No person was so impressed with the belief of her divine call as to follow her from Banffshire; nor after her departure from her native place did the whimsies advanced by her disturb, in the slightest degree, the order of any community. In Glasgow, the only convert she appears to have made was Andrew Innes! Andrew's first interview with Luckie happened the preceding year, as we have mentioned. Having travelled from Muthill to Glasgow, to attend the Relief Sacrament, he accidentally met her in his landlady's kitchen, and accompanied her to chapel. The consequences he must relate himself—

"After service, she invited me to her lodgings, which were then in the upper flat of an old wooden house in the Salt-Market, and was but poorly furnished. As soon as I went in, she rose and conducted me to Glasgow-green, where she laid open to my view how the kings and hosts of Israel became a curse to the people, and how David, by his adultery with Bathsheba, occasioned the death of so many people; with other parts of Scripture, which I knew to be truth so simple and easy to be comprehended, that I wondered I had never seen them before in the same light. We parted in the evening, and I called by appointment again at her house on Monday, for the purpose of seeing her letters of correspondence, which were chiefly with ministers of various sects in Banff and Aberdeenshire."

The doors of the church being closed against Mr. White, he preached in his own garden, but his hearers being often disturbed by persons throwing stones and brick-bats among them, he was forced to retire into his own house, where their meetings at night continued for some time, Mrs. Buchan always taking a leading part. The nature and results of these nocturnal conventions are thus described:—

"The room was always crowded to excess; and the enemies sometimes remained after the public service was over, to contend about disputed points of doctrine, from which no good resulted to either party. The friends and relations of those who had become members of the society were determined to throw every possible interruption in their way. Customers deserted merchants who were members; tradesmen, laborers, &c., were thrown out of employment; parents were set against their children, servants against their masters, and drunken sailors were encouraged to watch and molest every person about to enter Mr. White's house in the evenings. And these practices not being discouraged by the magistrates, they grew the longer, the more presumptuous, till at last they attacked the doors and windows with sticks and stones; and when he applied to the magistrates for protection, he was only told to send away that offensive woman, and the people would be quiet as formerly.

"For greater privacy, they afterwards met at the house of Mr. Hunter; but their meetings there

Digitized by Google

being discovered also, and the indignation of the populace being roused by the reports circulated of their doctrines and manner of worship, the doors and windows were demolished; and Mrs. Buchan, while endeavoring to escape the fury of the mob by a back way, was intercepted. She was accompanied by Mr. Gibson, a very strong man, who, when one of the rabble was about to lay violent hands on her, grasped her round the waist with his arms, and would not part with her till a drunken fellow cut one of his hands with a *jocteleg*, (clasp-knife,) whereupon a general shout of joy was raised for the capture of the *witch-wife*, who had cast her 'glamoury' over the minister. After dragging her through all the streets of the town, nearly in a state of nudity, many were for ducking her in the river, but the majority was for parading her home to her husband, to the sound of an old tin-kettle; and they actually trailed her to Stewarton, a village about eight miles from Irvine, on the Glasgow road. Andrew Innes says:—Mr. White and I, concealed by the darkness of the night, followed at a short distance all the way. We heard them once insult her about her feigned attachment to Christ. They would raise her up as high as they could, calling aloud for her to fly now to heaven, like Enoch or Elijah, at the same time letting her drop to the ground, exclaiming, 'She cannot fly yet; we must take her on a little further, and try her again.' When they came to the bridge at Stewarton, they took her to the ledge, for the purpose of throwing her into the river, and would have done so, had not one of the party opposed them, saying, 'She has done us no personal harm, therefore we will not kill her outright—let her husband do that if he pleases, when he gets her home.' This timely interruption seemed to divert them from their intention of drowning her. As they dragged her into Stewarton, the noise they made in the streets caused the people to come running out, many with candles in their hands. The crowd soon became very great, and the night being very dark, they lost sight of her suddenly, nor could they find her again."

This was rough handling for a prophetess, who claimed to have a heavenly commission—and, had her persecutors been amenable to the ordinary feelings of superstition, the circumstance of her mysterious disappearance might have shaken their incredulity of her being an impostor. But the mystery was soon revealed. Luckie showed that her nimbleness of heel was not inferior to the volubility of her tongue. She had taken advantage of the "sleety night" to retrace her steps—and when her scattered followers were assembled in Mr. White's parlor, mourning for her loss, (says Andrew Innes,) and the opinion gathered ground that she had actually ascended to heaven—

"In she stepped in the gray of the morning, in a most pitiable plight; she was bareheaded, barefooted, with scarcely a rag to cover her nakedness, and all her person over with blood; yet she was cheerful, and said, 'I suffer all this freely for the sake of those I love.' On escaping from the hands of her enemies at Stewarton, she made her way back to Irvine, by climbing over dykes, and squeezing through hedges, not daring to keep the public road, lest they might be in pursuit of her. Mr. Gibson washed and dressed her wounds, and when she was put to bed; we each retired to our respective places of abode."

Her presence in Irvine, and the congregating of her friends again, was the signal for another attack. Crowds assembled, the house was beset, the doors and windows battered with stones, and the lives of the inmates put in jeopardy. The magistrates were obliged to interfere, and immediately ordered her removal. In this extremity, Mr. Hunter engaged a man with a horse and cart, to take her to Glasgow—Mr. Gibson volunteering to attend her as sick-nurse, and Andrew Innes as an escort, to report her safe arrival. Her finances were so low at this time, that, on leaving Irvine, she did not possess even the smallest silver coin, and Andrew gave her his watch, which he understood she pawned for a few shillings, to relieve her immediate wants; but when she received a further supply from her more wealthy adherents, she redeemed the pledge, and returned it to its proper owner. In Glasgow her dupes continued to frequent her house, so that her family affairs were utterly neglected, and her husband reduced to abject poverty, by the extension of her hospitality to swarms of visitors, to whom he was an entire stranger. The consequence was, he was obliged to have a legal divorce, a step rendered all the more necessary from her revolting doctrines on the subject of "carnal marriages." It is remarkable that she never adopted her husband's name in her early letters, which are all signed "Elspeth Simpson;" and which make no disclosures on the grand point of her intention to carry her disciples to heaven in the body, without tasting of death. Her correspondence, at this period, is filled with rhapsodies about the overflowings of her love for her spiritual children, "amidst a generation of vipers," and the destroyers of this world "all coming against us like bulls of Bashan, with their mouths wide open to devour." She warned them that "Satan was trying to sift them," but that they were to rejoice in tribulation, for their past sufferings would now be "no more than a dream, or a tale that is told."

A change of locality was now deemed advisable, and as Andrew Innes' mother had come to Glasgow in quest of her strayed son, Luckie Buchan was persuaded to accompany them to Muthill, "a pious wheelwright" of that place, Duncan Robertson, having been despatched with a riding-horse to meet her at Kilsyth, and assist her in her journey. She professed great reluctance at parting with her "loving friends and sweet babes" in the west; but she was reconciled to her new abode by finding she was kindly received, and might get another "little vineyard" to bear fruit, as at Irvine. Her only desideratum here seems to have been Mr. Hugh White, who was, of course, strongly urged to take up his residence with her immediately.

"There being great desire and need of you, (she writes;) they are thirsting for the water of life, and receive it greedily. There are not a few young creatures here that have some breathings of love, but they are like to be choked with ignorance. I trust you will make no delay in coming here while the edge is on the people's minds. As to removing your family, you need say little about that till you come yourself. My body is loaded with a great cold, but my senses are like pipes of new wine, all running from a free fountain."

With this warm intention Mr. White complied, and travelled on foot in the latter end of November, from Irvine to Muthill, a distance of seventy-six miles, in two days. His companions were Andrew Innes, James Stewart, and Agnes Wylie. At this time two of Mrs. Buchan's daughters, Peggy and Anne, resided in Irvine, the elder being a servant with Mr. White. These are the young women whom she afterwards gave out to be, "one an

Digitized by Google

incarnation of Christ, the other of the Holy Ghost!"

Mr. White's reception at Muthill was not so kindly as that of his female forerunner had been. He discovered no symptoms of religious "thirst" anywhere except in Friend Mother. The people had too deep a reverence for the established church and the confession of faith, to listen to "the abominations taught by Mrs. Buchan, and confirmed by Hugh White," of which they were faithfully warned by the clergy. They refused to admit him into their houses, or to take him by the hand, or to touch him, as it was confidently believed Luckie had bewitched him; and when he preached, "many of the men who had assembled to hear him, rose to their feet, and waved their staves before him in a very threatening manner." Discouraged by this opposition, the two fanatics and their disciples resolved to venture back to Irvine, where some of Mr. White's former congregation seemed to think that poverty would make him recant, and that the Buchanites would thereby be scattered. In this they were mistaken, "and when they saw cart after cart arrive from Muthill, laden with people, goods, and chattels, their rage became ungovernable. Mr. White's house was again attacked, and the windows demolished. The inhabitants petitioned the magistrates to have the lady apprehended and punished legally as a blasphemer, and her reverend paramour also, as a disseminator of her dogmas. A sentence of banishment was issued, (May, 1784,) ordering her to leave the royalty within two hours. The summary decision was instantly obeyed; "and such was the hurry, that some had scarcely time to pack up a hand-bundle, put out the fire, and lock the door." One left a washing on the green—another left a cow bellowing at the crib. Although the act applied only to Mrs. Buchan, her followers resolved to share her exile.

"With this intention, (says Andrew Innes,) we had rallied round her in Mr. White's parlor, each man with a staff in one hand, and a small bundle in the other; each woman with her coats kilted, and a small bundle in a handkerchief, tied round her waist. Mr. and Mrs. White seemed rather downcast, but Friend Mother was more cheerful than ordinary. She spoke to us individually, and quoted passages of Scripture with surpassing aptitude, to fortify our minds in that trying hour. She often repeated the twenty-eighth verse of the sixteenth chapter of Matthew with great composure and dignity—'Verily, I say unto you, there be some standing here which shall not taste of death till they shall see the Son of man coming in his kingdom.' When the magistrates and constables appeared at the door, she proceeded with them, Mr. White accompanying her on one side, and Mr. Gibson on the other. The women and children followed, the men bringing up the rear. The streets through which we passed were crowded to such excess, that the constables could scarcely open a passage. All those that came from Muthill were very ill used; the people made sport of pushing their staves between our legs so as to make us fall, and then pushed others over us; chiding us at the same time for ruining ourselves by following an old witch-wife, who had evidently cast her cantrips over us. Just as the magistrates were about to return, a drunken sailor tore off the cap of our Friend Mother, and pulled her to the ground; and then ran past the magistrates, exclaiming, 'I have got a right handful of her hair,' and joined his companions without being molested by the authorities."

About this period these fanatics attracted the notice of the poet Burns, then residing at his farm of Mossgiel. In a letter to a friend in Montrose, he alludes to their society, and describes their tenets as "a strange jumble of enthusiastic jargon." Of their libertine principles he also speaks freely, but without exaggeration:—

"Old Buchan (he adds) pretends to give them the Holy Ghost, by breathing on them, which she does with postures and practices scandalously indecent. They hold a community of goods, and live nearly an idle life, carrying on a great farce of devotion in barns and woods, where they lie and lodge all together; and hold likewise a community of women, as it is another of their tenets that they can commit no moral sin. I am personally acquainted with most of them, and can assure you the above mentioned are facts."

The ejected emigrants, on quitting Irvine, which they denounced as another Sodom, to be overtaken with some signal judgment for the wickedness of the people, bent their steps towards the south. The cause of their moving in that direction, Mr. Innes explains:—"After consulting on the road a short time, we agreed to keep our faces as steadily as possible towards that part of the heavens where we supposed the Saviour of the world would appear at his second coming, (Matthew, chapter 26th,) and moved off very slowly," &c.

Their society consisted of forty-six, but was afterwards reinforced to sixty, chiefly by converts from England. The style of their travelling was picturesque. Mrs. Buchan, attired in a scarlet cloak, the discarded minister, and one or two of her higher dupes, were seated in a cart, while the remainder followed on foot. Allan Cunningham states that Luckie sometimes rode in front on a white pony, "and often halted to lecture them on the loveliness of the land, and to cheer them with food from what she called the gardens of mercy, and with drink from a large cup, called the comforter." Her company "were for the most part clever chiels, and bonny, spanking, rosy-cheeked lasses, many of them in their teens. Over their dark petticoats they wore short gowns, reaching from the chin half-way down the thigh, and fitted close to the bosom. They were bare-headed, and their locks of unusual length were restrained from falling in a fleece over their back and breast by small buckling-combs."

They had difficulty in procuring food, as the country shunned them. Oat cake, when they could purchase it at the farm-houses, and cold water, was their common fare. When they came to a stream, they sat down on the bank, Friend Mother dividing to each a bit of cake, and a tankard of water was handed round, brought from the rivulet by one of the women. All shared alike; the only distinction in the way of luxury being that our lady "after she had divided the bread, *lighted her pipe and took a smoke of tobacco.*" In the article of lodgings they were miserably provided for, as few public houses could accommodate them, and farmers declined to harbor them. Near Dundonald they were permitted to occupy a cart-shed and a *killogie* for the night. At New Cumnock they were granted the use of a hay-loft; but at Slunkford the farmer would not give them his barn, nor even allow them the shelter of his hay-stack. Mr. White preached to them and cheered them on their journey, by drawing comparisons between their difficulties and those of Christ and his apostles. During their march they chanted, like the seekers of the New Jerusalem, hymns, as a kind of rude psalmody, which attracted general at-

Digitized by Google

tention wherever they passed. "They made the hills and woodlands ring with rhymes of their own composing, sung in full chorus to what is called profane music," one of their favorite airs being *The Beds of Sweet Roses*, then a popular song in the west.

The first resting place they procured was at New Comple, a farm-house in Nithsdale, near Thornhill thirteen miles above Dumfries. There the wandering Buchanites were induced to halt, in consequence of one of the wealthiest of their members, Mr. Hunter, being apprehended and carried back to Irvine, on the charge of having deserted his business and property, but in reality to detach him from the idle company he had joined. The tenant of the farm, Mr. Davidson, at first gave them only the temporary use of a barn; but finding they consumed and paid ready money for a considerable amount of his farm produce, and assisted him in his field labors, he allowed them to remain for some time, and afterwards gave them grounds to erect a house for themselves, called *Buchan's Ha'*, a name which it still retains. "It was here," says Andrew Innes, "like the disciples of Christ after Pentecost, our apostolical life commenced; all that believed were together, and had all things common." Their money was put into a joint-stock purse, and placed at the disposal of John Gibson, who was both treasurer and purveyor of the kitchen. Janet Grant, who had kept a cloth-shop in Irvine, was mistress of the robes, and had charge of all the unoccupied clothes, to keep them clean and whole, and give them out when any person wanted a change. The other women assisted in washing, knitting, and darning stockings, and they had tailors and cobblers for mending their shoes and outer garments. They occasionally wrought at hay or harvest for their neighbors, but never accepted wages, and always took their meals apart by themselves, concluding it with singing one of their own rhymes.

Their food was mean and scanty, consisting of potatoes and salt, or herrings, or "a drop of milk, when that was attainable." It was cooked in the farmer's kitchen, and served on a small table, round which they sat; and if any religious discussion was going on in the barn, they would run, with a potato, *en chemise*, in their hand, to hear the controversy. Having neither hay nor straw to sleep on, they were obliged to pull heather from the moors, which they bound in bundles of about six feet long and four broad, "thereby forming a bed for two persons." Those bundles were placed in a double row on the barn floor, closely pressed together, with the tops uppermost for softness, the space between being scarcely more than sufficient for a single person to pass; their only covering was one blanket to each bed, and for pillows they used their body-clothes. By degrees, and after they had erected their house, which they built entirely themselves, their condition improved—each had two blankets, and for bedsteads they nailed four rough boards together, which were filled with straw for mattrasses as soon as it could be procured. Their cabin was only one story high, thirty-six feet long, and sixteen broad, covered with heather. It was provided with a loft, supported by poles, and this primitive attic was the general sleeping apartment. To this bed-room they ascended by a trap-ladder in the middle of the house, there being only two beds below in a small closet.

"Our furniture (says Andrew Innes) consisted of two long tables, or deals, surrounded by links or cutty stools. In the kitchen was a dresser, a meal-chest, and a few stools. In Mr. White's closet was a table, and a few chairs, intended for strangers."

In this miserable hovel, and in beds of heather or straw, so closely jammed together that a person could scarcely move between them, were immured about sixty individuals of both sexes, who embraced some of the worst dogmas of the ancient Essenes, and of the modern Socialists. Among them the marriage relation was entirely disregarded. Children did not know their parents; the title of Mr. and Mrs. was abolished, and new names substituted for the old; thus, Mr. Hunter, who had returned, was called Peter—Mr. White, Isold Whitehead—and so of the rest, except the Man-Child, who wished to be named Friend White. For these changes, Scripture reasons were assigned; but the general belief was, they adopted this device for the purpose of committing and concealing crimes of a flagitious character.

The fixture of these abominable enthusiasts in the Vale of Nith, where many persons alive still remember them, created a strong sensation, which was soon inflamed into violence by Mr. White's preaching, and announcing Friend Mother as the "mysterious woman predicted in the Revelation, in whom the light of God was restored to the world." Disgusted with these blasphemous ravings, the people attacked their house, smashed doors and windows, ransacked the beds and chests, and even the farmer's draw-well, for "Luckie," who might have been torn to pieces, had she not escaped privately to Closeburn Castle, the seat of Mr. (now Sir Charles) Monteith, being warned on the previous evening of what was to take place; for guns were fired and lights kindled on the hills, as signals to collect for the attack. Forty-two of the rioters were tried for the assault, and upwards of twenty of them were fined at Dumfries by the sheriff of the county. The clergy of the local Presbytery also interfered, and attempted to have "Mrs. Buchan and the man-child, White," libelled before the church court for teaching blasphemous doctrines; but they did not succeed, and the proceeding was abandoned. Luckie's correspondence must have been voluminous; for she sometimes wrote all night, and complained grievously of the expense of postages. She paid a visit, accompanied by her "high priest," to a very old acquaintance, near Moffat, the Rev. Mr. Nicholson, of Wamphray, in the hope of converting him. She boldly maintained, "She was actually the spirit of God, which all unbelievers would soon know to their cost." But when the neighbors learned that the manse was polluted by such unholy visitants, they threatened to mob them, and call the minister to account.

Much of Mr. White's time, while at Closeburn, seems to have been occupied in writing hymns for the use of the society, and in composing the *Divine Dictionary*, or summary of their doctrines; for as they professed having Scripture to support all their opinions, they deemed it necessary that they should publish to the world such an exposition of their faith and practice as would tend in future to silence their enemies! The work is described as a complete jumble of fanatical nonsense, and denunciations against those who dared to disbelieve the divine mission of the mysterious woman. "It showed them," says the historian of the Relief church, Mr. Struthers, "to be illiterate, erroneous, visionary, and rhapsodical. So little reason was mixed up with their madness, that it is often impossible to comprehend their ravings, and to say exactly what, on various topics, was their belief." It treated of

Digitized by Google

the propagation of mankind—the human soul—the decrees of God—the nature of true devotion—the meeting Christ in the clouds—and pretended to give "a divine receipt, instructing how all may live forever." The principal object of the work, however, was to proclaim to the world that they (the Buchanites) "are actually waiting for the second coming of Christ, and believe that they alone shall be translated into the clouds, to meet the Lord in the air." This leading article of their creed was engrossed in the title-page of the work: and the publication blasphemously concludes by declaring that "the truths contained in it were received from divine inspiration, by a babe in the love of God, Hugh White, revised and approved by Elspeth Simpson!" Repeated warnings are given in it "to this poor deluded world" not to despise their admonitions, but to repair forthwith to New Comple, if they would be saved from sin and death, for there alone was the light of God restored back to this earth. "Never mind the style, but attend to the sentiment," was the laconic advice they gave to all readers of the *Divine Dictionary*.

If their ambition was, as stated, to spread their fame by this publication, they were grievously disappointed. Their worst enemies could not have advised them to do anything more injurious to their expectations of success. It was scarcely known beyond their own locality, and no clergyman deemed it worth while to lift a pen to refute it. Even the printing of such infamous doctrines could not be tolerated in Dumfries; and such was the popular odium against Mr. Jackson, who threw off the first sheets, that the remainder was transferred to Edinburgh, in Mr. Innes' pocket.

Their only other writings appear to have been hymns; but judging from a single specimen, the inspiration of their muse could not have proceeded from a very sublime fountain. The following stanzas commence a kind of psalm, or song of deliverance from their ill-treatment, by the "People of Closeburn:"—

"The people in Closeburn parish residing,
Came often our sermons to hear;
And rudely they questioned our words, though most pure—
Our persons they threatened to tear.

"They often, with batons and cudgels combined,
With billets of wood, and with stones;
But He who has power all men to control,
Prevented them breaking our bones."

Mrs. Buchan herself, in one of her letters to the Rev. Gabriel Russell, of Dundee, celebrates her troubles and her triumphs, at New Comple in a similar strain:—

"I have been, these ten years past, the very butt of the great red dragon's wrath, and a gazing-stock to a worthless, blinded world, who are continually spewing out floods of falsehood, cruel mockings, and murdering plots against us, either to scatter or kill us; but oh, praise! praise! eternal praise and thanksgiving to divine wisdom and almighty power, the worst of their intentions have hitherto turned out for our good, for none of our society has yet fallen before the enemy."

Instead of diminishing, the society increased, having about this time gained an accession of more than twenty persons, the greater part being from the north of England. George Hill, a well-educated young man, a native of Edinburgh, and at that time clerk to the Closeburn lime-works, was the first to join them; and he, with Mr. Hunter, the ex-town-clerk of Irwine, proved useful assistants, as amanuenses, to Mr. White. The fame of the sect, and of the "Lady of Light," or "Great Luminary," as Mrs. Buchan was now called, was carried to England by James Brown, a merchant tailor from Sunderland, who had accidentally visited New Comple, and was captivated with their expectations of passing into glory without tasting of death. A more important acquisition was Mr. Thos. Bradley, from Hartlepool, in Durham county, who disposed of his property in Yorkshire, and his farming-stock at Stranton, and joined the Buchanites. His friends attempted to prevent this foolish expedition; but he absconded before day-light, with clothing and victuals, for the journey, wife, children, and chattels, in a large wagon drawn by two horses, and was received joyfully at New Comple—his wealth being of material advantage to the society.

It was to be expected that doctrines so palatable to human nature, both spiritually and carnally, would attract proselytes of somewhat equivocal character. One applicant of this kind that appeared was a young naval officer, Mr. C. E. Conyers, lieutenant of marines, who consented to "leave all the vain-glory of his former life," and cast in his lot with "those blessed expectants of immortality." But as it was a rule of the society that no member could retain any earthly drag or entanglement, whereby his ascension to the next world might be retarded, Mr. Conyers was obliged to resign his half-pay, which he did in a letter to the secretary of the admiralty, intimating his determination to hold no longer any commission under an earthly crown. On first appearing in his new service, he was bare-headed, which our lady took as a mark of profound respect and superior breeding, to which she was not always accustomed. It soon transpired, however, that he had been regaling himself the night before at a neighboring wayside inn, (Brownhill,) and having no money to pay his bill, the landlord kept possession of the hat. This explained the mystery of the obeisance; but the old hat was redeemed, and the next time the owner appeared bare-headed was on the scaffold at Tyburn. The society had early discovered that, notwithstanding his seeming zeal, "he was a wolf in sheep's clothing," and had sought their community for other reasons than the hope of an immediate translation to heaven. He had defrauded a life assurance company in London, and probably expected to be carried into the clouds before his villany was detected. He was mistaken. The officers of justice traced him to his lurking-place, and handed him over to the fate he deserved. Other "moneyless rakes" sought admission, but in vain; none being accepted in future without being subject to examination and investigation by Mrs. Buchan, in which she was the chief actor, but of which delicacy forbids a more particular description.

Various circumstances now made it necessary that Friend Mother should give some evidence of the truth of her doctrine. Their creed had been published to the world. Expectation was excited. The English converts had been summoned to "make haste and join their loving brothers the saints in glory." The faith and hope of the whole community were wound to the highest pitch, "longing for the time of the bride's translation." Scripture confirmed these devout warnings. The 1260 days which the woman in the Revelation was to tarry in the wilderness, after giving birth to the man-child, who was to rule all nations with a rod of iron,

Digitized by Google

had nearly expired, reckoning from Mr. White's conversion at Irvine. This coincidence of dates and hopes led the sanguine enthusiasts to believe that the great event so ardently desired was at hand. An accident, the burning of a neighboring farmer's premises, "one of their most violent enemies," brought on a premature crisis. Imagining the nocturnal conflagration to be the commencement of the general judgment that was to destroy all unbelievers, a panic seized the whole inmates of Buchan Ha', from the oldest to the youngest. Andrew Innes, who was an eye-witness to this *Midnight Manifestation*, as he calls it, says:—

"All the members below instantly started to their feet, and those in the garret hurried down as fast as they possibly could through the trap-door. But it being about midnight, and there being no light in the house, Mr. Hunter, in the agitation of the moment, tumbled headlong down the trap-ladder. In an instant, however, he bounded from the ground, and with a voice as loud as a trumpet, joined in the general chorus, which every one in the house sung most vehemently—

'Oh! hasten translation, and come resurrection!
Oh! hasten the coming of Christ in the air.'

"The bodily agitation became so great, with the clapping of hands and singing, that it is out of my power to convey a just idea of the scene. Every one thought the blessed moment was arrived; and every one singing, and leaping, and clapping their hands, passed forward to the kitchen, where Friend Mother sat with great composure, while her face shone so white with the glory of God as to dazzle those who beheld it, and her raiment was as white as snow."

The extraordinary noise and tumult collected a crowd of neighbors, who dispersed when the agitation subsided. Here a curious scene is described by old Andrew:—

"I remember, when daylight appeared, of having seen the floor strewed with watches, gold rings, and a great number of trinkets, which had been, in the moment of expected translation, thrown away by the possessors, as useless in our expected country. We did so, because Elijah threw away his mantle when he was, in like manner, about to ascend to heaven. My own watch was of the number; I never saw it more, but I afterwards learned that John Gibson, our treasurer, had collected all the watches and jewelry, and sold them in Dumfries."

This sudden explosion of fanaticism did not in the least disconcert Mrs. Buchan, who quietly *called for a tobacco-pipe and took a smoke;* "telling her people she now saw they were not sufficiently prepared for the mighty change she intended them to undergo." The failure on this occasion she ascribed wholly to the want of faith in her followers, and therefore another ordeal was prescribed for them. As Moses and Elijah fasted forty days and nights, as Christ remained the same time in the wilderness without food, and finally, as Peter, James, and John needed no terrestrial support on the Mount of Transfiguration, so Friend Mother, in order to bring her dupes into the spiritual state necessary to their translation without tasting death, enjoined a total abstinence from all earthly nourishment for forty days. This she declared to be an indispensable preliminary, and assured them, at the same time, that as the blood receded from their veins, the Holy Spirit would occupy its place, and that they would consequently become spiritual bodies, like the great founder of their society.

Severe as this test of orthodoxy was, it was cheerfully and unanimously complied with. The enthusiasts shut themselves up from all intercourse with strangers, doors bolted, windows nailed down and screened—their only exercise being reading, and singing hymns composed for the occasion, one of which began thus:—

"On words of God his children feed,
For little by this mouth they need," &c.

In this imprisonment they continued like so many Jonahs in the fish's belly. The narrative thus describes their condition:—

"We never went to bed; some stretched themselves on coverlets by turns on the floor. The infirm generally lay couchant on the beds in the cock-loft, and being about the middle of June, we scarcely knew night from day. When the fast commenced, we had eight gallons of molasses, a little manna, and a few stones of oatmeal; but during the whole six weeks of the fast, there was no such thing as cooking victuals, and no complaint was made for want of food, even by the children. There was, indeed, sometimes a desire for a little drink, and as Friend Mother was always stepping about among us, she kept a little treacle mixed with hot water, which she gave to any person that was thirsty; but it was very seldom required."

The only recipient of this liquid was "an old blind and deaf woman, who lay in bed most of the time." Whether this insane attempt to live without food amounted to total abstemiousness, it is impossible to know. Certainly, the fasting was not imaginary, as the personal appearance of the whole fraternity showed, for they were reduced to skeletons. Mrs. Hunter, fearing that her husband and children might be starved to death, succeeded in having them conveyed home, by virtue of a warrant, charging him with "folly and ill-behavior, in having left a good property and an excellent business for the purpose of following a filthy, lascivious witch, to the ultimate ruin of his family." For this act of defection, the Lady of Light opened her spiritual artillery in full wrath against the offending female, denouncing her as an imp of Satan, "with all the cunning of a serpent and the deceit of a devil." To prevent desertion in future, any one suspected of an intention to leave the society was locked up, and every day *ducked in cold water!* But before this rule had passed, Mrs. Innes had contrived to carry off her two daughters, also residing "under the wings of mercy at Buchan Ha'."

It would appear that before the expiry of the forty days, Luckie resolved to give her adherents confirmation of the fulfilment of her promises. They were assembled first on a small green hillock behind their cabin, where they remained till midnight, "singing with such united strength that the deeply-mixed melody of their voices was frequently heard at Closeburn Castle, a mile distant." They then moved slowly off towards Templand Hill, which they ascended before day-break, to hold a "love meeting" preparatory to the grand translation. Platforms were erected for them to wait patiently until the wonderful hour arrived. The hair of each head was cut short, except a tuft on the crown "for the angels to catch by when drawing them up." Mr. White was so confident, or appeared so, of being carried aloft, "that he dressed himself in his canonicals, put on his gloves, and walked about

Digitized by Google

scanning the heavens." Luckie Buchan was herself the most conspicuous figure. "She was raised nearly her whole length above the crowd by whom she was surrounded, who stood with their faces towards the rising sun, and their arms extended upwards, as if about to clasp the great luminary as he rose above the horizon." Her platform (an empty cask turned upside down, according to some accounts) was exalted above the rest.

The utmost anxiety prevailed among the spectators who witnessed this extraordinary scene, "expecting every minute that the sound of the archangel's trumpet would break upon their ears." The finale was ridiculous enough. The momentous hour arrived; "a gust of wind came, but instead of wafting them upwards to the land of bliss, it capsized Mrs. Buchan, platform and all!" After this "unexpected downcome," Luckie and the whole band made their way back to New Comple. An eye-witness who had been on the hill says—

"We all hastened to see them retrace their steps to their wonted abode, and such a company of half-famished creatures I never saw before. They were all deadly pale, and emaciated to the last degree; they seemed like living skeletons just escaped from the grave, or newly imported from Ezekiel's valley of dry bones, with the exception of Luckie herself. She was like one of those beauties who crowd the canvass of painters with *hillocks of rosy flesh*. Her hair was unbound, and hung profusely over her back and shoulders. She was downcast and melancholy, as were all her followers, evidently from the exposure of their reckless folly."

It is plain that Friend Mother had not abstained from terrestrial nutriment, and her credulous dupes believed her when she told them that "being a partaker of the divine nature, she partook of earthly sustenance during the fast, merely to prevent her tabernacle from becoming too transparent for human eyes to behold!"

Two of the Englishmen, the Sunderland tailor and the Durham farmer, broke down in the middle of the fast, not liking that species of training; they waited the result at a little distance, and had their faith considerably shaken. One of Mr. Bradley's children was obliged to be removed nearly lifeless; and after tasting food she became quite delirious, and at last died insane. Andrew Innes was also compelled to depart privately for Muthill, before the termination of the fast, in consequence of Catherine Gardiner, who had left the society pregnant, being advised to enforce her claims upon him by law. Being completely exhausted with hunger, he was conveyed away "by cock-crow, on the landlord's old mare," so weak, that he required to be lifted on horseback, and his tattered habiliments hurriedly put on by mistake, a world too wide for his shrunken person he afterwards married Catherine, who returned with him to New Comple, and treated her with the affection of a wife, although the old heartless vagabond confessed that he submitted to the ceremony, knowing that the most legal union that marriage could form, would be done away on entering the society. She lived with him fifty-eight years, having died in November, 1845.

The failure of the attempt to scale the skies was a sore disappointment, and may be said to have exposed the absurdity of this "most romantic enthusiasm." The lady of light sank in the estimation of her followers, who began to doubt the reality of her pretensions. The English people, all of them Methodists, and many of whom had placed their whole worldly means at the disposal of the society, were reduced to beggary, and returned home loudly inveighing against the darker shades of Luckie Buchan's character, and the miseries she had entailed upon them by "her irreligious fooleries." The Sunderland tailor was the most violent, as he had additional cause for unbelief, having witnessed the failure of a pretended miracle in a time of severity, whereby Friend Mother promised to draw a supply of cash from heaven. They went to the summit of a neighboring hill, with a sheet held by the four corners, to receive the money; but the man tired before the golden shower fell, leaving madam alone, who upbraided him, when she came home with £5, for his want of faith. Mr. White, too, became arrogant and disrespectful, accused his spiritual mother of being a deceiver, debarred her from quitting the house, or receiving visitors, and, in a short time, was the means of breaking up the society. Quarrels ensued about the distribution of the funds, the treasurer's honesty was questioned, and on his claim of £85 being refused, he obtained a *fugæ* warrant against Mr. White and Mrs. Buchan, who were apprehended and laid in Dumfries jail. From this unpleasant situation they were liberated by the spontaneous generosity of Thomas Bradley, who lodged the sum claimed by Gibson, by way of bail, until the matter should be decided in due course of law. The decision of the sheriff went against the treasurer, as it appeared he had put his money voluntarily into the general funds of the society. Failing in this issue, Gibson impeached the luckless couple before the kirk sessions of Closeburn, for having carried on an improper intercourse. Several of the disaffected members were summoned as witnesses to establish the charge, but not appearing in court, the case was dismissed, although Andrew Innes afterwards admitted that "the fact of Mr. White and Mrs. Buchan sleeping together was never intended to be kept a secret in the society." Ultimately, Gibson returned to Irvine, to resume his occupation as a builder; his wife, however, refused to accompany him, because "like Judas, he had betrayed his mistress."

The county magistrates now became apprehensive lest, in the dilapidated condition of the society, its remaining members might fall a burden on the parish for support. To avert this danger, an order was issued that they should leave Dumfrieshire; and accordingly, on the 10th March, 1787, they moved off in a body from New Comple; their landlord, Mr. Davidson, supplying horses and carts for removing their bedding and furniture. They were under great alarm of a second attack, as crowds had assembled from various parts to witness, as they expected, the final dispersion of the society, and endeavor to recover their infatuated friends. But they were allowed to depart without much injury, though not quite unmolested, as we learn from Mr. White's poem on the occasion:—

"The tenth day of March, being closely impending,
Like voracious hawks which the doves doth pursue,
Or wolves, which the sheep and the lambs doth devour still,
Came Closeburn's people God's course to undo," &c.

The emigrants took up their next residence at Tarbreach, and afterwards at Auchergibbert, a small farm on the borders of Galloway, in Kirkpatrick Deeham parish, the lease being in Mr. White's name. There they had literally to begin

Digitized by Google

the world anew; and as they had never wrought for wages, a shower of money would have been of real service to them—their whole stock consisted of only one cow, a calf, two stirks purchased on credit, and a pair of old horses, gifted to them by Bradley and their former landlord—they had to erect the entire farm-steadings, which they accomplished themselves, there being builders, carpenters, and tin-smiths, as well as spinners and knitters, in the society. These expenses obliged them to take hire for their labor; the women spun yarn, at 3d. the hank—and the men went to harvest, at 8d. a day, with victuals. Luckie occasionally superintended "her bairns" personally in the fields; the deference they paid her was quite extravagant—they threw down their sickles, embraced each other, moved towards her with their heads uncovered, singing at the pitch of their voices the hymn "O hasten translation" to their favorite tune, "Beds of sweet roses;" and forming a circle, kneeling round her, she laid her right palm on the forehead of each, when they started up in succession, like automaton figures, raised by the pressure of internal springs. But it was in the kitchen that her maternal cares displayed themselves most usefully. Her prowess in cookery according to Innes, must have been miraculous, as she could turn simple fare into the most delicious dishes, make a few potatoes, carrots, or cabbages, with a handful of oat, or barley meal, feed upwards of forty persons daily—and produce "more palatable and substantial broth from a single spoonful of butter, than any other person could do with a whole joint of mutton and plenty of vegetables of the best description."

The supernatural gift, however, that nearly rivals the miracle of the loaves and fishes, could not prolong the author's life beyond the natural time. The disobedience of her children, and especially the violent and uncourteous conduct of Mr. White, had broken her peace of mind and crushed her spirit. She rebuked their ingratitude and unbelief in bitter reproaches:—"Since I cannot prevent some of you going hell-ward, I will cast my body down in your way, and those who wish to do so may go over it." Her declining health left no doubt of the result, however reluctant her followers might be to credit the possibility of her death; and after a severe illness she expired on the morning of the 29th March, 1791, in the seventh year of the Buchanite *Hegira*, or flight from Irvine. Her last breath was received by the group of devotees who stood in consternation around her bed, "all being greatly agitated, with the exception of Mr. White; nothing was then to be seen but the deepest emotions of distress—nothing heard but the unsubdued wailings of heart-felt sorrow." Before becoming speechless, she had exhorted them to continue steadfast and unanimous in their adherence to her doctrines.

"She said they had received a convincing proof that she was the Spirit of God—that Christ was her elder brother, and that she was, consequently, the third person in the Godhead, or the Holy Ghost, and, therefore, she could not die; and though she would appear to do so, they needed not be discouraged, for she would only sleep; and if their faith was pure and without alloy, she would return for them at the end of six days. But if they still remained faithless she would not come back to take them to heaven till the end of ten years; and if they still continued unprepared, fifty years would elapse before she would reappear on the earth; but then, at all events, she would descend to convince the faithless world of its error in supposing her to be only one of the false prophets mentioned in the 18th chapter of Deuteronomy."

To this graduated scale of faith most of her disciples clung to the last. A rude coffin of boards, without being planed or blackened, was prepared, into which the body was laid, wrapped in a simple shroud; "and what was most singular, (says her devoted chronicler, Innes,) our hands, after touching her, emitted an odoriferous perfume, which spread over the room, as if we had been handling myrrh, or some other aromatic herb." The greatest pains were taken to conceal the death, and strict orders given that no lamentation should be made, nor any appearance of funeral rites. That no obstacle might interpose to obstruct the ascension, the lid of the coffin was not nailed down; and instead of being carried to the grave, it was secretly removed at night to the barn. In his zeal to maintain his mistress' immortality, Andrew contrived to abstract the corpse the first night, and hid it "in a mow of corn," to prevent its being buried. But fearing the rats might set upon it, and the trick being discovered, "he plainly told where he had concealed her." A platform was then erected in the centre of the barn, on which the coffin was placed; and as the sixth day approached, the return of Friend Mother was waited for with breathless expectation. A second stratagem was now attempted to prove the fact of a veritable resurrection. The body being clandestinely removed by those who watched it, and a hole cut in the roof, exactly close where the corpse lay, "they next day told the rest of Luckie's deluded followers, that an angel had come and carried her away before their eyes; in proof of which they showed the aperture in the roof through which they had ascended."

The two daughters of Mrs. Buchan had quitted the society two years before her death, in consequence of her rude treatment by Mr. White. Annoyed by the reports in circulation, some alleging the body was thrown into Auchergibbert loch, others that it was buried in the house under the hearth-stone, they applied to the sheriff to cause Mr. White to surrender the remains of their deceased parent. But the public agitation being great, it was deemed more advisable to have the corpse regularly buried; and accordingly, at the dead of night it was interred under the coffin of another in the church-yard of the neighboring parish, Kirkguzion; the only individuals present or cognizant of the fact being Mr. White, Mr. Hill, and the stewart depute, Sir Alexander Gordon, by by whom the secret was disclosed thirty years afterwards.

The body, however, which had been carefully packed in feathers, was not allowed to remain long in its resting-place. White, Robertson, and Hill carried it away, and deposited it beneath the hearth-stone, in the kitchen of Auchergibbert. Thence it was removed, with all possible privacy, to their next abode, at Longhill, where it was enclosed in a large chest, previously used for holding the spare blankets of the society. Finally it was conveyed, like the bones of Joseph, to the last residence of the Buchanites, at Crocketford, near Castle Douglas, where it was kept many years, in a little abutment, or charnel-house, attached to the dwelling, and immediately behind the bed-room fire-place of Andrew Innes, who displayed a singular enthusiasm in the preservation of this sacred treasure. Twice every day in the year he regularly warmed the skeleton with a heated flannel cloth, which he

Digitized by Google

pushed through a hole, made on purpose, at the back of the grate directly above the coffin, into which it fell, and was carefully spread over the remains by this superstitious devotee, who had private access to them by a lock-door in his sleeping apartment. Daily did the old man pay his respects to this venerated mummy, with its dark brown skin cemented like parchment to the bones; and when he expired his last directions were, that the coffin, or packing-box, with its precious contents, should be interred with his own in the kail-yard, "on the left flank of the line of the graves of his former associates." Time had not dulled the edge of his fanaticism, and to the end he cherished his darling hope of translation without death, consoling himself with the pleasing reverie that "every night he slept in Friend Mother's house, and breakfasted every morning with her family."

The sequel of this strange record of human vice and folly is soon told. The death of the founder dispersed, but did not annihilate, the sect. White, whose zeal gradually subsided after the failure of the Templand Hill demonstration, and whose contempt for Mrs. Buchan increased so far as to lead him to assume the apostleship of the society himself, was the first to break up the concern. Farming added to his wealth and to his worldly-mindedness; and as Luckie waxed old his affection for her waned, and reverted to his wife and family. The disingenuous part he acted in first pretending that the dead impostor was only in a trance; and, when the delusion would no longer avail, having her clandestinely buried, that her votaries might believe that she had ascended to heaven, was the natural prelude to his recanting her doctrines altogether. Having disgusted his associates with his arrogance and hypocrisy, and providing for his worldly comforts as far as he could, he emigrated to America, in June, 1792, taking with him such members as could pay their passage, or be persuaded of his power to promote their interests in that country. His abortive attempt to become the leader of a new sect in Scotland, appears to have deterred him from setting up in that capacity to propagate his dreamy mysticisms in the new world. He adopted the profession of teaching; and when last heard of, he was school-master in a small village in Virginia, occasionally preaching to a few Universalists. His fellow-emigrants were all unfortunate, with one exception, Joseph Innes, Andrew's brother, who realized property to the amount of £8,000. George Hill, who had married Jean Gardiner, (Catherine's sister, and one of Robert Burns' many "darling Jeans,") became a bookseller in Baltimore, but was reduced to abject poverty by the failure of a shipping company. Mrs. Buchan's son had been long removed from the society; he entered the British naval service about the beginning of the French revolution, and was killed at the battle of Trafalgar.

The secession of Mr. White left a remnant of fourteen, who immediately removed to the neighboring farm of Larghill, a waste moor of four hundred acres, which they had leased at a rent of twenty guineas a year. There they were again obliged to erect a house, and support themselves by manual labor, the women spinning, and Duncan Robertson exercising his trade of wheel-making; no distinction in regard to the Sabbath being observed in carrying on their in-door work. The costume of the society, male as well as female, was cloth of their own manufacture, and all of a light green color. Being of small stature, this peculiar dress gave them in their lonely moor more the appearance of a race of elves than human beings. All their farm utensils, barn and stable doors, carts, corn sacks, &c., were marked in large characters, "*Mercy's Property*," a device fallen upon to preserve the community of goods and chattels, in case of any one assuming, like Mr. White, authority over the rest.

When the farm (which once belonged to the famous persecutor, the Laird of Lag) was improved, the proprietor took it under his own management, which obliged the faithful remnant again to shift their quarters. Having purchased five acres of building ground, at Crocketford, at a cost of £900, they removed, in 1808, to their new premises, which were destined to be the final resting-place of the remaining members of the society. Many of them had paid the debt of nature, and were always buried in the *kail-yard*, ostensibly to prevent the graves being trodden by strangers, but more probably because no other burial ground would receive them. It was their rule to show no symptoms of grief, nor wear any of the usual badges of mourning.

Of the fourteen residuaries, two were interred at Larghill, the other twelve sleep under the green sward at Crocketford; Andrew and his partner (he refused her the name of wife) being the last survivors. Old Katie's shrivelled form must have been of grotesque appearance. Originally diminutive, the pressure of fourscore years had bent her down to the pigmy size of fifty inches. Her head, naturally large, was augmented by an incredible accumulation of caps and bandages, so as nearly to conceal her little hatchet face; the most conspicuous feature of which was a pair of black horn-mounted spectacles, with colored yarn wrapped round the bridge, to save the skin of her nose. Her attachment to Andrew was inalienable; her great anxiety being lest the timber soles of his clogs, as he sat with his feet on the ribs of the grate, might take fire and roast his legs before he could shift his chair. The old man survived her little more than a year; and with him the name, and race, and doctrines of the Buchanites became extinct. He was certainly the most devoted of all the adherents to this delusion. In defiance of all evidence, his belief remained unshaken in the anticipated resurrection of Friend Mother, and the reality of his own translation. The first decade came, and the fifty years elapsed without shaking his convictions; and when his end came, he met it with the firmness of a stoic, the hope of a martyr, and the credulity of a fool.

The details of the history of this sect furnish one of the most extraordinary instances of fanaticism, superstition, and profligacy, that modern times have to record. Its tenets were not calculated to win converts; it made not a single proselyte in Galloway, and was merely tolerated because its professors were civil and obliging neighbors.

It were easy to trace a striking resemblance between the mystical and blasphemous reveries of Mrs. Buchan and those of Ann Lee, Johanna Southcote, Jane Leadley, John Peterson, the Gorlitz tailor, Behmen, the Heren-hutters, Muggletonians, and scores of other semi-bedlamite reformers. There was no doubt, however, that the real prototype of Elspeth Simpson was Antoinette Bouvignon, whose heresies were flagrant in Banffshire, a few years before Mrs. Buchan was born. This celebrated fanatic excited no small disturbance with her religious pretensions in Flanders, Holland, Germany, and Denmark, being driven from city to city,

Digitized by Google

in consequence of her visionary and indelicate doctrines, until she at length died, in 1680, at Francker, in the province of Frieseland. She was a great pretender to divine effusions, sacred elucidations, &c., and had her spiritual children, of whom she travailed in birth—her dear proselytes, M. de Cort, and Peter Poiret, a great master of the Cartesian philosophy. She carried a printing-press with her in all her wanderings, and published a vast number of books, stuffed with very singular doctrines; but the work by which she is best known in Scotland is, "*The Light of the World*," which was translated into English, with an apology, of which Dr. George Gordon, of Aberdeen, was alleged to be the author. It would be needless here to attempt any analysis of her wild, incoherent doctrines; they spread extensively at the time, and required the utmost vigilance of the General Assembly to extirpate. They are now, however, become obsolete, or only known as matter of record in the laws and proceeds of the church courts. Buchanism and Bouvignonism are alike extinct, destined to pass away like hundreds of other memorials of human folly and misguided religious feeling.

From the Life of Mrs. Jordan.

THE WESLEYAN AND THE ACTRESS.

During Mrs. Jordan's short stay at Chester, where she had been performing, her washerwoman, a widow with three small children, was by a merciless creditor thrown into prison. A small debt, of about forty shillings, had been increased in a short time, by law expenses, to eight pounds. As soon as Mrs. Jordan had heard of the circumstance she sent for the attorney, paid him the demand, and observed, with as much severity as her good-natured countenance could assume,

"You lawyers are certainly infernal spirits, allowed on earth to make poor mortals miserable."

The attorney, however, pocketed the affront, and with a low bow made his exit.

On the afternoon of the same day the poor woman was liberated. As Mrs. Jordan was taking her usual walk with her servant, the widow with her children followed her, and just as she had taken shelter from a shower of rain, in a kind of porch, dropping on her knees, and with much grateful emotion exclaimed,

"God forever bless you, madam! you have saved me and my poor children from ruin."

The children, beholding their mother's tears, added, by their cries, to the affecting scene, which a sensitive mind could not behold but with strong feelings of sympathy. The natural liveliness of Mrs. Jordan's disposition was not easily damped by sorrowful scenes. However, although she strove to hide it, the tear of feeling stole down her cheek, and stooping to kiss the children, she slipped a pound note into the mother's hand, and in her usual playful manner replied,

"There, there; now it's all over. Go, good woman; God bless you! Don't say another word."

The grateful creature would have replied, but her benefactress insisted on her silence and departure.

It happened that another person had taken shelter under the porch, and witnessed the whole of this interesting scene, who, as soon as Mrs. Jordan observed him, came forward, and he, holding out his hand, exclaimed with a deep sigh,

"Lady, pardon the freedom of a stranger, but would to the Lord they were all like thee!"

The figure of this man bespoke his calling. His countenance was pale, and a suit of sable, rather the worse for wear, covered his tall and spare person. The penetrating eye of Thalia's favorite votary soon developed his character and profession, and with her wonted good-humor, retreating a few paces, she replied,

"No, I won't shake hands with you."

"Why?"

"Because you are a Methodist preacher, and when you know who I am, you'll send me to the devil!"

"The Lord forbid! I am as you say, a preacher of the gospel of Jesus Christ, who tells us to clothe the naked, feed the hungry, and relieve the distressed, and do you think I can behold a sister fulfilling the commands of my great Master without feeling that spiritual attachment which leads me to break through worldly customs, and offer you the hand of friendship and brotherly love?"

"Well, well; you are a good old soul, I dare say; but—I don't like fanatics, and you'll not like me when I tell you I am a player."

The preacher sighed.

"Yes, I am a player; and you must have heard of me. Mrs. Jordan is my name."

After a short pause he again extended his hand, and with a complaisant countenance replied,

"The Lord bless thee, whoever thou art. His goodness is unlimited. He has poured on thee a large portion of His spirit; and as to thy calling, if thy soul upbraid thee not, the Lord forbid that I should."

Thus reconciled, and the rain having abated, they left the porch together. The offer of his arm was accepted, and the female Roscius of comedy and the disciple of John Wesley proceeded, arm in arm, to the door of Mrs. Jordan's dwelling. At parting, the preacher shook hands with her, saying,

"Fare thee well, sister. I know not what the principles of people of thy calling may be. Thou art the first I ever conversed with; but if their benevolent practices equal thine, I hope and trust, at the great day, the Almighty God will say to each, '*Thy sins are forgiven thee.*'"

Pontoons for General Sir Harry Smith.—Sept. 11.—Two India-rubber pontoons have been sent down to Portsmouth from the royal engineer department, for the purpose of conveyance to the Vernon, which takes out Sir Harry Smith to the Cape of Good Hope. These pontoons were presented to the master-general of the ordnance by an American; they are portable; each of them forms three canoes, eighteen feet in length, and about seven feet in width, and on their being required for use they are filled with air. The process of inflation is by three bellows screwed on at each end of the canoes, and each takes about five minutes to fill it with wind, and when they are fitted with rafters form a very buoyant bridge. These pontoons were exhibited to Sir Harry when he was at Chatham, and witnessed the late siege operations. On that occasion a six-pounder field-piece, with fifty men, were carried about the river for some time on these pontoons, and Sir Harry was so delighted with them, that on his return to London he made special application for them at the Board of Ordnance. It is the intention of Sir Harry Smith to use these pontoons in the Great Fish river. Captain Haworth, of the royal engineers, goes out in charge of the pontoons, and six other engineer officers embark with the new governor for the cape.

From the Churchman's Monthly Penny Magazine.

AN INDIAN FAMILY IN THE OREGON TERRITORY.

ANY one accustomed to read books of travels, will find frequent references in them to the missionaries we have sent out into foreign lands. These are almost universally in favor of the missionaries. Indeed, in a long course of such reading, the only remarks I have ever met with that have been otherwise, have been all written by men who are evidently loose in their moral feelings as well as in their religious opinions.

To my mind, testimonies of this kind to these devoted men come with much greater force than any other. They may not be more deserving of credit than what we hear concerning them from the avowed friends of missions; but they *seem* more deserving of it, as coming from impartial, and sometimes reluctant witnesses, men who have no end to answer in the testimony they give, but only relate things as they themselves have seen them. They describe a missionary and his doings just as they describe a river and its windings, or a mountain and its cliffs—caring no more generally for the excellence of the one than for the beauty or magnificence of the other.

I send you, for the readers of your magazine, an extract from a volume of travels which has just come into my hands. It is written by an American, who appears to have gone into the much-talked of Oregon territory, on a tour of examination for the government of the United States. He is now in the heart of this territory, at the Rocky Mountains, where the foot of civilized man seldom treads, and where the native Indian is still for the greater part in a state of savage wildness. I must premise that the writer, as his book shows, is by no means a decidedly religious man.

"About three o'clock we came into the camp of a middle-aged Skyuse Indian, who was on his onward march from the buffalo hunt in the mountain valleys. Learning that this Indian was proceeding to Dr. Whitman's mission establishment, where a considerable number of his tribe had pitched their tents for the approaching winter, I determined to leave the cavalcade and accompany him there. My guide, Carbo, therefore, having explained my intentions to my new acquaintance, departed with the remainder of his charge for Ford Walla-walla.

"Crickie (in English, 'poor crane,') was a very kind man. Immediately after the departure of Carbo and his company, he turned my worn-out animals loose, and loaded my packs upon his own, gave me a splendid saddle-horse to ride, and intimated by significant gestures that he would go a short distance that afternoon, in order to arrive at the mission early the next day. I gave my assent, and we were soon on our way.

"Having made about ten miles at sunset, we encamped for the night. I noticed during the drive a degree of forbearance towards each other in this family of savages, which I had never before observed in that race. When we halted for the night, two boys, Crickie's sons, were left behind. They had been frolicking with their horses, and as the darkness came on lost the trail (the track.) It was an half-hour before they made their appearance, and during this time the parents exhibited the most affectionate solicitude for them. One of them was but three years old, and was lashed to the horse he rode; the other only seven years of age—young pilots in the wilderness at night! But the elder, true to the sagacity of his race, had taken his course and struck the brook on which we had encamped, within three hundred yards of us. The pride of the parents at this feat, and their ardent attachment to their children were perceptible in the pleasure with which they received them at their evening fire, and heard the relation of their childish adventure.

"The weather was so pleasant that no tent was pitched. The willows were beat, (beaten down,) and buffalo robes spread over them. Above these were laid other robes, on which my Indian host seated himself, with his wife and children on one side, and myself on the other. A fire burned brightly in front. Water was brought, and our evening ablutions having been performed, the wife presented a dish of meat to her husband, and another to myself. There was a pause. The woman seated herself between her children. The Indian then bowed his head, and prayed to God! 'A wandering savage in Oregon,' the American writer exclaims in admiration, 'calling upon Jehovah in the name of Jesus Christ.' After the prayer he gave meat to his children, and passed the dish to his wife. While eating, the frequent repetition, in the most reverential manner, of the words 'Jehovah' and 'Jesus Christ,' led me to suppose they were conversing on religious topics, and thus they passed an hour. Meanwhile, the exceeding weariness consequent on a long day's travel admonished me to seek rest.

"I had slumbered I know not how long, when a strain of music awoke me. I was about rising to ascertain whether the sweet notes of Tallis' Chant which I heard came to these solitudes from earth or from sky, when a full recollection of my situation, and of the religious character of my host, easily solved the rising inquiry, and induced me to observe instead of disturbing. The Indian family were engaged in their devotions. They were singing a hymn in the Nez Perces language. Having finished it they all knelt and bowed their faces on the buffalo robes, and Crickie prayed long and fervently. Afterwards they sang another hymn, and then retired to rest. This was the first breathing of religious feeling that I had seen since leaving the United States, (three months)—a pleasant evidence that the Oregon wilderness was beginning to bear the rose of Sharon on its thousand hills, and that on the barren soil of the Skyuse heart, were beginning to bud, and blossom, and ripen, the golden fruits of faith in Jehovah, and hope in an after state."

I know not what the feelings of your readers may be after perusing this narrative in its detached form, but if they read it as I did, among many revolting descriptions of ordinary Indian life, they would, I think, be feelings of delight and thankfulness; they would see, as I did, that the gospel of Jesus Christ is indeed a blessed gospel, and wonder at the little efforts they make to send it to heathen lands. The writer arrives the next day at the mission station, and gives a very pleasing account of what he saw there. The missionary and his wife, it is clear, are indefatigable in their labors for the good of the savage tribes around them, and happy and thankful among their labors and hardships. With reference to the latter, the author says, speaking of a pleasant meal he took with them, "When the smoking vegetables, the hissing steak, bread white as snow, and the newly-churned golden butter graced the breakfast-table, and the happy countenances shone around, I could with difficulty believe myself in a country so far distant from, and so unlike my native

Digitized by Google

land in all its features. But, during breakfast, this pleasant illusion was dispelled; our steak was of horse-flesh. On such meat this family subsist most of the time. It enables them to exist to do the Indian good, and this satisfies them." Crickie himself, the traveller, on his departure from the station, engages as his future guide, and when the poor fellow eventually falls sick and is left behind, he bears this strong testimony to him—"He was an honest, honorable man; and I can never think of all his kind acts to me from the time I met him on the plains beyond the Walla-walla mission, till I left him sick on the bank of the Columbia, without wishing for an opportunity to testify my sense of his moral worth in some way which shall yield him a substantial reward for all he suffered in my service."

A HYMN, AND A CHANT; FOR THE HARVEST-HOME OF 1847.

BY THE AUTHOR OF "PROVERBIAL PHILOSOPHY."

A HYMN.

O NATION, Christian nation,
Lift high the hymn of praise,
The God of our salvation
Is love in all his ways;
He blesseth us, and feedeth
Every creature of his hand,
To succor him that needeth
And to gladden all the land!

Rejoice, ye happy people,
And peal the changing chime
From every belfried steeple
In symphony sublime;
Let cottage and let palace
Be thankful and rejoice,
And woods, and hills, and valleys,
Reëcho the glad voice!

From glen, and plain, and city
Let gracious incense rise,
The Lord of life in pity
Hath heard his creatures' cries;
And where in fierce oppressing
Stalked fever, fear, and dearth,
He pours a triple blessing
To fill and fatten earth!

Gaze round in deep emotion:
The rich and ripened grain
Is like a golden ocean
Becalmed upon the plain;
And we, who late were weepers
Lest judgment should destroy,
Now sing, because the reapers
Are come again with joy!

O praise the hand that giveth
—And giveth evermore,—
To every soul that liveth
Abundance flowing o'er!
For every soul He filleth
With manna from above,
And over all distilleth
The unction of his love.

Then gather, Christians, gather
To praise with heart and voice
The good Almighty Father,
Who biddeth you rejoice:
For He hath turned the sadness
Of his children into mirth,
And we will sing with gladness
The harvest-home of earth!

A CHANT.

O BLESS the God of harvest, praise him through the land,
Thank him for his precious gifts, his help, and liberal love:
Praise him for the fields, that have rendered up their riches,
And, drest in sunny stubbles, take their sabbath after toil;
Praise him for the close-shorn plains, and uplands lying bare,
And meadows, where the sweet-breathed hay was stacked in early summer,
Praise him for the wheat-sheaves, gathered safely into barn,
And scattering now their golden drops beneath the sounding flail;
Praise him for the barley-mow, a little hill of sweetness,
Praise him for the clustering hop, to add its fragrant bitter;
Praise him for the wholesome root, that fattened in the furrow,
Praise him for the mellow fruits, that bend the groaning bough:
For blessings on thy basket, and for blessings on thy store,
For skill and labor prospered well, by gracious suns and showers,
For mercies on the home, and for comforts on the hearth,
O happy heart of this broad land, praise the God of harvest!

All ye that have no tongue to praise, we will praise Him for you,
And offer on our kindling souls the tribute of your thanks:
Trees, and shrubs, and the multitude of herbs, gladdening the eyes with verdure,
For all your leaves and flowers and fruits, we praise the God of harvest!
Birds, and beetles in the dust, and insects flitting on the air,
And ye that swim the waters in your scaly coats of mail,
And steers, resting after labor, and timorous flocks afold,
And generous horses, yoked in teams to draw the creaking wains,
For all your lives, and every pleasure solacing that lot,
Your sleep, and food, and animal peace, we praise the God of harvest!
And ye, O some who never prayed, and therefore cannot praise;
Poor darkling sons of care and toil and unillumined night,
Who rose betimes, but did not ask a blessing on your work,
Who lay down late, but rendered no thank-offering for that blessing
Which all unsought He sent, and all unknown ye gathered—
Alas, for you and in your stead, we praise the God of harvest!

O ye famine-stricken glens, whose children shrieked for bread,
And noisome alleys of the town, where fever fed on hunger—
O ye children of despair, bitterly bewailing Erin,
Come and join my cheerful praise, for God hath answered prayer;

Digitized by Google

Praise Him for the better hopes, and signs of better times,
Unity, gratitude, contentment; industry, peace, and plenty;
Bless Him that his chastening rod is now the sceptre of forgiveness,
And in your joy remember well to praise the God of harvest!

Come, come along with me, and swell this grateful song,
Ye nobler hearts, old England's own, her children of the soil:
All ye that sowed the seed in faith, with those who reaped in joy,
And he that drove the plough afield, with all the scattered gleaners,
And maids who milk the lowing kine, and boys that tend the sheep,
And men that load the sluggish wain, or neatly thatch the rick—
Shout and sing for happiness of heart, nor stint your thrilling cheers,
But make the merry farmer's hall resound with glad rejoicings,
And let him spread the hearty feast for joy at harvest-home,
And join this cheerful song of praise—to bless the God of harvest!

ROYAL REFLECTIONS.

Sadly sits old France at Neuilly, glum he waiteth for the Post;
Twirleth his moustache dark Joinville, till he twirls it off, almost;
Very gingerly the lackeys move about, with secret shrug—
Why so sad is all at Neuilly? Wherefore mournful every mug?

Not that, for Italian quarry, Austria sharpeneth beak and claw;
Not that Algiers sucketh millions into its rapacious maw;
Not that Frenchmen seem inclined to question if "*L'Etat c'est Moi;*"
Not that guests at public dinners give up crying "*Vive le Roi.*"

Liberty, of course, is humbug; taxes—'tis the people pay;
Theories may be safely argued 'neath the "*enceinte continuée.*"
If the royal health 's forgotten, still the royal pocket 's full;
The sheep are welcome to their baäing, so they render up their wool.

'T is that he is vexed with shadows in the evening of his days;
A young queen's face, a wedded widow's, ever seems on him to gaze;
Lies, an ugly swarm, that he hath called to being with his gold,
Sins, that he hath fed and fostered, press in on him, blunt and bold;

And Napoleon's stony image frowns upon him through the air,
Holding up the cross of honor men are now ashamed to wear;
And France, a shade of scorn and sorrow, will not from his side depart,
Pointing with accusing finger to a fester in her heart!

Wonder not that such a sadness broods o'er Neuilly's pleasant room;
Wonder not that from the monarch's presence steals a blight and gloom;
Methinks, the chink of five-franc pieces only hollow music sends
To a proud man with no honor—to an old man with no friends.—*Punch.*

The Classico-Mania.—We have been requested to enter our protest against a practice that now prevails of affixing classical inscriptions to modern English buildings. A sort of compromise is usually attempted by resorting to bad Latin, for the accommodation of those who can only read the mother-tongue, as the individual thrown into the company of a Frenchman, and not being able to say a word in French, met his companion half-way by talking broken English. A rich specimen has been furnished to us of an inscription on a Wesleyan Chapel, commencing "Hujus Wesleyani sacelli fundamenta posita sunt a Georgio Green, Armigero, de *Nigro Muro.*" Wesleyani and Green are certainly not remarkable for the purity or elegance of their Latinity, and the attempt to elevate Blackwall, by turning it into *Niger Murus*, is as bad as the effort to give a lift to Turnham Green, by calling it *Verte eos Virides*. We might as well call Fleet street the *Via Rapida*, Houndsditch the *Fossa Canum*, and dignify our old friend Upper John street with the magnificent sounding title of *Via Superioris Johannis!* No! No! Let us call English things by English names; and if the dictionary is not comprehensive enough to accommodate all our countrymen, we will undertake to lengthen the language, at a half-penny for every substantive, a penny for a verb, and the rest of the parts of speech at sixpence a dozen, all round!—*Punch.*

Notice to Trespassers.—The Duke of Athol begs to inform tourists, geologists, botanists, and the public in general, that his extensive estates in Blair Athol are shut up for the season. The duke has lately turned several sheep-farms into deer forests, and repose is absolutely necessary for the comfort of the animals. Great injury having recently been done to the duke's heather, and several persons having been observed breaking pieces off the duke's whinstone, offenders are hereby warned that all such depredations will be punished with the utmost rigor of the law.—*Punch.*

The New Postage Stamps.—The new postage stamps, intended principally for the pre-payment of foreign letters, were issued on Monday. They are of the value of 1s. each, the color being green, and the form octagonal, to distinguish them easily from the smaller denomination of postage stamps at present in use. These stamps may be used for inland as well as well as foreign postage, but they are chiefly intended for the postage of letters to the United States, India, China, the West Indies, New South Wales, New Zealand, and other places to which the postage is 1s. It is understood that other denominations of postage stamps are hereafter to be issued; and no doubt it will be found desirable to have a fourpenny or sixpenny stamp, to avoid the inconvenience of the long rows of stamps now frequently required on inland letters.—*Examiner*, 18 *Sept.*

CORRESPONDENCE.

In days of yore, when the indiscreet advocates of the protective system were wont to proclaim their determination to force this policy upon the South, even if it should result in the dissolution of the Union, we endeavored to show them that this dissolution would destroy the prize for which they were contending. Will our southern friends listen to the same argument, which we copy from the Republican, Macon, Alabama?

SAFETY OF THE SOUTH.

It is truth, worthy to be repeated, that there is no safety for the south, but to reject and repudiate the idea of acquiring territory. It is risking too much for too little. The advantages sought to be gained are insignificant in comparison to those that may be lost. Should the dreaded collision between the north and south take place, and the threatened issue be made, the initiative will devolve upon the south. And what will it do? Will it dissolve the Union? Have we duly considered and estimated the value of the Union? Are we prepared to surrender the compromises, guarantees, and protection of the constitution, and take our chance upon the broad sea of anarchy, and brave the appalling calamities that many ensue? The very institution we seek to extend is guaranteed and protected alone by that constitution we would overthrow. It is the only bar to northern interference with slavery. By it the north are compelled not only to protect the south against foreign interference, but to suppress domestic insurrection. So long as that instrument is regarded sacred, the "peculiar institution" of the south is safe from either foreign or domestic interference, and will remain unmolested under its present and legitimate jurisdiction. But if we should, from any cause, or by any means, divest ourselves of the security the constitution affords, there will remain no well-founded hope for the future in relation to the institution of slavery. In the event of the dissolution of the Union, even provided it could be amicably consummated, it can hardly be supposed that the two governments, which would be created could or would long remain friendly in their mutual relations. The same cause which would have brought about the dissolution would still exist to disturb all good understanding between the two governments. For instance: the slaves contiguous to the free states would have every inducement to abscond and take refuge among the people of the north, because there would no longer be a constitution or laws prohibiting the northern people from receiving and protecting them. That such would be the case, no one can for a moment doubt. Under such provocations, it would be morally impossible to preserve peace. War of the most relentless character would be the inevitable consequence, and slavery would hang like a millstone suspended to our necks, crippling our resources and paralyzing our energies. We could not successfully repel our enemies and at the same time control the slave population. Slavery would be as a magazine among us, to which our enemies would most assuredly apply the torch, and dreadful would be the explosion.

But suppose all the impending difficulties were for the time being smothered, and the territory acquired without restriction; it would have to be governed and provided for by the United States, whose duty and province are to make such laws and regulations, as they may deem proper, among which there would certainly be a clause or provision prohibiting slavery. Thus the question will inevitably arise, and assume its hideous and portentous aspect. The contest will come, and if the north stands firm as it promises to do, the south must be overpowered, and slavery will be prohibited from the acquired territory. What will the south do? Will it dissolve the Union? Suppose it do; the power of the north to prohibit slavery in the territory will not therefore be impaired, but, on the contrary, would be exercised with greater rigor. We would lose the protection and security we now enjoy, without gaining admission into the coveted territory. It would be making a bad matter worse. Look at it as we will, the acquisition of Mexican territory is attended with difficulties and danger. Could the territory be obtained without restriction in regard to slavery, it would confer important advantages upon the south; but it cannot be so obtained. If it come at all, it must come with the proviso; or, at any rate, in such a manner as to be subject to the proviso hereafter. Thus, it will bring evils with it of incalculable magnitude—evils that will infinitely counterbalance all the advantages that could possibly be derived under the most favorable circumstances.

The National Era, which is a thorough believer in the doctrine of State Rights, even holding that Ohio could introduce slavery into her borders if she pleased, and even agreeing with what we think the treasonable doctrine of Nullification, makes the following argument, which is well deserving of careful examination by the South as well as by the North. We have not sufficiently examined the legal question to be able to give an opinion.

A DANGER TO BE AVOIDED—THE TRUE DOCTRINE.

The advocates of the Wilmot Proviso, led away by their zeal for this measure, in the excitement of discussion are in danger of yielding a point of vital importance. Their whole struggle seems to proceed on the assumption, virtually made by their adversaries, and not denied by them, that slavery can be introduced, as a thing of course, into California and New Mexico, should the proviso be defeated. Important as we deem this measure, the assumption, we hold, is totally false, as we shall now proceed to show.

An American traveller or resident in England or France, may recover personal property—clothes, money, books, &c.—of which he is deprived by force or fraud. The municipal laws of those countries recognize such things as property, and provide a safeguard for them.

If an American carry his slaves to either country, for a day or a moment, the relation of slavery or property ceases instantly, and his slave becomes a freeman. The municipal law does not recognize human beings as property, and has provided no safeguards for such a tenure.

A citizen of Maryland, purchasing a farm in Pennsylvania, may drive thither his flocks and his herds, and continue to hold them there. But, if he carry his slaves into that state, his property in them ceases, and they become freemen. The municipal law recognizes property in beasts, but not in men.

Digitized by Google

Should a citizen of Kentucky, after having settled in Indiana with his slaves, return with them to the former state, and undertake to continue them in slavery, the courts of Kentucky will hear an application for their freedom, and on proof of their having been settled in Indiana, by their claimant, discharge them as free.

Citizens of Louisiana, bringing back to that state persons who have become free by being taken to France, cannot hold them as slaves under the laws of Louisiana The courts in that state have decided this point.

It is an established principle, sustained by the highest judicial decisions, that a slave, carried by the will of his master into a free state, ceases from that moment to be a slave; it being universally admitted that this case is not provided for in the constitution, which has guarded the right of a master only in the case of a slave *escaping from* the state where he is held, *into* another state. Prior to the adoption of this clause, the master of a slave had no legal right to reclaim him, whether he *escaped*, or was *taken* from the state in which he was held.

Before the abolition of slavery in the British colonies, slaves of the southern states of this Union were shipwrecked, or driven by stress of weather, upon their shores, and liberated. Indemnity was demanded by our government, and yielded, on the ground that slavery was recognized by the municipal laws of the colonies. Since the act of abolition, indemnity for slaves liberated on entering or being driven into their ports despite the will of their owners, has been peremptorily refused, on the ground that the municipal law had ceased to recognize the right of property in man.

The South Carolina abstractionists are indignant at the inequality to which their institutions are attempted to be subjected by the Wilmot proviso. Rather than submit to such inequality, they prefer the dissolution of the Union and civil war. This is extreme folly. The inequality of which they complain relates solely to one "institution," as they call it—slavery—and it already exists from the very nature of the case. The right of property in a human being is repudiated by every country in Europe, with the exception of Russia and Spain. We do not except France, because she has already adopted the principle of abolition, and the sole question before her government now, in relation to slavery, is one of *time* not *principle*. It is repudiated by fifteen states of this Union. It has been treated as an exception, entitled only to exceptional safeguards, by the constitution of the United States, which recognizes the master's right no further than as its exercise may be necessary to secure a slave *escaping from one state into another*. It has been treated as an exception, not entitled to an equality of privilege with other rights, by the act of the government prohibiting it altogether in the Northwest territory; by the act of congress restricting its introduction into the Louisiana territory; by the act excluding it from all that portion of the same territory lying north of 36½ degrees; and by the joint resolution of congress for the annexation of Texas, prohibiting the right above the same degree.

The municipal laws of Europe and of one half this Union; the international laws of Christendom, so far as the usages of nine tenths of Christendom can make law; the constitution of the United States; four distinct acts of the general government, and the decisions of the highest courts in the southern states, have fixed upon slavery the brand of *Inequality!* They all assume that it is an exception to natural right; that it can have only exceptional privileges and safeguards; that it exists and can exist only by positive law; and that whatever privileges are accorded to it cannot be taken for granted, but must be expressed in positive terms, which then are to be construed always with strictness.

Slavery, in any state, is an institution of that state, standing alone upon positive or municipal law, if it stand upon any law. This is the ground, if we understand the state-rights men of the south, which they assume. They claim that slavery is a state institution, not created by congress, not deriving its existence from general usage, not standing upon the common law, but created and sustained by the municipal laws of the state in which it exists; in all of which we entirely concur.

They claim, further, that the general government is one of grants—has no inherent, but simply delegated powers. We agree with them. They claim that congress is not omnipotent—is not a British parliament—can exercise no power not conferred in express terms by the federal constitution, or necessary to the exercise of a power which is thus conferred. We agree with them. They hold that congress, therefore, cannot construct a railroad or a canal through Ohio, for the benefit of that state, because such a work is beyond the charter of its powers. We agree with them. They hold, for the same reason, that congress cannot abolish or create slavery *in the states*. We agree with them.

But we hold that congress cannot create slavery either in state or territory—no power to do this being conferred, or necessary to the exercise of any one that is conferred. If not insincere in their creed, they must agree with us, as we agreed with them. They must take this step, or retrace every step they have taken. And, if they be candid, they shall go one step further. Whatever may be said against the applicability to the legislative or judicial powers *of a state*, of the restrictions imposed on power, and for the protection of right, by the guaranties of the federal constitution, it must be admitted that these restrictions apply, in all their force, to every department of the *federal* government —executive, legislative, and judicial. Deny, if you please, that the guaranty of the people to be secure in their "persons, houses, papers, and effects," against unreasonable searches and seizures, and against arrest, except in pursuance of warrants issued "upon probable cause, supported by oath or affirmation," has anything to do with the action of an executive or a legislature of a state, in relation to the people of that state; still, all will admit that it effectually restricts the exercise of power by any department of the *general government*. To provide the people a safeguard against its usurpations, was, in fact, the primary object of the clause. But the same constitution provides that—

"No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service, in time of war, or public danger; nor shall any person be subject, for the same offence, to be twice put in jeopardy of life or limb; nor shall he be compelled, in any criminal case, to be witness against himself; *nor be deprived of life, liberty, or property, without due process of law.*"

Deny that this provision controls in any way the action of the state legislature or judiciary; still you

Digitized by Google

cannot for a moment question that "it absolutely controls the action of *congress* and the *federal* executive and judiciary." No department, nor all the departments of the federal government united, can deprive any person of his liberty, property, wages, without due process of law. No due process of law can be directed to the accomplishment of such an object, unless crime has been committed. Hence this clause of the constitution positively prohibits the general government from creating slavery.

But, were not this reasoning sound, our argument, drawn from the total want of power in congress, under the constitution, to create slavery, would remain unanswerable by any state rights man.

Whether this view, or the one just presented, or both, extorted from F. P. Blair, of this city, the following remarks, we know not; but one portion of them fully corroborates our position.

At a meeting of the Jackson Association in this city, on the 6th, to consider the death of Silas Wright, F. P. Blair submitted an address, from which we quote the following rather remarkable passage:

"It has been said that Mr. Wright originated the movement on the slave question made by Mr. King, of New York, and which Mr. Wilmot, of Pennsylvania, incorporated in the proviso which has taken his name. A letter received from Mr. Wright by a friend in this city, when the suggestion was first made known to him, refutes the assertion. He had no share in the origination of the measure, whatever may have been his views in regard to its introduction. Mr. Wright's doctrine, we believe, was that of the constitution—non-interference on the part of the federal government with the domestic institutions existing among the people of states *in, or coming into, the Union*. If this principle be correct, congress cannot extirpate slavery where it exists, *nor create it where it does not exist*. Legislation on the subject belongs to the state immediately affected by it. Hence it would result, that South Carolinians and Californians have an equal right to maintain the law establishing the family relations existing in each state, respectively."

We have established two positions:

1st. That slavery, not being recognized by the common law, but being contrary to natural right, can exist only by positive statute or municipal law; that, by the law of nations, the municipal laws of Europe, generally, the laws of fifteen states of this Union, the constitution of the United States, and the highest courts of the country, north and south, it is regarded and treated as an exception, entitled to no privileges but such as are guarantied by express law.

2d. That the congress of the United States cannot create slavery.

The next point to be stated—for it is not necessary to prove what all admit to be true—is, that slavery is prohibited in California and New Mexico. By a decree proclaimed by the President of the United Mexican States, September 15, 1829, it was decreed:

"1. That slavery be exterminated in the republic.

"2. Consequently; those are free who to this day have been looked upon as slaves."

California and New Mexico are, therefore, by their fundamental law, free territory. No one pretends that slavery can be introduced in either, as they now exist. Suppose, by the treaty of peace now in process of negotiation, they should be ceded to this country, they become territories of the United States, under the exclusive jurisdiction of congress.

Now, if the three positions we have taken be true, slavery cannot be introduced into either territory. If it be a local institution, depending alone upon local law, not recognized by the common law, but expressly ruled to be contrary to natural right, it can acquire no legal claim by being smuggled into these free territories. If the laws of California and New Mexico be supposed to continue in force till the United States provide them a code, it can derive no sanction from them, because they prohibit it. If congress frame for them territorial governments or laws, it has no power, as we have seen, to create slavery. It would therefore be absolutely impossible to introduce slavery there, unless it be assumed that the laws of the states in which it is established have extra-territorial force to such an extent, as to override the jurisdiction of congress in United States territory!

Let the slaveholder carry his slaves, then, into either territory, and unless congress pass a law creating the tenure of property in them—an act beyond its power—the slaves would become free of right, and all that would then be necessary would be for the persons held as slaves to sue for damages or wages, as the case might be, before the United States courts.

The adversaries of the Wilmot proviso may inquire—"If you believe all this, if this be the true state of the case, why, then, insist upon the proviso?" The reply is easy. Do you concur with us? Do you believe that this is the true state of the case? If so, why resist so fiercely the passage of a resolution simply declaring that a thing *shall* not be, which you believe *cannot* be? If you do not thus believe—and the evidence is sufficiently strong that this is the fact, or that you have resolved to smuggle slavery into these territories contrary to all law—then you at least must acknowledge the importance of the proviso. So insidious have been the encroachments of slavery, and with such tenacity she clings to her usurpations, imposing upon the popular mind the delusion that they are sustained by law, that we wish to make assurance doubly sure, and, by a timely measure, show, in advance, the resolve of the nonslaveholders of the country to maintain freedom intact where already it is the fundamental law of the land. But, should we be defeated in this measure, we warn the propagandists of slavery that they shall have no peace; that no usurpation of theirs shall receive recognition from us; that, should they insinuate slavery into the new territory, we shall continue to denounce it as an infamous fraud; step by step, we shall struggle against them, invoking the press, the pulpit, the ballot-box, for their overthrow; appealing from the parties which they have used, and the sects they have silenced, to the people, whose eyes they cannot blind forever, and whose power they shall yet feel.

A CORRESPONDENT of the New York Gazette and Times gives us a beautiful thought of Burns:

I well remember with what delight I listened to an interesting conversation which, while yet a schoolboy, I enjoyed an opportunity of hearing in my father's house, between the poet Burns and another poet, my near relation, the amiable Blacklock. The subject was the fidelity of the dog. Burns took

Digitized by Google

up the question with all the ardor and kindly feeling with which the conversation of that extraordinary man was so remarkably imbued. It was a subject well suited to call forth his powers; and when handled by such a man, not less suited to interest the youthful fancy.

The anecdotes by which it was illustrated have long since escaped my memory; but there was one sentiment expressed by Burns, with his characteristic enthusiasm, which, as it threw new light into my mind, I shall never forget.

Man, said he, is the god of the dog. He knows no other, he can understand no other; and see how he worships him. With what reverence he crouches at his feet; with what love he fawns upon him; with what dependence he looks up to him; and with what *cheerful alacrity* he obeys him. His whole soul is wrapped up in his god, and the powers and faculties of his nature are devoted to his service, and these powers and faculties are exalted by the intercourse. It ought just to be so with the Christian; but the dogs put the Christians to shame.

They say, "When you wish to beat a dog, it is easy to find a stick."—See how they treat a fellow-creature in the British Provinces; our authority is Sam Slick:

A Rum Fellow.—"Lawyer," addressing himself to Barclay, "did you ever hear of Andrew Wallace seizing a man that was drunk, and putting him up at auction? I must tell you that story. Squire Wallace, was a captain in the militia; and one day, after training was over, and jist before the men was dismissed from parade, he took a guard with him, and made a prisoner of Pat Sweeney, who was a most powerful drinker—drank as much at a time as a camel a' most. 'Pat,' says he, 'I seize you in the king's name!' 'Me!' says Pat, a-scratching his head, and looking abroad, bewildered like; 'I'm not a smuggler!—Touch me if you dare!' 'I seize you,' says he, 'for a violation of the excise law, for carrying about you more than a gallon of rum without a permit, and to-morrow I shall sell you at auction to the highest bidder. You are a forfeited article, and I could knock you on the head and let it out, if I liked; so no nonsense, man!' And he sent him off to gaol, screaming and screeching like mad, he was so frightened. The next day Pat was put up at vendue, and knocked down to his wife, who bid him in for forty shillings. It's generally considered the greatest rise ever taken out of a man in this country."

We submit to the State Conventions of the different parties, the following story from the St. Louis Reveille:

I must tell you of a curious *echo* we heard while lying on the Naples flats. The orders of the captain to the crew given from the upper deck, and the reports of the soundings on the flats, ("two feet scant") were heard repeated among the tall trees on the eastern shore, without the slightest variation. Some of the passengers, observing this curious effect, began to call out in various tones to Mr. Echo, and they were always favored with a repetition of the question asked, or the latter part of it. Hear some specimens:

"Hallo the shore!"
Echo—"*Hallo the shore!*"
"How are you?"
Echo—"*How are you?*"
"Shall we stay here all night?"
Echo—"*Stay here all night!*"
"Tell me if Gen. Scott has entered Mexico."
Echo—"*Scott has entered Mexico.*"
"Hurrah for your good news!"
Echo—"*Hurrah for your good news!*"
"Who 'll be the next president?"
Echo—"*Zachary Taylor!*"

"Well, that *is* a curious echo, sure enough," exclaimed an elderly lady, who was rocking herself on the after guard, and smoking a pipe at the same time. We were all somewhat startled by this unexpected answer to the question concerning the next presidency; but after a short pause the questions were resumed:

"What is the price of corn?"
Echo—"*The price of corn.*"
"What was the reason that Pratt and Campbell did n't fight?"
Echo—"*Pratt and Campbell did n't fight.*"
"What are you doing out there?"
Echo—"Catching Catfish!"
"Ha! ha! ha! ha!"
Echo—"*Ha! ha! ha! ha! ha!—ho! ho! ho! ho! ho!*"

Thus ended the *cat*-echism. A sucker was discovered sitting on a log, down at the point, quietly pursuing his evening sports and brushing off the mosquitoes. Some of the answers had evidently been given by *him*.

A correspondent of the National Era, whose letter is dated Sussex Co., Virginia, thus describes that region:

The melancholy pine is springing up in deserted fields. As you pass along, you see a gate unhinged: the path leading to that house, with its crumbling chimney and sashless windows, is grown up with thin, pale grass. Of many an old settlement, nothing remains but the well with its broken bucket, and a few neglected graves. Such a country is full of the poetry of desolation. There is nothing in it new or noisy. In all points it is the contrast of the rushing, turbid world of the west. Everything is still. Nobody makes haste. The white sands gleam in the hot sunshine; vegetation creeps up slowly through a lean soil. The dark creeks steal through gloomy forests, as if afraid of the rustling of a leaf. You travel in the woods through a long, sad avenue of pines, where the road is but wide enough for one carriage, no one dreaming of the possibility of meeting another equipage.

We copy part of a letter from the Journal of Commerce, a vivid picture:

The attack upon Churubusco, which closed the operations of the day, was a scene of thrilling interest. The place was defended by at least 27,000 Mexican troops. Their whole force in the morning amounted to 32,000 men, of whom 5,000 may have been killed, taken, or dispersed, in the affairs of Contreras and San Antonio, in the earlier part of the day. The remainder were posted behind two strong field works—one of them enclosing a large stone church. Our troops making the attack did not exceed one fourth the number of the enemy. The conflict lasted two hours and three quarters, during the whole of which time the deafening roar of artillery and small arms was continuous and tremendous, such as no man present ever before witnessed. It was a time of awful suspense, but the issue was not for a moment doubtful. When it was over, the general-in-chief (Scott) rode in among the

Digitized by Google

troops. It would have done your heart good to hear the shout with which they made the welkin ring. Several old soldiers seized the general's hands with expressions of enthusiastic delight. Suddenly, at a motion from his hand, silence ensued, when, in the fulness of his heart, he poured forth a few most eloquent and patriotic words, in commendation of their gallant conduct. When he ceased, there arose another shout that might have been heard in the grand plaza of Mexico. During this thrilling scene, I looked up to a balcony of the church that had been so bravely defended. It was filled by Mexican prisoners. Among them Gen. Rincon, a venerable old soldier, was leaning forward, his countenance glowing, and his eyes sparkling with every manifestation of delight. I verily believe that the old veteran, with the spirit of a true soldier, upon beholding a victorious general so greeted by the brave men he had just led to victory, forgot, for the moment, his own position—that he was defeated and a prisoner—and saw and thought only of the enthusiasm by which he was surrounded.

How unanswerable, and how beautiful is the argument contained in this notice by the accomplished editor of the literary department of the Christian Inquirer!

Littell's Living Age, No. 176, has an article from the North British, which we should abuse, (if we had time,) as containing some of those implied slanders which are the meanest of all, against women who venture upon fields which the lords of creation have chosen to consider as exclusively their own. The idea that a woman devoted to astronomical studies is likely to be a worse wife and mother than one devoted to dress and show, never was sincerely entertained by any man whose opinions on any other subject were entitled to a hearing; but this and similar *fadaises*, are broadly insinuated in the Review, apropos to the novels of the Countess Hahn Hahn, whom the reviewer affects to consider as a fit representative of literary women—a "mistake on purpose," we suspect.

We are very willing that the Presbyterians should give good measure, but do not choose to give up to party what is meant for mankind; and so copy for the use of the Church Catholic the following piece from the Presbyterian:

What a Presbyterian should do.—We sincerely hope that the following hint may not be needed by any reader of our paper; but if there be one Presbyterian within the compass of our circulation who likes to drive a hard bargain, and who, to pick up an odd penny, would screw down his measure to the extreme verge, so as barely to escape the charge of fraud, we will, perhaps, do him a service by bringing the following paragraph under his eye:

"When I was a young man, there lived in our neighborhood a Presbyterian, who was universally reported to be a very liberal man, and uncommonly upright in his dealings. When he had any of the produce of his farm to dispose of, he made it an invariable rule to give good measure—over good, rather more than could be required of him. One of his friends observing him frequently doing so, questioned him why he did it, told him he gave too much, and said it would not be to his advantage. Now, my friends, mark the answer of the Presbyterian: 'God Almighty has permitted me but one journey through the world, and when gone I cannot return to rectify mistakes.' Think of this, friends, but one journey through the world!"—*James Simpson.*

CONTENTS OF No. 179.

1. Powers, the Sculptor, ... *President Everett*, ... 97
2. Shutting up the Highlands of Scotland, ... *Morning Chronicle*, ... 101
3. From the Army in Mexico, ... *Union, &c.* 102
4. The Maiden Aunt, No. 3, ... *Sharpe's Magazine*, ... 105
5. Female Fanaticism in Scotland, ... *Dublin University Magazine*, . 123
6. An Indian Family in the Oregon Territory, ... *Churchman's Magazine*, . . . 137

Correspondence.—Safety of the South; Wilmot Proviso; Burns on the Religion of the Dog; A Rum Fellow; Echo on Gen. Taylor; Desolation of Virginia; Gen. Scott after the Battle; Mrs. Kirkland *vs.* North British Review; What a Presbyterian should do, 140—144.

Poetry.—The Ills of Life, 122—A Hymn, and a Chant, for the Harvest Home of 1847, 138—Royal Reflections, 139.

Scraps.—Gen. Taylor and his Staff; Mr. Macaulay, 104—The Wesleyan and the Actress; Pontoons for General Sir H. Smith, 136—The Classico-Mania; Notice to Trespassers; New Postage Stamps, 139.

The Living Age is published *every Saturday*, by E. Littell & Co., at No. 165 Tremont St., Boston. Price 12½ cents a number, or six dollars a year in advance. Remittances for any period will be thankfully received and promptly attended to. To insure regularity in mailing the work, remittances and orders should be addressed to the office of publication as above.

Twenty dollars will pay for 4 copies for a year.

Complete sets to the end of 1846, making eleven large volumes, are for sale, neatly bound in cloth, for twenty dollars, or two dollars each for separate volumes. Any numbers may be had at 12½ cents.

Agencies.—The publishers are desirous of making arrangements in all parts of North America, for increasing the circulation of this work—and for doing this a liberal commission will be allowed to gentlemen who will interest themselves in the business. But it must be understood that in all cases payment in advance is expected. The price of the work is so low that we cannot afford to incur either risk or expense in the collection of debts.

LITTELL'S LIVING AGE.—No. 180.—23 OCTOBER, 1847.

From the Dublin University Magazine.

A HIGHLAND CHIEF ONE HUNDRED YEARS AGO.

Among the names which intestine commotion has from time to time withdrawn from obscurity and rendered historical, none has come down to posterity with a fairer or more honorable reputation than that of Donald Cameron, of Lochiel, who, one hundred years ago, was zealously engaged, with his numerous and valiant clan, in the last enterprise of the Stuart party.

The object of the present paper is not to pass over ground so much beaten as the expedition in question, nor to detail the particulars of the conspicuous part borne in it by Lochiel, which narratives approved by general acceptance have already sufficiently set forth—but to throw together, in a very brief form, a few circumstances less generally known regarding that memorable Highland chief.

Born about 1698 or 1700, he was too young to bear a part in the insurrection of 1715, (as his grandfather, the celebrated Sir Ewan, of Lochiel, was too old, being then eighty-seven years of age,) which preserved for him the succession to the estate and chiefdom, on Sir Ewan's death, in 1719. His father, John Cameron, of Lochiel, had been outlawed and attainted for his share in the rebellion of 1715, and mostly remained an exile for thirty-two years, the whole term of his subsequent existence.

Lochiel not only imbibed attachment to hereditary and indefeasible right, from the martial achievements in behalf of the Stuart family of his renowned grandfather, the most famous chief of his own day, but from the courageous example of his father, who, with his younger brother, Allan, perilled his life, and lost his fortune in that cause.

This Allan Cameron, the uncle of the subject of my paper, was a man of very considerable abilities and address, [illegible] years one of the prime agents of the Stuart family. In company with Stuart of Appin, he was commissioned by the Highland chiefs to present at court what was commonly called the "sword-in-hand" address, in 1712, and it well deserved that name, for it openly asserted principles altogether inconsistent with the Hanoverian succession.

It is, I think, highly probable that Allan and his colleague were the Highland gentlemen mentioned by Swift, in a letter of that period, as having dined in his company at Lord Treasurer Harley's, and whom he specially distinguishes as "very polite men;" no small compliment to two Scottish Highlanders, from that caustic pen. Allan exercised a very considerable influence over the mind of his nephew, the young chief, and employed it all in establishing his principles, and inflaming his zeal, on behalf of the Stuarts.

Lochiel, in his youthful days, paid many visits to France, and when about to return home from one of these, in 1729, received a regular commission from the old chevalier, to treat with such of his friends in Scotland as he considered trustworthy.

This was accompanied by a letter from his uncle, Allan, (who was chamberlain to that unfortunate prince,) then at Albano, in Italy, which contains ample proof of the tact and ability already attributed to that relative. A few extracts are subjoined:—"You are to keep on good terms with Glengarry and all neighbors, and to let bygones be bygones as long as they continue firm to the king's interests. You must see to win them by courtesy and good management, which will, I hope, enable you to make a figure amongst them—not but that you are to tell the truth, if any of them fail in their duty to their king and country. * * * As to Lovat, pray be always on your guard, yet not so as to lose him; on the contrary, you may say that the king trusts a great deal to the resolution he has taken to serve him. * * * But, dear nephew, you know very well that he is a man whose chief end has always been his own interest. It is true he wishes our family well, and, I doubt not, would wish the king restored, if he has grace to lend a helping hand to it, after what he has done. So, upon the whole, I know not what advice to give you concerning him, only you are to make the best of him you can; but always be upon your guard, for it is best not to put too much in his power, before executing a good design. The king knows very well how useful he can be, if sincere, which I have represented as fully as necessary."

Thus ably instructed, and possessed himself of an excellent understanding and accomplished manners, Lochiel was an invaluable auxiliary to the cause which, unhappily for himself, he so ardently espoused; and he brought a strength to it, superior to any resulting from mere force of intellect, or gentlemanlike bearing—the solid respect attached to an upright, honest, honorable character, which, through his entire life, he maintained unblemished, by the universal admission of friend and foe.

Placed at the head of a numerous and warlike clan, long distinguished for military achievement, but as much distinguished for predatory habits, he set his face steadily and consistently against every act of aggression and violence. "Burt's Letters from the Highlands" prove that he had done so as early as 1726. "The chief of the Camerons," writes that intelligent officer, "has, as I am very well informed, positively forbidden all such outrages, (cattle-lifting, &c.,) which has not at all recommended him to some of his followers."

But, however some of the fiercer spirits might chafe at being reigned in from their accustomed turbulence, the clan in general soon became sensible of the inestimable qualities of their amiable chief. A chieftain of the clan, a few years deceased, and a worthy example of a hospitable, warm-hearted Highland gentleman, (the late Cameron of Clunes,) who was probably better acquainted with the local history of his sept than any person now surviving, and on whose authority many of the statements in this paper are made, gave me the following description of the estimation in which the subject of this memoir was held by his clan:—"There never was a chief more beloved than Donald of the Forty-five. He took the greatest pains to improve his clan, and was himself a most amiable gentleman, so just, generous, and condescending, that he governed them entirely by the love which they had for him personally!"

Digitized by Google

His generosity was indeed only restricted by his means. His estate, though forty miles in extreme length, by many in breadth, did not produce more than £600 or £700 a year. The same estate now produces £10,000 per annum, as it is possessed by his great-grandson. Indeed, the rental itself of the estate did not amount to the sum above stated, but part of it was covered with vast woods, and where these were contiguous to the sea, Lochiel had many large transactions in their timber with the merchants of Whitehaven, and others.

His residence at Achnacarrie, in Glenarkaig, through which a river rushes connecting the two large lakes, Arkaig and Lochy, and which was surrounded on all sides by extensive woods, formed a romantic and suitable abode for a Highland chief.

The tourist will there vainly seek any extensive ruins of Lochiel's mansion, burned by the military in 1746; nothing of it remains but a small portion of a cross wall. With the exception of a cross wall and a stone foundation, it had been entirely built of wood, which was the most abundant material in the neighborhood, about the year 1725.

A summer-house erected by him may be seen by the river-side, within which a large ash-tree grows, marking the long period during which the building has been roofless. This was a favorite resort of his, and from the window it is said he could shoot a deer in the opposite wood, or draw a salmon from the stream, in order to which a bell rang when a fish was taken by machinery fixed in the river.

Lochiel had considerable taste for the improvement of grounds. He laid out gardens, and formed plantations of trees (such as beech) which did not grow naturally in his forests.

Just at the time of the young chevalier's landing in the Highlands, he contemplated the drainage of a large tract of ground, and the addition of it to his demense, as well as the erection of a new mansion-house, for which preparations had been made, and timber actually sawn, which was thrown by the soldiery into the general conflagration, at the burning of the house already in existence at Achnacarrie.

Amidst such pursuits, and acts of real benevolence and general utility to his country, mingled, however, of course, with political plots, many years of his life passed away in the enjoyment of domestic happiness.

He was already closely allied to the clan Campbell, by near relationship to the Breadalbane family, and also to the Lochnell, the oldest cadets of Argyle, of which house his mother was a member, and he drew the bond of union with a clan generally so opposite in politics, still closer, by marrying the daughter of Sir James Campbell, of Auchenbreck, Bart.

His father-in-law, however, was of the same political principles with himself, and they were alike Protestants in religious profession—a curious inconsistency, but one very common in Scotland at that day.

There were persons of all religious persuasions to be found among the Scottish adherents of the Stuart family, but men of rank were in general (as Lochiel was) of the Protestant Episcopal church. Romanists (except among the very lowest class of Highlanders) were comparatively but few in number. The strength of the Jacobite conspiracy was among the Episcopalians.

So truly respectable a character as Lochiel, in whom Jacobitism was presented in the fairest colors, naturally attracted the notice of the friends of government in Scotland, and many efforts were vainly made by them to detach him from his party.

The celebrated John Duke of Argyle, to whose family and clan Lochiel was related, always paid him the most flattering attentions, and in conjunction with President Forbes, threw temptations in his way, which would have deprived the Stuarts of a less honest and resolute adherent.

While Lord Lovat played the game of fast and loose, watching any opportunity of personal advantage which either party afforded him, trusted by none, and disliked by all, Lochiel, steadfast in his political attachments, and earnest for his cause, attracted universal esteem, and his most bitter opponents lamented the fatuity which had thrown so worthy a man into the ranks of the Pretender.

I need not recapitulate the circumstances connected with the landing of Charles Edward, and the arrangements for insurrection. The histories of Home and Chambers are, upon these points, sufficiently satisfactory.

Lochiel was exceedingly distressed by so unadvised and rash an advent, and, in the first instance, dispatched his brother Dr. Archibald Cameron, with a message to the chevalier, absolutely declining any association with so wild an enterprise.

It had been happy for himself, as well as his family and country, if he had been content with this intimation of his views; but on further reflection he thought his loyalty required him to wait upon the prince, and explain them in person.

Mr. Home is very distinct and particular in his account of the interview which took place between Charles Edward and Lochiel, at Boradale, and there cannot be the smallest question that he is a faithful narrator of the real truth. The genuine character of the chief remarkably appears in that singular conversation—sensible and prudent, yet full of loyal enthusiasm and devoted bravery.

"I will share the fate of my prince, and so shall every man over whom nature or fortune has given me any power," was its decisive conclusion.

In the diary of Bishop Forbes, published by Mr. Chambers, an assertion is made, on the authority of Macdonnell of Glengarry, that Lochiel required security to be given him for the value of his estate, before consenting to join the standard. Even if it were true, it is no blot upon the character of the chief. In the next place, the character of the bishop's informant was very indifferent, and altogether unworthy the gallant race from which he sprang. It is too bad to find a craven, who himself skulked from danger, and allowed his brave clan to be led out by his younger brother, presume to cast a reflection upon such a man as Lochiel, who asked no clansman to encounter peril which he himself did not face before him, and of whom a friendly opponent wrote—

"Not his the pretty, prudent, modern way,
Bid others go, himself at home to stay,
But like a warrior bravely drew his sword
And reared his target for his native lord."

It may be observed, last of all, that there is not the slightest trace of such an arrangement discernible in the correspondence between the Stuarts and Lochiel, subsequent to 1746, as we have it published in the appendix to "Brown's History of the Highlanders." On the contrary, the high and disinterested character of the chief stands in honorable contrast with the selfishness of others.

When Lochiel had once determined upon the hazardous enterprise which put an end to the hap-

Digitized by Google

piness of his own domestic circle, as well as to that of so many other families, he threw all his energies into the task of marshalling his clan for the field. His call was cheerfully responded to by that warlike people, and all his chieftains were anxiously engaged in preparing their numbers against the day of rendezvous—

"Then through the wild Glennevis,
And down by Lochy's side,
Young Donald leaves his shealing,
And Malcolm leaves his bride."

His accession to so rash an adventure seems to have surprised some who were best acquainted with his principles and character. Sir Alexander Macdonald, of Sleat, writes to President Forbes, "Young Clanronald is playing the fool, and, what is much more extraordinary, Lochiel's prudence has altogether forsaken him." The lord president himself also writes about the same time to Cluny Macpherson, "I am prodigiously concerned at the folly of our friend Lochiel."

The night of the 18th of August, 1745, was surely an anxious and agitating one at Achnacarrie. The next day was appointed for the erection of the standard at Glenfinnan, and parties of men were arriving from different quarters during the entire night. The house itself was filled with soldiers of the royal Scots, nearly two hundred of whom had been taken prisoners the day before, by Macdonald of Keppoch, and handed over to Lochiel for safe custody. Lochiel treated these prisoners with the greatest humanity and courtesy; and finding one of the officers wounded, sent him on his parole to Fort Augustus, that he might be properly taken care of. I fear that this officer broke his parole.

At an early hour on the morning of the 19th, the main strength of the Clan Cameron had arrived; but a large company, who resided in Morven and Suinart, in Argyleshire, were not to come to Achnacarrie, but to join on the march to Glenfinnan, to raise whom and bring them up, Lochiel had sent his brother, Dr. Archibald Cameron, two days before. All the Lochaber Camerons had come up under their different chieftains, by six or seven o'clock. Letterfindlay, Glennevis, Glendessary, Calaart, Eracht, Strone, Clunes, Lindevra, &c., &c., all produced their plaided warriors.

Like other large Highland clans, the Camerons consisted of various tribes, of which the three principal were, the Mac Martins, under the Laird of Letterfindlay; the Mac Molonys, under Strone; and the Mac Sorleys, under Glennevis. It was often a matter of great difficulty in clan regiments, to adjust the claims of the various chieftains to regimental rank, and required all the authority of the chief to prevent dissension. Lochiel's arrangements were, on this occasion, submitted to with little murmuring, although in general he gave the youngest cadets the highest rank, which was reckoned by some an innovation upon the ancient Highland usage. It greatly facilitated the matter, that the Laird of Mac Martin, or Letterfindlay, who was the head of the most numerous tribe in the clan, as well as the oldest cadet, was at this time a child, so that the nomination to the command of the tribe rested with the chief, who appointed his uncle, Ludovic Cameron, one of the youngest cadets, to lead the Mac Martins. This Ludovic Cameron was of a school very different from his nephew Lochiel, and has received a character from Pennant, in one of his tours, which I believe him to have merited; but although selfish and unscrupulous, he was an adroit and able partisan, and was of very signal use in recruiting for the clan regiment.

Arrangements having been completed, the Camerons marched in two columns, with the prisoners in the centre, for Glenfinnan, which was many miles distant, amidst the tears and exclamations of a crowd of females, old men, and children, who had assembled to see them depart.

"The tartan plaid it is waving wide,
The pibroch 's sounding up the glen;
And I will tarry at Achnacarry,
To see my Donald and all his men."

They marched by Strone, and then by the side of Lochiel, past Kilmalie church, and the enormous ash-tree that grew beside it, full in the view of the garrison of Fort William, but they were far too numerous to apprehend any molestation from that quarter.

They passed Achdalu, the scene of a triumph of Sir Ewan's over Cromwell's soldiers, and Fassafern, the residence of Lochiel's brother, John Cameron, who took no share in the insurrection, and had done his best to dissuade his brother, the chief, from the rash enterprise. While Lochiel rejected his brother's prudent counsel, he allowed him in his own person to follow the bent of a cautious and pacific disposition.

When Lochiel and his clansmen arrived at the head of the loch, and were now but a few miles from Glenfinnan, the Camerons of Morven and Suinart, headed by his brother Archibald, and Cameron of Dungallon, were seen advancing to join them. Loud were the mutual shouts of congratulation with which the junction was effected. The clan now formed a body of eight hundred men, and surpassed the other septs that joined Charles Edward, as well by early adhesion as by superior numbers.

The public are indebted to Mr. Chambers for a correct version of the legend of Jenny Cameron, of whom so many stories, altogether false, have been told. She was the sister of Cameron of Dungallon and Glendessary, (one of the majors of Lochiel's regiment, and a person of considerable importance as to property,) had now attained to middle age, never saw Charles except once, and that in public, on the day the standard was raised, for a short time, and was always a person of the greatest propriety of conduct and character.

I need not enter upon the general facts of the insurrection, which are so well known. Lochiel's conduct was throughout distinguished by the highest gallantry, as well as by signal humanity and moderation. He not only warmly and consistently, in the council of chiefs, opposed every design of a merely aggressive and vexatious character, but what was a more difficult task, withheld by terror the canaille of his own people from acts of rapine and violence. Mr. Chambers mentions, with some surprise, that upon one occasion he shot one of his men for committing a robbery upon a lowland farmer; but what officer could lead troops, and especially Highlanders, through a country, with any regard to discipline, without inflicting summary punishment upon the rapacious and insubordinate?

Lochiel shared his last farthing with his men, and lived himself on the march as they lived; but he would not connive at the smallest act of oppression upon their part, and however mild and indulgent towards them in his general disposition, was on this point resolute and inflexible. He was the first man to enter Edinburgh when the Highlanders took it by a *coup-de-main*, but was careful to pre-

Digitized by Google

serve the sentinel at the gate from injury, by grasping him by the arm, so that the city was occupied by his detachment without spilling one drop of blood, or depriving any one of the smallest item of property.

Indeed, the generally admitted moderation and good discipline of the Highland army in this expedition, were greatly owing to the influence of Lochiel, and the admirable example set by him throughout to the other chiefs and commanders. At the battle of Prestonpans he was the foremost chief in leading his men into the right of the enemy's line; a contemporary ballad thus describes his conduct—

"The brave Lochiel, as I heard tell,
Led Camerons on in clouds, man."

And although under a heavy fire of artillery and musketry, with a threatened charge of dragoons, nothing could be more completely successful than his attack.

It is said that he was not favorable to the march into England, considering the Highland army quite too small to produce any decisive result in that country, though sufficient for the occupation of Scotland.

There can be no question that at Derby he joined Lord George Murray in urging a retreat, while there was still time to make one. They argued that there had been no movement throughout England in their favor, and that even if they did get to London without a battle, or after a successful engagement, they had not men enough to secure and guard the public places.

As Lochiel and Keppoch stood in the street of Derby, talking to Lord George Murray, after the determination had been taken, a person came up to them and said, "Oh, shame! a Cameron vote for retreat! a Macdonnell turn his back upon the enemy!" It was certain that the three brave men who stood there together had courage enough, as they amply proved, to face any peril, but they did not choose to lead on their men to what plainly appeared inevitable destruction. At the same time, such was the panic which prevailed in London, that it is hard to say what would have been the result of their continued and rapid advance upon that capital. They would probably have beaten any of the three armies that covered it, the more that the Highlanders would have fought with unusual desperation, as having no retreat. But their numbers were small, and the risk was fearful.

An anecdote is preserved of Lochiel, during the march into England, which marks the extreme terror that had seized the minds of the country people. One evening, as he entered the lodgings assigned to him, his landlady threw herself at his feet, and implored him to take her life, but to spare her children. Lochiel, astonished, asked her what she meant, and desired her to explain herself; upon which she said it was commonly thought the Highlanders ate children as their common food! The chief assured her that they would not injure her or her little children, or any person whatever. After looking at him for an instant, she called out, "Children, you may come out; the gentleman won't eat you," when several children came from a press, and threw themselves at his feet.

The Highland army was exceedingly incensed against the city of Glasgow, and resolved, on its return from England, to visit it with particular vengeance. It had well nigh been determined to give the city up to plunder, as a punishment for its zeal in the service of government, when Lochiel, with his usual aversion to harsh and oppressive measures, interfered in its behalf. The merchants and principal men of Glasgow were very sensible that any favor they obtained was through his influence, and, however odious to them his political principles might be, he was long remembered by them with respect and gratitude.* About this time, in concert with Secretary Murray and Cluny Macpherson, he wrote a letter to Lord Lovat, which a good deal marks the diplomatic talent early cultivated in him by Allan, his able uncle. The letter itself may be found in Lord Lovat's trial, as well as a remarkable one from that cunning and unprincipled nobleman to Lochiel.

Lochiel, in his letter to Lovat, designates the conduct of Sir Alexander Macdonald and the Laird of Macleod as "the shameful apathy of the one, and the scandalous activity of the other. Sir Alexander had hitherto been simply quiescent, but Macleod had raised men for the service of government. It is an undoubted fact, that they were both under positive engagements to the Stuarts.

At the battle of Falkirk, the Camerons were placed opposite the best English regiment in the field—viz., Barrell's, which bravely stood its ground, when all the rest of the army broke into a general flight. The ground certainly favored it, for there was a ravine in its front, which prevented the Camerons attacking sword in hand, according to their wont. Lochiel lost a good many men by the severe fire, and was himself wounded in the leg; but his regiment imitated his gallant example, and in the end he pursued his foes into the town of Falkirk, when darkness alone saved them from entire destruction.

Shortly after this affair, the Highland army separated into various bodies, and Lochiel, with his neighbors, the Macdonnells of Keppoch, and Stuarts of Appin, marched for his own country, to lay siege to Fort William.

While engaged in that design, he forwarded, in conjunction with Keppoch, an emphatic remonstrance against the conduct of the Clan Campbell, with reference to the people of Lochaber.

It appeared that the Campbells, taking advantage of the absence of the able-bodied, had devastated a part of the country, and committed outrages on the helpless inhabitants—burning houses, stripping women and driving them to the mountains, shooting horses, houghing cattle, &c. &c.

Lochiel felt the wrongs committed against his vassals the more keenly, that he himself had exhibited very different conduct, and had even offended some of his brother chiefs, by preventing, through his superior influence in the Highland army, incursions upon the property of those very same Campbells.

He also felt that the Clan Campbell ought to have remembered his near relationship to their most considerable chieftains, and however they might have opposed him fairly in the field, ought not to have selected his people as the prime objects of peculiar and malicious outrage.

It is not surprising, therefore, that he expressed himself warmly and indignantly in a joint letter despatched by him and Keppoch to Stuart of Invernahyle, that he might make the contents known

* A merchant of Glasgow many years ago assured me of this, and informed me that he heard by tradition of townsmen, that Lochiel was a man of fine person and engaging manners. He was called by his clan "Donald Bean," on account of his light-colored hair and fair complexion.

Digitized by Google

to the Campbells, and from which I subjoin a few extracts :—

"As you happen, for the present, to be contiguous to the Campbells, it is our special desire that you communicate our sentiments (which, God willing, we are determined to execute) to their sheriff Airds, and to other leading men amongst them. * * * When courage fails against men it betrays cowardice to a great degree to vent the spleen on helpless women, and dumb brutes that cannot resist. We purpose to apply for permission to enter their country, with power to act at discretion, and should we be fortunate enough to obtain it, hope to show that we wage war, not against women and the brute creation, but against men. * * * No such act was committed by us since the commencement of the war, though we had it in our power, if barbarous enough, to take advantage of it. * * *"

Lochiel added the following postscript to the letter :—"I cannot omit taking notice that my people having been the first that have felt the cowardly barbarity of my pretended Campbell friends, I only wish that I may live to have an opportunity to thank them for it in the open field.

"Donald Cameron."

The crisis of the adventure now rapidly drew nigh, and Lochiel, having raised the siege of Fort William, arrived, on the evening of the 14th of April, 1746, at the camp of the Chevalier, in the park of Culloden.

The sound of the Cameron pibroch was a joyful one to that prince and his officers, as they were never in so much need of valiant men and undaunted leaders.

The Duke of Cumberland was within a few hours' march of them, yet their forces were not nearly concentrated. So entirely had the commissariat been neglected that they had not provisions sufficient for the men already with them, even for a single day. Under these circumstances, Lochiel, at a council of war on the 15th, agreed with the other principal officers to a night attack on the enemy's camp at Nairn, though he was sensible of the risk of attempting it with such an inferior force.

Mr. Home, in his account of the transaction, says—"Lochiel, who was not a man of many words, said that the army would be stronger next day by fifteen hundred men at least." Had all the other regiments in the small army marched with the same alacrity as Lochiel's, during that eventful night, the Duke of Cumberland's camp would have been reached by one o'clock in the morning, and an attack have been made with the fairest prospect of success. The Atholmen and Camerons, led by Lord George Murray and Lochiel, had the van of the column, followed by the other Highlanders, and had been retarded throughout the night by repeated messages from the Lowland regiments in the rear, requesting them to march slower, so that on reaching Culraik at two o'clock in the morning, they were still four Scotch miles from the enemy's position, which they could not now hope to reach before daylight.

It had been a better arrangement to have marched the clan regiments, amounting to about 3000 men, in a completely separate body, and that the Lowland regiments should have followed only as far as the wood of Culraik, and there in position have awaited the issue of the attack, and in case of failure have covered the retreat. The Duke of Cumberland knew from spies that the Highlanders were marching towards his camp, but he had no idea that they meditated anything more than taking their ground in the night, and attacking early the next morning, as they had done at the battle of Prestonpans.

If the attack had been made (as would have been done) fiercely and resolutely, with shouts rendered more terrific by darkness, and from more points than one, with the advantage derivable in such a combat from the nature of the Highland weapons, there can scarcely be a doubt that the issuo must have been disastrous to the Duke of Cumberland's army.

Here, again, then, the fate of England trembled on the beam ; never was the house of Hanover, in all probability, so near ruin, as when saved by the bad marching of a few inferior regiments. The weary and starved clansmen had but little time to rest after returning to Culloden, and altogether contrary to the opinion of Lord George Murray, Lochiel, and the most sensible officers, were formed on the open moor to meet the far more numerous army of the Duke of Cumberland.

The Camerons stood in the right wing, next tc the Atholmen, which had hitherto been the position of the Macdonalds, and which Lochiel had himself persuaded the other chiefs to yield to them without dispute, at the battle of Prestonpans, and doubtless he was governed by his usual good sense on this occasion. Though Macdonald of Morar, in his journal, has this record, "Our sweet-natured prince was persuaded by Lochiel and his faction to give this honor (the right) to another, which we judge they will be ready to yield us back next fighting-day." This sarcasm is, however, pointless, for the Camerons, even surpassing their usual bravery, fought on the right, not merely with valor, but with headlong desperation, while the Macdonalds, by their weak and irresolute conduct on the left, and more especially by suffering the gallant Keppoch* to perish alone before the English line, dishonored their long-established martial reputation.

When the right wing and centre, after suffering dreadfully from the cannonade, moved under the orders of the intrepid Lord George Murray, against the hostile line, Lochiel led his regiment right upon Barrell's, (the present 4th foot,) his former adversaries in the field of Falkirk.

Under a fearful shower of grape-shot, which tore their ranks and levelled many of their boldest, and a close-sustained fire of musketry, the Camerons rushed on, sword in hand, and, within two minutes, entirely pierced and broke Barrell's regiment, killing and wounding more than a hundred, and forcing the routed corps to run towards their right, in a disorganized mass. The same fate, at the same instant, overtook Munro's regiment, on the right of Barrell's, under the attack of the Macintoshes, &c. ; and had the singularly gallant onset of the right wing of the Highland army been duly supported, a different story might have been related of the field of Culloden. But the attack had no support from any quarter, and, after the exhibition of extraordinary daring and prowess, and the loss of innumerable lives, was finally defeated by the fire of the second line of infantry, and the dragoons coming in on the flank.

Lochiel did not himself share in the short-lived triumph of his valiant clan. He was within ten paces of Barrell's line, and had fired his pistol, and was drawing his sword, when he fell, wounded with grape-shot in both ankles. He was seen fall-

* There was not cordiality between this brave chief and his clan on the subject of religion. Sir Walter Scott tells us that he was a Protestant, while they were Roman Catholics, and he had offended them by positively refusing to allow a Romish priest to be with them in the expedition.

Digitized by Google

ing by a person in Barrell's regiment, who knew him, and hence a report of his death was generally believed; but the two brave and strong brothers, between whom, according to Highland usage, he advanced to the attack, and whose sole duty it was to guard the person of the chief, raised him up, and bore him away out of the sanguinary tumult. Before they arrived at the rear of the Highland army, it was evident that the day went against it, so they carried the wounded chief into a hut, and proceeded to take off the clothes he wore, appropriate to his rank, and to dress him in a common Highland plaid. While they thus consulted for his greater safety in retreat, the house was surrounded by a troop of dragoons, and a file had actually dismounted to enter it, when the whole party was called off elsewhere, by a peremptory order. By this time some other clansmen had come to the assistance of their beloved chief, and when the dragoons drew off, he was brought out of the hut, and placed upon a Highland pony. He was in a weak and fainting condition, and could scarcely be supported on the pony by a man on either side, while it was led out of the field, and towards a rough and inaccessible country, where danger of pursuit was at an end. The painful and distressing journey was continued from day to day, until he reached the covert of his own forest, but he was frequently on the very point of expiring, from agony and exhaustion.

He did not stop at Achnacarrie, but sought a concealment near the head of Locharkaig, where he remained until his wounds were beginning to heal. A dead body was found, some weeks after the battle of Culloden, which was mistaken for his, and this second report of his death greatly contributed to his escape from his numerous pursuers.

He had many hair-breadth escapes, and was, on one occasion, surprised alone, while asleep, by a soldier, but who allowed him to get off, on receiving a guinea. This soldier was, of course, ignorant of his rank, as the reward offered for his apprehension was very considerable.

I need not detail circumstances so well known as the failure of an attempted rally after the battle of Culloden, (which was to have been made at Achnacarrie; but Lochiel alone, wounded as he was, kept his appointment,) the devastation of the country by the Duke of Cumberland, and the adventures of Lochiel after he met Charles Edward in Badenoch. He gave his distressed clansmen who resorted to him in his covert, all the consolation and assistance in his power, advising them to the best course, and sharing with them his last shilling. He thus wrote to some brother chiefs, who had appointed with him a rendezvous:—"The above is our present determination, and what I have advised all my people to, as the best and safest course, and the interest of the public, yet some of them have delivered up their arms without my knowledge, and I cannot take it upon myself to direct in this particular, but to give my opinion, and let every one judge for himself."

The embarkation of Lochiel, in company with Charles Edward, in September, 1746, is said to have been an affecting scene. A considerable number of Highlanders had assembled on the shore, and many were the tears shed on all sides. The chief promised his mourning clansmen that he would shortly return to their relief—a promise which he afterwards vainly exerted himself to fulfil, for his heart was with his bleeding country—

"Lochiel 's awa to France,
But he 'll be back again,"

expressed the vain expectations of his sorrowing vassals, who were never to see him more.

In France, Lochiel was joined by his family, whom, at one time, he had little hope of ever seeing again; but however the feelings of the husband and father were gratified, the heart of the chief was continually wrung by the melancholy tidings concerning his friends and vassals, which he received from Scotland.

So far from pressing his own individual interest on the notice of the Stuart family, for whom he had performed and suffered so much, he continually urged an expedition for the relief of the Highlanders, whose blood, he said, cried to him and claimed his help; and even when offered the command of a regiment in the French service, he expressed the uppermost desire of his heart in the following noble words:—"Others may desire to make a figure in France, but my ambition is to serve my king, and serve my country, or perish with it." It is recorded, on excellent authority, that the Duke of Cumberland caused it to be intimated to him when in France, that if he only sent him a message, he would procure for him pardon and favor from the British government, but that Lochiel shrank from owing obligation to one whom he regarded as the destroyer of his country.

Placed in the command of the regiment of Albany, and quartered in the fortress of Bergue, near Dunkirk, on the frontiers of the Netherlands—a most unhealthy situation—he took his last illness, and died in October, 1748, of an inflammation in the head, (as reported to the old chevalier, by his cousin Macgregor Drummond, of Bochaldy,) or, perhaps, of one of the country fevers. His death made a great impression at the time in his own country, and the following lines, written by a political opponent, appeared shortly afterwards in the *Scots' Magazine*:—

"Dead is Lochiel, the terror of whose arms
So lately filled this island with alarms!
Be just, ye whigs, and though the tories mourn,
Lament a Scotsman in a foreign urn,
Who, born a chieftain, thought the right of birth
The source of all authority on earth—
Mistaken as he was, the man was just,
Firm to his word, and faithful to his trust;
Humane he was, protected countries tell,
So rude a host was never ruled so well;
Not his the pretty, prudent, modern way,
Bid others go, himself at home to stay,
But, like a warrior, bravely drew his sword,
And reared his target for his native lord.
Fatal to him and to the cause he loved
Was the rash tumult which his folly moved;
For this condemned in foreign realms to bear,
Midst Gallic bands, a mercenary spear;
But Heaven, in pity to his honest heart,
Forbade him long to fill so mean a part;
To ease at once his fortune and his mind,
With exile wretched, and with error blind,
The awful mandate unto death was given,
And good Lochiel is now a whig in heaven!"

Pennant, also a whig, thus writes of him:—"Achnacarrie, once the seat of Cameron of Lochiel, but burnt in 1746. He was esteemed by all parties the honestest and most sensible man of any that engaged in the wicked and absurd attempt of that and the preceding year, and a melancholy instance of the victory of the prejudices of education over a naturally fine understanding and well-meaning heart." Douglas says of him, in his "Baronage:" "He was a man of good parts, great probity, an

Digitized by Google

amiable disposition, universally esteemed, and was at great pains to soften and polish the manners of his clan."

Sir Walter Scott writes of him:—"It might have been our lot to have represented patriarchal authority in a very different light, as exercised by Donald Cameron of Lochiel, who, to the high spirit, courage, and loyalty of a Highland chief, added the manners of an accomplished gentleman, and the morals of a good Christian."

Campbell, who would have rendered his name famous in literature, by the beautiful poem of "Lochiel's Warning," even if he had written nothing else, thus speaks of his character:—"He was famed for the social virtues, as much as his martial and magnanimous, though mistaken loyalty." It would be easy to multiply similar testimonials.

After Lochiel's death, an ingenious application was made to the court of sessions to obtain his forfeited estate for his eldest son, on the ground of his being erroneously described in the act of attainder as "Donald Cameron the *younger*, of Lochiel," whereas he was the real fiar of the estate, though his father was alive, having succeeded at once to his grandfather, on account of his father's attainder in 1715. The application was, however, refused, but the estate was restored by act of parliament with the other Highland forfeitures, in 1784.

NOTE.—In an article on the United Irishmen, in the UNIVERSITY MAGAZINE, it was remarked of one whose courage failed in the last extremity that "this is not the stuff traitors should be made of." Lochiel's brother, Dr. Archibald Cameron, a physician by profession, but who took a forward and courageous part in 1745, showed the very material referred to as desirable under such circumstances, at his execution, under the act of attainder previously passed against him, in 1753.

"When Dr. Cameron came to the place of execution, he looked on the preparations and spectators with an undaunted and composed countenance, and on being loosed from the sledge, he started up, and with an heroic demeanor stepped up into the cart, whence looking round with unconcern on all the awful apparatus of death, he smiled, and seeing the clergyman who attended him coming up the steps, he endeavored with his fettered hands to help him up, saying, 'This is a glorious day to me—it is my new birth-day; there are more witnesses at this birth than were at my first.' * * He thus addressed the sheriff:—'Sir, you see a fellow-subject just about to pay his last debt. I the more willingly resign my life, that it is taken from me for doing my duty according to my conscience. I freely forgive all my enemies, and those who are instrumental in taking away my life. I thank God, I die in perfect charity with all men. As to my religion, I die a sincere though unworthy member of the church in which I have always lived, the Church of England, in whose communion I hope, through the merits of my blessed Saviour, for forgiveness of my sins, for which I am heartily sorry.' * * * He then said, 'I have now done with this world, and am ready to leave it.' He joined heartily in the commendatory prayer, repeated some ejaculations from the psalms, after which he embraced the clergyman and took leave."

Dr. Cameron has, I think, been condemned in rather too sanguinary a manner by Mr. Brown, in his "History of the Highlanders," with regard to the abstraction of a sum of money belonging to Charles Edward, which was concealed in the Highlands. I shall only observe that the witnesses brought forward against him, viz., Macdonnell, of Glengarry, and Ludovic Cameron, of Torcastle, were "arcades ambo," and unworthy of credit in a court of justice, in any case where their own interests were at all concerned. That Dr. Cameron did remove some of this money, I believe; but in 1752 he wrote an explanation of the transaction to Cluny Macpherson, stating that he was compelled to do so by the extreme destitution of his deceased brother Lochiel's family. Unless his own application of the circumstances were fully had, it is most unfair to asperse the memory of this courageous partisan and humane gentleman, on such evidence.

From the Literary World.

AN HOUR WITH ALEXANDER VON HUMBOLDT.

BY MR. STEPHENS, THE TRAVELLER.

TOWARDS sunset on the first of July, the railroad cars from Hamburgh brought me to the gate of Berlin. Entering the city, the twilight of a northern summer illuminated the stately houses, and the broad avenue of Unter Den Linden. Leaving the proud portal of the Brandenburgh gate, with the car of victory on the top, carried off as a trophy by Napoleon, and after eight years of captivity, restored in triumph to its place—and riding on to the other extremity of the avenue, I had before me at one view the Schloss Platz, or Palace Square, with the colossal palace, and all the most magnificent buildings of the city, all enlarged and made more grand by the mellow twilight, and exhibiting an architectural splendor hardly to be met with in any capital of Europe. Turning off on one side of the square, at nine o'clock, I was "taking mine ease" in the salon of the Hotel de Russie.

I had gone over in the Washington, the pioneer of the American mail-steamers to Bremen, and was striking over the continent for a paseo on the Rhine, and to intercept the steamer at Southampton on her return to New York. I had but a day for Berlin. There was but one object in it I had any special desire to see, and that was—Humboldt. I might visit Berlin again, the other monuments of the city would remain; but he might pass away.

Early in the morning, I called upon Mr. Donaldson, our minister, and to my extreme regret learned from him that Baron Humboldt was with the king at Potsdam, thirty miles distant, in feeble health, and unable to receive visitors. Fortunately, I had occasion afterwards to call upon Baron Von Rœnne, formerly Prussian minister to this country, and incidently mentioning to him my disappointment and regret, he stopped me abruptly, and with friendly earnestness said, that I must not leave Berlin without seeing Baron Humboldt, at the same time looking at his watch, calling up my servant, telling him that the cars for Potsdam started at 12, and hastily writing a line of introduction, without allowing me any time for acknowledgments, he hurried me off to my carriage. A brisk ride brought me to the depot just in time for the cars; three quarters of an hour carried us to Potsdam, and almost before I had recovered from my surprise, I was at Baron Humboldt's residence.

It was in the royal palace, a stately and historic pile, once the residence of Frederick the Great, with his apartments remaining in the same state in which he left them. One wing was now occupied by Baron Humboldt, and it seemed a just tribute and a right reward—a proper crowning of his fame, alike honorable to prince and subject, that after years of travel, of physical and intellectual labor, he should, in the evening of his days, return to the town in which he was born, to live in the royal palace, the guest and friend of his king.

Ascending to the door of his apartments, I was disappointed anew by positive word from the servant in attendance, that the baron would not receive any visitors that day. With very little hope of success, but disposed to try every chance, I left my letter and card with an intimation that I would call again at 2 o'clock.

On my return, the expression of the servant's face as he opened the door relieved me of all apprehension. Showing me into an adjoining apartment,

Digitized by Google

Baron Humboldt came to meet me, with the flattering greeting that no letter of introduction was necessary.

I was entirely mistaken in the idea I had formed of his personal appearance, and was surprised at not finding him bowed down, and bent by age. Nearly half a century ago, he had filled the first place in the world of letters, sitting as it were, upon a throne, lighting up the pathway of science to the philosopher, and teaching the school-boy at his desk. He was recorded in the annals of a past generation. Indeed, his reign had been so long, and his fame went back so far, that until I saw him bodily, I had almost regarded him as a part of history, and belonging to the past; even then, alone and in the stillness of the palace, I could hardly keep from looking at him as something monumental, receiving the tribute of posthumous fame.

He is now nearly eighty, but has the appearance of being some years younger. In stature, he is rather under than above the middle size, with a frame, probably in youth, well-fitted for the hardships of his arduous travels. His head might serve as a study for a craniologist; his face is broad, and his eye remarkable for its intellect and expression. He was dressed in a plain suit of black, without ribands or decorations of any kind, and his apartments corresponded with the simplicity of his personal appearance. He was dibilitated from an attack of illness, but the vigor and elasticity of his mind were unimpaired. He spoke English with much fluency, but with an accent, and his manner of speaking and the tone of his conversation reminded me of Mr. Gallatin, who was an old personal friend, and to whom he wished to be remembered.

The ruined cities of America, being the means of bringing me to his acquaintance, were of course the first subject referred to, but learning that my connection with the line of mail-steamers to Bremen was the immediate object which had brought me to Germany, he expressed his satisfaction that I was identified with an enterprise at that moment most interesting to Germany. He considered the action of our government in establishing the line, wise and statemanlike, as, for a commercial people like ours, it must be the means of opening new relations, and a wide field for the enterprise of our citizens. He himself felt a lively interest in its success, believing that the Germans of all classes were desirous of direct intercourse with us; that they had a great variety of manufactures which might be exchanged to advantage for the large amount of our staples now consumed in that country, when more frequent intercourse should give a better knowledge of each other's wants and resources: as between the United States and Germany there never could be any feeling of rivalry or any cause of collision, and the closer we could be drawn together, the more advantageous would it be to both countries. He spoke of the long lines of railroads now constructing in Germany, to connect the Rhine and the Danube, the Adriatic and the North Sea, with branches from towns and manufacturing districts, winding into each other all over the country, furnishing facilities for travel and transportation to the sea-board, such as had never been known before, the greater part of which, both as a matter of feeling, and on the score of interest, must in the first instance turn towards the United States.

He inquired about Mr. Wheaton, our late minister to that country, whether he had arrived in the United States before my departure, and what was to be his future career. He said that it was understood at Berlin, that he was to be appointed minister to France, and expressed his surprise that the United States should be willing to lose the public services of one so long trained in the school of diplomacy, and so well acquainted with the political institutions of Europe.

Although I had heard Baron Humboldt spoken of as one of the privy councillors of the king, I did not expect to find him, at his advanced age, and with his great work Cosmos to occupy his mind, bestowing much of his attention upon political relations; but the political condition of Prussia, and indeed of the world, seemed to be the subject which interested him most. It was, in fact, just at that moment an interesting point in the history of Prussia. The long-called-for Diet, which had been looked to with great anxiety throughout all Germany, had closed its session but two days before my arrival. For the first time in the history of Prussia, delegates had been permitted to assemble at the capital, and, in the hearing of the king, discuss the measures of his government. Great reforms had been proposed, and boldly and fearlessly debated. The debates had been published, and the voice of a liberal party heard all over Germany.

Baron Humboldt himself is a liberal, a firm believer in progress and improvement, known and recognized as sympathizing with that great political party which has for its lofty aim the greatest good to the greatest number, bettering the condition of the masses, and increasing the sum of human happiness; and while throughout the civilized world he has filled the "measure of fame" as a traveller and philosopher, in Prussia he is regarded besides as one of her soundest and best statesmen.

Out of Europe, Mexico seemed to be the country which interested him most; perhaps from its connection with those countries which had brought me to his acquaintance, or, more probably, because it was the foundation of his own early fame. He spoke of Mr. Prescott's History of the Conquest, and said that I might, when the opportunity offered, say to that gentleman, as from himself, that there was no historian of the age, in England or Germany, equal to him.

And he was keenly alive to the present condition of Mexico; he was full of our Mexican war; his eyes were upon General Taylor and the American army. I was well aware, that in the conduct of this war, General Taylor was drawing upon himself the eyes of all Europe; and that, whatever might be the differences of opinion as to its necessity or justice, it was producing everywhere, in monarchical and anti-republican countries, a strong impression of our ability and power for war—which in *enlightened* (!) Europe, even at this day, more than all the fruits of peace, industry, and extended commerce, more than the exhibition of twenty millions of people abounding in all the comforts of life, raises us to the rank of a "first-rate power," and makes us "respected."

Baron Humboldt said that with one of his own maps before them, the king and his military council had followed General Taylor from his encampment at Corpus Christi, to Palo Alto and Resaca de la Palma, through the storming of Monterey, and the bloody scenes of Buena Vista. They had fought over all his battles, and with his positions all marked on the map, were then looking for further tidings. They had seen and appreciated all his difficulties at Buena Vista. In Prussia war is a science, and

Digitized by Google

according to the leading policy of Europe, to be always ready for war, every male in Prussia, the highest nobleman's son not excepted, is compelled to serve his regular term in the army. In the teeth of all settled opinions, and as it were upsetting the whole doctrine of standing armies, General Taylor, with a handful of regulars, and a small body of volunteers who had never been in battle, had stood up for a whole day against a murderous fire, and had finally defeated four times his number. Field marshals and generals of Prussia, among them veterans who had studied the art of war on the great battle-fields of Europe, were struck with admiration at the daring and skill displayed at Buena Vista; and this admiration, Baron Humboldt said, they expressed without reserve, freely, publicly, and everywhere. Amid the bitterness and malignity of the English press, it was grateful to hear from such lips, that the leading military men of a military nation did justice to the intrepidity and firmness of our volunteers, and to the courage, skill, and high military talents of General Taylor: while Baron Humboldt's comments upon his dispatches and orders, and in fact upon all that related to him personally in the conduct of the war, were such as no American could listen to without feeling proud.

I had occupied, without any interruption, more than an hour of Baron Humboldt's time, when the servant entered to summon him to dinner—with the king. I would have left him at once, but courteously saying, that, if late, he would excuse himself by mentioning the cause that detained him, he urged me to remain a few days, for the purpose of making certain acquaintances at Berlin, and, pressed as he was, insisted upon giving me a line to a distinguished gentleman of that place, without seeing whom he said I ought not to leave. Circumstances did not permit me to deliver the letter; but I had the satisfaction of bringing it home with me, written in German, in a strong, firm hand, as an autograph of Humboldt, and a memento of one of my most interesting incidents of travel.

JOHN RANDOLPH'S CASE.

DR. PARRISH'S DEPOSITION.

Joseph Parrish, of the city of Philadelphia, doctor of medicine, aged 55 years or thereabouts, being produced, affirmed, and examined, on behalf of William Meade, named in the annexed commission, deposeth as follows:

That being legally required to make a deposition, relative to John Randolph of Roanoke, I do hereby state my recollections of such incidents as I consider calculated to show the state of his mind during the period of my medical attendance.

John Randolph died under my medical care on the morning of fifth month (May) 24th, 1833, at one quarter before twelve o'clock. He breathed his last in a chamber of the City Hotel, No. 41 North Third street.

I was present at his departure, closed his eyes, and placed his limbs in a decent position. I was called to visit him on the 20th inst., by Edmund Badger, one of the proprietors of the City Hotel. It was a stormy night. The patient had arrived that afternoon in the steamboat from Baltimore. He was bound for Europe, and had been disappointed in getting on board the packet. He soon informed me that he was acquainted with my character. "I know you thro' Giles," alluding I presume to Wm. B. Giles, late governor of Virginia, respecting whose case I was repeatedly consulted. The patient appeared much disturbed on account of some difficulties he had encountered after leaving the steamboat. It was evident he was extremely ill; his debility was such, that it was with great difficulty he could expectorate, which caused much distress in respiration. He appeared fully aware of his danger; told me he had attended several courses of lectures on anatomy, described his symptoms with medical accuracy, declaring he must die, if he could not discharge the puriform matter. On inquiring how long he had been sick, he replied, "Don't ask me that question. I have been sick all my life." He soon told me, however, that he had been affected for three years with his present disease, which had been greatly aggravated by his voyage to Russia. "This had killed him." On feeling his pulse he said, "You can form no judgment by my pulse, it is so peculiar." I soon perceived that to manage the case before me, would be like steering between Scylla and Charybdis, and concluded to proceed by cautious soundings, rather than advance under full sail. I told him he had been so long an invalid, he must have acquired an accurate knowledge of the general course of practice, adapted to his case: he replied, "Certainly, at 40, a fool or physician, you know." I remarked there were idiosyncracies in many constitutions, and wished to ascertain what was peculiar about him; he said, "I have been an idiosyncracy all my life." This appeared truly a most trite and correct view of the subject, although the querist did not think it necessary to give a concurring reply. He informed me that all the preparations of camphor invariably injured him, and as to ether, "It would blow me up." Not so of opium and its preparations—for I soon discovered he was accustomed to free use of this drug in some form or other.

On one occasion he told me that he either did or could (I am not clear as to the words *did* or *could*) take opium like a Turk; but I certainly received from him the impression, that he was in the habitual use of opium in some shape or other.

His conversation was curiously diversified, and he complained with no small asperity of the difficulties he encountered after leaving the steamboat.

He was put into a wretched hack, the glass of the carriage was broken—he had been obliged to go from one hotel to another, in search of lodgings, exposed to the peltings of the storm, and everything was in a state of discomfort. He soon introduced the subject of the Quakers, complimenting us in his peculiar manner for "neatness, economy, order, comfort in everything, right in everything, except politics—there, always twistical." Before I departed, he repeated a portion of the Litany of the Episcopal church with apparent fervor. The following morning he sent for me early. I was called from bed; he apologized handsomely for disturbing me, and from this period, we appeared mutually to enter into our new acquaintance in the capacity of patient and physician.

After considerable experience in sick chambers and at death-beds, I may say, I never met with a character so perfectly original and unique. He might be sometimes compared to a spoiled and fractious child, but a little observation convinced me that, in the midst of his extreme constitutional irritability, petulance, impatience, and sarcasm, there were some noble traits of character; among these was a keen sense of propriety, and when this was gently appealed to there was a disposition to be convinced and acknowledge indiscretions. On more

Digitized by Google

than one occasion, it seemed proper for the patient to understand, that while his physician felt every disposition to treat him with kindness and respect, he was not insensible to what was due to himself.

On one occasion, when I proposed something for his relief, he petulantly and positively refused compliance. I paused and addressed a few words to him; his good sense predominated—he apologized, and was as submissive as an infant. One evening I proposed a medical consultation, leaving the choice to himself. With an assurance of entire confidence in his medical attendant, he promptly objected to the proposal, with the remark—"In a multitude of counsel there is confusion—it leads to weakness and indecision—the patient may die, while the doctors are staring at each other."

On parting with him, especially at night, I would receive the kindest acknowledgments in the most affectionate tones, generally with the addition—"God bless you, He does bless you, and He will bless you."

It seemed as though his disposition to criticise on the pronunciation of words could not be restrained under any circumstances of bodily suffering or immediate danger of death—the slightest deviation from his standard of propriety must be met and corrected.

In the application of words to convey ideas, he was extremely exact. He once remarked to me, that "although the French was a vile language, yet it was preferable to any other for treaties and public documents, because every word was in its exact place, no double meaning—there it stands." The night preceding his death, I passed about two hours in his chamber; he told me, in a plaintive tone, that his poor John was worn down by fatigue, and compelled to go to bed.

A most attentive substitute supplied his place, but neither he, nor I, were like John, who knew where to place his hand on everything, in a large quantity of baggage prepared for an European voyage.

The patient was greatly distressed in breathing, in consequence of difficult expectoration, and requested me at my next visit to bring instruments for performing the operation of bronchotomy, for he could not live, unless relieved; yet in the same interview he directed a certain newspaper to be brought to him;—it was found after a difficult search—he put on his spectacles as he sat propped up in bed, turned over the paper several times and examined it carefully—then placed his finger on a part he had selected—handed it to me with a request that I would read it; it was headed "Cherokee." In the course of reading, I came to the word "Omnipotence"—I gave it the full sound Omni-potence, he checked me instantly, repeating it according to Walker. I offered my reasons for pronouncing it as I did; he did not rebut, but quickly said, "Pass on." Not long after I pronounced the word "Impetus," with the *e* long—he corrected me instantly. I hesitated on his criticism, and in an inquiring and doubtful tone, repeated the word as he had pronounced it; he sharply replied, "There can be no doubt of it." An immediate acknowledgment of the reader that he stood corrected appeared to satisfy the critic, and the piece was concluded. I now observed to him that there was a great deal of sublimity in the composition; he directly referred me to the Mosaic account of creation, and repeated, "'Let there be light, and there was light.' There is sublimity!" He spoke, in the interview, of the slanders and lies that had been published against him in the newspapers; even his domestic arrangements, his silver cups, &c., had been noticed, when every one might know that silver was more economical than highly finished china, or cut glass, that was liable to be broken. I believe the patient never fully relinquished his hold on life until the day he died;—it is true he had often said he was dying, he must die, or words to that effect, but these were rather to be considered as the ebullitions of a morbidly irritable mind. The hope of getting off to Europe still lingered with him—in proof, I will state that, perhaps on the third day of my attendance, he informed me that he intended to go to New York the next morning, and wished my bill to be left at the bar. I understood it to be his intention to embark at New York for Europe. Instead of going as he expected, he was so extremely ill in the night that I was called from my bed to visit him. He also requested me to have some sulphate of morphia which he had in his possession, as a pure imported article, divided into papers of one grain each.

The morning of the day that John Randolph died, I received an early and urgent message to visit him—several persons were in the room, but left it, except his servant John, who appeared affected at the situation of his dying master. I remarked to John, soon after I arrived, that I had seen his master very low several times before, and he had revived, and perhaps he would again; the patient directly said, "John knows better than that."

The interview of this morning was peculiarly impressive. I had not been long with him, before he looked at me with great intensity, and said, in a very earnest and distinct manner, "I confirm every disposition in my will, especially that respecting my slaves whom I have manumitted, and for whom I have made provision." This declaration was to me altogether unexpected; it involved a subject, which in our previous interviews had never been touched. It was one I should not have introduced.

I assured him I was rejoiced to hear such a declaration from him—he appeared anxious to impress it on my mind. Soon after this, I proposed to go for a short time, to attend an urgent message, received just before I left home, assuring my patient I would return as speedily as possible. He positively objected to my leaving him. "You must not go, you cannot, you shall not leave me." He called to his servant John to take care that the doctor did not leave the room, and John accordingly locked the door and soon reported. "Master, I have locked the door and got the key in my pocket; the doctor can't go now." My proposal to leave him for a short time, even on a promise of return, evidently irritated him for a moment.

It may show the situation of his mind, when I state, that in the moment of excitement to which I referred, he said, "If you do go, you need not return."

I appealed to him as to the propriety of such an order, inasmuch as I was only desirous of discharging my duty towards another patient who might stand in need of assistance. His manner instantly changed, and he said, "I retract that expression;" and probably a quarter of an hour afterwards, casting on me an expressive look, he again said, "I retract that expression." I told him I thought I understood him distinctly on the subject he had communicated, and I presumed the will would explain itself fully—he replied in his peculiar way, "No, you don't understand it—I know you don't. Our laws are extremely particular on the subject of slaves. A will may manumit them, but provision

Digitized by Google

for their subsequent support requires that a declaration be made, in the presence of a white witness, and it is requisite that the witness, after hearing the declaration, should continue with the party and never lose sight of him until he is gone or dead. You are a good witness for John! You see the propriety and importance of your remaining with me! Your patients must make allowance for your situation." I saw and felt the force of the appeal.

The interest of the scene increased every moment. I was now locked in the chamber with a dying statesman, of no common order; one whose commanding talents, elevated political station, combined with great eccentricity of character, had spread his fame, not only through his native land, but over Europe. He then said, "John told me this morning, 'Master, you are dying.'" I made no attempt to conceal my views; on the contrary, I assured him, I would speak to him with entire candor on the occasion, and told him it had been rather a subject of surprise that he had continued so long.

He now made his preparations to die. Between him and his faithful servant there appeared to be a complete understanding. He directed John to bring him his father's breast button which was immediately produced. He then directed him to place it in the bosom of his shirt. It was an old-fashioned, large-sized gold stud. John placed it in the buttonhole of the shirt-bosom; but to fix it completely required a hole on the opposite side. When this was announced to his master, he quickly said, "Get a knife and cut one." I handed my pen-knife to John, who cut the hole and fixed the valued relic to the satisfaction of the dying patient. A napkin was also called for, and was placed by John upon the breast of the patient. For a short time he lay perfectly quiet, his eyes were closed, and I concluded he was disposed to sleep. He suddenly roused from this state, with the words, "Remorse," "Remorse." It was twice repeated; at the last time at the top of his voice, evidently with great agitation, he cried out, "Let me see the word." No reply followed: having learned enough of the character of my patient to ascertain, that when I did not know *exactly* what to say, it was best to say nothing. He then exclaimed, "Get a dictionary—let me see the word." I cast my eyes around me and told him I believed there was none in the room. "Write it down, then—let me see the word." I picked up one of his cards from the table, "Randolph of Roanoke," and inquired whether I should write on that. "Yes, nothing more proper." Then with my pencil I wrote Remorse. He took the card in his hands in a hurried manner, and fastened his eyes on it with great intensity. "Write it on the back," he exclaimed. I did so, and handed it to him again. He was excessively agitated at this period—he repeated, "Remorse! you have no idea what it is—you can form no idea of it whatever; it has contributed to bring me to my present situation; but I have looked to the Lord Jesus Christ, and hope I have obtained pardon." He then said, "Now let John take your pencil and draw a line under the word," which was accordingly done. I inquired what was to be done with the card; he replied, "Put it in your pocket and take care of it; when I am dead look at it."

This was an impressive scene. All the plans of ambition, the honors and the wealth of this world, had vanished as bubbles on the water. He knew and he felt that his very moments were few, and even *they* were numbered. It afforded his physician an opportunity, without being intrusive, of offering to him a few serious observations, and pointing the expiring statesman to a hope beyond the grave. My situation at this period was serious and embarrassing. Locked in the chamber of a patient, and solemnly called upon as a witness, confirming a will already made for the liberation and support of his slaves, when the only human ear that heard these declarations, except myself and the testator, was one of the very slaves included in the bequest. It required no unusual foresight to anticipate the construction which might be put upon such testimony: perhaps in a distant court, where the witness might be personally unknown, especially when, added to this, it was found he was a member of the religious society of Friends, who long since had washed their hands from the stain of slavery, and whose sentiments on that subject were universally known. I saw that even under a charitable construction of the testimony, the force of early impressions and the bias of education might be supposed imperceptibly to influence even an upright mind, and give a coloring to words and facts, which to others, differently educated, might be viewed in another light.

Under these views, I introduced the subject of calling in some additional witnesses, and suggested sending down stairs for Edmund Badger, whose attentions were very great to him. He replied, "I have already communicated that to him." I stated that it was my intention to be with him as steadily as possible until his death, but with his concurrence I would send for two young physicians who should remain and never lose sight of him until he was dead, and to whom he could make the declaration. My son, Dr. Isaac Parrish, and my young friend and late pupil, Dr. Francis West, were proposed to him, saying the latter was a brother of Captain West. He quickly asked, "Captain West of the packet?" On receiving an affirmative reply, he said, "Send for him, he is the man, I 'll have him." From some circumstances that had come to my knowledge, I had reason to believe that Capt. James West was a favorite with the patient. Before the door was unlocked, he pointed to a bureau, and requested I would take from it a remuneration for my services. To this I promptly objected, informing him, I should feel as though I were acting indelicately to comply. He then waived the subject by saying, "In England it is always customary."

The witnesses were now sent for, and soon arrived. The dying man was propped up in bed with pillows, nearly erect. Those only who know his form and singular physiognomy can form an idea of his appearance at this moment. Being extremely sensitive to cold, he had a blanket over his head and shoulders, and he directed John to place his hat on over the blanket, which aided in keeping it close to his head. The hat bore evident marks of age, and was probably the one exposed to the peltings of the storm during his discomforts on the day of his arrival.

With a countenance full of sorrow, John stood close to the bed-side of his dying master. The four witnesses, viz., Edmund Badger, Dr. Francis West, my son, Dr. Isaac Parrish, and myself, were placed in a semi-circle in full view. It was evidently an awfully interesting moment to the patient. He rallied all the expiring energies of mind and body to this last effort; his whole soul seemed concentrated in the act; his eyes flashed feeling and intelligence.

Pointing towards us with his long index finger, he thus addressed us:—"I confirm all the directions in my will respecting my slaves, and direct them to

Digitized by Google

be enforced, particularly in regard to a provision for their support;" and then raising his arm as high as he could, he brought it down with his open hand on the shoulders of his favorite John, adding these words, "especially for this man." He then asked each of us whether we understood him.

At the close of this exhausting effort, I remarked to my fellow-witnesses, that my patient a short time before informed me in private, that according to the laws of Virginia, a will might manumit slaves, yet in order for their subsequent support, it was necessary that a declaration should be made, in the presence of one or more white witnesses, who, after receiving it from the party, should remain and never lose sight of him until he was dead. I then appealed to the dying man to know whether I had stated it correctly; he replied, "Yes!" and gracefully waving his hand as a token of our dismission, he said, "The young gentlemen will remain with me." I took leave, with an assurance that I would return as speedily as possible, and remain with him. After an absence of perhaps an hour or more, and about fifty minutes before his decease, I returned to his sick room—but now the scene was changed; his keen, penetrating eye had lost its expression, his powerful mind had given way, and he appeared totally incapable of giving any correct directions relative to his worldly concerns. To record what now took place may not be required further than to say, that almost to the last moment, some of his eccentricities could be seen lingering about him.

He had entered within the dark valley of the shadow of death, and what was passing in his chamber was like the distant voice of words which fell with confusion on the ear: the further this master spirit receded from human view, the sounds became less distinct, until they were finally lost in the deep recesses of the valley—and all that was mortal of Randolph of Roanoke was hushed in death.

In conclusion, perhaps it may be proper for me clearly and distinctly to state, that at the time he made the declarations in my presence, relative to his will, he was capable of discriminating correctly between thing and thing, and he also possessed tenacity of memory; hence, I give it as my decided belief, that he was of sound disposing mind and memory.

Early on the afternoon of the day on which John Randolph died, it was concluded by the four witnesses to commit to writing the declarations which he had made, according to their understanding of them. This I did in a room, contiguous to the one wherein he died, and where his corpse was then lying, and the original paper is now in my possession. The paper hereto annexed, marked and subscribed with my name, is a true copy of the same. Jos. Parrish.

The Bottle. In Eight Plates. By George Cruikshank. Bogue.

It is remarked of Hogarth's genius, by Lamb, in his incomparable essay, that his graphic representations are books, and have the teeming, fruitful, suggestive meaning of *words*. "Other pictures we look at—his prints we read." Mr. Cruikshank aspires to the same kind of praise; and no trifling share of it may be conceded to his honorable ambition.

The *Bottle* has the same object as Hogarth's *Gin Lane*, and, like that immortal print, is made accessible by its price to the poorest people, for whose instruction it has been composed. The series of eight plates are published for a shilling; with a more expensive edition on tinted paper, for the portfolios of lovers of art. We recollect nothing half so good that was ever so cheap. The plates are printed from surface blocks, by the new art of glyphography. There is no end to the new arts since Hogarth's time. What a pity it is that we have not made corresponding improvements in those higher matters, the condition of which, in our day as in his, still renders necessary such publications as this, for the amendment of the poor and the warning of the rich.

Mr. Cruikshank has adopted Hogarth's manner of a *Progress* to show the fatal influences and results of gin. The first plate is a happy homely mechanic's room, with every sign of comfort and order; the husband and wife at dinner, the eldest daughter attending them, the two younger children at play, and all the minor accessories of chimney-ornaments and furniture indicating habits of sobriety and virtue. But the bottle is introduced, and the husband induces the wife "just to take a drop." In the second plate the drop has done its work; the husband has been discharged from his employment, the wife is sending out the daughter with clothes to pawn for a fresh supply of gin, and the younger children look in amazement at their father, who sits in a state of bestial drunkenness before the disordered fire-place. In the third plate an execution is sweeping off the furniture, the bed, the clock, the Bible, and the little picture ornaments, while the bottle, held by the degraded wife, still consoles the wretched man. The effect of this on the children, and the half-sorrowful, half-stupefied gaze of the mother at the departing picture of the village church, are excellent points in this plate. In the next the children are begging at the railings of a churchyard, and a neighboring gin-palace receives their miserable earnings. The fifth plate shows that cold and want have destroyed the youngest child, and that even the bottle is become a very inefficient consolation. The figure of the daughter as she stands by the coffin of her sister, the lid of which she has gently opened, is very truthful and affecting. The sixth plate portrays fearful quarrels and brutal violence. In the seventh the husband has murdered the wife with the hideous instrument of all their misery. The attitude and face of the boy in this plate, and of his sister as she points to the broken bottle lying at her dead mother's feet, are admirably conceived; indeed, the treatment of these children, from step to step of their degradation, is the finest stroke of the artist. There is also something appalling in the imbecile phrenzy of the murderer. In the eighth plate "the bottle has done its work: it has destroyed the infant and the mother, it has brought the son and the daughter to vice and to the streets, and it has left the father a hopeless maniac."

We cannot doubt that this series of plates will contribute to the artist's benevolent object, as they will certainly support his deservedly high reputation. In his peculiar walk of observation Mr. Cruikshank is unrivalled; and with this he has combined, in the present series of plates, touches of universal truth, and indications of the highest artistic genius.—*Examiner*.

THE HIGHEST CORRUPTION IN FRANCE.

HARDLY more prevailing was the licentiousness in the time of Charles II. than is the corruption in France under Louis Philippe. That it is not, as profligacy was with our cavaliers, actually a fashion, is the most that can be said in the way of favorable distinction. It is not paraded, but for the extensive practice there is an indulgent toleration. The delinquents in the recent exposures were not regarded as more culpable than their neighbors, but less fortunate. They were pitied. The common reflection was *multi* (if not *boni*) *idem feccrunt*. Or as it is expressed in the old song,

> 'The greatest and gravest—
> A truce to grimace—
> Would do the same thing,
> Were they in the same place."

To prey on the public when opportunity offers is thought fair play. The shame is only the Spartan shame, in detection, and it is but faint and transitory.

As we have before had occasion to remark, the broad difference between corruption in France and in England is, that with us the lower trusts are most abused, and with our neighbors the highest. It lies at the root of the tree in England, and amongst the flowers and fruits in France. Here we have corrupt voters, across the channel corrupt ministers. But have we even in the last the highest of those who in France do not scruple to turn their public trusts to private account? What is the example of the king himself? He does not, he cannot, peculate; but he makes the policy and the honor of France subservient to the enrichment of his family. To make great a family, he makes a nation little. He tricks in one quarter, and he truckles in others to procure sufferance. What he perfidiously gains on the one hand, he endeavors to secure on the other, by sacrificing the lasting interests and the glory of the nation. The feelings that do most honor to France, sympathy with oppressed Poland, sympathy with oppressed Italy, have all been outraged by the policy of the government, from the date of the intrigues for the Montpensier marriage. For the last two years the whole policy of France has been a Montpensier policy. All the powers and influences of a great nation have been adjusted to compassing a provision for a son, and stealing a crown for his descendants. For this object England has been defied, and Austria truckled to; and all the worst designs of the worst powers in Europe have been encouraged to action by the position to which France has been reduced to pursue the miserable intrigues in Spain for family aggrandizement. France, in the hands of Louis Philippe, is as much the instrument for his private gain, apart from the national interests, as any tradesman's stock is the means of making his profit, and to be huxtered or bartered for that end.

The example bears out the observation in our last number, on the text of abdications, on the preference of the private to the public, not indeed in this instance in respect of station, for Louis Philippe has no disposition whatever to abdicate, but of turning the opportunities of royal station to private account, or, in homely phrase, "feathering the nest."

When we see what France is now—a nation for the uses of a family, what a melancholy mockery appears the revolution of the Barricades, whose three days of glory have been the last she has seen in any exalted sense! Never was there such devotion as that which hurled down the tyranny of Charles X., and asserted the principle of the sovereignty of the people in the setting up of Louis Philippe. And what have been its consequences? A government not for the nation that made it, but for the family which it made. The constitutional forms of the government render this perversion the more mischievous. In a despotism, a prince like Louis Philippe would carve out of the substance of the people the provisions he wanted for his sons and daughters, and there would be the end of the wrong; or if he coveted a neighboring throne, he would consider whether he was strong enough to seize it or not, and act accordingly. But in a country like France this direct procedure is impossible, and it is through and at the expense of the influence and credit of the nation that the machinations for the object in view must be carried on. It is a grand peculation, not in pelf, but in policy, and an embezzlement of national honor exchanged for so much connivance at a crooked scheme to get a throne. The difference of stations makes no difference in abuse of trust. A constitutional monarch is a trustee for the nation, and is bound to discharge his trust with regard only to the public interests. If for other and selfish purposes he sacrifices the true national policy and honor, he is guilty of as low a breach of trust as the man who dips his fingers into the purse confided to his honor. It is the worst of embezzlements, preying upon the interests and the character of a people, robbery and demoralization conjoined.

The foolish ill-will to England has hitherto blinded the French to their true position. As the Montpensier intrigue has run counter to the policy of England, and has been extremely offensive to her, it has been pardoned by, if not acceptable to, a large portion of the French, whose animosities are stronger than their reason. If the matter had had no bearing on England, the clamor that would have arisen against it would have overwhelmed the government. But too many of our neighbors have been content that France should be degraded so that England should be thwarted and mortified. The signs, however, of the unworthy position in which the nation was placed to play the selfish game of the monarch soon appeared in the seizure of Cracow, and we have now another evidence of it in Austria's aggression in the occupation of Ferrara.

Austria, the most cowardly power in Europe, whose empire is a bundle of robberies, and who is always trembling lest she should lose what she should never have got, and holds uneasily, would never have ventured to take the step she has done, but for the posture of France crouching to creep through the Spanish intrigues. England and France heartily allied can sway the world; but the moment there is an interruption of the understanding between them, the despotic powers are emboldened to acts of rapine, as in Cracow, or to endeavor to crush improvement, as in Italy.

A great admiration of the wisdom of Louis Philippe was at one time the fashion, and many eulogies of him have been delivered by the leading statesmen in both houses of parliament. We have always questioned the justness of those panegyrics. We have never been able to discover the grounds for them. Louis Philippe in our view is a wily man, but not a wise one. He is crafty in his management of means for an end, but short-sighted in his choice of objects. He does not form correct calculations of difficulties; but when they arise, he

Digitized by Google

is dexterous in coping with them. He is perpetually making the mistake proverbially described as "reckoning without your host;" but when out in his reckoning, he is very ingenious in shifts, and contrives to leave the host in the lurch. We have often heard it said, "What a clever man Louis Philippe is! see how he gets out of his difficulties." But the answer has always seemed to us to be—"See also how he got *into* his difficulties." But this is what the world does not look to. As the *Great Britain's* getting ashore was a nine days' wonder, while getting her off again has occupied the public attention for a year, so Louis Philippe's triumph over embarrassments of his own creating has filled with admiration minds that have ceased to remember how he got into the scrape. His sort of cleverness is like that of a clown in a pantomime, who vigorously knocks his head against the wall without hurting himself. Never was there a greater mistake than that of ascribing prudence to him. He is adroit, but not prudent. He has in an eminent degree the French genius for making shift—for making the best of bad positions, and turning men and circumstances to account. But this kind of dexterity will not always avail, it will be overmastered at last—the pitcher goes once too often to the well. And the present imprudence of the king of the French threatens to be irreparable. He has not observed that wise rule of Nicol Jarvie, not to put the arm in further than it can be safely drawn back again. He has overreached himself in Spain, and for dynastic objects endangered his dynasty. The train of embarrassing events is likely to be longer than his life, and any precipitated solution of them would have the most grave consequences. Louis Philippe's last days will be passed in cares and troubles, the bitter fruits of his own cupidity—"the mighty pains to mighty mischiefs due." He is, as Bacon has it, "one of those great self-lovers who will set their neighbor's house on fire to roast their own eggs in the embers;" but Louis Philippe in cooking his eggs has burnt his fingers most grievously.

The *Constitutionnel* takes a just view of the perils which impend over Europe through the conduct of the monarch who has been styled the Napoleon of peace!

"See on what a slight thread depends the peace of the world! Should the health of Queen Isabella suffer any injury—should, unfortunately, a fall from her horse or any untoward accident compromise her life, and she died without giving birth to an heir, the case of a disputed succession would arise, and the *casus belli* reserved by England would present itself. If the king and queen should remain separate and irreconcilable, there can be no hopes of a direct heir to the throne. In such a case the dissension between Great Britain and France, the effects of which are suspended during the life of the queen, will become every day more envenomed, and it reserves a menacing prospect for Europe. Should the king and queen become reconciled through the exertions of Salamanca and Narvaez, and if, nevertheless, the queen should not give birth to an heir, the situation would be no less embarrassing nor perilous. Should, on the contrary, the separation of the royal couple be prolonged and the queen obtain a divorce, the choice of a second husband would renew the conflict between England and France. Such are some of the formidable chances which Spanish affairs present for the repose of the world. Suppose, in short, that the queen, reconciled to her husband, should give a successor to the throne, the dearest wish of our government would be accomplished. Is it not so? Well, the effect of this single fortunate chance would be to destroy all the hopes of the Duchess de Montpensier succeeding to the throne of Spain. That is the destruction of all the advantages of the Spanish marriages so much vaunted last year. It would not restore the independence of Cracow, nor repair the bad results of our policy in Switzerland, Greece, and elsewhere. It would not reëstablish confidence between the cabinet about to be presided over by M. Guizot and that of which Lord J. Russell is the head."—*Examiner*, 11 *Sept.*

SALE OF SHAKSPEARE'S HOUSE.

THIS important national event took place on September 16, at half-past one o'clock, at the City Auction Mart. The attendance was so numerous, that half those desirous of being present could not be accommodated in the spacious sale-room. Amongst those in the room were Sir F. Madden, keeper of the MSS. in the British Museum; Mr. Amyot, chairman of the London committee; Dr. Thomson, chairman of the Stratford committee; Mr. P. Cunningham and Mr. Sheldon, treasurers of the committees of London and Stratford; Mr. Wilkes, Mr. Payne Collier, chairman of the general meeting of subscribers; Mr. Flower, Mr. Chas. Knight, Mr. Butterworth, Mr. Halliwell, many members of the Shakspeare Society, and most of the resident members of the several committees interested in the subject.

Mr. Robins, to whom the disposal of the birthplace of the great dramatist was entrusted, briefly, but with great ability, directed the attention of the crowded auditory to the circumstances connected with the sale, which were such as to exonerate from all blame the trustees who acted on the part of the minors to whom the property legally belonged. The property was very valuable as regarded its position in Stratford, and its extent; but its great value arose from its being the spot where the immortal Shakspeare first saw the light—a spot which was regarded with reverence not only by Englishmen, but by the admirers of genius from all countries. It was interesting to observe the steady increase in the number of visitors to the shrine of the poet which was taking place. A few years ago one thousand in a year was considered a large number, but last year the number had increased to seven thousand. He was quite confident that such an object as the house in which William Shakspeare first drew his infant breath would be fully appreciated by such an assembly as that which he saw around him, and that they would exhibit in a practical manner that appreciation. Mr. Robins then read the terms of sale, which were in the usual form of freehold property, and stated that he was ready to commence the sale.

The offer of 1,500*l.* was then made, which was immediately advanced upon to 2,000*l.* by Mr. Butler, of Clapton. 2,100*l.* was then offered, and after a very slight pause the following offer, on the part of the Stratford and London Shakspeare Committees, organized for the purchase of Shakspeare's house, was placed in the hands of Mr. Robins:—"To Mr. Robins. We, the undersigned, deputed by the united committees of Stratford and London, for raising subscriptions for the purchase of Shakspeare's house, hereby offer a bidding of 3,000*l.* The committees having purchased another property which really constitutes an integral portion of

Digitized by Google

Shakspeare's house, have expended a considerable part of the amount already raised by public contribution; but, looking at the duty imposed upon them in undertaking to represent the feeling of the nation, they have come to the resolution of making this large and liberal offer for the property now for sale, without regard to the funds which they can at present command, in the confidence that the justice of the public will eventually discharge the committees from the individual responsibility which they thus incur. Signed, Thomas Amyot, chairman of the London committee; Thomas Thomson, chairman of the Stratford committee; P. Cunningham, treasurer of the London committee; W. Sheldon, treasurer of the Stratford committee. September 16, 1847."

Mr. Robins having read the offer aloud, said he had the agreeable duty of announcing on the part of the trustee that he intended to forego his privilege of bidding for the property, after the offer which the committee had made, (3,000*l.*,) an advance of 900*l.* on the last offer. (Cheers.) He was now desirous to know if any one present proposed to offer a larger sum? A few moments of anxious suspense ensued, when no other bidder appearing, the Stratford and London Committees were declared the purchasers for 3,000*l.*, amidst immense cheering, which clearly exhibited the gratification which those present felt at the circumstance of this most interesting national monument having been secured for the nation by the committees.

The following interesting lots were put up and sold at the subjoined prices:—Visitors' Books of Autographs, seventy guineas—Mr. Butler, of Clapton, who offered 2,000*l.* for the house; ditto, twenty guineas; a curious tablet, with a portrait of Shakspeare—J. W. Pearson, 5*l.* 5s.; five carved walnut-tree chairs, with needlework backs and seats—W. B. Fletcher, 5*l.* 5s.; a curious antique carved cabinet, elaborately worked—A. L. Butler, 10*l.* 10s.; an elaborately carved Elizabethan chair, cane back—Mr. Lilly, 7*l.* 7s.; another equally curious chair, high back—Mr. Lilly, 1*l.*; an inlaid walnut-tree corner beaufet or closet—Mr. Lilly, 2*l.* 2s.; two ancient portraits in frames—C. D. Butler, 1*l.* 1s.; a small bust of Shakspeare, carved from the veritable mulberry tree, to the truth of which Mr. Sharp deposed—Thomas Wilkinson, 18*l.* 18s.; a spectacle case, also carved from the mulberry tree—Mr. Butler, 15*l.* 15s.; a life-size bust of Shakspeare in plaster, and a copy of the church register tracing the family from its first settlement at Stratford—Mr. Goldsmith, 1*l.* 15s.; an elaborately carved oak cabinet, with richly decorated front and sides and corner pillars—Mr. Weedon, 10*l.* 10s.; two carved oak chairs, leather seats—Mr. Weedon, 1*l.* 10s.; a fine old black letter Bible, 1589—Mr. Weedon, 2*l.* 2s.; a small walnut-tree table, a small plaster bust, and a curious delf candlestick—Mr. Weedon, 16s.—*Examiner.*

THE WORSE OF TWO ASSASSINATIONS.

We can easily believe that the murder of the Duchess de Praslin filled Louis Philippe with horror. It must have shocked his humanity, and it ought to have touched and alarmed his conscience; not that he was in the remotest way accountable for that particular crime, but as the example of the direful extremities to which matrimonial strife may be carried in high stations should have made him reflect with sorrow and with fear on what he has done and undone in Madrid. Sickening to the imagination is the night scene of butchery in the chamber of the ill-fated Duchess de Praslin, but the assassin's malice did not go beyond the destruction of life, and his victim went to her account spotless in character, and with all her virtues unblemished. The murderer made his havoc of the body, hacked with his knife, stamped on the head with the impression of the ducal arms on the butt end of the pistol; but here ended his malice; he shortened a blameless life, he did not make a guilty one, he was assassin of the flesh, not assassin of what it enshrined. He wrought no corruption, no depravation, no debauchery, he contented himself with vulgar murder—there was an obstacle to his illicit desire, and he removed it; he did not doom the victim to a position in which the virtues could not live, and in which the vices sure to spring up would tend to ruin of every kind, ruin of character, ruin of fame, ruin of inheritance. The assassin kept all the guilt to himself; he did not work his will through making his victim guilty—his instrument was a knife, not a snare to destroy by debauchery and degradation, or to torture into the renouncement of rights.

"What the eye does not see the heart does not rue." The mind's eye sees the horrid scene of the wife sinking under the blows of the hand bound by every tie to protect her; but the assassination of character and peace is not palpable; we see the wounds, but do not trace them directly to the instrument, nor the instrument to the hand, and they are repeated at intervals. The butcher puts the sufferer out of pain in a few minutes, but demoralizing to destroy is a slow operation, requiring a sustained cruelty, which intense cupidity will supply. Such examples there have been in the annals of vulgar crime. Donellan, the guardian, who murdered his ward Sir Theodosius Boughton, commenced by giving the youth every licentious indulgence, in the hope that debauchery would do the work of death; he never, however, had the wit to think of marrying him to some woman whom he would inveterately hate, and becoming impatient of the slow process of destroying by immorality, he shortened the matter with a dose of laurel water. For this act of comparative mercy he was hung. The succession to the estate was the temptation to the crime. Successions have much to answer for in wickedness, but modes are altered, and what used to be done by wars and throat-cutting is now brought about by weddings, the hymeneal torch being borrowed from the Furies.

But to return to our text—the piteous example of the assassination of the Duchess of Praslin—what father, with the alternative for his daughter of a death like that of the unfortunate duchess or a life like that of Isabella of Spain, would hesitate as to the choice?—a sudden violent death on the one hand, on the other the cruellest position in which a woman and wife can be placed, one in which it is hardly possible that the virtues most befitting the female character could survive, and in which, if they did survive, they would not be believed to survive—an incredulity most powerfully tending to cast down morality in despair. A Lucretia may indeed exist with the repute of a Messalina, but that is not the question—it is whether any father would not prefer the worst death for his daughter with her mind unsullied, her fame unspotted, her virtues in their perfection, to such a lot as that which has been cast for the Queen of Spain, whose throne is a pillory, whose reputation is dragged through the kennel, whose married life has been a series of disgusting disappointments, mortifications, and angry

Digitized by Google

conflict, and whose court and report, true or false, is the scandal of the whole civilized world. She may have resisted all the artful combination of adverse circumstances that would have demoralized ninety-nine women out of a hundred in the same position; but the question whether she has done so or not is in itself an infamy which makes her fate more to be pitied than the victim in the late assassination, and which renders her destroyer not less to be execrated than the felon Duke of Praslin. The objects in the two cases have been different, but in morality the motives are hardly less criminal in the one instance than the other. The evil desires had different directions, but they crushed what stood between them and the coveted object with equal ruthlessness—a mistress in the one case, a throne for a descendant in the other.

"Committunt eadem diverso crimina fato,
Ille crucem sceleris pretium tulit, hic *diadema*."

For taking away a life the law has its penalties; but for taking away the happiness of a life, for taking all that gives it value, for taking away peace, innocence, the world's respect, and, worse still, self-respect, there is in the moral code no worse name than ambition, or the craving for family aggrandizement.

Curious it is that in France, within a year, two personages have made the world ring with actions at opposite ends of the matrimonial chain, the Duke de Praslin by his method of dissolving a union, the matchmaking king by his refinement on the torture of old, of uniting a living with a dead body, to destroy by the repugnant pestiferous connection.

We see it announced that, by order of the Queen of the French, a funeral service has been performed in the chapel of Eu for the repose of the Duchess of Praslin. If the life of the Queen of Spain should be shortened, and she should be despatched to the place where the wicked cease from troubling, it will be not for the Queen but for the King of the French to order a funeral service for the repose of Isabella's soul. He will owe it to her. And when she is no longer in the way as an obstacle, he will have no indisposition to pray for the repose of the soul his machinations so troubled in the life, for there has been no malice, no ill-will in the case—nothing but greed—nothing but what makes a vulgar villain cut a throat to obtain a coveted purse. It is too general a libel on human, or on inhuman nature, that the injurer never forgives, but hates in proportion to the wrong he has done. This is far from uniformly true. One of the celebrated German assassins, a priest, who cut the throat of a mistress who embarrassed him, administered the last offices and solaces of religion to the dying victim with his hands reeking with her hot blood.

Should Louis Philippe have to order a funeral service for the repose of the Queen Isabella, let it be in the chapel of Eu, where the nuptials were discussed and the promise given which would have saved the young queen from so much trouble and misery.—*Examiner*, 4 *Sept.*

TO THE EDITOR OF THE EXAMINER.

SIR—The moral and religious world must unanimously agree in the sentiments you express so eloquently in the "Examiner" of September 4. Certainly you have pointed out the worst of two assassins, and public execration will follow him to his grave. I believe it is seldom that you admit Latin verses into your paper; but, if the following are worth a place in it, they may perhaps run forward into other channels, and shame one culprit.

I am, sir, very truly yours,
WALTER SAVAGE LANDOR.

Ad Philippum Galliarum Regem.

O patre nequam gnate multò nequior,
Philippe! quorsum te petat sicarius?
Probi-ne sunt in Gallià sicarii
Soli? æquitatis unici satellites?
At casta certè contigit tibi soror,
Gnatæque castæ; nec caret conjux fide,
Utcunque matre scorto et infami domo.
Atqui neque illud pessimæ scortum domûs
Neptem alligaret conjugi haudquaquam viro,
Adulteramque vellet et compelleret,
Ut pecus Iberum clauderet septo suo.

THE U. S. FRIGATE RARITAN.—MR. GRANT'S EXPERIMENT.—Some two or three months since, the frigate Raritan entered this port from the Gulf of Mexico with a sick crew, a large number, some of them officers, having died on the passage, with what was believed to be the yellow fever. She was ordered off by the Board of Health, and has since been anchored off Craney Island, dismantled and uninhabited. Such was the dread of the fatal disease, that though every part of her was open, and her valuable cargo of provisions, &c., exposed, no one dared board her, save some hands from the Vandalis, whose duty it was to trim the wind-sails, that were set with the hope of purifying her. Sailors who ventured below, were sure to be seized with a violent sickness—five out of seven who went on board, having been prostrated by the foul stench that arose from her hold. It was suggested by many to scuttle her, but this was objected to, as it would cause a loss of between 50 and 60,000 dollars' worth of provisions, powder, &c., which could not be removed while she remained infected. Some two or three weeks since Professor Robert Grant received permission of Com. Skinner, Chief of the Bureau of Construction, Equipment, and Repairs, to experiment on the frigate with his newly invented disinfecting gas. Such was his confidence in his own ability and the efficacy of his invention, that all the warnings of his more timid friends could not dissuade him from an undertaking which seemed deathdaring. He went on board with his apparatus on Tuesday last week, and after laboring day and night, most of the time "solitary and alone," in a week he reported the ship to Captain Stribling, of the Pennsylvania, as perfectly healthy, and "sweet as a nut." The result of his experiment was, contrary to the expectation of many, a complete triumph; and as a proof of his confidence in her purity, he will forthwith take up his lodgings on board, sleep in her cock-pit, and keep command of one of our noblest frigates, if the government will only commission him, and furnish "a bold brave crew."—*Norfolk Beacon*, 25 *Sept.*

APPLICATION OF THE ELECTRIC TELEGRAPH TO LOCOMOTIVES.—A line of electric telegraph is in active preparation along the railway from Vienna to Prague. As soon as it is completed, every locomotive engine is to be furnished with a small electric apparatus, by aid of which, and by that of a wire, which can, at pleasure, be put into communication with that of the railway, the train can announce to every station, far or near, the events it may have learnt on the road.

From the Examiner.

Journal of an Overland Expedition in Australia, from Moreton Bay to Port Essington, during the years 1844—1845. By Dr. Ludwig Leichhardt. Boone.

The expedition described in this book excited great interest during its progress. The smallness of the party, the scantiness of its equipment, and the enormous tract of country proposed to be explored, stamped it at its commencement with a character of rashness; and when several months had passed without any tidings of the travellers, the people of Sydney generally gave them up for lost. Two parties successively went out in search of them, or, failing their discovery, to ascertain their fate; but neither could get upon their track, or learn anything concerning them: and when at last they reappeared, after more than fifteen months' absence, the delight and gratitude of the colonists of Sydney took a very substantial form. Upwards of fifteen hundred pounds were collected for them by public subscription; and a gratuity of a thousand pounds was voted to them by the legislative council of the colony. Doctor Leichhardt has since received, too, the latest honors of the Geographical Societies of London and Paris. The successful issue of his perilous enterprise, the fortitude and perseverance displayed by the persons engaged in it, the advantages derived from it to general science, and in particular to the colony and society of Sydney, were the proper and sufficient justification of these well-merited rewards.

The details of the expedition, in which a distance of upwards of three thousand miles was traversed, are given by Doctor Leichhardt in this volume, and will be read with great interest. He was the originator, director, and animating soul of the enterprise, from its commencement to its close. He limited the party, in the first instance, to five beside himself; exacting from them the condition that they were to be contented with animal food, patiently to submit to every other privation, and resign themselves implicitly to his guidance: but, on similar conditions, he allowed four additional persons to join them at Brisbane. It seems clear that it was by by these prudent precautions, by confining provisions and stores to what were actually necessary, and by keeping the expedition as far as possible in what Doctor Leichhardt calls "light marching order," they were able to encounter the difficulties of the broken mountainous countries through which they passed, to endure the unusual privations to which they were subjected, and at last to achieve success. They took with them seventeen horses and sixteen head of cattle; and not the least interesting part of the doctor's narrative relates to his brute companions. The bullocks were highly unmanageable at first; but ropes, iron nose-rings, and other artifices, were some check to their refractory bluntness; and the familiarity of constant association, and of common wants and dangers, seems to have made it at last quite a family party of "man and beast." The horses, the dogs, and the bullocks, came to have each their peculiar character, their marked individuality, their (as it were) personal interest for the men; and when the expedition fell upon its evil days—horses drowned, dogs lost, and bullocks of necessity killed—it was with no small grief they lost the old familiar brutish faces. The men of education in the party, beside the doctor himself, were four, well acquainted, for the most part, with natural history pursuits; the attendants were two aboriginal natives, a crown prisoner of Sydney, and a sturdy young lad.

We shall not attempt to give any outline of what befell the expedition. Some notion may be formed of what they had to contend with, when the reader is told, that, having stored themselves with provisions for seven months only, which the doctor had calculated to be sufficient for the journey, they were nearly sixteen months in reaching Port Essington. "I was deeply affected," says Doctor Leichhardt, describing his arrival at the latter place, "in finding myself again in civilized society, and could scarcely speak, the words growing big with tears and emotion; and even now, when considering with what small means the Almighty had enabled me to perform such a long journey, my heart thrills in grateful acknowledgment." He had arrived at Port Essington, too, with the satisfactory sense of having been engaged in no thankless or profitless labor. The result of his enterprise was thoroughly successful. It has added not a little to our existing stock of knowledge in the various departments of natural history; and has made discovery, in districts before untrodden, of an almost boundless extent of fertile country, replete with means for the establishment and growth of civilization, and connecting the Australian continent with the shores of the Indian Ocean.

We shall borrow a few extracts from Doctor Leichhardt's unassuming yet most striking narrative, to show the character of the hardships endured, the dangers braved, and the almost insuperable difficulties surmounted by steady fortitude. After the eighth month their condition began to be very critical.

"When we left our last camp at the Lynd, John Murphy's pony was missing. Charley went to look for it, and did not join us before we had arrived at our camp, after an unusually long and fatiguing stage. He brought us the melancholy news that he had found the poor beast on the sands of the Lynd, with its body blown up, and bleeding from the nostrils. It had either been bitten by a snake, or had eaten some noxious herb, which had fortunately been avoided by the other horses. Accidents of this kind were well calculated to impress us with the conviction of our dependence on Providence, which had hitherto been so kind and merciful.

"As all our meat was consumed, I was compelled to stop, in order to kill one of our little steers. It proved to be very fat, and allowed us once more to indulge in our favorite dish of fried liver. Although we were most willing to celebrate the anniversary of the battle of Waterloo, and to revive our own ambitious feelings at the memory of the deeds of our illustrious heroes, we had nothing left but the saturated rags of our sugar bags; which, however, we had kept for the purpose, and which we now boiled up with our tea: our last flour was consumed three weeks ago; and the enjoyment of fat cake, therefore, was not to be thought of. Should any of my readers think these ideas and likings ridiculous and foolish, they may find plenty of analogous facts by entering the habitations of the poor, where I have not only witnessed, but enjoyed, similar *treats* of sugared tea and buttered bread."

The climate was very merciful to them; but against this they had to set the unceasing anxiety of possible attack from the natives.

"The mornings and evenings were very beautiful, and are surpassed by no climate that I have ever lived in. It was delightful to watch the fading and changing tints of the western sky after sunset, and

Digitized by Google

to contemplate, in the refreshing coolness of advancing night, the stars as they successively appeared, and entered on their nightly course. The state of our health showed how congenial the climate was to the human constitution; for, without the comforts which the civilized man thinks essentially necessary to life; without flour, without salt, and miserably clothed, we were yet all in health; although at times suffering much from weakness and fatigue. At night we stretched ourselves on the ground, almost as naked as the natives, and though most of my companions still used their tents, it was amply proved afterwards that the want of this luxury was attended with no ill consequences."

A few days after the above entry in Doctor Leichhardt's journal, the natives suddenly attacked them. They had heard, some days before, the "subdued cooees" which indicated their presence in the neighborhood, but seem to have had not the least expectation of immediate danger. They had made their tents, and had obtained some game which enabled them to dine well.

"After dinner Messrs. Roper and Calvert retired to their tent, and Mr. Gilbert, John, and Brown, were platting palm leaves to make a hat, and I stood musing near their fire-place, looking at their work, and occasionally joining in their conversation. Mr. Gilbert was congratulating himself upon having succeeded in learning to plat; and, when he had nearly completed a yard, he retired with John to their tent. This was about seven o'clock; and I stretched myself upon the ground as usual, at a little distance from the fire, and fell into a dose, from which I was suddenly roused by a loud noise, and a call for help from Calvert and Roper. Natives had suddenly attacked us. They had doubtless watched our movements during the afternoon, and marked the position of the different tents; and, as soon as it was dark, sneaked upon us, and threw a shower of spears at the tents of Calvert, Roper, and Gilbert, and a few at that of Phillips, and also one or two towards the fire. Charley and Brown called for caps, which I hastened to find, and as soon as they were provided, they discharged their guns into the crowd of the natives, who instantly fled, leaving Roper and Calvert pierced with several spears, and severely beaten by their waddies. Several of these spears were barbed, and could not be extracted without difficulty. I had to force one through the arm of Roper to break off the barb; and to cut another out of the groin of Mr. Calvert. John Murphy had succeeded in getting out of the tent, and concealing himself behind a tree, whence he fired at the natives, and severely wounded one of them, before Brown had discharged his gun. Not seeing Mr. Gilbert, I asked for him, when Charley told me that our unfortunate companion was no more! He had come out of his tent with his gun, shot, and powder, and handed them to him, when he instantly dropped down dead. * * * *

"Mr. Roper had received two or three spear wounds in the scalp of his head; one spear had passed through his left arm, another into his cheek below the jugal bone, and penetrated the orbit, and injured the optic nerve, and another in his loins, besides a heavy blow on the shoulder. Mr. Calvert had received several severe blows from a waddi; one on the nose which had crushed the nasal bones; one on the elbow, and another on the back of his head; besides which, a barbed spear had entered his groin, and another into his knee. As may be readily imagined, both suffered great pain, and were scarcely able to move. The spear that terminated poor Gilbert's existence, had entered the chest, between the clavicle and the neck; but made so small a wound, that for some time I was unable to detect it. From the direction of the wound he had probably received the spear when stooping to leave his tent."

Mr. Gilbert was one of the volunteers who joined at Brisbane, and Doctor Leichhardt had used every persuasion to deter him from the expedition; but he was bent upon prosecuting certain zoological inquiries, and thus paid for them the forfeit of his life. Yet within three days of this frightful incident, (it occurred on the 28th of June,) and with the wounded relying solely on the still kindly climate and Doctor Leichhardt's surgical skill, the whole party were in march again. They buried their ill-fated companion, and travelled upwards of fourteen miles, on the first of July; nor did the severe wounds received form any further impediment to the progress of the journey.

Among the matters that diversified it were such as this:

"By a mere accident, we discovered a remarkable medicinal property of the glutinous secretion of the seed-vessels of a drooping Grevillea. John Murphy, having no pockets in his trowsers, put the seeds which he found during the stage into his bosom, close to the skin, where he had already deposited a great number of Sterculia, and was much inconvenienced by the starry prickles which surround the seeds. Afterwards, finding the drooping Grevillea in fruit, he gathered some capsules and placed them as before stated. Upon arriving at the camp he felt great pain; and, on examining the place, he saw, to his greatest horror, that the whole of the skin of the epigastric region was colored black, and raised into a great number of painful blisters. Upon his showing it to me, I thought that it was caused by the Sterculia prickles having irritated the skin, and rendered it more sensitive to the sharp properties of the exudation of the seed-vessels of Grevillea. Brown, however, merely touched the skin of his arm with the matter, when blisters immediately rose; showing clearly its properties. The discoloration of the skin was like the effects of nitrate of silver."

Here is one of Doctor Leichhardt's notices of the fates of his brute fellow-travellers.

"We travelled down to the water, about four miles north-east along the creek, which was covered with cypress pine thickets, and tea-tree scrub. Mr. Calvert and Charley returned on our tracks to endeavor to recover our poor dog. They found him almost dead—stretched out in the deep cattle track, which he seemed not to have quitted, even to find a shady place. They brought him to the camp; and I put his whole body, with the exception of his head, under water, and bled him; he lived six hours longer, when he began to bark, as if raving, and to move his legs slightly, as dogs do when dreaming. It seemed that he died of inflammation of the brain. If we become naturally fond of animals which share with us the comforts of life, and become the cheerful companions of our leisure hours, our attachment becomes still greater when they not only share in our sufferings, but aid greatly to alleviate them. The little world of animated beings, with which we moved on, was constantly before our eyes; and each individual the constant object of our attention. We became so familiar with every one of them, that the slightest change in their walk, or in their looks, was readily observed, and the state of their health anxiously interpreted. Every bullock, every

Digitized by Google

horse, had its peculiar character, its well-defined individuality, which formed the frequent topic of our conversation, in which we all most willingly joined, because every one was equally interested. My readers will, therefore, easily understand my deep distress when I saw myself, on recent occasions, compelled to kill two of our favorite bullocks long before their time; and when our poor dog died, which we all had fondly hoped to bring to the end of our journey. Brown had, either by accident, or influenced by an unconscious feeling of melancholy, fallen into the habit of almost constantly whistling and humming the soldier's death march, which had such a singularly depressing effect on my feelings, that I was frequently constrained to request him to change his tune."

Another extract will show that the doctor's zeal for his four-footed friends, selfish as in some sort it may have been, was not confined to words.

"About three miles above the junction of the Wilton with the Roper, we again encamped on the steep banks of the latter, at a spot which I thought would allow our horses and cattle to approach in safety. One unfortunate animal, however, slipped into the water, and every effort to get him out was made in vain. Its constant attempts to scramble up the boggy banks only tired it, and as night advanced, we had to wait until the tide rose again. I watched by him the whole night, and at high water we succeeded in getting him out of the water; but he began to plunge again, and unfortunately broke the tether which had kept his fore-quarters up, and fell back into the river. At last I found a tolerable landing place about fifty yards higher up; but, as I was swimming with him up to it, and trying to lead him clear of the stumps of trees, he became entangled in the tether rope by which I guided him, rolled over, and was immediately drowned. This reduced our number of horses to nine. When the other horses were brought to the camp, another rushed into the water, but I swam with him at once to the good landing place, and we succeeded in saving him."

Our last quotation must be a memorial of the last of the bullocks, and of his instincts of regret for the loss of his companions.

"Poor Rehmond, the last of our bullocks, came frequently to the spot where his late companion had been killed; but finding that he was gone, he returned to his abundant feed, and when I loaded him to continue our journey down the river he was full and sleek. It was interesting to observe how the bullocks on all previous occasions almost invariably took cognizance of the place where one of their number had been killed. They would visit it either during the night or the next day, walk round the spot, lift their tails, snuff the air with an occasional shake of their horns, and sometimes set off in a gallop."

Doctor Leichhardt has not been deterred by his sufferings on this expedition from engaging in another adventure, fraught with like utility and danger. He is now engaged in an overland journey to Swan river, (which is expected to occupy him two years and a half,) with the object of exploring the interior of Australia, of discovering the extent of Sturt's desert and the character of the western and northwestern coast, and of observing the gradual change in vegetation and animal life from one side of the continent to the other.

ELECTRIC TELEGRAPHS.

The old adage, "it never rains but it pours," is as fully verified in the history of scientific discoveries as by the events of life. When science rains upon us any new and long desiderated gift, it comes not in scanty crops, but torrents of inventions embodying the same principle in different shapes are poured down, so that we are in a perfect *embarras des richesses*, and know not which of the many to choose. It has been thus with most of the great discoveries and inventions in science; for no sooner has any given problem been solved that the successful discoverer finds himself surrounded by claimants for a share of the honor. It has been so from the invention of printing by types down to the more astonishing invention of printing by lightning; so it will probably continue to the end of time; and we doubt not that when the two problems of squaring the circle and setting the Thames on fire shall have been solved, the "rain" will descend on many at the same time, and multitudinous means will be at once discovered for doing what philosophers of all ages have hitherto striven for without success.

The numerous inventions of electric telegraphs are apt illustrations of the abundance that attends the new appliance of scientific principles to accommodate the wants of man. The various contrivances by which electricity may be applied to transmit signals with the speed of lightning, have indeed made the choice of the particular means a question of no small difficulty. There are four companies now competing with one another to send messages through the earth; and not only has each of these companies its peculiar mode of availing itself of the terrestrial currents of electricity for that purpose, but there are at least thirty other distinct plans for accomplishing the same object. In some of these appliances the communications are made by the deflections of gold leaf, in others by the sounding of bells of different tones; in some, again, by causing magnetic needles to point to letters of the alphabet. There are also various printing telegraphs, which will print a message delivered at one station almost instantaneously at the distant station with which the instrument is *en rapport*. Among the most recent of the printing telegraphs is the one invented by Dr. Howse, of the United States; the operating parts of which are arranged like the keys of a pianoforte, so that by pressing down a key marked with a letter of the alphabet a like letter is printed on paper at the other terminus of the connecting wire. Telegraphs of this construction are in extensive use in America; and it is intended to enable friends in distant towns to hold direct and immediate communication with each other.

The telegraph company which has succeeded in extending the electric telegraph most widely in England, transmit their signals at present by magnetic needles; but we this week inspected an ingenious plan recently invented by Mr. Bain, and which we understand it is the company's intention to adopt, whereby the communications are actually written. The galvanic pen does not luxuriate in flourishes; it neither crosses its *t*s nor dots its *i*s; but on it goes in one undeviating straight line; and yet there is such significance in its touch, that the initiated can decipher its mark more readily than he could the handwriting of most literary scribes. The line, though straight, is not unbroken; and it is by the breaks that the letters and words are made known. To produce this effect, a strip of paper is

Digitized by Google

perforated, and then placed on a clock-work mechanism which draws it along, pressed tight against a metallic drum. The point of one of the wires which forms the electric circuit presses on the paper as it crosses the drum; and at each aperture it comes in contact with the metal. The paper being a non-conductor of electricity, the circuit is interrupted whilst it interposes, and is only completed at the perforated apertures. A similar piece of mechanism at the distant station draws a strip of moist blue paper across the drum, and a point of the connecting wire presses also upon that. The property which electricity possesses of discharging and altering the colors of substances is applied in discharging the color of the paper over which the point passes on those parts where the electric circuit is not interrupted, and on the other parts a dark-colored line is marked; consequently the breaks in the line correspond with the perforations made in the strip of paper whereon the signals are stamped. By varying the positions and by increasing the number of the perforated spaces, the letters and symbols are indicated. For example, a single small space marks one letter, a wider space another, two small spaces together a third; and by combining the wide and narrow spaces every letter is expressed. The operation of perforating the paper requires practice to do it quickly; but when the paper is prepared it is run through the apparatus very rapidly. Much improvement might, and no doubt will be made in this mode of making communications; for the principle seems capable of being applied even to transmitting the writing of one correspondent to another; and merchants in London, after quitting 'Change, might thus send their instructions in full to their correspondents at Liverpool, which might be filed as authentic documents for reference.

We have observed that the variety of forms in which useful inventions of the same kind present themselves embarrass the choice. Perhaps it is this difficulty which paralyzes the government; for, strange to say, though the wires of the electric telegraph are laid down from London to Gosport, the government officials continue to work the old semaphore on the same line, in preference to the infinitely more speedy and certain electric telegraph. Instead of being the first to encourage useful inventions, the government is always the last to adopt them, even when their utility has been long proved: therefore, perhaps, it was not to be expected that so great an innovation as the employment of lightning-messengers should be yet permitted. The speedy operations of the electric telegraph may well terrify the tardy-moving officials, who cannot find precedents for its use in the days of Pitt and Fox. There seems no tangibility about a thing that, in some incomprehensible manner, glides instantaneously through an iron wire and returns without any hinderance through the solid earth. Red tape can get no hold on lightning. The arms of the semaphore, on the contrary, are of wood, and may be held steady; they work slowly, and (weather and daylight permitting) surely;—the red tape sticks to them.—*Spectator, Sept.* 4.

From the Spectator.

TISCHENDORFF'S TRAVELS IN THE EAST.

Constantine Tischendorff is a German savan, who seeks to establish a purer text of the New Testament. He considers that the text from the later manuscripts, used by Erasmus and Stephens, (because they wanted access to earlier,) have too much fettered the later editors; and that the only proper mode of getting at a pure reading is by a verbatim print of the manuscripts from the fourth to the tenth century that lie scattered through the libraries of Europe, comparing them with the quotations of the earlier fathers as well as with the earlier Latin versions. In this way, M. Tischendorff considers that the world would have the means of arriving at the true text: and, supposing the munificent design executed, such would be the case; the more ancient manuscripts being, *cæteris paribus*, clearly of the greatest authority. The importance of this labor and expense is not so evident. M. Tischendorff speaks of the different tone or coloring of the text in the earlier compared with the later versions; but the largest changes that he notices are the text of the three heavenly witnesses —a matter that has been disputed to tiresomeness, and the omission of the story of the woman taken in adultery—also a subject of doubt from the days of St. Augustin if not earlier. And where theology or anything like theology is at issue, such disputes would arise if we had a manuscript of the age of the apostles. Those who deemed a passage to be in their favor would support, and those whom i bore hard upon would repudiate, its authenticity.

However, M. Tischendorff is enthusiastic in his object. In pursuit of it he had explored the repositories of England, France, and Italy, when, in 1844, an opportunity offered of going to the East, and he embraced it with ardor. Leaving Leghorn in March, he reached Alexandria; and after examining such collections of manuscripts in the Egyptian monasteries as he could get access to, he started for Mount Sinai. Thence he returned to Egypt; then went to Judea, to survey Jerusalem and its neighborhood; and visited the monasteries of Mount Carmel and Patmos, Smyrna and Constantinople, with a variety of less important places, on his way home.

The scholarly results of his tour M. Tischendorff reserves for classical publications and his editorial labors. His descriptions chiefly refer to the state in which he found the libraries and their contents; the learning of the monks, and the value they attached to their treasures, or rather the sort of knowledge they had of them; some discussions on manuscripts which were *not* there, and any little incidents that occurred in connection with the pursuit. In fact, the main object of the tour merely falls into place as forming a part of the personal adventures of the writer: nay, it is sometimes postponed to antiquarian discussions on localities, as at Mount Sinai and Jerusalem. This is to be regretted: because the subject was a novelty in books of travels, and our author was strongest on his own ground. Writing to Germans, who do not travel quite so much as the motion-loving Britons, and probably do not so often tell their adventures to the world, he makes too much of matters with which the English public are already familiar, and which, be it said, they have had presented by artists with a more graphic style and a better taste. M. Tischendorff has something of the sedateness of the German and the rust of the scholar and recluse, which he aims at combining with the vivacious manner and sentiment of the Frenchman. Not content with describing things and routes which are familiar to English readers, he must indulge in rhapsodies, sometimes upon the scene before him, sometimes about personal reminiscences, the last not always intelligible, but intended to be tender. There is, too, a dash of bad taste about some of his

Digitized by Google

stories, and for a learned man he seems occasionally rather ignorant of oriental usages.

Upon other matters of learning our author is more at home. He is familiar with the early travellers in the East, and by that means is sometimes able to give to the present the interest of contrast by comparing it with the past. The foreign eye with which he regards things is another source of occasional novelty, or at least of curiosity, especially when German and British ideas clash. The savan's personal qualifications for a traveller are not of the highest kind: in the desert or in Syria he takes every one for a bandit; "the sea, the open sea," turns him very queasy; and the common accidents of navigation become memorabilia—

—"the waves oozing through the port-hole made
His berth a little damp and him afraid."

But in spite of these amusing traits, the book is slow, and somewhat dry. The descriptions of nature are short, without producing the effect which follows a brief exhibition of salient points; and the author falls into the plan of the common tourist who has crammed for his journey and exhibits at every spot the commonplaces of its history. In the case of Tischendorff the knowledge is probably genuine; and the scenes of Palestine are memorable both in sacred and profane story. The mode, however, is so common that it has become vulgarized.

The best parts of the book are those which relate to the search for manuscripts. The interest may often be only bibliographical, and the result is sometimes nothing; but there are reality in the subjects, understanding in the author, and often some incident in the pursuit.

THE GERMANIC GRECIAN AND THE GREEK PATRIARCH.

"I was informed by many persons of a treasury of manuscripts that had reached Cairo from Antioch about twenty years ago. It consisted of an entire library conveyed to Cairo as security, and was in the immediate possession of the patriarch. No person conversant with such matters had seen these manuscripts, and therefore the stories about them were exaggerated into romance. The incredible addition was soon made that this library was walled-up. The Austrian consul-general endeavored in the kindest manner to obtain for me an elucidation of the mystery. To effect this, he thought the best plan would be to make a direct application to the patriarch, with whom he was personally acquainted. We therefore rode one Sunday in company with a native Greek to Old Cairo, where the patriarch resides when absent from Alexandria.

"After the preliminaries of reception by an aged female domestic, who hospitably entertained us with coffee and pipes, the patriarch himself appeared in his home costume, which was sufficiently distinguished to indicate his high rank. Pope Gregory XIV. was more simply clad when he admitted me to a private audience. The patriarch, who is now in his ninety-first year, has great dignity in his appearance; his long white beard, which falls down upon his breast, becomes him very well; his stature is above the ordinary height. We exchanged a few friendly words; in the course of which I told him, that the chief ecclesiastic of my own country was, like him, a wonder also in his reverend appearance; for he equally resisted the attacks of extreme old age by the indestructible bearing of a cheerful temperament.

"We rapidly approached the object of our visit. The consul-general told him that I was a profound Hellenist, although I had never been in Greece. The patriarch then called for a printed Greek book in folio, I think it was a volume of Chrysostomus, and he requested me to read in it. I presumed he wished to hear how we un-Grecians pronounce Greek, and I read him a couple of lines according to our Leipsic pronunciation. To my great mortification, I did not succeed in this examination; I may fairly record it as a failure. The patriarch upon this experiment was of opinion that I had scarcely yet learnt the alphabet. We intermingled a little mirth in our hasty explanations; but the mishap was not to be repaired. I conversed also in Greek with him: but the least mistake in the Romaic pronunciation, or even a false accent—I had latterly become accustomed to pronounce the Greek according to its quantity—he urged harshly in confirmation of his opinion. It would seem that the patriarch had the delicate ear of a Parisian lady. It was now, indeed, difficult to make him comprehend that my studies of manuscripts could be of any consequence. My *Codex Ephræmi Syri Rescriptus* sounded like a pleasant fable. Upon hearing of it, he retorted with how could I read manuscript, when I could not even read a printed text?

"The consul began to lose his temper, and told him he might wholly rely upon him, and that our great object was only to obtain the privilege of the sight of his concealed library. Upon wishing to know why we so eagerly sought to see it, we informed him that my object was to inspect the ancient codices of the original text of the New Testament, in order to derive a text from their combination which might approach as closely as possible to what was written by the apostles. But he added, we have all that we require: we have the evangelists, we have the apostles, what can we desire more? The idea of criticism seems to have struck his ears for the first time in his ninety-first year. He became thoughtful and distrustful upon our explanations. At last he availed himself of the circumstance that the library was walled-up, and could be entered only at a great outlay; whereupon we mentioned that we were willing to bear all the charges. Nevertheless he seemed only apparently to concur, and we very speedily withdrew. * *

"But to revert to the walled-up library of the patriarch: we induced several Greeks of distinction to attach themselves to our interests; nevertheless we were still unsuccessful, for as an opponent we had to combat with a narrow-minded dogmatism, which saw in my critical labors upon the sacred text some undefined danger threaten the *status quo* of the faith of the Greek church.

"At last I found a powerful auxiliary in a German physician, a man whose name had been already very long dear to me. He made his professional intercourse, as family physician to the procurator of the patriarch, available for my object, and upon him some influence was gained by the representation that upon my return to Europe I should make an unfavorable report respecting this unapproachable walled-up patriarchal library. The procurator promised that he would have this library opened for me; but I was not present personally when this took place; and the number of manuscripts that I had the opportunity of examining from it was very small, whereas the remaining contents of the library consisted ostensibly of many thousand printed books. I strongly suspected that I was not ingenuously dealt with: yet those few manuscripts have yielded most welcome results."

LIBRARY OF THE SAMARITANS AT NAPLUS.

"I was now anxious to visit the Samaritan synagogue, being exceedingly curious to inspect the celebrated manuscripts which it contains. There was no difficulty in obtaining access. A rabbin, but not the chief, who had remained engaged with the pasha, led us to a small oratory which was covered with straw mats, and not to be trodden except bare-footed. Upon a book-shelf I observed about twenty manuscripts, chiefly upon parchment. To several I unhesitatingly accord an age of many hundred years. One exhibited by many peculiarities—for instance, that of being written in three columns—an antiquity of more than a thousand years. But I was chiefly occupied with the alleged exceedingly ancient manuscript which is said to contain a statement to the effect that it was written thirteen years after the death of Moses, by Abischua, the son of Phineas, who was grandson of Aaron. The rabbin brought us a tin case, within which lay the manuscript, like a large, synagogue roll of parchment, enveloped in a costly covering of crimson silk with embroidered golden letters. It bears undeniable traces of antiquity. I examined the parchment, the color of the ink, the system of the lines, the punctuation, the divisions, none of which have initials, and the characters, as well as they could be examined without a knowledge of the Samaritan. All combine to convey the idea of a manuscript of the sixth century. Even under this supposition it necessarily holds a very distinguished rank among all the ancient parchment codices of both the East and the West. With respect to the alleged statement, it may not, if in fact it exist, be considered otherwise than as a transcript carelessly copied from former documents, and incorporated in it as a note founded on a remote tradition. Perhaps this Abischua took some share in writing the original pentateuch. In that case, the statement in question would receive some elucidation from the practice in the Greek manuscripts of the Gospel, wherein is frequently noted that it was written by Matthew, by John, &c., as well as the year in which it was first promulgated. These notices have misled uninformed persons. For instance, I found in a celebrated library, inscribed in a manuscript of the gospel, a remark from the pen of the librarian himself, to the effect that the manuscript was written by the rhetorician Hebraides, in the tenth century after Christ's ascension, and referred to an ancient commentary. But what stood in this commentary? Nothing more than that the Gospel of St. Matthew was published ten years after Christ's ascension, and that in the Hebrew tongue.

"But I return to the Samaritans at Naplus. I do not believe that it would be impossible to obtain their manuscripts; and I feel convinced that thereby a precious treasure would be gained for even the largest library in Europe."

The following is a rather favorable specimen of the manner in which M. Tischendorff combines Scriptural reminiscences and tradition; generally treating the latter with a singular mixture of critical scepticism and sentimental belief.

"Bir enjoys distinction in Christian tradition. It formed the first day's journey of Joseph and Mary (St. Luke, ii. 43.) upon their return from the passover; and it was here they sought Jesus, when twelve years old, among their friends, and missed him. There is nothing inconsistent in this tradition; as from ancient custom, even at the present day, the Easter pilgrims extend their first day's journey homeward only as far as Bir; the pilgrims from Galilee may also long since have practised the same custom. Our road to Nazareth was certainly the same which our Lord and his disciples repeatedly took when he went to the festival. These reminiscences were the dearest company. In our frequent descent from the precipitous mountain declivities of this district, I clearly comprehended how correctly the sacred text, speaking of the paschal journey of Jesus, usually says (John vii. 10) 'went he also *up* unto the feast.'"

M. Tischendorff's parting at Patmos from the wife and sister-in-law of his host, furnishes an example of the manner in which he sometimes mingles sentimental and Scriptural matters with creature comforts.

"But I must relate my farewell from the house of my host. As my visit happened during the Greek fasts, our mid-day repast consisted consequently of appropriate dishes; but before I again stepped on board ship a roasted chicken was sent after me by the careful hostess. During the afternoon, I had exchanged many friendly words with both the black-eyed sisters, and had certainly entertained more kind thoughts than I could express in words. Upon taking leave, the lady herself hastened suddenly to a flowering shrub close to the house, broke two blossoms off, and brought them to me. The blossoms were very beautiful, but the eyes of the giver shone still more beautifully. Her sister ran to an odoriferous plant, and brought me a nosegay from it. It was therefore with tender emotion that I parted from the two sweet daughters of the island of St. John. I thought of the favorite exhortation of St. John with which he was accustomed to address the community, 'Beloved, let us love one another.' (1 John, iv. 7.) Who would not suppose that these ladies of Patmos bore the farewell of their instructor faithfully in their hearts!"

From the Spectator.

EVANS' SUGAR-PLANTER'S MANUAL.

DESTRUCTION at certain epochs, to be followed by replacement in order to advance, seems a law of the natural, the national, and the social world. The history of the earth as unfolded by geology exhibits this principle in every stage of progress. History and tradition, or tradition's echoes, point to the invasion of an inferior by a superior race, and the national destruction or absorption of the former. Greece and Italy, under unknown or disputed colonists—Gaul, Spain, and Britain, under the Romans—are merely an illustration of the principle which is now at work among the aborigines of America and Australasia. It would be needless to point out how social changes operate upon manners, and whole classes become extinct as one grade advances upon another: where is now the feudal baron, or the courtier wit, or even "the fine old English gentleman!" In looking at industrial occupations, the destruction of copyists to be replaced by printers will at once recur to every mind. In the memory of us all, the "long stage" with its "characters" has nearly vanished from the land; and other if less rapid and staring changes have already taken place in various branches of industry, or are now in progress. It is possible that the entire English and Irish agriculturists must be replaced; probable that the West Indian planters must share the same fate. Whether this is to be

Digitized by Google

accomplished by total ruin, or by absorption, or by a social change brought about by giving new ideas to the existing race, would be difficult to decide upon after the experiment, much more à priori.

To contribute something to the last alternative—to change measures rather than men—is the object of Dr. W. J. Evans in the *Sugar-Planter's Manual*. Dr. Evans fully admits the difficulties in which the planter is involved by partial free trade, which has destroyed his protection without giving *him* freedom of industry, by the want of labor under which he suffers, by the destruction of capital and the loss of profits which crude and popularity-hunting legislation entailed upon him, and the depression and lack of enterprise that such a state of pressure produces in the mind. Still he thinks that something may be done by the introduction of agricultural machinery or implements, except in British Guiana, which, from "the nature of the country, is at present wholly dependent on manual labor." In his opinion, however, the principal means of safety are, first, greater attention to the quality of the cane and the precise time of cutting it, so as to secure a richer quality and larger quantity of "juice;" second, improvements in the manufacture, from the first "pressure" of the canes till the shipment of the sugar and molasses. This last section is indeed *the* subject of the book; for the quality and treatment of the cane are rather generally suggested than specifically directed.

The Sugar-Planter's Manual consists of two leading divisions; the first relating to the physiology and chemistry of the sugar-cane, the second to the various processes of the sugar manufacture. In the first part, Dr. Evans explains the structure and component parts of the cane in various stages of its growth; and, by an analysis of its elements, shows how readily *sugar*, through minute causes, may become *glucose*, (that is, the saccharine matter of fruits which never crystallizes,) or undergo other changes that injure the quality or lessen the quantity of the produce, or cause increased expense in extracting it. Hence he adduces the rules he lays down as to judgment in the choice of the plant and the time of cutting, the rapidity with which it should be conveyed to the mill for crushing lest decomposition should ensue, and the advantage of draining where the soil requires it and the means of the proprietor permit it. In a literary point of view, this part is perhaps too elaborated, by evolving too minutely the principles of botanical chemistry, and an arrangement which has the effect of repetition; but it is well adapted for acquiring a thorough knowledge of the physiology and properties of the sugar-cane.

The practical application of botanical and manufacturing chemistry to the production of sugar is the subject of the second division; and it forms, we think, the most useful part of Dr. Evans' work. The doctor himself appears to be practically acquainted with the processes as conducted in several sugar-growing colonies; he has carefully studied the various contributions of foreign chemists to the science, or the business of sugar-manufacture, especially from the beet-root; and he has gleaned some floating knowledge upon the subject from those colonies in which he has not been. He possesses a great quality for a practical improver—a sensible mind. He draws a distinction between *chemical* and *commercial* production—between that which is best and that which under the circumstances can best be done. Many processes, available to the refiner amidst the skilled labor and dense manufacturing population of Europe, are beyond the power of the planter, or could not in his circumstances be profitably applied. As the subject is of great importance to the West Indian proprietor and the public at large, it may not be useless to give a general idea of the sugar-manufacture, so far as to make Dr. Evans' views intelligible.

Healthy cane in a state of maturity is shown by chemical experiment to consist of 90 parts of fluid and 10 of solid matters; the fluid constituting what is called cane-juice, the solid consisting of woody fibre. The quantity of sugar in the juice has been variously estimated; indeed, independently of accidental circumstances, it must differ with the quality of the cane. Dr. Evans takes the sugar at 18 per cent. of the fluid, but considers that it not unfrequently exceeds 22 per cent. To extract it *all* is possible to the chemist in his laboratory, but impossible for the planter; or if it could be done, the expenses would absorb the profit. Our author, however, considers that a much larger amount may be obtained than is now done; and the chief end of *The Sugar-Planter's Manual* is to point out the way.

When the cane is cut, the first operation is to carry it to the mill, where it is *crushed* by means of rollers in order to extract the juice. There are no regular statistics of the average amount of cane-juice practically extracted; it must vary with the efficiency of the mills and the motive power; but instead of 90 parts, the highest estimated average is only between 50 and 60 per cent. M. Duprez, who was sent by the French government to Gaudaloupe to make experiments, could only extract from the mills in that island 68.5 per cent. at the highest, and his average was only 56 per cent. Other calculators give a lower amount for other places. Dr. Evans says—

"The lowest amount that my observation, in the West Indies, permits me to give, is 47 per cent., and the highest 61 per cent.: but, as I have just mentioned, it has been too limited to be offered as an authority. In the island of Madeira, I obtained at two different times by the same mill, and from canes of similar character and quality, 47.5 and 70.2 per cent. of juice. The mill was a small one, made at Aberdeen about two years previously, on the ordinary principle, with horizontal rollers; and the motive power was cattle. During the experiment which furnished the last and largest result, the rollers were braced more than usually tight, and the number of canes introduced at a time were five or six, being the utmost that the strength of the cattle would admit of. The canes were squeezed once only; indeed, the megass was too much lacerated to admit of its being passed between the rollers a second time with advantage."

Dr. Evans therefore concludes that a much larger quantity of cane-juice could be produced than is now obtained, by increasing the motive power of the mills, and by a better system of managing them, as well as by treating the canes when in a certain condition.

"By following the foregoing rules, the quantity of cane-juice may be increased at least 20 per cent.; that is, a mill which ordinarily gives 50 lbs. of juice for every 100 lbs. of canes which are crushed by it, may by a little attention be made to increase the quantity to 60 lbs. at least, and the one which now produces 60 lbs. may be made to yield 70 lbs. from a like quantity.

"This amelioration may be obtained without any additional outlay of money; a little watchfulness on the part of the planter, to see that his order are car-

Digitized by Google

ried out, being all that is required for its accomplishment.

"There are, unfortunately, many mills, which, either from age, the want of solidity originally, or from a construction altogether imperfect, produce even an inferior result to those given above. A comparative amelioration will follow the application of these rules in all cases; but the only real amelioration which can be effected in the cases alluded to, is the removal of the old mill and the erection of a new one. The present, it is true, are not the times when sugar properties in the West Indies permit an indiscriminate outlay of capital for the purchase of new machinery. But it must be remembered, that the difference between 45 or 50 lbs. and 70 lbs. of juice, extracted from equal quantities of canes, indicates a corresponding difference in the amount of the crop; while the annual expense attending the cultivation of the estate would be in both cases the same."

There lurks, however, in the planter's mind, a reason for not extracting all the juice which he can, and very probably he may urge it in formal argument: the refuse of the canes, or *megass* as it is called, is his fuel, by which the succeeding crop of sugar is prepared. If, therefore, he increases his quantity of juice, he lessens his stock of fuel. To this Dr. Evans replies, that natural changes deprive him of much of the combustive matter in the megass; and that were it not so, it would be cheaper to make more sugar and buy fuel.

"It is found in practice impossible to dry the megass in such a manner as to preserve within it the quantity of combustible materials given above. For whether it be stacked at once, or be previously exposed for some hours to the rays of the sun, fermentation of the juice retained in it commences, and the sugar is converted into incombustible bodies, as gum, lactic acid, &c., or into others which are rapidly evolved, as carbonic acid and alcohol; so that when the time arrives when its use as fuel is required, little more remains available for the purpose than the woody fibre; that is to say, that instead of obtaining 17½ of fuel from canes which have given 50 parts in 100 of juice, 10 parts only are actually serviceable; and the amount of evaporation which could be effected by this quantity would be equal to 50 lbs. of water only.

"The planter would appear to be in a great measure aware of this fact, by offering as a reason for the imperfect pressure to which he submits the canes, the fear of having a larger evaporation to effect than his fuel is capable of accomplishing. When he states, however, that by imperfect pressure he is thereby obtaining a proportionately increased supply of fuel for the following year, he is manifestly in error; for the only constituent of the cane on which he can rely for that purpose is the woody fibre, which will be equally abundant to whatever extent the pressure may have been carried.

"To exemplify the loss which a sugar plantation annually sustains from an adherence to this most shamefully extravagant system, I will suppose, that by increased pressure the amount of cane-juice obtained is augmented merely from 50 lbs. to 60 lbs. in every 100 lbs. of canes. It is clear that the amount of sugar, molasses, and rum, must be increased in the same proportion; and, therefore, an estate which otherwise would give 200 tons as its annual product of sugar, would from this cause alone afford 240 tons.

"Let us also suppose, that there being no other available fuel at hand in place of the megass, coals have to be imported from England at an expense of 1*l.* per ton, and that 240 tons would be required to evaporate the requisite quantity of cane-juice to make the same number of tons of sugar; the price of the coals would represent the expense attending the augmentation of the produce. The sugar would be worth at least 20*l.* per ton; consequently the clear gain would be 800*l.* less 240*l.*, or 560*l.*

"The profit, however, would not be confined to the mere increase of 40 tons of sugar; the megass, after due fermentation, would produce an amount of farm and yard manure, which, when thrown upon the land, would augment the quality of canes for the ensuing crop at least 20 per cent., and in the greater number of colonies very much more. In Barbadoes, for instance, there are many estates that after a good supply of manure readily yield, in favorable seasons, three tons of sugar per acre, which without that assistance would not yield one."

The cane-juice, whatever may be the percentage extracted, holds in solution other substances besides sugar. These are not large in point of quantity, but important from their effects. Some of these particles are saline, which art cannot remove: they must be *prevented*, by acting upon the soil in which the cane grows. The other substances are threefold—insoluble impurities, such as earthy matter, pieces of cane, &c.; the proteine compounds, albumen, caseine; and soluble coloring matter. These are got rid of partly by mechanical means, and partly by the application of heat and the use of clarifying substances. The first process, which is called *clarifying*, is followed by *evaporation;* whose object is, by means of heat, to drive off some of the watery particles, till the cane-juice is concentrated into the consistency of a *syrup* of a certain degree of density. After this syrup has undergone treatments according to the evils to be remedied, it is fitted for *crystallization;* a process which it performs of itself while in the act of cooling, though it requires some mechanical assistance. The crystals form the common brown sugar of commerce; the viscid part which drains away is the molasses; and then the sugar-manufacture under the present system terminates.

An account is given in detail of all these processes; and Dr. Evans enters at length into various modes of improving them, either with the existing means or by new methods. He also discusses the different discoveries that have lately been made on the continent or in this country in relation to the sugar manufacture, and considers how far they may be applicable to our colonies. These points will all have much interest for the sugar-planter, even when he may be already acquainted with some of them; but we have said enough to indicate the scope and character of the work. And the latter suggestions of Dr. Evans are rather distinguished for cumulative effect than for the large promise which he holds forth by improved modes of crushing the canes. The recommendation to reboil the molasses is perpaps of the most striking character.

"By the mode at present pursued of potting in the hogshead, the drainage as it escapes passes directly into the molasses cistern, a cavity situated immediately beneath the beams of the curing-house This cistern is consequently exposed and open. It is lined with cement, and is seldom in a perfect state of repair.

"Here the molasses remain until they are shipped, or until they are required for distillation. The result is, as might be expected, rats, cockroaches,

Digitized by Google

and other vermin, creep in and assist by their decomposition the rapidity and degree of the fermentation which under any circumstances is sooner or later certain to arise.

"In the palmy days of West India prosperity, this lax and improper system may in some degree have been excusable, owing to the highly remunerative prices obtained for all the produce; at present it can only be considered as one of extravagance, and therefore of loss.

"In the first place, a quantity of molasses is always lost, either in consequence of the leakage of the cistern, or from its absorption by the cement. 2. Owing to the evaporation constantly going on, a quantity of a soft, whitish, and amorphous sugar is precipitated to the bottom of the cistern. 3. The vinous and acetous fermentation set in; and a part of the saccharine matter is converted into carbonic acid, alcohol, and ascetic acid or vinegar, while another part is converted into uncrystallizable glucose. Thus, from a fluid possessing a bland, sweet, and sugary taste, the molasses are often changed into one having an offensive smell and a foreign and disagreeable taste. During the voyage these changes continue, and often increase in intensity, from the high temperature existing in the hold of the ship. *Nevertheless, in spite of all the injuries which they have received, the molasses, on their arrival in this country, find a market, and by the skill of the purchaser are converted into sugar of a quality superior to that from which they were originally obtained.*

"Can there be a greater proof of the ruinous management of a West India sugar estate than this fact? (In Jamaica, owing to the high price obtained for the rum, the molasses are wholly converted into that spirit, and the loss is considerably diminished in consequence; but in those colonies from which molasses are exported, the decomposition which they undergo is a serious item in the depreciation of revenue of every estate.)"

Since Dr. Evans fully admits the evils under which the West Indian labors from a depressing legislation, his last remark bears rather hard upon the planter. It is but a few years since refined or indeed improved processes were entirely forbidden to him, in order to protect the sugar-refiner at home. A duty of 8*l.* 8*s.* the hundred-weight was imposed upon what is popularly called "lump" sugar; duties of varying amount, but higher than the article could fetch in the market, were placed upon any intermediate produce; and, in short, brown sugar (muscovado) was enforced upon the planter by act of parliament. From the time when the whig ministry began their career of West Indian impolicy by the Apprentice Bill, to the moment of their deathbed corn, timber, and sugar budget, these evils remained unmitigated; Sir Robert Peel left them untouched in his great reform of the tariff; and though some modification of the restrictions which fetter the sugar-grower have latterly taken place, very many still remain to encumber the free action of the planter.

From the Literary World.

THE PROCESS OF SCULPTURE.

THE GREEK SLAVE.—This statue having, on its first presentation to the American public, excited unbounded admiration and enthusiasm, a brief account of it will be interesting to its author's fellow-countrymen.

The Greek Slave is the second ideal work of the American sculptor, Hiram Powers; the Eve being his first. The clay model was begun and finished in the summer and autumn of 1842. American sculptors having been hitherto obliged to work abroad, but few of our citizens have had opportunities of witnessing the labors of the studio; acceptable, therefore, will be some explanation of the several processes through which a work in sculpture must pass ere the artist can present his conception smoothly embodied in marble The visitors to the "Slave" will thus be made acquainted with the bodily birth and growth of the wonderful creation that stands before them in dazzling beauty.

The conception being matured in the artist's mind, the first step in the process of giving form to it is to erect, on a firm pedestal, a skeleton of iron, whose height, breadth, and limbs are determined by the size and shape of the proposed statue. In this case it would be about five feet high, with branches, first at the shoulders, running down forwards for the arms, then at the hips, to support the large mass of clay in the trunk, and thence divided in two for the legs. About this strong, simple frame is now roughly built, with wet clay, the predetermined image. Rapidly is this moulded into an approximation to the human form; and when the trunk, head, and limbs have been definitely shaped, then begins the close labor of the mind. The living models are summoned, and by their aid the surface is wrought to its last stage of finish. I say models, for to achieve adequately a high ideal, several are needed. Nature rarely centres in one individual all her gifts of corporeal beauty. For the Eve, Powers had more than a score of models. The modern Christian artist cannot be favored as was the painter Zeuxis of old, to whom a Grecian city, that had ordered from him a picture of Helen, sent a number of its choicest maidens, that out of their various graces and beauties he might, as it were, extract one matchless form. For the "Slave," the character Powers had established in Florence, for purity and uprightness, obtained for him one model (who was not a professional sitter) of such perfection of form as to furnish nearly all that he could derive from a model. With this breathing figure before him, and through his precise knowledge of the form and expression of every part of the human body, obtained from the study of nature, and his own deep artistic intuitions, the clay under his hand gradually grew into life, and assumed the elastic, vital look, which no mere anatomical knowledge or craft of hand can give, but which is imparted by the genial sympathy with nature's living forms in alliance with a warm sensibility to the beautiful—qualities which crown and render effectual the other less elevated endowments for art. Thus, by the most minute manual labor, directed by those high and refined mental gifts, the clay model of the "Slave" was wrought out; and there the artist's work ended: the creation was complete. The processes whereby it was now to be transferred to marble, though of a delicate, difficult kind, and requiring labor and time, are purely mechanical, and are performed, under the artist's direction, by uninspired hands.

In order that the soft clay image be transformed into a harder substance, without suffering the slightest change in its surface, a mould is applied to it in the same way and with the same material as when a cast is taken of the living face or head, by means of semi-liquid plaster of Paris. The clay figure is entirely covered with this substance, from one to two or more inches thick, provision being made for taking off the arms, and for splitting the trunk after

Digitized by Google

the plaster shall have hardened. The clay is then all taken out, the hollow mould is cleaned, and then refilled with semi-liquid plaster of Paris. When this, which now occupies entirely and minutely the place of the clay, has in its turn become hardened, the outside crust of plaster is broken from it, and then is laid bare an exact fac-simile of the original clay figure, in hard, smooth plaster of Paris, capable of bearing the usage of the studio, and of receiving the many marks that are to guide the marble-cutters, whose work now begins.

First comes the blocker-out, with his heavy mallet and coarse chisel, under whose rough blows the white block soon begins to grow into a rude likeness of humanity. Then, a finer workman, who loosens more of the folds that overlay the beaming image that the artist is bent on disclosing from the centre of the marble. And finally, the artist himself, or, as in this case, a refined worker, schooled under the eye of Powers, gives the finishing touches, reproducing with unsurpassed accuracy, in the transparent, pure marble, every swell and indentation and minutest curve, all the countless delicacies of detail, the which, combined with and forming grand sweeping lines, characterize the original as moulded in clay by the hand of Powers.

And now in the midst of us here is the marvellous work, drawing from our hearts a flood of vivifying, purifying emotion—a revelation made by its author to his countrymen of the power and majesty of Art. They who have looked in silent delight on the Venus of the Tribune in Florence, no longer enjoy a unique privilege. On our native shore, sprung from the warm bosom of native strength, a fresh emanation from the exhaustless soul of beauty, stands a work as resplendent with the impress of genius as the famed Grecian goddess, as sublimely simple, as vividly graceful, and more touching in its moral appeal. The stronger the genius, the simpler the elements wherewith it delights to work. How simple, how common are those by which such overpowering effect is wrought—a young maiden in a condition of painful constraint. But the two great sources of human interest, the human body, and, shining through it, the human soul, are here. The artist has had the creative vigor to reproduce, in its indescribable symmetry, its matchless grace, its infinite beauty, that chief marvel of the earth, the human body, making transparent through these attributes, deep inward power and emotion; and it is because he has had this inspired mastery, that, standing before his work, the beholder is not only spell-bound by beauty, but awed by a solemn, ineffable feeling, and mysteriously drawn closer into the chastening presence of God. J. H. CALVERT.

LARGE SUM FOR COPYRIGHT.—The late Dr. Chalmers has left a large quantity of unpublished manuscripts, among which is a Commentary on the Scriptures, as far as the Book of Jeremiah. Among the manuscripts fully written out, and in a fit state for publication, are also the series of lectures which he, as professor of divinity in the University of Edinburgh, addressed to the students, whose theological education was committed to his care. These lectures are understood to be singularly original and brilliant. There has likewise been found among the correspondence which Dr. Chalmers carried on with nearly all the distinguished men of the present century, a number of letters of a deeply interesting nature, sufficient to make, with a memoir of himself, four large octavo volumes. The whole of the Rev. gentleman's manuscripts have been bought by Mr. T. Constable, brother-in-law of Mr. Cowan, the new member for Edinburgh, and son of Mr. Constable, the friend of Sir Walter Scott, and publisher of all his works. Mr. Constable has given the enormous sum of 10,000*l.* for Dr. Chalmers' manuscripts—a sum, we believe, much greater than was ever before given for the posthumous works of an author. The largest amount ever given, under similar circumstances, was 4,500*l.*, which Mr. Murray gave to the sons of Mr. Wilberforce for his "Life and Correspondence."

COAST DEFENCES IN THE CHANNEL ISLANDS.—The government, in fortifying the English coast, have also directed their attention to the channel islands. A breakwater is being constructed at Alderney, and engineers are now inspecting Guernsey. In Jersey, a breakwater is in the course of construction, at St. Catherine's Bay, on the eastern coast of the island, extending, at about a distance of three miles from the shore, from the N. E. to S. W., a range of four miles. The sites and plans of these works have lately been examined by Admiral Sir Charles Ogle, the Marquis of Anglesea, the Earl of Auckland, Colonel Irvine, Mr. James Walker, civil engineer, and other eminent personages. These works are being constructed opposite the French coast, which is only about eighteen miles distant. The government have also purchased all the heights between St. Catherine's Bay and Mount Orgueil Castle, a distance of about four miles, and intend building important fortifications thereon, which are to be commenced forthwith.

From the National Era.

A DREAM OF SUMMER.

BLAND as the morning breath of June
The southwest breezes play;
And, through its haze, the winter noon
Seems warm as summer's day.
The snow-plumed Angel of the North
Has dropped his icy spear;
Again the mossy earth looks forth,
Again the streams gush clear.

The fox his hill-side cell forsakes,
The muskrat leaves his nook,
The bluebird in the meadow brakes
Is singing with the brook.
"Bear up, oh mother Nature!" cry
Bird, breeze, and streamlet free;
"Our winter voices prophesy
Of summer days to thee!"

So, in those winters of the soul,
By bitter blasts and drear
O'erswept from Memory's frozen pole,
Will sunny days appear.
Reviving Hope and Faith, they show
The soul its living powers,
And how beneath the winter's snow
Lie germs of summer flowers!

The Night is Mother of the Day,
The Winter of the Spring,
And ever upon old Decay
The greenest mosses cling.
Behind the cloud the star-light lurks,
Through showers the sunbeams fall;
For God, who loveth all His works,
Has left His Hope with all!

4th 1st month, 1847. J. G. W.

THE MAIDEN AUNT.—NO. IV.

CHAPTER I.

"BEAUTIFUL!—yes, there can be no doubt that she is very beautiful; her face is absolutely faultless, and her figure magnificent. But it gives me no pleasure to look at her;—her manifest self-consciousness destroys the charm at once. It is always so with perfect beauties;—you may be forced to *admire*, but you are not *fascinated*. They are like Pope's poetry;—all possible care seems to have been lavished on the form, but the soul has evaporated during the process."

A common-place observation enough, reader. Can you guess the sex of the speaker? According to all conventional rules—and it is by those that the world walks—it ought to be a lady. The prime article in the creed of that great complex, hollow-hearted rationalist, society, is a belief that women love delicately to detract from each other's merits. Not a man in the world, who has outlived the noble credulousness of his youth, (which, trust me, comes ever nearer to the truth than the shallow unbelief of after years—just as the man who walks blindfold towards a tree is more likely to reach it than he who goes in an opposite direction, with his eyes wide open,) but thinks that his safest way of recommending himself to any woman is to proclaim his indifference to the attractions of another. And what do the ladies all the while? They tolerate it, as an attempt to please, however mistaken, and they laugh inwardly to think how little the mystery of their hearts is comprehended by those who seek to win them.

Exactly thus felt Mrs. Dalton, while listening to the observation which we have just recorded;—perhaps a secret consciousness that she herself possessed, in the highest degree, the species of fascination alluded to, rendered her peculiarly alive to its meaning. The speaker was Sir Mark Wyvil, a middle-aged baronet, of unimpeachable fashion, laboriously attractive, and resolutely youthful. The subject of his criticism was Edith Kinnaird.

Her third season had just drawn to a close, having consisted, like the two which preceded it, of a series of uninterrupted triumphs, a perpetual incense of admiration. She was now staying at Selcombe Park, the noble owners of which had assembled a large circle of guests, to beguile the tediousness of a magnificent autumn in a beautiful country. Lord and Lady Selcombe were amiable, respectable, and moderately pleasant people; they had great wealth, of which they duly expended a reputable fraction in charities, public and private; the gentleman was a regular attendant in the house, a most affable president of agricultural meetings, a hearty tory, a steady church-goer, (on Sundays,) and a profound hater of "the Oxford theology,"—in short, the popular ideal of a country gentleman could scarce have found anywhere a better embodiment. The lady was *passée*, but elegant—of toilette studious and elaborate; she patronized district societies and charity bazaars; was frequently heard to lament that she lived in such a whirl of engagements that she had no leisure for any serious pursuit; kept a first-rate governess for her daughters; worked a pair of slippers annually for her husband; and was esteemed by all her acquaintance "a pattern wife and mother." The other members of the party at Selcombe Park shall speak for themselves as they are introduced to the reader. Yet we must bestow one word on Mrs. Dalton ere we proceed to record her answer to Sir Mark Wyvil's observation. She was, by some, considered *a little too blue to be feminine*—Heaven forbid that we should unravel all the meaning of that phrase, or develop all the consequences which it involves!—but even this worst sin in woman was tolerated, for the sake of the fascinations which accompanied it. She might perhaps have seen thirty summers, but her attraction depended not on feature or complexion, and was rather increased than impaired by time. Its elements consisted in the singular gracefulness of her figure, movements, and manners, the varying expression of her large dark eyes, the only really fine feature which she possessed, the ready, ringing laugh, musical as that of childhood, and that rarest, and perhaps most winning of all gifts—perfect melody of voice. For these she was forgiven if she presumed to discourse of literature at a dinner party, and to know a little more of art than most of the men who devoted themselves to her. Yet, even these would scarcely have preserved her from the danger of being secretly voted a bore, had she not added to them the charm of a vanity sufficiently under discipline to avoid offensiveness, sufficiently evident to save her friends from the painful necessity of compelled respect. She was accessible to delicate flattery, capable of refined coquetry, pleased with attention, and always ready to glide from literature to playfulness—from playfulness to sentiment, at least in the social sense of the term. She was therefore charming; and when we add that her voice was as bewitching in singing as in speaking, her talent for music so remarkable as to be recognized even in these days when education labors to bring all students up or down to the same level of undistinguishable but cultivated mediocrity, it will be at once allowed that she was irresistible. We have here sketched the external development of her character—heart, mind, and soul, (if she has them,) must be left for a more gradual discovery. Her husband was a member of parliament, still engaged with his duties, though it was the second week of August. They had been married several years, but had no children.

With a slightly sarcastic expression in her beautiful eyes, she rejoined—"A stronger proof of the omnipotence of Miss Kinnaird's claims could scarcely be found than that she has inspired Sir Mark Wyvil with a simile."

The sting of the words was neutralized by the smile with which they were spoken, and Sir Mark, drawing his chair very decidedly forwards, seemed to be preparing himself in a business-like manner for a playful encounter of wits, when he was checked by the entrance of Miss Kinnaird herself.

She came from the garden, laden with flowers. A scarf, hastily substituted for a bonnet, was twisted round her head, the ends falling on her shoulders; her delicate color flushed into crimson with the exertion of her late employment; her hands full of roses. Since we last saw her, her marvellous beauty has matured into a steadier brilliancy, her step has acquired something of stateliness, her manner something of composure, blended with a more even vivacity; the world admires her ten times as much as it used to do, for the last lingering tint of the glory of childhood has faded away—and childhood is a mystery and a wonder—and the world does not like mysteries, and is far too well educated to wonder at anything.

Two gentlemen advanced from opposite sides of the room—the one from a book, the other from a lounge—to relieve her of her fragrant burden. Sir Mark Wyvil lifted his cold critical eyes to her face,

Digitized by Google

and then turned to Mrs. Dalton with an expressive smirk (for such a man cannot *smile*—there is heart in a smile.) In every gesture and movement of poor Edith—in the manner in which she resigned her flowers to her two assiduous squires, in the tone with which she declared herself tired, in the careless grace with which she threw herself upon the nearest chair, in the little pause which intervened ere she removed her unwonted head-dress—he saw only the panoply of conquest, consciously assumed and used for a purpose. His discernment was lost on Mrs. Dalton, however, for she had joined her younger friend at the table, and was helping her to sort the flowers. Few things had more entirely gratified Edith than the manner in which Mrs. Dalton had singled her out from the circle at Selcombe Park, with the apparent resolution of making her a friend. To a girl of intelligence, enthusiasm, and warm affections, the caressing demeanor of the first woman of genius with whom she had ever come in contact, was absolutely irresistible, and she repaid it with a kind of uncalculating idolatry, which effectually secured its continuance. The influence which Mrs. Dalton thus acquired was of somewhat dubious advantage to the character of her admirer; for if the delicious sophistry of love should fail in making all she did and said appear "wisest, virtuousest, discreetest, best," the danger was rather that Edith would learn to undervalue wisdom, virtue, and discretion, than that she would approach to any distrust of the perfection of her idol. Aunt Peggy would have been alarmed, could she have witnessed this period of her darling's mental history; but her alarm would have been groundless. The exercise of hearty love and admiration, if only the object be in the main good and admirable, is, in itself, the most ennobling process to which the spiritual part of man's nature can be subjected. Let all who are around the young, or around those whom any peculiarity of temperament preserves in the youth of their hearts to a later period of life, beware how they shut up this sweet fountain, or turn it into bitterness by ridicule, by surprise, by criticism, by contradiction, or by cold withdrawal of sympathy. Lose not the glory of a sunset by seeking to count the spots in the sun. We confess that they are there, if you *will* force us to the confession; but we are not thinking about them, and we do not mean to look at them;—suffer us to take the beauty and goodness of God's works into our inmost hearts!

"Miss Kinnaird," said one of the two gentlemen who were hovering around the chairs of that lady and Mrs. Dalton, "how does the diary proceed? and when are you going to fulfil your promise, and read us the events of a whole day?"

"When they are written," returned Edith, laughing. "What a gigantic idea you must have of my powers, both bodily and mental, if you think I have strength enough left to make an entry in my diary, after dancing as I have done every night since I came here!"

"Is it a green book with silver clasps?" pursued the questioner.

"Yes," answered Edith, a little puzzled.

"Then I have seen it!" exclaimed he, triumphantly. "I passed under the window of your room after breakfast this morning: the table was standing in the window, and I saw a green book with silver clasps upon it. It was lying by a pocket-handkerchief with a lace border, and a white kid glove, trimmed with blue, was lying in a heap with it. Yes!" continued he, accumulating the evidence, "there were two roses in a china vase, and a gold vinaigrette, and a sash, checked white and lilac. I said to Vaughan, at the moment, 'I am quite sure that is Miss Kinnaird's diary.' He did not think it was, but I felt quite sure."

The smile with which Edith looked up at Lord Vaughan, as this speech was concluded, proved, that, on her side at least, all unpleasant recollections connected with the ovent of three years ago had passed away. Whether it also betokened a lurking consciousness that her power was undiminished, we will not determine.

"I am not by any means certain that you are right," observed she, gravely addressing the speaker, whose eyes opened to their widest extent, in pure astonishment.

"O! my dear Edith," cried Mrs. Dalton, "you do not know what a dangerous thing it is to contradict Mr. Delamaine. His accuracy is positively unbounded. I don't believe he ever was mistaken in a date, a name, or a number, in his life."

"Well," said Mr. Delamaine, visibly delighted, "I do believe I am tolerably accurate. That is the habit of mind which I have always labored to acquire. I could tell you some curious traits relative to that very subject—I mean, the accuracy with which Mrs. Dalton is good enough to say that I remember even the most trivial occurrences. Remind me"—turning to Lord Vaughan—"to tell you a story about a pair of ear-rings, and the way in which I recollected something. It is not exactly *apropos* just now; but I dare say we shall resume the conversation."

Lord Vaughan promised to remind him, with the air of a well-bred victim, and Mr. Delamaine proceeded, "Thornton always used to remark, 'If memory be not accurate, it is worthless.' I remember perfectly the occasion upon which he said that.—He was saying, that he had painted a hundred and fifteen portraits since he began his career as an artist, out of which there were only three which had satisfied him. I said he had painted a hundred and sixteen, and I offered to recount the names of the sitters. He did n't wish me to do it; but I did, though, after the first twenty or so, I required a little reflection to bring each name to my remembrance. It was a dinner-party, and, long before I finished, Thornton and I, and our good host, who was dozing in his arm-chair, were left quite alone; however, I went through the whole number, and it was as we crossed the hall to take our leave of the ladies—for it was getting very late—that he made the remark which I have just now quoted."

"You were correct, then," said Edith, politely.

"Why, no, not exactly—that is to say, I was correct in remembering all the names, which was, after all, the great thing, you know—but there were only a hundred and fifteen of them; so Thornton was right there."

"That gives a somewhat different coloring to his observation," observed Mrs. Dalton, in a very low tone of voice, to Edith, as she stooped over her flowers.

"I found out afterwards," continued Mr. Delamaine, "how I had added that hundred and sixteenth. He had painted the same portrait twice;—you know that was a very satisfactory sort of thing—I must say that it gratified me, for I was altogether at a loss to know how I had contrived to make the confusion. I offered afterwards to give the names in the order in which they had really presented themselves; but Thornton would n't take the bet. I suppose he felt sure of losing."

"Time or money," said Mrs. Dalton, with an arch look at Sir Mark Wyvil.

"Ah! time," cried Lord Vaughan; "that brings us back to the diary, you know. Have you much waste of time to chronicle, Miss Kinnaird?"

"That is scarcely a fair question to ask a young lady," interposed Lady Selcombe, who was comfortably ensconced in a bay window, embroidering a spaniel on a footstool in livid and unearthly hues, which suggested that you were setting your feet on the discolored corpse of a dog, whose profile, moreover, seemed to have been much battered by frequent crushing; "trifles, I am afraid, generally make the sum of human things at that age." And Lady Selcombe glanced with good-natured condemnation at the group round the table, and then looked complacently down upon her work, feeling convinced that embroidering dogs was a much fitter occupation for an immortal soul than contemplating flowers.

"I fear I must plead guilty," said Edith, looking from one of her admirers to the other with a playful ease very unlike penitence. "But before I begin my confession, do tell me who Mr. Thornton is, and whether it is the same Mr. Thornton who is coming here to-day."

"Thornton! coming here!" cried Mr. Delamaine; "Good heavens, how extraordinary! My dear Miss Kinnaird, you could not have applied to a better person than myself to tell you all about Thornton; for I think I may venture to say that he is one of the most intimate friends I have in the world. If you will allow me, I will tell you his whole history."

Edith looked imploringly at Mrs. Dalton, who instantly came to her rescue.

"I protest against this!" cried she to Mr. Delamaine. "You are not to speak on the subject at all. Mr. Thornton is my cousin, and I claim the right of kindred as giving me precedence in the matter."

"But, my dear lady——" cried the rebuked orator.

Edith playfully held a rose against his lips, so as to stop the torrent of words. He accepted the flower with a bow and a gratified smile, as though he felt that the favor accorded was so great as to pledge him to observance of the terms on which it was granted; and Mrs. Dalton commenced her history at once, as fearing that the pause would not be of long duration.

"My cousin, Godfrey Thornton," said she, "is young, rich, of good family, handsome, and a genius."

"And coming here!" added Edith; "that completes the list of his attractions. I heard Lord Selcombe tell Mr. Davis so, as they passed to the stables, while I was gathering my flowers."

"But if he is rich and of good family," inquired Lord Vaughan, "how comes he to be an artist?"

Mrs. Dalton's eyes kindled into more than common brilliancy. "Oh, what an *English* observation!" exclaimed she. "He is an artist because God made him one, and he has neither the power nor the will to unmake himself."

"Then he lives for art!" cried Edith, with a sudden burst of her old romance; "and has given up the world's life, though, with all the attractions which you have enumerated, it would have been to him nothing but triumph and enjoyment. He ought to have a tower like Balta's in Minstrel Love, where, in the midst of the grandeur and beauty of nature, he might be a true artist-hermit, and forget men and women altogether. How delightful! He must be quite an ideal character."

"*Quite!*" responded Sir Mark Wyvil, coolly. "He 'lives for art' at No. 15, Green-street, Grosvenor-square, and studies nature from his drawing-room windows."

"My dearest Edith," said Mrs. Dalton, a little impatiently, "that is one of your pretty heresies of which I have not yet been quite able to cure you. You seem to have a sort of vague, unpractical idea that a man must needs withdraw from the world in order to achieve anything really great. Now I, on the contrary, believe that society is the very food and stimulus of genius, which droops without it, grows morbid, and loses both the creative power and the power of self-measurement."

"Long may the idea continue unpractical," exclaimed Lord Vaughan, answering the only part of Mrs. Dalton's speech which was within the limits of his comprehension, "if Miss Kinnaird meditates achieving greatness in her own person!"

"Why, yes," replied Edith, "I confess I have no inclination to shut myself up in a hermitage. That would be rather too high a price to pay for *any* sort of greatness."

She did not speak exactly as she *felt*—but there was no discrepancy between the words and the manner in which she *lived*. How long would the world, which had already divorced the outer life from the inner thought, leave the thought unmolested?

"There is only this difference," said Sir Mark, with studious sportiveness; "to shut Mr. Thornton up in a hermitage would be an act of cruelty to an individual, but to immure Miss Kinnaird would be punishing the world."

CHAPTER II.

THE quiet and graceful nonchalance with which Edith received all the varieties of compliment, homage, and devotion, which were tendered to her acceptance, spoke volumes for the experience she had acquired since her first introduction into society. Yet it could scarcely be called indifference—certainly not that indifference which would seem to be the natural result of preöccupation; for she was keenly alive to all that passed around her, and her appetite for gayety had none of that languor which is often the result of satiety, and which, though it does not begin with disgust, frequently ends with it. Lightly as she appeared to esteem the admiration of which she was the object, so long as it was undisputedly hers, it might easily be discerned that she would have felt its withdrawal as a trial of no light order.

Mr. Delamaine here broke in, panting under the enforced silence of the last five minutes. "Yes," cried he, "only just fancy shutting Thornton up from society. Why, now," addressing Miss Kinnaird, "I'll just tell you exactly, without further circumlocution, what Thornton is. He is the centre of every circle into which he goes."

"My dear fellow, don't be so geometrical!" said a voice from the window which opened upon the lawn.

Mrs. Dalton clapped her hands. "I thought you would not be able to contain yourself much longer," exclaimed she. "Come in, Godfrey! How long have you been within hearing?"

"Only since you saw me, half a minute ago," answered the new comer, cordially responding to her shake of the hand, and then turning to pay his compliments to the rest of the company. He was about eight-and-twenty years old, a little below the middle height, but formed with singular grace and symmetry. His hair was dark and profuse, his face

Digitized by Google

rather picturesque than handsome, his voice and manner peculiarly gentle, his eyes full of fire. After the ceremonies of greeting and introduction were at an end, he seated himself on a low ottoman at Mrs. Dalton's feet, his eyes seeking Edith's face with a frequency which nothing but good breeding prevented from degenerating into a fixed stare, and requested to be enlightened as to the subject under discussion.

"We were talking," began Mr. Delamaine, "of society in general—"

"Of society in particular, I should say," interrupted Sir Mark Wyvil.

"Did n't somebody say something about seclusion?" inquired Lady Selcombe from her bay-window.

"It was Miss Kinnaird," replied Lord Vaughan, "who was celebrating the praises of a life of seclusion."

"No, no, my dear fellow," exclaimed Mr. Delamaine; "I beg your pardon, but you entirely mistook Miss Kinnaird's meaning. She only said that she should like to live in complete retirement if she were going to be an artist."

"I did not exactly mean that," interposed poor Edith, suffering from the embarrassment which so frequently befalls a woman when, having been betrayed by impulse into the expression of a sentiment at variance with the ordinary course of small talk, she is condemned to hear a distorted paraphrase of it quoted as hers by some afflicting bystander, and is thereby involved in the necessity of denying, defending, or explaining words, which she now feels that it was folly to utter at all.

Mr. Thornton's face expressed a mixture of sarcasm and impatience, restrained by politeness. Wisely deeming, however, that his best method of securing the two ladies for himself, would be to keep the conversation at too high a level for the others to teach, he ventured to assume a tone somewhat graver than his wont, except in a tête-à-tête.

"I don't wonder," said he, "that seclusion should seem, in England, to be the only atmosphere in which art can breathe. Our miserable 'common sense,' as it is sarcastically called, is, in its way, as destructive of the true spirit of art as the frivolity of our neighbors the French."

"Yes," said Mrs. Dalton, "and the popular idea of beauty finds here its fit embodiment in the 'handsome and substantial,' while there it is in the fantastic and incongruous."

"But in Italy," suggested Edith, with some hesitation.

"In Italy," said Mrs. Dalton, "where common daily life is, as it were, steeped in poetry, and the present is so beautiful that it almost wins you from contemplating the past—and such a past!—art seems there to be born of nature, to come unsought and stay unasked."

"And is therefore undisciplined and impulsive, possessing men rather than possessed by them," returned Mr. Thornton.

"My dear Godfrey! what new theory is this?" cried his cousin in amazement. "You a painter, and decry the art of Italy!"

"You mistake me," replied he smiling; "I was not speaking of works of art, but of the expression of their spirit in the actual life of the artist, moulding the structure of society into a correspondence with itself, so as to dispense with the necessity of seclusion to the production of its highest development. We must go to Germany for this—to Germany, which, if you will allow me to say so, leaves Italy as far behind in architecture, in music, and in poetry, as she is herself outstripped in painting."

"I could dispute that of all but architecture," said Mrs. Dalton.

"I will not allow you to do so—at least not in music," answered he. "That which is passion in the one becomes spirit in the other—do you not *feel* the difference? But I know you do, for you expressed it just now far better than I could hope to do. The one, as you truly said, comes by nature; it is a cavern full of radiating crystals, where you walk in a labyrinth of bewildering beauty; but the other is a mighty temple, symmetrical and stately, reared by laborious and devout hands, symbolizing something which is above earth, and which art cannot represent except by symbol."

"And England," said Edith. "Will you allow us no art at all?"

"Nay!" cried Mr. Thornton; "we have had art of the first order, at least in poetry. But it must be content to be like that flower," pointing to a cactus; "it springs in sudden splendor out of a rugged and unsightly stem, which has no harmony or consistency with itself. The more fully we recognize its beauty, the more do we wonder at the strange and anomalous position in which we find it."

"It is a part of our national reserve," said Mrs. Dalton, "of the moral cowardice which accompanies our physical courage, of the strange timidity which makes us distrust alike the past and the future, and believe only in the present, because, and so far as, we actually see it before us. Our eyes are obstinately fixed on the planks of the boat which carries us, and we see neither the leafy shore from which we have departed, nor the glowing depths of the sunset into which we are sailing."

"Don't call it by so high a name as *reserve*," cried Mr. Thornton. "Call it, as I did, *common sense*—by which I mean a resolute adherence to conventionalism in defiance of original thought."

"Call it by what name you please," said Mrs. Dalton, "it is everywhere present with us, like fetters on the limbs and ice on the heart, and the only warmth and freedom one ever enjoys, is when one has succeeded in getting away from it for a few happy moments."

She spoke with a bitterness of tone very unusual to her; and Mr. Thornton, glancing round the room, replied with a well-satisfied smile, "We have got away from it now, Amy. This is one of those 'few happy moments.'"

Mrs. Dalton looked up, and perceived with some amazement that Sir Mark Wyvil had drawn his chair to Lady Selcombe's side, so as to be virtually absent from the *conversazione* party at the table, while Mr. Delamaine had seized on Lord Vaughan and carried him off to the terrace, where, within sight of the window, he was pitilessly inflicting upon him the deferred story about the ear-rings.

"Let us enjoy it while we can!" cried she. "Tell me, Godfrey, what have you been doing, thinking, and feeling, all this age that we have been separated?"

"For the *doing*, first," he answered, "I have been enduring society."

"What an expression!" exclaimed Edith, "and I am so fond of society!"

"So was I once," returned Mr. Thornton; "but since then I have looked under the surface, and the vision of what I saw there has haunted me from that moment forwards. Do you suppose that if the diver had come back from those ghastly hollows where he saw the sea-hyænas and the hundred-

Digitized by Google

jointed snakes, he could ever have admired the beauty of the ocean afterwards with an unruffled spirit!"

"You remind me," said Edith, "of that strange little poem of Milnes', in which he describes the wretchedness of the soul which is forced to look upon the world as it really is, and to see the seeds of decay and death visibly present in the midst of life and beauty. If that would be the result of opening one's eyes, I would rather keep mine always shut."

"Milnes' poem," said Mrs. Dalton, "is only an amplification, and a feeble one, of Hamlet's grand idea;—I need not quote, need I?"

"If Mr. Delamaine were here," observed Edith, "he would give us the passage entire."

"Don't mention him," cried Mr. Thornton; "don't let there be a thought to break the unity of 'one happy moment.' If you only knew what an indulgence this is to me after the life I have been leading for the last six months, mere charity would induce you to prolong it."

"But, if you detest society so utterly," said Edith, simply, "why do you not break away from it altogether? A man has always the privilege of being able to act independently of others—to follow the dictates of his own will."

"Yes," added Mrs. Dalton, "while a woman is —oh, give me a simile! Your favorite Germans would say she was like a Psyche in the grasp of the serpents—she may weep, implore, writhe in the toils—but she can never escape." Her manner was playful, but the same bitterness to which we have before alluded might be discerned beneath the assumed levity.

"My will is my Psyche," returned he; "it struggles and suffers, but has not strength to set itself free."

"But then," said Edith, "I think your desire to be free can scarcely be so *very* strong. There must be something else to contend with it."

"You are right," he replied, "I could not live in solitude. Sympathy is as necessary to me as the very air I breathe. I am forever seeking for it—accepting mere dross and tinsel instead of it—hugging them for a little while with a fool's fancy that they are real—finding out that they are not the true gold—flinging them away in wrath and scorn, and setting out anew upon the same search, to be again deceived, and to begin it all over again; till I am inclined at last to question whether there is really any such thing in the world, and whether, if there be, it is worth while to take so much trouble in looking for it. But I don't want to arrive at this conclusion, for if I were once thoroughly convinced of it, I believe I should take the first opportunity of walking out of the world altogether, by a shorter and more effectual way than merely secluding myself from it."

"No, you would not," cried Mr. Dalton; "weakness of will would again beset you. Like Goethe, you would take the dagger to bed with you night after night, hold the point tenderly to your heart for half an hour, reasoning meanwhile most philosophically with yourself—then—go to sleep."

"If I am Psyche, you are the serpent!" exclaimed Mr. Thornton.

"Yes," retorted she, "but you would require no *effort* to escape from my toils."

"And now," said Edith, "you have told us what you have been thinking of during these six months —the third question was, what were you feeling?"

"Don't ask me," replied he, quickly; "I believe I never felt at all till this moment."

From most persons this speech would have sounded like a mere jesting compliment, but there was so strong a coloring of sentiment in Mr. Thornton's playfulness that Edith felt herself blush, and then blush doubly lest the first embarrassment should be misinterpreted.

"The dressing-bell rang ten minutes ago," said Mrs. Dalton, abruptly, "and Sir Mark and Lady Selcombe have already taken wing. Come, Edith, or we shall not have time to arrange our bouquets."

She quitted the room as she spoke, followed by Miss Kinnaird. Mr. Thornton sauntered to the window, and stood for some minutes listlessly gazing at the smooth green lawn, with its carefully grouped shrubs, trim borders, and delicate flower-baskets—no inapt, though certainly a most favorable symbol of the elegant conventionalism of which he had just expressed his languid abhorrence. He was roused by a light tap on the shoulder, and turning round, he beheld his cousin, her face radiant with restored good humor.

"Now, Godfrey, what do you think of her?" cried she, eagerly.

"She is faultless," returned he, "or else I have lost my power to criticise. Amy, I *must* paint her picture. Do contrive it for me—you know you can manage anything, and anybody, when you please."

"Even you?" inquired she, archly.

"Yes, truly," he answered. "Am I not here in obedience to your summons? though in this case to obey was to please myself."

"Ah!" replied Amy, "I am afraid that is always the secret of my power over you. I should not dare test it by asking you to do what did not please yourself."

"Nay, not seriously, my cousin," said he, taking her hand, and looking earnestly into her eyes, "do you not know that the task would become a pleasure if it were done at your request?"

She shook her head, smilingly, as she answered, "Well, Godfrey, I will have faith in your friendship. Having so little to lose, perhaps, makes me cowardly about losing that little;—now, don't answer me—that does not apply to you. And as to your present wish, 't is the easiest thing in the world. You cannot suppose that so beautiful a creature as Edith has finished her third season without learning her own charms. It will only seem to her a very natural and necessary little bit of homage on your part."

"Ah," said he, with a sigh, "pity that she has been out three seasons!"

Mrs. Dalton fixed her eyes on him for a moment with an expression of restrained mirth. Then compressing her lips, and keeping silence with an effort, she darted from the room to commence the important business of the toilette.—"Simpleton that I am!" said she, chidingly, to herself, as her maid looped up her dress with geranium and myrtle, and fastened the blossoms among her profuse ringlets. "I had nearly marred my own scheme at its very commencement by a little outbreak of jealous vanity. So irrational! To pick out a wife for Godfrey, and then begin to be angry because he overlooks me in his admiration of her! Absurd! Well, I only hope he will not be too precipitate. Edith is not a woman likely to dispense with the wooing which is our sex's privilege. We have a full month before us; I shall be quite satisfied if, by the end of that time, he comes to the point. And then

Digitized by Google

—I shall go down to Beechwood for the winter."

And a sombre expression stole into her large dark eyes, and a gradual languor seemed to unstring her graceful limbs. Few who had beheld the apathy with which she submitted to the adornments which her silent attendant lavished upon her, would have believed that her face was capable of such sparkling animation—her manner of such vivacious coquetry. But when the last curl had been arranged, and the last boquet fastened, she passed her hand over her forehead, and, with a sudden expression of contempt, whether for herself or for the subject of her meditations we cannot say, she resumed, as with an effort, her ordinary demeanor, and descended to the drawing-room.—Beechwood was her HOME.

Shall we inquire into Edith's thoughts during the same half hour? No. Time will develop them. At dinner she was a little surprised to see Mr. Thornton the life and leader of the party, but she felt strangely interested by the idea that, under all this sparkling vivacity, there was a concealed melancholy of temperament, known, in all probability, only to herself and to his cousin. The latter appeared fully to understand the art of drawing him out, and under her judicious management he scattered repartees, puns, and illustrations, with a prodigality perfectly astonishing. Edith was at some distance from him, and fully occupied in listening; she was thankful to be seated between a fat squire and a taciturn curate, neither of whom endeavored to divert her attention. The style of Mr. Thornton's conversation was perfectly new to her, and she enjoyed it not a little. Nothing seemed to come amiss to him; no subject was evaded, no remark unanswered. From theology down to gourmandism, from politics to pic-nics—wherever the conversation-ball glanced, there was he ready to catch and to return it with untiring vigor. If he had no argument at hand, he had a simile; and if that failed him, he supplied its place by a jest. Nothing was too deep or too shallow, too high or too low, but his wit could touch, or his fancy embellish it. She had no time to analyze, even if she had been capable of doing so—she could only admire. And a strange kind of feeling came upon her as she walked meditatively back to the drawing-room, as though all deep thought and laborious study were but waste of time, and there was no topic which could not be fully discussed and satisfactorily settled in a conversation. Strange, also, it seemed, that some of the topics should be handled at all; stranger still, that one who could handle them so delicately should not have shrunk from exercising his skill in public. But of this she had neither leisure nor inclination to think at any length. She was entertained, interested, fascinated; she had experienced a new sensation.

THE DEATH OF THOMAS CLARKSON.

THE good man's arms are folded now—
The great man's race is run—
The warm, brave heart, and thought-worn brow
Rest—for their work is done!

'T is well! the fine gold back we give
Ere it was changed or dim;
The curtain none can lift and live
Falls between us and him.

It was not grief, it was not fear,
Feeling for tears too deep
Subdued us, when that white-haired seer
Serenely fell asleep.

As the word passed from lip to lip,
Silence upon us fell;
The way-worn man laid down his scrip,
Pilgrim his scallop shell.

Age moved more slowly on its way,
Less firm was manhood's tread,
And thousands bore themselves that day
As present with the dead.

As the word passed from line to line
Of Freedom's allied host,
The answer came, "For us still shine
The footprints of the lost.

"To us his spirit speaketh still,
'Be faithful to the end!'
Not for ourselves our sad hearts fill—
THE SLAVE HATH LOST A FRIEND!"

When he was friendless, on his chain
Fell the great Clarkson's eye;
And in that hour he vowed to gain
His brother's cause, or die!

He went forth, an enthusiast boy—
He fought, an earnest man—
He conquered—and laid down in joy,
As only Christians can.

We thank Thee, Father! that on earth
Thy servant staid so long;
Thou gavest his noble purpose birth,
And made his spirit strong.

Glory to Thee! his wayside seed,
In Faith and Patience sown,
Has blossomed for the bondman's need:
Glory to Thee alone!

And all o'er England's rich domain,
His spirit hath begot,
For her crushed poor, for Want and Pain,
Friends—and they know it not.

Beside the forge, and at the loom,
Amid the factory's din,
Where little children weave their doom,
His lineage looks in.

Around the laborer's cold hearth,
Where Want hath cast out Love,
Where Misery hath conquered Mirth,
Unseen his offspring move.

With hearts his life hath warmed, they come,
With steady souls and brave,
To lift a clear voice for the dumb,
To succor and to save.

We mourn him not! he did not go,
His great heart was not stilled,
Till all the streams that from it flow
Had with his life been filled.

NON-SLAVEHOLDER.

Philadelphia, 11th month, 1846.

ITALY.

The Italian question becomes one of intense interest. Although anxiety on the subject cannot be expected to have abated, yet the conflict of favorable and adverse interest appears to proceed hopefully. The Roman government has taken an important and judicious step in transmitting a formal protest to Vienna, and threatening the recall of its nuncio from the Austrian court. This is all strict and regular. The protest of King Charles Albert, if it be confirmed, is a demonstration of immense importance. It was due to the reputation which the king claimed as a patriot even when he was prince of Carignan. The popular manifestations at Leghorn are another proof of the general sentiment. And the further aggressions of the Austrian commander only help to weaken Austria by putting her still more palpably in the wrong. So far the intelligence of the week represents Rome in a position maintained with discreet energy, and strengthened by the fault of the enemy.

At the first view, the attitude of France seems unfavorable; but it is far better than the most sanguine could have expected a week or two back. It would be too much to assume that the "feeler" in the *Journal des Débats* strictly represents the definite views of Louis Philippe's government; yet it may be taken as an approximation to the view which that government would wish to avow, and also as betraying the feeling by which the official party is moved. The *Débats* is very angry with divers journals in Italy and England, for censuring the coldness that France shows in support of liberty; is angry with the court of Vienna, for not having more skilfully maintained the status quo; with the pope, for not having kept the dispute "purely diplomatical." "The sovereign pontiff," says the French editor, "has been publishing protests of a nature to inflame the Italian people." Now this is false. We do not of course mean that the highly respectable journalist deliberately states what he feels to be a falsehood; but his bias is such as to warp his perception; and we use the strongest term because no other would express the extent of the misrepresentation. The protests of the pontiff are not calculated, any more than they are intended, to inflame the Italian people. Before the time of Pius the Ninth, Rome was on the point of ruin through internal corruption—an effete official despotism struggling hopelessly with a growing spirit of reform, which being unlegalized was revolutionary. Pius began reforms with all the deliberation requisite for safety, with all the sincerity requisite to secure faith in the renovating process. The existence of Austrian despotism in contiguity with liberal institutions would be difficult if not impossible; and Austria tries to mar the legalized reforms. Nothing could be more calculated than *that* to inflame the Italian people. Pius issues protests against that hostile intervention; also exhortations to his people against any irregular violences, and assurances that he will firmly support their substantial interests in a regular and discreet way. It is impossible to imagine any declaration less calculated to inflame the Italian people, or more calculated to soothe and cool their anxiety and indignation. Pius is really what in France and England is called a conservative reformer; and if it were possible to avoid blame in a position so beset with every difficulty, he deserves to have done so.

In the midst of these testy criticisms, the *Débats* makes some important declarations: France, we are told, will interfere if any other country interferes; France will support "all legal and pacific reforms," —[the sovereign pontiff evidently contemplates none other;] and will support the independence of the Italian princes if that be threatened. Good.

But it is from the very irritation of the ministerial paper that we draw the most hopeful inference of all. The government of Louis Philippe has been unable to dictate the course which it wishes affairs to take; hence its splenetic distribution of censure on all concerned. It would best have suited that government to have *no* movement in Italy just at present, and accordingly it hates all who move: it deprecates any step against Austria, with whom the King of the French sympathizes; also any against the Italians, with whom the French people sympathize. But the traditional policy of France in Italy is too strong for the government, and part of its anger is the cry wrung from it by the knowledge that to that policy they *must* succumb. The government of the French nation must take the side of freedom in Italy; hence the bitter anger of the present ministers, who wish to side with Austria: but that anger is a sign that the government does recognize the necessity under which it lies; in obeying that, possibly it may learn also to know its real interests. We agree with our contemporary, that if any other country intervene in Italy, France must: we could have informed the respected writer that France also will defend all legal and pacific reforms in Italy; but it is very satisfactory to perceive that the French ministers, in spite of their bias, are equally clear-sighted.—*Spectator*, 4 *Sept.*

The destiny of Italy is too strong for the powers that have so long held her down. The discretion and firmness of Pius the Ninth have kept his case so clear from doubt, whether in equity or policy, that state after state has felt forced to give in its adhesion. Naples is now said to have declared her concurrence in the Roman policy of internal reforms, and to have expressed her disapproval of Austrian aggression. Without a declared alliance, the conduct of Tuscany is that of imitation and sympathy. Sardinia maintains her friendly declarations with offers of troops and arms. It may now be said that all Italy is with the pope. Naples is a good third of the peninsula; Tuscany will complete the half; the Roman States, with Piedmont and Genoa, another quarter. Austria may perhaps boast the alliance of Lucca and Modena and the little states; and she retains her somewhat doubtful sway in her own territory; Austria occupies barely one quarter of Italy; three quarters are against her.

It does not appear that Austria gains in other parts of Europe that support which in Italy she is manifestly losing. England is understood to stand by Rome. Even France can no longer hold back, and is said to have made an offer of arms. No country has yet declared for the government of Vienna. On the contrary, some of the Austrian provinces are known to constitute a standing diversion in favor of the Italians; and at this very moment the Imperial government is refusing concessions demanded by Bohemia.

It is not surprising, therefore, that Austria should show signs of a disposition to retract her false move at Ferrara. This penitent disposition is displayed in a manner intended to save the dignity and feeling of the aggressive power: the responsibility of the military advance is laid upon the Austrian commander Radetzky, but without disapproval; hostile

Digitized by Google

intentions are disclaimed: an offer is made to refer the question of right to the arbitration of any foreign power, to be chosen by the pontiff. Such is understood to be the nature of the concession made by the government of Vienna. As to the responsibility of the local commander, that may very probably be true. It is evident that the infirmities of Prince Metternich are telling seriously on the administration of Austrian affairs: had he done the work himself, it is not probable that he would have made so great a political blunder as the gratuitous aggression on the Roman territory. But in his decline a good deal is necessarily left to subordinates. And that fact furnishes Austria with a loophole to back out by.

The pope is said to have declined to negotiate until Austria should have relinquished her armed occupation of his territory: but practically the question has been brought within diplomatic discussion, and it is to be hoped that the wiser spirit now manifested by Austria may be improved. If it be possible to reëstablish Italy among the nations, without bloodshed or war, the achievement would be worthy of the enlightened views which statesmen of our day so loudly boast.—*Spectator*, 11 *Sept.*

If the rulers of Italy are of accord, they do not as yet go fast enough for the people, and the progress of the peaceful revolution is hastened by the popular impatience. The record of the journalist can barely keep pace with the march of events: now some great movement occurs in Rome, now the sound of revolt in the Neapolitan domains penetrate through the muffling of the press; now the scene is shifted to Lucca, to Leghorn, to Genoa; and the Austrians cannot keep stillness even in their own territory.

We last week learned the ready concession yielded by the Grand Duke de Lucca to the demands of his subjects: he retracted, but only to make his concession the more complete. After his paternal proclamation, Charles Louis ran off, like Louis the Sixteenth, and repudiated his concessions: a deputation was sent to bring him back: he declined to go home, but offered to appoint a regency with the chief of the popular deputation at its head: the managers of the revolution were not to be thus foiled, they threatened to confiscate the duke's goods; on which he returned with haste and did all that he was required to do. It has been ascertained, therefore, who is master in Lucca.

Tuscany benefited by this great political experiment on the obduracy of princes: the people called upon the Grand Duke Leopold to hasten his concessions, and he complied at once. A national guard is now the guardian of order in Tuscany. It has therefore been ascertained who is master there.

Parma, a small quasi-Austrian duchy, seems disposed to follow Lucca.

A similar spirit has been manifested in all parts of the Italian territory, though it takes an endless variety of shapes: in Sicily and Calabria, it is armed revolt; in the towns of the Roman States, it is fervid and clamorous loyalty to Pius the Ninth; in Genoa, it is exulting displays in honor of the old expulsion of the Austrians; in Piedmont, it is suggestive cries in praise of Charles Albert. In many places "the *Italian* flag," a tricolor, has been unfurled, instead of the flags of the separate States; and among the cries has been one for a "King of Italy."

But the most significant of all demonstrations, perhaps, is the out-break at Milan, the capital and head-quarters of Austrian Italy. The arrival of a new archbishop was the occasion for a sudden and irrepressible burst of cries to the honor of the prelate's spiritual lord, the sovereign pontiff: the authorities were alarmed, and tried to suppress the popular feeling by force of arms; in the attempt they sustained a damaging repulse, and a few days later were fain to establish a military occupation of their own capital. The Milanese have not yet revolted; but the hint must alarm the Austrians.

It is not wonderful, therefore, that the communications from Vienna to Rome are said to be couched in language that grows more and more conciliatory. Austria, if she knew her own interests, would not repel, but would invoke, the intervention of Pius the Ninth in reconstructing the political constitution of the Italian states.—*Spectator*, 18*th Sept.*

The important event which, though productive of so little effect at the time, has decidedly changed the fate of Italy, was the occupation of Ancona, an armed protest against the violent interference of Austria in the affairs of southern Italy. The occupation of Ancona, be it remembered, was not merely an act of France, or of a French captain. It was a measure deliberated upon, resolved, and sanctioned by the joint accord of France and England, and was a position taken up by the two great constitutional countries of the west against the despotic tendencies and dictation of the east. The occupation of Ancona, as well as the reduction of Antwerp, were acts of France, supported by English assent. Without this support, France would in both cases have brought down war upon her. Austria mooted the point; but seeing England and France arrayed against her, bowed her head, and submitted to the occupation of Ancona, and to something more serious, viz., the principle implied and established in that occupation.

Since that period until now, Austria has marched no columns across the Po. She has even much relaxed of her absolutism. Her efforts have been directed rather to conciliate than intimidate the princes of Italy, and to manage that country amicably through its courts and statesmen, without bullying or dictation. There was the more necessity for this, since France having so signally come forward to captivate the good will of the Italian people, now addressed herself also to Italian princes. It is known how Louis Philippe sought to conclude a marriage between the King of Naples and one of his daughters. This was defeated by Austria, who gave the monarch an archduchess. In Piedmont and Rome, Austria was equally successful, preventing the pope from acknowledging the constitutional queens of either Spain or Portugal, and checking, in short, every move of France. The abilities of Count Rossi, and his efforts, when sent ambassador to Rome, changed the fortunes of this secret and diplomatic war. Rossi procured the election of Pius the Ninth, thereby routed the Austrians, and drove them from the very centre and strength of their Italian position.

The King of the French had thus a straight and glorious path before him, and had but to pursue it with moderation in order to emancipate Italy, and neutralize the power and the despotism of Austria. But dynastic purposes and interests intervened. The settlement of a younger son, and the hope of his wearing the Spanish crown, overweighed with Louis Philippe all the interests of France or of freedom, and his majesty has evidently been anxious to sell both to Austria, in return for its support of the Montpensier succession.

In consequence of such an understanding with

Digitized by Google

France, Austria imagined that she might recur to her old policy, might once more intimidate the sovereigns of Rome, Naples, and Sardinia, without any fear of an Ancona occupation; and accordingly Prince Metternich pushed his legions to the city of Ferrara. He, however, reckoned without his host. Although France might have been bought, England remained unsold. One of the powers that had sanctioned the occupation of Ancona and the independence of Italy was true to its old policy, and took up that standard which the French king had purposely let fall, and which announced that the apparition of Austrian bayonets beyond the Po would bring British guns and vessels into the Italian ports both of the Adriatic and of the western coast. The demonstration was enough. Austria has withdrawn. The pope and the Italians are left to right themselves, and work out their own reforms; each government being left undisturbed in its confidence and councils to guide and control the popular effervescence and its outbreaks—most dangerous, indeed, but inevitable in such a state of things, and which hitherto has been marked by no fatal or disastrous symptoms. Never did a great, a national, a universal change from monarchic monopoly to the acknowledgment of popular rights, take place with less of the character, or more of the realities, of revolution.—*Examiner*, 18 *Sept.*

Diplomatic Intercourse with Rome.—The truth is that there is hardly a single court of Europe with which it is of greater importance that we should be in regular and legitimate communication than this. The pontifical dominions promise to be the birthplace of that enlightened and liberal policy which is to retrieve the long degradation of the Italian peninsula, and which it is the interest of all philanthropists to promote. Nor is the influence of their sovereign confined to his own territories. As the spiritual head of a vast number of British subjects, he exercises a certain controlling power within these realms which it might indeed be thought very desirable to transfer to more amenable hands, but which it is the height of childishness to ignore. The influence, such as it is, actually exists, not in force sufficient, as experience has often proved, to be weighed for a moment against the suggestions of loyalty or patriotism, but with quite enough reality to deserve attention. And yet, for the sake of a statute already condemned by the conclusions of sense and reason, we have been contented to forego all the benefit which might be derived from amicable relations with a sovereign whose voice on certain points would be respectfully listened to by some millions of British subjects.—*Times.*

Promotion of the Italian Princes.—There is reason to hope that the sovereigns of Italy have not only yielded to the peaceful revolution which keeps the even tenor of its way among them, but that they have adopted it, and perceive how large an interest they have in its consummation. It will virtually promote them from the rank of vassals to that of potentates. This is apparent from the facts.

Italy has never altogether lost her greatness. Her country is still blessed with the same sun that shone upon it when Rome emerged into the light of history, or when the city of Fiesole looked down upon the flooded Arno and saw no younger rival in Florence the Fair. From the earliest dawn of history, Italy has been a favored seat of intellect and art, more than once of political power. Although hideous corruption destroyed the empire of Rome, the Romans still exist. Florence and the other Italian city-states first helped civilization to struggle out of the dark ages; and although their returning greatness bore in it the seeds of decay, from the very necessity of inexperience, which made them adopt imperfect political principles, it should never be forgotten that they set Europe the example of civilization and self-government. Italians redeemed the lost learning of the ancients. Italians revived the arts, as they still lead in the youngest of the arts—music. Long as the Italians have been kept in bondage, they have never sunk so low as the other countries in the south of Europe. Spain, whose brightest history was that of her Arab rulers, has never rivalled Italy in intellect or art, but has always been in the comparison semi-barbarous. Greece, the great teacher and prototype of Italy, though possibly she may retain her natural faculties, is but emerging from the dark ages, prolonged for her by Mussulman oppression even to our own day. Italy has been held down, but has never yielded—has never forgotten, has never ceased to vindicate, her nationality; and Mr. Cobden can tell whether her politicians are behind our own in knowledge.

The accidents of their own priority in civilization, of their consequent dissensions, of the course of events in Europe, have contributed to split up the people of Italy into a number of petty states. The feeble sovereigns have sought a strength from without, and in return for Austrian protection have been the servants of Austria. That fatal reliance has deprived them of internal strength: defended against their own people, they have aided Austria in oppressing and weakening their people; their people have been an enemy, not a support; and thus the princes have been content to be sovereigns over states which were stunted, feeble, and poor. But the government of a poor and feeble state is itself poor and feeble; and the princes of Italy have scarcely ranked with the private peers of England or the marshals of France. They have been of no account in the councils of Europe.

It is all altered now. Italy, even while divided, has been one of the great nations of Europe; as intellectual as any; as replete with political information, as ripe for modern self-government, as most. But, divided among feeble princes, possessing no unity, she has been a blank in the European system. At present, when any question arises in Europe, we talk of its being settled by "the five powers"—Austria, France, Great Britain, Prussia, and Russia; the secondary powers, such as Holland and Belgium, occasionally take their share; but Italy is a nullity. Let her be free and united, and, with her high intellect, she becomes a leading, a first-rate power: we shall henceforth speak of the six powers—Austria, France, Great Britain, *Italy*, Prussia, and Russia. When Austria or Russia seeks to keep back the progress of the world, France and England will look to the princes of Italy to join them in maintaining the lead. Apart from all considerations of disinterested humanity, the princes of Italy, if they are as wise as they seem inclined to be, will perceive that the emancipation of their land under Pius the Ninth will confer upon them an immense accession of political power and royal dignity.—*Spectator.*

From the Examiner.

History of the Bank of England, its Times and Traditions. By JOHN FRANCIS. Two vols. Willoughby; Effingham Wilson.

EVERY one has laughed at Sydney Smith's witty and wise assertion that the warlike power of every country, in these modern and mercantile days, depends on their three per cents. "If Cæsar were to reäppear on earth," said the peaceful canon, *Wettenhall's List* would be more important than his *Commentaries*; Rothschild would open and shut the Temple of Janus; Thomas Baring, or Bates, would probably command the tenth legion; and the soldiers would march to battle with loud cries of scrip and omnium, reduced, consols, and Cæsar." Great accountants bear out the great wit; and Mr. Finlayson, examining the states of the three per cents. all over the world, tells the House of Commons assembled in grave committee at what precise time it may look for insolence, and when for patience, from the full or empty purses of the rival powers of Europe. What more dignified subject for history, then, in these modern days, than banks and banking operations? So it seemed to Mr. Francis, who has written a very amusing book. He appears to be connected in some way with the great corporation, and familiar with its practical workings and ways. But he has treated his subject popularly; and does not affect to discuss the many grave questions which rise in connection with it, and are likely to force themselves soon more nearly upon public attention. He has a clever knack at compiling, fits in his anecdotes very pleasantly, and writes what he has to say for himself with considerable ease and freedom of style.

To any knowledge of the science of political economy, we should think Mr. Francis made small pretension; and his book will win little regard from the graver economical pundits. He is simply and as it were personally devoted to the very respectable Old Lady of Threadneedle street. Her griefs are his; her accidents, adventures, and glories. What she owed to her founder, William Paterson; how far she has been befriended by the state, and with what rich interest she has repaid that service; how the fates of such schemes as the Mississippi in France, and the South Sea in England, were but testimonies in her behalf; how panics arising from the pope, the devil, the pretender, joint-stock schemes, and railways, have at various times agitated the old lady; how she has borne up against the "runs" that have on these occasions threatened to bear her down; how she has been able, when necessary, without any very material loss of character, to suspend her payments in cash; how she might have profited by branch banks, and how much more the country would have profited by their adoption; how the curious forgeries of Price, the desperate frauds of Fauntleroy, and all the various exchequer bills, wills, and continental forgeries, have variously affected or afflicted her; and finally, what countless human beings' blood she has shed in a vain attempt to keep her own one-pound-circulation pure;—all this is Mr. Francis' theme. We must do him the justice to add, that in the last-mentioned case, he does not think his venerable client void of blame. His opinions on such matters are liberal and intelligent, as we find them for the most part on every subject introduced.

Occasionally we have a slip of the pen; as where he mentions a celebrated incident of the reign of Charles the First:

"The treasure arising from the accumulated gains of the merchants had been deposited by them in the mint, then within the tower, with a perfect conviction of its safety. If the short-sighted policy of the earlier kings of England had extorted money from the Jew and the Lombard, at least they borrowed from their English subjects; it remained for the polished Charles to sully his fair fame by robbing them. Yet let him not be judged too harshly. Right and wrong assume new aspects under varying circumstances. The monarch trembled on his throne. His prerogatives were denied. His favorite minister was impeached. The claims of his children were endangered. A discontented people were opposed to a perfidious court. An irritated parliament were thwarting a proud aristocracy. The supplies were stopped, and levies were made in vain. To compass these dangers money was required; to gain it by ordinary means was impracticable. Ere judgment be passed, let these things be remembered. Rank, family, life, were in the balance, and the monarch yielded. The money placed by the merchants in the mint, amounting to two hundred thousand pounds, was seized; the sanctuary of a people's commercial faith was violated to supply the royal necessities."

Is not this somewhat dangerous "bank" doctrine? If the circumstances Mr. Francis mentions, and not the immutable moral laws, are to determine right and wrong, what wretched culprit that ever held up his hand at the Old Bailey might not have pleaded precisely such in acquittal of his crime? The murderer lifts the knife, and the thief takes the purse, because "to gain his object by ordinary means is impracticable."

The passage is also an illustration of a somewhat vicious excess of short sentences which impairs the otherwise easy style of Mr. Francis' writing. "The prize for which he struck was a kingdom." says Mr. F. of the Pretender. "The spirit with which he contended was worthy of the prize. His march was one scene of triumph. Men fought for him. Women embraced him." And so forth. "He soon learned to play many parts," says Mr. F. of Charles Price the forger. "Now a comedian, and now a gentleman's servant. At one time a rogue and the companion of rogues, and then a fraudulent brewer or a fraudulent bankrupt. Great talent was employed in enormous crimes, and great evil was the result. His only confidant was his mistress. He practised engraving till he became proficient. He made his own ink. He manufactured his own paper." All this, with its huge affectation of pretence about it, is miserable slip-slop. Let us give one more instance. "England," says Mr. F., speaking of the time of the French Three Days, "felt that mighty and revolutionary spirit. The demands for reform grew earnest and incessant. Ireland was told by the Liberator to look at France and Belgium. Kent, the garden of England, witnessed the first disturbances. Night after night, conflagrations were lighted up by bands of incendiaries. Mills were attacked. Machinery was demolished. All protection for property seemed at an end." A man who can write so well as Mr. Francis should be ashamed of such writing as this.

We close with a few extracts that are more amusing. Lovers of mere anecdotical gossip will find Mr. Francis' book agreeable reading.

FATE OF ONE OF THE FOUNDERS OF THE BANK.

"Mr. Michael Godfrey, whose pamphlet has been quoted, and to whose exertions, with those of William Paterson, may be traced the successful estab-

Digitized by Google

lishment of the bank, met with a somewhat singular fate in 1695. Previously to this year, the allied armies had retreated before the wisdom of Louis, and the bravery of his soldiers. The funds supplied by the new corporation changed the scene; but the transmission of specie was difficult and full of hazard, and Mr. Godfrey left his peaceful avocations to visit Namur, then vigorously besieged by the English monarch. The deputy governor, willing to flatter the king, anxious to forward his mission, or possibly imagining the vicinity of the sovereign to be the safest place he could choose, ventured into the trenches. 'As you are no adventurer in the trade of war, Mr. Godfrey,' said William, 'I think you should not expose yourself to the hazard of it.'

"'Not being more exposed than your Majesty,' was the courtly reply, 'should I be excusable if I showed more concern?'

"'Yes!' returned William, 'I am in my duty, and therefore have a more reasonable claim to preservation.'

"A cannon-ball at this moment answered the 'reasonable claim to preservation,' by killing Mr. Godfrey with several officers near the king, and it requires no great stretch of imagination to fancy a saturnine smile passing over the countenance of the monarch, as he beheld the fate of the citizen who paid so heavy a penalty for playing the courtier in the trenches of Namur. Tradition states that Mr. Godfrey's remains, which were buried in the churchyard of St. Christopher le Stocks, were disinterred, to make room for the enlargement of that prosperous establishment in which he once felt so deep an interest, and in the service of which he may be said to have fallen."

THE MISSISSIPPI MANIA.

"The dirty street, Quincampoix, in which Law resided, was impassable. People of the highest rank clustered about his dwelling to learn their destiny, and delicate women braved all weathers with the hope of enriching themselves. 300,000 applications were made for 50,000 shares; and the destiny of an empire, remarkable for its national *hauteur*, seemed in the hands of John Law, the son of a Scottish jeweller. * * * From six in the morning until eight in the evening the street was filled with fervent worshippers of mammon. The dissolute courtiers of the yet more dissolute regent shared in the spoil. The princes of the blood were not too proud to participate. They mingled with the eager crowd, they added their voices to the Babel-like confusion, and when they won the money of the *canaille*, thought they did them too much honor in accepting it. The antechamber of Law was crowded by women of rank and beauty—the mistress of Law was flattered by ladies as irreproachable as the court of the regent would allow them to be—and interviews with Law were sought with so much assiduity, that one lady caused her carriage to be upset to attract his attention; and another stopped before his hotel, and ordered her servants to raise the cry of 'Fire.' The people emulated one another in luxury. Equipages more remarkable for splendor than taste rolled about the streets. Footmen got up behind their own carriages, so accustomed were they to that position. One of those who had done so recollected himself in time to cover his mistake by saying he wished to see if room could be made for two or three more lackeys whom he had resolved to hire. The son of a baker, wishing a service of plate, sent the contents of a jeweller's shop to his wife, with directions to arrange the articles properly for supper. The opera was crowded with cooks, ladies' maids, and *grisettes*, dressed in the superbest style of fashion, who had fallen from a garret into a carriage."

A FRENCH SETTLEMENT.

"A considerable banker at Paris having a draught brought to him from a public office in that city for a large sum, which he could not answer, after cramming down the draught into a loaded pistol, called to the gentleman who brought it, and telling him, 'This, sir, is the way that persons who have no money pay bills that are due,' instantly clapped the pistol to his ear, and shot himself dead."

THE FIRST FORGER.

"The day on which a forged note was first presented at the Bank of England forms a memorable era in its history. For sixty-four years the establishment had circulated its paper with freedom; and during this period no attempt had been made to imitate it. He who takes the initiative in a new line of wrong doing has more than the simple act to answer for; and to Richard William Vaughan, a Stafford linen-draper, belongs the melancholy celebrity of having led the van in this new phase of crime, in the year 1758. The records of his life do not show want, beggary, or starvation urging him, but a simple desire to seem greater than he was. By one of the artists employed, and there were several engaged on different parts of the notes, the discovery was made. The criminal had filled up to the number of twenty; and deposited them in the hands of a young lady to whom he was attached, as a proof of his wealth. There is no calculating how much longer bank-notes might have been free from imitation, had this man not shown with what ease they might be counterfeited."

THE FIRST CLIPPER.

"A new crime was discovered in 1767. The notice of the clerks at the bank had been attracted by the habit of William Guest, a teller, picking new from old guineas, without assigning any reason. An indefinite suspicion—increased by the knowledge that an ingot of gold had been seen in Guest's possession—was attracted; and although he asserted that it came from Holland, it was remarked to be very unlike the regular bars of gold, and that it had a considerable quantity of copper on the back. Attention being thus drawn to the behavior of Guest, he was observed to hand one Richard Still some guineas, which he took from a private drawer, and placed with the others on the table. Still was instantly followed; and on the examination of his money, three of the guineas in his possession were deficient in weight. An inquiry was immediately instituted; and forty of the guineas in the charge of Guest looked fresher than the others upon the edges, and weighed much less than the original amount. On searching his home, four pounds eleven ounces of gold filings were found, with some instruments calculated to produce artificial edges. Proofs soon multiplied; and the prisoner was found guilty. The instrument with which he had effected his fraud, of which one of the witnesses asserted it was the greatest improvement he had ever seen, is said to be yet in the mint, a memento of the prisoner's capacity and crime."

INGENUITY OF FRAUD.

"In 1780, a gentleman of eminence in the mercantile world was grieved by the contents of a letter

Digitized by Google

which he received from a correspondent at Hamburgh, the post-mark of which it bore. From the statement it contained, it appeared that a person most minutely described had defrauded the writer, under extraordinary circumstances, of 3000*l*. The letter continued to say, information had been obtained that the defrauder—the dress and person of whom it described—was occasionally to be seen on the Dutch Walk of the Royal Exchange. The object of the writer was to induce his correspondent to invite the party to dinner; and, by any moral force which could be used, compel him to return the money; adding, that if he should be found amenable to reason, and evince any signs of repentance, he might be dismissed with a friendly caution and five hundred pounds, as he was a near relation of the writer. As the gentleman whose name it bore was a profitable correspondent, the London merchant kept a keen watch on the Dutch Walk, and was at last successful in meeting, and being introduced to the cheat. The invitation to dine was accepted; and the host, having previously given notice to his family to quit the table soon after dinner, acquainted his visitor with his knowledge of the fraud. Alarm and horror were depicted in the countenance of the young man, who, with tones apparently tremulous from emotion, begged his disgrace might not be made public. To this the merchant consented, provided the 3000*l*. were returned. The visitor sighed deeply; but said that to return all was impossible, as he had unfortunately spent part of the amount. The remainder, however, he proposed to yield instantly, and the notes were handed to the merchant, who, after dilating upon the goodness of the man he had robbed, concluded his moral lesson by handing a cheque for 500*l*. as a proof of his beneficence. The following morning the gentleman went to the banker to deposit the money he had received, when, to his great surprise, he was told that the notes were counterfeit. His next inquiries were concerning the cheque, but that had been cashed shortly after the opening of the bank. He immediately sent an express to his Hamburgh correspondent, who replied that the letter was a forgery, and that no fraud had been committed upon him. The whole affair had been plotted by a gang, some of whom were on the continent, and some in England."

Mr. Francis dedicates his book, as "illustrative of the origin and progress of the Bank of England, and forming the first history yet attempted of the greatest monetary establishment in the world," to Sir Robert Peel, whom he thinks the greatest statesman of the day.

From the Courier and Enquirer.

THE BATTLES OF CONTRERAS AND CHERUBUSCO.

THE following clear and admirable description of the march and achievements of the American army, under Gen. Scott, from the day of its leaving Puebla, until it became master of the city of Mexico, will be read with universal interest, and we therefore give it place, to the exclusion of much other matter prepared for to-day's paper:

SAN ANGELO, Mexico, Aug. 31, 1847.

We left Puebla on the morning of the 7th, and entered upon a beautiful rolling country of great fertility, supplying with its gardens the inhabitants of Puebla with food, and surrounded by lofty mountains, some of which were covered with snow. Our road was gradually ascending and so good that on looking back from the head of the column, our train could be seen for miles in rear, dotting with its snow-white tops the maguey covered plain. On our left was Popocatapetl and Iscatafetl, the snow on their not distant tops rendering the air quite chilly. General Scott did not leave with us, but came on the next day with Captain Kearney's dragoons.

The second day's march was like the first, gradually ascending, passing through defiles, narrow passes and over deep chasms, where a more determined enemy might have seriously annoyed us by merely making use of the obstacles nature everywhere presented. Thick woods of the finest forest trees were abundant, and the rugged nature of the country would readily carry one back to the northern parts of New England or the passes of the "Notch." Here and there beautiful little lakes were interspersed in the deep valleys, and the clearness and coldness of their waters were almost incredible.

The third day we were to encounter the much vaunted pass of "*Rio Frio*," and also the passage of the mountain which was to lead us to the El Dorado of our hopes, the great plain of Mexico. Our march was to be long and difficult, and three o'clock saw us under way with heart and hopes full of the prospect before us. The much dreaded pass is reached and passed. The mountains which skirt the road on the left, here close upon it for about a mile, overhanging and enfilading it completely and affording with their crests most excellent coverings for an enemy's marksmen. The newly cut trees and long range of breast-works thrown up on the crest, showed us that preparations had been made, while numerous parapets with embrasures in the logs taught us what might have been done. But no men were there—the muskets and cannon were gone. Valencia, with 6,000 Mexicans, was full a day's march ahead, making for Mexico with a speed which betrayed home-sickness. Rio Frio was found to be a little stream, pouring down from the snow mountain, of icy coldness and crystal purity. After a slight pause for refreshment, we commenced our ascent of the ridge which separates the plains of Puebla and Mexico, the former of which it had hitherto skirted. For several long miles we toiled up the hill, only recompensed for our labor by what we hoped to attain at last. When all were pretty nearly worn out, a sudden turn in the road brought to our view a sight which none can ever forget. The whole vast plain of Mexico was before us. The coldness of the air, which was most sensibly felt at this great height, our fatigue and danger were forgotten, and our eyes were the only sense that thought of enjoyment. Mexico, with its lofty steeples and its chequered domes, its bright reality, and its former fame, its modern splendor and its ancient magnificence, was before us: while around on every side its thousand lakes seemed like silver stars on a velvet mantle.

We encamped that night at the base of the mountain, with the enemy's scouts on every side of us. The next day we reached *Ayotla*, only fifteen miles from Mexico by the national road, which we had hitherto been following. Here we halted until Generals Quitman, Pillow, and Worth, with their divisions, should come up. We were separated from the city by the marshes which surround *Lake Tezcuco*, and by the lake itself. The road is a causeway running through the marsh and is commanded by a steep and lofty hill called *El Pinnol*. This hill completely enfilades and commands the

Digitized by Google

national road, and had been fortified and repaired with the greatest care by Santa Anna. One side was inaccessible by nature, the rest had been made so by art. Batteries, in all mounting 50 guns of different calibres, had been placed on its sides, and a deep ditch, 24 feet wide and 10 deep, filled with water, had been cut connecting the parts already surrounded by marshes. On this side Santa Anna had 25,000 men against our force of a little over 9,000 all told.

On the 22d, we made a reconnoissance of the work, which was pronounced *impracticable*, as the lives of 5,000 men would be lost before the ditch could be crossed. We continued our search, and found another road which went round on the left, but when within five miles of the city, were halted by coming suddenly upon five strong batteries on the hill which commanded this road, at a place called *Mexicalcingo*. We soon countermarched, and then saw our danger. With one regiment and three companies of cavalry, in all about 400 men, we saw that *El Pinnol* lay directly between us and our camp, distant full 15 miles. Every eye was fixed on the hill with expectation of an approaching column, which should drive us back into a Mexican prison, while we stepped off with the speed and endurance of 400 Captain Barclays! At about midnight we arrived safely at camp, and General Scott did us the honor of calling it "the boldest reconnoissance of the war." General Worth was encamped about five miles off, that is, in a straight line, across the *Lake Chalco*, at a place of the same name, but about ten miles by the road. The Mexicans had a foundry in the mountains, at which we were getting some shells made, and on returning from which, Lieutenant Schuyler Hamilton was badly wounded.

By means of his scouts, General Worth had found a path round the left of *Lake Chalco*, which led us to the western gate of the city, and which, up to that time, had not been fortified. On the 14th, the other divisions commenced their march, while we brought up the train and the rear. In the morning, the train was sent in advance, while Smith's brigade acted as rear guard. It was composed of the rifles, 1st artillery, and the 3d infantry, with Taylor's battery. As the rear guard, marching slowly along, came up with the train, word came to General Twiggs that a force of about five thousand men were trying to cross the road between them and the train, in order to cut it off. We were then passing through a small village which, by a curious coincidence, was called *Buena Vista*. On our left were large fields of half-grown barley, through which was seen advancing, in splendid order, the enemy's column. It was the most splendid sight I had ever seen. The yellow cloaks, red caps and jackets of the lancers, and the bright blue and white uniforms of the infantry, were most beautifully contrasted with the green of the barley field. Our line of battle was soon formed, and we deployed through the grain to turn their left and cut them off from the mountains. A few shots, however, from the battery, soon showed them that they were observed, and countermarching in haste, they left their dead on the field. Thus ended our fight of Buena Vista. That night we stayed at Chalco. The next day we made a long and toilsome march over a horrible road, through which, with the utmost difficulty, we dragged our wagons by the assistance of both men and mules. The next was nearly the same, except that the road was, if possible, worse than before, as the Mexicans had blocked it up with large stones, rolled down from the neighboring hills. This night we encamped at a most beautiful olive grove, of immense size and accommodating at once both divisions. In the town, as well as in Chalco, there are still standing the churches of the Indians where the fire-worshippers assembled before Cortez had introduced a new religion. They are large and sombre edifices, differing but little from the churches of this country, and being near the city, are said to have been formerly resorted to by the ancient kings.

The next day we arrived in sight of the rest of the army, and heard the guns with which Worth was breaching the walls of San Antonio. That night the news of the death of Captain Thornton of the second dragoons reached us. He was a brave officer and a thorough gentleman, but was always unfortunate in his military career.

On the morning of the 19th, we left the little village where we had heard this sad news, and took the road to *San Juan*, about seven miles to the west and only about ten miles from the city. When we arrived here, we heard the sound of General Worth's guns, who was said to have attacked *San Augustine*, a village three miles nearer the capital, where Santa Anna was said to be with 20,000 men. When we arrived at San Juan, the men were told to sling their blankets across their shoulders, put their knapsacks into their wagons, and to put two days' bread and beef in their haversacks. When this order came, all knew that the time had come. The officers arranged their effects, put on their old coats, and filled their haversacks and flasks. Soon we were all ready for anything but a thrashing. We here heard the position of the enemy, which was nearly as follows:—Santa Anna with 20,000 men was at *San Augustine;* Valencia with 10,000 was at a hill called *Contreras*, which commanded another road parallel to the San Augustine road, but which led into it between the city and Santa Anna. Now, by cutting a road across, if we could whip Valencia, we could follow the road up and thus get in between Santa Anna and Mexico, and whip him too. General Worth, supported by General Quitman, was to keep Santa Anna in check, while Twiggs, backed by Pillow, was to try and astonish Valencia, which, you will see, he did very effectually. Pillow with some of the ten regiments was to cut the road. We left San Juan about 1 o'clock, not particularly desiring a fight so late in the day, but still not shunning it in case we could have a respectable chance. About 2 P. M., as we had crawled to the top of a hill, whither we had been ourselves pulling Magruder's battery and the mountain howitzers, we suddenly espied Valencia fortified on a hill about 200 yards off, and strongly reinforced by a column which had just come out of the city. We laid down close to avoid drawing their fire, while the battery moved past at a full gallop. Just then General Smith's manly voice rung out, "*Forward the rifles—to support the battery.*" On they went, till we got about 800 yards from the work, when the enemy opened upon them with his long guns, which were afterward found to be sixteen and eight inch howitzers. The ground was the worst possible for artillery, covered with rocks large and small, prickly pear and cactus, intersected by ditches filled with water and lined with maguey plant, itself imperviable to cavalry, and with patches of corn which concealed the enemy's skirmishers, while it impeded our own passage. The artillery advanced but slowly, under a most tremendous fire, which greatly injured it before it could be got in

Digitized by Google

range, and the thickness of the undergrowth caused the skirmishers thrown forward to lose their relative position, as well as the column. About 4 the battery got in position under a most murderous fire of grape, canister and round shot. Here the superiority of the enemy's pieces rendered our fire nugatory. We could get but *three* pieces in battery, while they had *twenty-seven*, all of them three times the calibre of ours. For two hours our troops stood the storm of iron and lead they hailed upon them, unmoved. At every discharge they laid flat down to avoid the storm, and then sprung up to serve the guns. At the end of that time, two of the guns were dismounted and we badly hurt; thirteen of the horses were killed and disabled, and fifteen of the cannoneers killed and wounded. The regiment was then recalled. The lancers had been repelled in three successive charges. The 3d infantry and 1st artillery had also engaged and successfully repelled the enemy's skirmishers without loss of either officers or men. The greatest loss had been at the batteries. Officers looked gloomy for the first day's fight, but the brigade was formed, and General Smith in person took command. All felt revived, and followed him with a yell, as, creeping low to avoid the grape, which was coming very fast, we made a circuit in rear of the batteries, and passing off to the right we were soon lost to view in the chapparal and cactus. Passing over the path that we scrambled through, behold us, at almost 6 o'clock in the evening, tired, hungry and sorrowful, emerging from the chapparal and crossing the road between it and Valencia. Here we found Cadwallader and his brigade already formed, and discovered Riley's brigade skirmishing in rear of the enemy's works. Valencia was ignorant of our approach, and we were as yet safe. In front of us was Valencia strongly entrenched on a hill-side and surrounded by a regular field work concealed from us by an orchard in our rear. Mendoza with a column of 6000 was in the road, but thinking us to be friends. On our right was a large range of hills, whose continued crest was parallel to the road, and in which were formed in line of battle 5000 of the best Mexican cavalry. On our left we were separated from our own forces by an almost impassable wilderness, and it was now twilight. Even Smith looked round for help. Suddenly a thousand *vivas* came across the hill-side, like the yells of prairie wolves in the dead of night, and the squadrons on our right formed for charging. Smith 's himself again! "Face to the rear!" "Wait till you see their red caps, and then give it to them!" Furiously they came on a few yards, then changed their minds, and, disgusted at our cool reception, retired to their couches. On the edge of the road between us and Valencia, a Mexican hamlet spread out with its mud huts, large orchards, deep cut roads and a strong church, and through the centre of this hamlet ran a path parallel to the main road, but concealed from it: it is nearly a mile long. In this road Smith's and Riley's brigade spent the night. Shields, who came up in the night, lay in the orchard, while Cadwallader was nearest the enemy's works. As we were within range of their batteries, which could enfilade the road in which we lay, we built a stone breastwork at either end to conceal ourselves from their view and grape. There we were, completely surrounded by the enemy, cut off from our communications, ignorant of the ground, without artillery, weary, dispirited, and dejected; we were a disheartened set. With Santa Anna and Salas' promise of "no quarter," a force of four to one against us, and one half defeated already, no succor from Puebla, and no news from General Scott, all seemed dark.

Suddenly the words came whispered along, "*We storm at midnight.*" Now we are ourselves again! But what a horrible night. There we lay—too tired to eat, too wet to sleep, in the middle of that muddy road, officers and men side by side, with a heavy rain pouring down upon us, the officers without blankets or overcoats, (they had lost them in coming across,) and the men worn out with fatigue. About midnight the rain was so heavy that the streams in the road flooded us, and there we stood crowded together, drenched and benumbed, waiting till daylight. At half past three the welcome word, "*Fall in*," was passed down, and we commenced our march. The enemy's works were on a hill-side, behind which rose other and slightly higher hills separated by deep ravines and gullies and intersected by streams. The whole face of the country was of stiff clay, which rendered it almost impossible to advance. We formed our line about a quarter of a mile from the enemy's works, Riley's brigade on our right. At about 4 we started, winding through a thick orchard which effectually concealed us, even had it not been dark, debouching into a deep ravine which ran within about 500 yards of the work, and which carried us directly in rear and out of sight of their batteries. At dawn of day we reached our place, after incredible exertions, and got ready for our charge. The men threw off their wet blankets and looked to their pieces, while the officers got ready for a rush, and the first smile that lit up our faces for twelve hours boded but little good for the Mexicans. On the right, and opposite the right of their work, was Riley's brigade of the 2d and 1st infantry and 4th artillery, next the rifles, then the 1st artillery and 3d infantry. In rear of our left was Cadwallader's brigade as a support, with Shields' brigade in rear as a reserve, the whole division under command of General Smith in the absence of General Twiggs. They had a smooth place to rush down on the enemy's work, with the brow of the hill to keep under until the word was given.

At last, just at daylight, Gen. Smith, slowly walking up, asked if all was ready. A look answered him. "*Men, forward.*" And we *did* "forward." Springing up at once, Riley's brigade opened, when the crack of a hundred rifles started the Mexicans from their astonishment, and they opened their fire. Useless fire, for we were so close that they overshot us, and before they could turn their pieces on us we were on them. Then such cheers arose as you never heard. The men rushed forward like demons, yelling and firing the while. The carnage was frightful, and though they fired sharply it was of no use. The earthen parapet was cleared in an instant, and the blows of the stocks could be plainly heard, mingled with the yells and groans around. Just before the charge was made, a large body of lancers came winding up the road, looking most splendidly in their brilliant uniforms. They never got to the work, but turned and fled. In an instant all was one mass of confusion, each trying to be foremost in the flight. The road was literally blocked up, and while many perished by their own guns, it was almost impossible to fire on the mass, from the danger of killing our own men. Some fled up the ravine on the left, or on the right, and many of these were slain by turning their own guns on them. Toward the city the rifles and 2d infantry led off the pursuit. Seeing that a large crowd of the fugitives were jammed up in a pass in the road,

some of our men ran through the cornfield, and by thus heading them off and firing down upon them, about 30 men took over 500 prisoners, nearly a hundred of them officers.

After disarming the prisoners, as the pursuit had ceased, we went back to the fort, where we found our troops in full possession, and the rout complete.

We found that the enemy's position was much stronger than we had supposed, and their artillery much larger and more abundant. Our own loss was small, which may be accounted for by their perfect surprise at our charge, as to them we appeared as if rising out of the earth, so unperceived was our approach. Our loss was one officer killed, Captain Hanson of the 7th infantry, and Lieutenant Van Buren of the rifles shot through the leg;—and about 50 men killed and wounded. Their force consisted of 8000 men under Valencia, with a reserve, which had not yet arrived, under Santa Anna. Their loss, as since ascertained, was as follows:—killed and buried since the fight, 750—wounded 1000, and 1500 prisoners, exclusive of officers, including four generals, Salas, Mendoza, Garcia and Guadalupe, in addition to dozens of colonels, majors, captains, &c. We captured in all on the hill 22 pieces of cannon, including five 8 inch howitzers, two long 18, three long 16, and several of 12 and 8 inches, and also the two identical 6 pounders captured by the Mexicans at Buena Vista, taken from Captain Washington's battery of the 4th artillery. The first officer who saw them happened to be the officer of the 4th, selected by General Scott to command the new battery of that regiment, Captain Drum. In addition were taken immense quantities of ammunition and muskets; in fact, the way was strewed with muskets, escopets, lances and flags for miles. Large quantities of horses and mules were also captured, though large numbers were killed.

Thus ended the glorious battle of Contreras, in which 2000 men, under General P. F. Smith, completely routed and destroyed an army of 8000 men under General Valencia, with Santa Anna and a force of 20,000 men within five miles. Their army was so completely routed that not 1500 men rejoined Santa Anna and participated in the second battle. Most people would have thought that a pretty good day's work. Not so. We had only saved ourselves, not conquered Mexico, and men's work was before us yet.

At 8 A. M. we formed again, and General Twiggs having taken command, we started on the road to Mexico. We had hardly marched a mile before we were sharply fired upon from both sides of the road, and our right was deployed to drive the enemy in. We soon found that we had caught up with the retreating party, from the very brisk firing in front, and we drove them through the little town of San Angelo, where they had been halting in force. About half a mile from this town we entered the suburbs of another called San Katherina, when a large party in the church-yard fired on the head of the column, and the balls came right among us. Our men kept rushing on their rear and cutting them down, until a discharge of grape shot from a large piece in front drove them back to the column. In this short space of time five men were killed, ten taken prisoners, and a small color captured, which was carried the rest of the day.

Meanwhile General Worth had made a demonstration on San Antonio, where the enemy was fortified in a strong hacienda; but they retired on his approach to *Cherubusco*, where the works were deemed impregnable. They consisted of a fortified hacienda, which was surrounded by a high and thick wall on all sides. Inside the wall was a stone building, the roof of which was flat and higher than the walls. Above all this was a stone church, still higher than the rest and having a large steeple. The wall was pierced with loop-holes and so arranged that there were two tiers of men firing at the same time. They thus had four different ranges of men firing at once, and four ranks were formed on each range and placed at such a height that they could not only overlook all the surrounding country, but at the same time they had a plunging fire upon us. Outside the hacienda, and completely commanding the avenues of approach, was a field work extending around two sides of the work and protected by a deep, wet ditch, and armed with seven large pieces. This hacienda is at the commencement of the causeway leading to the western gate of the city, and had to be passed before getting on the road. About 300 yards in rear of this work, another field work had been built where a cross road meets the causeway, at a point where it crosses a river, thus forming a bridge head, or *tête de pont*. This was also very strong and armed with three very large pieces of cannon. The works were surrounded on every side by large corn-fields, which were filled with the enemy's skirmishers, so that it was difficult to make a reconnoissance. It was therefore decided to make the attack immediately, as they were full of men and extended for nearly a mile on the road to the city, completely covering the causeway. The attack commenced about 1 P. M. General Twiggs' division attacked on the side towards which they approached the fort, i. e., opposite the city. General Worth's attacked the bridge head, which he took in about an hour and a half; while Generals Pillow and Quitman were on the extreme left, between the causeway and Twiggs' division. The rifles were on the left and in rear of the work, entrusted by General Scott with the task of charging the work in case General Pierce gave way. The firing was most tremendous—in fact, one continued roll while the combat lasted. The enemy, from their elevated position, could readily see our men, who were unable to get a clear view from their position. Three of the pieces were manned by "*The Deserters*," a body of about 100, who had deserted from the ranks of our army during the war. They were enrolled in two companies, commanded by a deserter, and were better uniformed and disciplined than the rest of the army. These men fought most desperately, and are said not only to have shot down several of our officers whom they knew, but to have pulled down the white flag of surrender no less than three times.

The battle raged most furiously for about three hours, when, both sides having lost a great many, the enemy began to give way. As soon as they commenced retreating, Kearney's squadron passed through the *tête de pont*, and charging through the retreating column, pursued them to the very gate of the city. As they got within about 500 yards of the gate, they were opened upon with grape and canister, and several officers wounded. Amongst the number was Captain Kearney, 1st dragoons, who lost his left arm above the elbow. Lieutenant Graham, of New York, received a severe flesh wound in his left arm. Captain McReynolds, ditto. Our loss in this second battle was large. We lost in killed seven officers, Capts. Capron, Burke, 1st artillery; Lieuts. Irons, Johnson, Hoffman, Captain Anderson, Lieut. Easely, 2d, infantry; Captain Han-

Digitized by Google

son, 7th infantry. Lieut. Irons died on the 28th. Colonel Butler, of South Carolina, and about 30 officers wounded—exclusive of the volunteers. The official returns give our loss in killed and wounded at 1150, besides officers. The Mexican loss is 500 killed in the second battle, 1000 wounded, and 1100 prisoners, exclusive of officers. Three more generals were taken, among them General Rincon, and Anaya, the provisional president; also 10 pieces of cannon, and an immense amount of ammunition and stores. Santa Anna, in his report, states his loss in killed, wounded and missing at 12,000. He had only 18,000 left out of 30,000 which he gives as his force on the 20th in both actions.

Thus ended the battle of Cherubusco, one of the most furious and deadly, for its length, of any of the war. For reasons which he deemed conclusive, General Scott did not enter the city that night, but encamped on the battle field about four miles from the western gate of the city. The next day a flag of truce came out and propositions were made which resulted in an armistice.

Meanwhile the army is encamped in the villages around the city, recruiting from their fatigue and nursing the sick and wounded. There are but few sick, and the wounded are getting along comfortably in their hospitals.

From the Union.

DIFFERENCE OF LONGITUDE BY TELEGRAPH.

One of the earliest uses of Morse's electro-magnetic telegraph, was that of determining geographical longitude. A few signals were passed between Washington and Baltimore in 1844, under the direction of Captain Wilkes, by carrying chronometers from astronomical stations to the telegraph offices. But the most complete trial of this method extant, has recently been made under the direction of the present superintendent of the United States coast survey, Professor Bache.

In the autumn of 1845, arrangements were commenced for making an experiment on the whole extent of the line from Jersey city to Washington, a distance of 250 miles. Immediately after the completion of the line in 1846, trials were made. The violent storms of the autumn, and the continual repairs along these new lines, prevented complete success in 1846. Accordingly, in the months of July and August of this year, operations were resumed on the new and more perfectly insulated lines.

Professor Bache had built, at the expense of the survey, a line from the Washington post-office to the National Observatory. He had procured for the three observatories of Washington, Philadelphia, and Jersey city, full and complete telegraph apparatus, and had connected them with the main line, so as to make these observatories temporary telegraph offices; having rented the line of the Telegraph Company for astronomical purposes only. Professor Bache had also, at the expense of the survey, erected the temporary observatory at Jersey city, and engaged the services of Professor Loomis, the late distinguished director of the Western Reserve Observatory, now in the chair of physics in the New York University. He had also engaged the services of Professor Kendall, the director of the observatory of the Central High School of Philadelphia. Lieutenant Maury, the superintendent of the National Observatory, had, early in 1845, tendered to Professor Bache the co-operation of that establishment. The arrangement of the details of the work was entrusted to Sears C. Walker, one of the assistants of the survey. It is understood that a full and detailed report of these operations will be made this autumn, by the superintendent, to the secretary of the treasury. As some partial notices of the work have already found their way prematurely into the public prints, we are authorized to lay before our readers, in an authentic form, a general view of the nature of these operations, of which the results will, in proper time, be made public.

The clocks at the observatories having been carefully regulated by astronomical observations, at 10 P. M., possession of the line for the night is given over to the astronomers, and skilful operators accompanying them at each station.

The performances of the 3d of August, 1847, may be quoted as an example of a successful night's work. The source of electrical power was a Grove's constant battery, having forty-four half-pint cups. The magnets were adjusted by the operators, and twenty clock signals were given by Mr. Zantzinger, the operator at Jersey city, at intervals of ten seconds each, and at coincidences with the clock beats. These twenty signals were compared with the Jersey city clock by Professor Loomis, and by Professor Hubbard, U. S. N., (then on a visit to Jersey city.) The same twenty were received and compared with the clock of the Philadelphia observatory by three observers, Messrs. Walker, Reynolds, and Mason, (Professor Kendall being absent.) The same set of twenty signals was also received and compared with the clock at the Washington observatory by Professor Keith, the officer charged with this duty by Lieutenant Maury.

In the same manner the twenty signals from Philadelphia and from Washington were recorded at the three stations. It is known that no two observers, with the same transit instrument and clock, obtain for it the same correction. Each has his peculiar habit of seeing and hearing. It became necessary for all the observers to meet together, and to make observations at the same place, on the same evening, with the same instruments, in order to find the reduction of each one's clock correction to a normal or average value.

After applying this correction for the peculiarities of the observers, it may be presumed, from the excellence of the instruments and experience of the observers, that the corrected clocks at Washington, Philadelphia, and Jersey city, indicated the true siderial time of these meridians, within a quarter—perhaps within a tenth part—of a second.

The method adopted of observing zenith stars before and after reversal of the transit instrument, gives to the clock time, after correcting for personal equations, a precision little short of the actual levelling. Now, with the levels in use at these places, a second of arc, or seventy feet of longitude, is represented by a line, or tenth of an inch. The precision of a full night's work may be readily reduced within forty feet, so far as the levelling instrument is concerned.

If these clocks, or chronometers, so corrected, could be suddenly brought side by side, without deranging their motions, a simple comparison of their corrected readings for the same instant of time would give the difference of longitude, with a precision not far short of the clock corrections themselves, or of the levelling observations on which they chiefly depend. This method forms the basis of the chronometer expeditions, of which extensive

Digitized by Google

and successful use was made by Robert Treat Paine, Esq., in the Massachusetts survey.

It is in the same manner that the observatories of Liverpool, England, and of Cambridge, New England, have been connected together by William Cranch Bond, Esq., by means of the chronometers of the Liverpool steamers.

But the magnetic telegraph method dispenses with the transportation of chonometers, and only transports the essential portion, viz., the clock beat itself.

The practised observer can readily strike on his key with such precision that the most delicate ear cannot distinguish any want of accord between the clock beats and the key beats. This method of beating time resembles the process of the leader of an orchestra.

So far, then, as the giving of signals is concerned, no error need be apprehended. But the party who, at another observatory, receives this signal and enters the clock time of it, according to the best of his judgment, is liable to three separate and independent sources of error.

The *first* is in the time (if any) employed by the electro-magnetic fluid or wave, in traversing, for instance, the two hundred and fifty miles of the wire that connects the Washington and Jersey city observatories.

The *second* is the time that elapses after the fluid or wave has traversed the interval and commenced the induction of magnetic action in the receiving magnet, and before it brings up the armature, and causes an armature beat that is recorded by the receiving observer.

The *third* is the error committed by the receiving observer, in noting the fraction of a second between the clock beats preceding and following his armature beat.

From this enumeration of the sources of error, it appears that, when we take the mean of the two values for the longitude between two observatories by the *eastern* and the *western* signals, the result requires four corrections:—one is for the difference, or personal equation, of the *clock corrections;* one is for that of *clock notings;* a third is for that of circuit time, (astronomically, *aberration time;*) and a fourth for that of *armature time.*

The first two corrections are ascertained by bringing the two observers together. The sum of the other two may be obtained by subtracting the longitude, by *eastern* signals, from the longitude by *western* signals. Half the remainder is the sum of the two *circuit times* and of the two *armature times.*

Now, the more the experiments are repeated, and the greater the care bestowed on them, the more nearly does the sum of these four errors approach to nothing. The conclusion from this circumstance is irresistible, that if the sum of these two pairs of quantities (all positive) is inappreciable, the difference between the two similar individuals of these pairs is, for a stronger reason, insensible.

The number of clock signals transmitted along the line is about a thousand; the number of clock notings for signals, and for personal equations, is about five thousand. It appears from a discussion of them, as might have been expected beforehand, that this method of determining geographical longitude between the stations of a trigonometrical survey, first put into successful practice by Dr. Bache, is free from all appreciable sources of constant error; and that a sufficient multiplication of the nights of observations, (those of 1846 include eleven nights,) must give to the astronomical department of the United States coast survey a precision which, for want of such a method, no other nation has attained.

Previous to the application of Morse's telegraph to purposes of geodesy by Dr. Bache, (with the exception of Robert Treat Paine's stations in New England,) hardly two points in America, out of sight of each other, could be relied upon for longitudes obtained by astronomical methods, within a thousand feet. After its free use in the United States coast survey, it may happen that this uncertainty of a thousand feet may be reduced below a hundred —a degree of precision hardly attained to by any two observations in Europe. W.

SHIP-BUILDING IN THE WEST.

We have no doubt that the building of sea vessels will hereafter become a much more important interest to the west than it has heretofore been. The experiments in ship-building that have already been made have succeeded admirably, and the enterprise of those who have engaged in that branch of industry has been properly rewarded. That the west possesses peculiar advantages for ship-building is known to all who have ever devoted attention to the subject. We have timber, iron, hemp, and every material that enters into the construction of ships, in great abundance, and the skill to put them together in their most perfect form. The vessels that have been built on the Ohio have been noticed in the seaports for their excellence, and have made their trips in such time as to prove themselves to be good sailers.

We take the subjoined article, in relation to this interesting subject, from a late Philadelphia paper:—

"Our attention has been attracted, within a few days past, to a remarkably beautiful bark lying at the foot of Washington street wharf, Southwark, the history of which, we know, would awaken the interest of our citizens. She is named the John Farnum, in honor of the senior partner of the firm of Farnum, Newhall & Co., of this city. The bark was built in Marietta, Ohio, by Capt. William Knox, for Messrs. A. & I. Waters, of that place, who are engaged extensively in the project of ship-building.

"This vessel is built in modern and approved style, and, in the judgment of many, will favorably compare with the best and prettiest of the eastern built ships.

"The John Farnum *was sent laden with Ohio corn to Ireland;* arrived in 'good order and well conditioned' at Cork, and then *sailed for this city.*

"The feasibility of ship-building on the Ohio is no longer to be questioned. On the contrary, for many reasons, it appears to be an admirable investment for eastern capital. The difficulty of getting vessels to sea is entirely obviated; four times in the year a sufficient amount of water may be depended upon in the Ohio and Mississippi, and, with the assistance of a steamer, a vessel of any ordinary draught may be safely towed to New Orleans from Marietta, a distance of two thousand miles, in less than eight days. Nor is there any difficulty in procuring freight at Cincinnati or other places at any time, of pork, flour, or other western produce, for the eastern cities, which will pay a net profit of twenty per cent., on the cost of the vessel.

"The Marietta ship-builders have all the timber necessary within a few miles of the place; the best white oak, white pine, black locust, and black walnut. The durability of the work and materials may

Digitized by Google

be judged of by the fact, that the ship Rufus Putnam, which was built in Marietta, in 1810, is still in active employ, and in good condition.

"Timber in the east is gradually becoming more scarce and expensive, and it appears to us that, sooner or later, the attention of our ship-builders must be directed to the west for their supplies."

Now, if the above estimate is correct, and if, as we presume is the case, the cost of timber is much less on this river than it is in the neighborhood of the eastern ports, why are we not to expect the establishment of extensive ship-yards on the Ohio, Kentucky, Cumberland, and Tennessee rivers? We have all the materials of which a vessel is built and fitted for sea, in the greatest abundance. Timber is abundant on the banks of all our rivers, for the hull; pine is found on the Alleghany, Tennessee, and Cumberland, for masts and spars; while all around us is iron for bolts, anchors, and chains, and hemp for cordage. When the ship is completed, we have freight for her suitable to any foreign market. Why should we continue tributary to the east for the facilities of sending our great staples to the consumers, and why cannot we avoid, in part, the heavy duties at New Orleans, in the shape of commissions, expenses of reshipment, &c., with which our produce is now burdened? We are glad to learn that a vessel is now building at the mouth of Salt river, by Messrs. Cunningham & Rogers, of this city, and that a Philadelphia and New Jersey company have recently invested a large capital at Paducah, in a ship-yard and mill, and intend to ship kiln-dried corn-meal direct from their wharf to the foreign market. Success to the undertaking.—*Louisville (Ky.) Journal.*

From the National Era.

FAREWELL TO THE SEA.

FROM THE FRENCH OF LAMARTINE.

Around my skiff, come, ocean, play,
And dash thy billows, cherished main;
Which do, like love, both night and day,
With an eternal moaning lay,
O'er these poetic wrecks complain.

I love to float upon thy face,
When, from the high and lofty shore,
The orange tree and vine, with grace,
Cast their dark shadows at its base,
When timid seamen feel secure.

Without an oar, oft, in my boat
I fondly trust myself to thee,
And lulling sleep try to promote,
As on thy tossing surge I float,
And close my eyes with apathy.

As a bold courser, swift and kind,
Which goes with speed, without a rein,
A safe asylum dost thou find,
And, with a soft and steady wind,
Dost bring me back in port again.

Ah! rock, and rock, and rock once more,
Ah! rock again, thou mighty sea;
Rock him who from his earliest hour
Has felt and owned thy awful power,
And mused on nought but woods and thee!

When God in wisdom did ordain
The sea the earth should beautify,
One thing another should enchain,
He made the sky shine on the main,
And the deep sea reflect the sky.

As freemen's thoughts so thou art free;
The ships of kings thou cast'st away,
And in thy wild insanity,
Faithful to God, who governs thee,
His voice alone wilt thou obey.

Image sublime of boundless power,
From wave to wave in vain the eye
Does follow thee to seek a shore,
In vain thy vastness I explore,
As boundless as eternity.

Thy voice majestic, sweet, and grand,
Echo upon thy shores resounds,
Or when it falls upon the strand,
Like Zephyr's whispers, soft and bland,
Murmurs melodious dying sounds.

How I love thee, when in the breeze
My timid bark does glide on thee,
When like a giant, as they please,
Under its weight the running seas
A liquid cradle make for me.

How I love thee, when at his ease
In his cool grotto Zephyr lies,
And when thy shore, covered with trees,
With smiles upon thy bosom sees
Its dancing shadows and the skies.

How I love thee, when from my poop
A thousand streamers gayly sail,
Play in the breeze which keeps them up,
And crown my batteau like a cup
Whose edge sweet flowers adorn and veil.

How sweet, when under sunny skies
Thy face is ruffled by the air,
When my hand on thy surface lies,
Thy billows fall, and swell, and rise,
Like the soft bosom of the fair.

Come, as my bark now glides away,
Come, ere we part, a kiss bestow;
With plaintive voice now farewell say,
And with a wild and dashing spray,
Once more, oh sea, come wet my brow.

And now let on thy rolling wave
My little bark float frank and free,
And whether 'neath the Sibyl's cave,
Or over Virgil's silent grave,
Sacred thy billows are to me.

Upon thy shore, 'neath heaven's dome,
Where cherished love first broke my peace,
My soul, then softened by thy hum,
Finds an asylum and a home,
And wrecks of my departed bliss.

At random float, for on the sea,
Where'er I 'm carried by the stream,
An image in each wave I see;
Upon thy banks, each rock, each tree,
Brings back some youthful charming dream.

Bubulcus.

The creative spirit streams, like the Nile, from unknown and secret sources, bursts its way through rocks and over mountains, enriches the regions through which it flows with untold wealth, and finally, when it empties by many mouths, increases the sea of knowledge.—*Jacobs.*

New, bold, and inspiring ideas are only born of a clear head that stands over a glowing heart. The most precious wine is produced upon the sides of volcanoes.—*Jacobs.*

From the National Era.

RANDOLPH OF ROANOKE.

Oh, Mother Earth! upon thy lap
Thy weary ones receiving,
And o'er them, silent as a dream,
Thy grassy mantle weaving!
Fold softly in thy long embrace
That heart so worn and broken,
And cool its pulse of fire beneath
Thy shadows old and oaken.

Shut out from him the bitter word
And serpent hiss of scorning;
Nor let the storms of yesterday
Disturb his quiet morning.
Breathe over him forgetfulness
Of all save deeds of kindness,
And, save to smiles of grateful eyes,
Press down his lids in blindness.

There, where with living ear and eye
He heard Potomac's flowing,
And, through his tall ancestral trees,
Saw autumn's sunset glowing,
He sleeps—still looking to the west,
Beneath the dark wood shadow,
As if he still would see the sun
Sink down on wave and meadow.

Bard, sage, and tribune!—in himself
All moods of mind contrasting—
The tenderest wail of human woe,
The scorn like lightning blasting;
The pathos which from rival eyes
Unwilling tears could summon,
The stinging taunt, the fiery burst
Of hatred scarcely human!

Mirth, sparkling like a diamond shower
From lips of life-long sadness,
Clear picturings of majestic thought
Upon a ground of madness:
And over all romance and song
A classic beauty throwing,
And laurelled Clio at his side
Her storied pages showing.

All parties feared him: each in turn
Beheld its schemes disjointed,
As right or left his fatal glance
And spectral finger pointed.
Sworn foe of Cant, he smote it down
With trenchant wit unsparing,
And, mocking, rent with ruthless hand
The robe Pretence was wearing.

Too honest or too proud to feign
A love he never cherished,
Beyond Virginia's border line
His patriotism perished.
While others hailed in distant skies
Our Eagle's dusky pinion,
He only saw the mountain bird
Stoop o'er his Old Dominion!

Still through each change of fortune strange,
Racked nerve, and brain all burning,
His loving faith in mother-land
Knew never shade of turning;
By Britain's lakes, by Neva's wave,
Whatever sky was o'er him,
He heard her rivers' rushing sound,
Her blue peaks rose before him.

He held his slaves: yet made withal
No false and vain pretences,
Nor paid a lying priest to seek
For scriptural defences.
His harshest words of proud rebuke,
His bitterest taunt and scorning,
Fell fire-like on the northern brow,
That bent to him in fawning.

He held his slaves: yet kept the while
His reverence for the Human;
In the dark vassals of his will
He saw but Man and Woman!
No hunter of God's outraged poor
His Roanoke valley entered;
No trader in the souls of men
Across his threshold ventured.*

And when the old and wearied man
Laid down for his last sleeping,
And at his side, a slave no more,
His brother man stood weeping,
His latest thought, his latest breath,
To Freedom's duty giving,
With failing tongue and trembling hand,
The dying blest the living.

Oh! never bore his ancient state
A truer son or braver!
None trampling with a calmer scorn
On foreign hate or favor.
He knew her faults, yet never stooped
His proud and manly feeling
To poor excuses of the wrong,
Or meanness of concealing.

But none beheld with clearer eye
The plague-spot o'er her spreading,
None heard more sure the steps of Doom
Along her future treading.
For her as for himself he spake,
When, his gaunt frame upbracing,
He traced with dying hand "Remorse!"†
And perished in the tracing.

As from the grave where Henry sleeps,
From Vernon's weeping willow,
And from the grassy pall which hides
The sage of Monticello,
So from the leaf-strewn burial-stone
Of Randolph's lowly dwelling,
Virginia! o'er thy land of slaves
A warning voice is swelling!

And hark! from thy deserted fields
Are sadder warnings spoken,
From quenched hearths, where thy exiled sons
Their household gods have broken.
The Curse is on thee—wolves for men,
And briers for corn-sheaves giving!
Oh! more than all thy dead renown
Were now one hero living!

J. G. W.

* Randolph had a hearty hatred of slave-traders, and it is said treated some of them quite roughly who ventured to cheapen his "chattels personal."

† See the remarkable statement of Dr. Parrish, his medical attendant.

RAILROADS IN THE INDIES.

THE British people are making a new movement upon the globe—one that interests the United States not a little, too—and that is, for the establishment of railways in the East Indies, mainly with the view of developing the cotton culture of the East, and to bring it cheap from a distance to a market on the sea-board. British writers in India have all along contended that the reason why the East India cotton planters could not compete with the United States was in the greater cost of the transportation. In many a province the cotton now perishes upon the ground because it is not worth the cost of transportation, or is wasted away in value to what is worse than nothing, if the transportation is attempted. Thus a serious drawback has existed upon the cotton fields of India which, added to inexperience and inferior qualities, has hitherto discouraged all competition, and given the United States her supremacy in the British markets. That supremacy, however, has been and continues to be such a source of annoyance to British enterprise and British pride, that her people have not only made extravagant and extraordinary enterprises successfully to raise cotton in India, but are now renewing them with more vigor than ever, notwithstanding past discouragements, and, thus far, very poor success. Time alone, however, can develop what is to be their success; but one thing is quite clear, that what man can do England will do, with all the wealth of the world at her feet, and with colonies in such varieties of latitude and climate that they are well said to encircle the globe, and everywhere to welcome the rising sun with her morning drumbeat.

In the month of August, we see by the London papers that an East Indian Railway Board was organized, and that on the 20th of September the three commissioners appointed were to sail for the scene of their enterprise, with a full executive staff of surveyors and engineers. The Indian government has guarantied to the Bengal company undertaking the first enterprise a *minimum* dividend of five per cent., to commence immediately, and to continue for twenty-five years, or for seventeen years after the completed work shall have been opened for traffic. A free lease for ninety years of all the land required has also been granted by the same authorities. There will be no compensation to landholders, no competition, either now or hereafter, with any rival applicants, and no parliamentary expenses. The cheerful and undivided energies of a government which, for such a purpose, may be termed despotic, will be at the ready service of the adventurers. It must be recollected, also, that labor will be abundantly and cheaply supplied, and that the requisite materials are furnished by the productions of the country in most serviceable profusion.

The British press have for a long time past indulged in lively anticipations of what would be the grand spectacles in the East Indies, when all the Indian seas were coasted by British steamers and were touched by railways. It is difficult for us Americans, remote from the scenes, or ignorant of Indian geography and resources, to appreciate the worth of all these British visions; but there can be no doubt, even with the few lights before us, that the locomotive and the steamboat are soon to recuperate and rejuvenate the earliest, the infant home of ancient civilization. The steam fleet of the British authorities in India already exceeds sixty in number, and a regular mail is running from Hong Kong, in China, to the Red Sea. Now, when there is added to this oceanic power, already constituting England the Neptune, and giving her the trident of the Eastern seas, the further power of iron roads over all the presidencies of British India, who does not feel that Great Britain is to be the Jupiter Tonans of this our earth, and that the "Indies" are emphatically at his feet? The London Times, in the ecstasies of the prospect before its countrymen, and before India, exclaims:

"If the rich produce of the plains of Bengal could be interchanged with the crops of the table land of the Deccan, or the luxuriant abundances of Candeish and Tanjore be made reciprocally available for the ryots of either province, the desolating plagues of past years would be seen no more. There will be a check to sickness. By the means of these communications, the malaria of a locality or a season may be cheaply and summarily exchanged for a climate more salubrious than Cumberland and more genial than Madeira, and the appliances of skill and the aids of nature may be brought home to every man's door. There will be new impulses and opportunities for civilization. The simple or suspicious native of the interior will be brought into easy communication with the seats of our power, and will appreciate more readily and deeply the creeds and character of a people who are now nearly the oldest as well as the mightiest amongst the rulers of his land. The commercial results of the enterprise would be equally extensive. The value of every province in India would be multiplied tenfold, and the wealth of that land of fable, which was so glowingly depicted and so seldom discovered in early days, would now really flow in full stream to our harbors. The cotton of Berar and Bejapoor, which now perishes on the ground, or is frittered to dust on the road, would supply work and bread to thousands of our industrious countrymen, and the produce of every loom and plough from the Jumna to the Cauvery would be trebled in its worth both to the laborious native and to the people with whose exports he could provide himself in exchange. But these benefits, great as they are, are exceeded by the inexpressible accession to the general welfare of the poor Hindoos. There is a class of our readers in whose eyes philanthropy outweighs every other consideration, and to their notice we recommend this enterprise; for, if the well-being of others is to command the coöperation of men, we do most boldly assert that no mission ever sailed fraught with more momentous interests to a vast population than that which is to depart from our shores on the 20th of next September."

We Americans forget, with only England, Ireland, and Scotland on the map before us, and the North American provinces about us, that Britain is at this moment founding and establishing an empire in the Indies, as plenipotent as that we ourselves boast of having upon this continent. Looking at what she is now striving to bring about in that remote quarter of the world, and contemplating the vast consequences to trade, civilization, and Christianity that her movements threaten or promise, we may all well join with the "Times" in saying "no mission ever sailed fraught with more momentous interests" than that which is composed of Mr. Macdonald Stephenson, Mr. Arthur Adams, and Mr. Alfred Beeston, with the engineers, &c., all of whom were to proceed to Calcutta in the steamer of the 20th.—*New York Express.*

MISCELLANEOUS FOREIGN INTELLIGENCE.

Dr. Pusey has thought it necessary to send the subjoined disclaimer to the *Morning Herald*;—

"Sir—In consequence of a circumstantial statement copied by you from the *Standard*, that one formerly a clergyman in the English Church said that he had 'gone to Rome' by my advice, it seems best to say, once for all, that if any person ever said anything of the sort, he was guilty of a wilful untruth. I never advised *any individual* whatever to 'go to Rome,' or leave the English Church. Such advice mostly comes from a very different quarter. On the contrary, those who know me, know well, that, being convinced of the Divine office and mission of the English Church, I have never ceased to endeavor to remove the doubts of any who have applied to me.

"I contradict this account because it was brought before me, and is detailed so very circumstantially; but I cannot undertake to contradict all the idle tales in circulation; nor, if people are willing to believe them, must I leave my proper duties to correct them.

"I remain your humble servant,

"E. B. Pusey."

"*Christ Church, 4th Sept.*"

The *Morning Post* states that some gentlemen, of high character and considerable influence with the middle classes of society, have determined to make a serious effort to establish "a corporate or collegiate institution of females," with somewhat similar objects in view to those of the Sisters of Charity on the continent. The proposal is, to establish an institution for the maintenance and education of nurses and visiters of the sick and poor. The Bishop of London, it is said, not only sanctions the plan, but has consented to become president of the proposed institution.

The Gazette publishes an order in council announcing that copyright is secured to authors and composers in the Thuringian Union, for such works as may be printed and sold in Great Britain and Ireland, and *vice versa*. The Thuringian Union consists of the following States—Saxe-Weimar Eisenach, Saxe-Altenburg, Saxe-Coburg-Gotha, Saxe-Meiningen, Schwarzburg-Rudolstadt, Schwarzburgh-Sondershausen, Reuss-Greitz, Reuss-Lobenstein-Eberdorf, and Reuss-Schleitz.

A letter from Rome, of the 20th August, says that M. Rossi, the French minister, having made an offer of armed protection to Cardinal Ferretti, the latter frankly refused it; adding, that the Pope had never relied on the intentions of France, and that he could not help considering the governments of France and Austria as bound by a secret compact.

Lord Dundonald has addressed the elective peers of Scotland, offering himself as a candidate for one of the vacancies in the representation. He bases his claims on his practical knowledge of naval affairs, which may be soon called into requisition; on his capability of suggesting important naval reforms; and on his plans for improving naval warfare, which, at one fourth of the cost of making forts and ports of refuge, "would enable the navy to annihilate every ship of war in the ports of Europe or elsewhere."

"There is scarcely any doubt," says a letter from Frankfort, "that a congress for postal reform will be held in October next, at Dresden. Hanover has assented, and the few objections made by Bavaria will be easily waived at the congress. All the principal postal administrations of Germany are agreed on the urgency of a reform."

The General Free Trade Congress will be held at Brussels on the 14th instant, in the Hotel de Ville, which has been offered by the authorities for the occasion. The deliberations of the congress, it is said, "will turn upon the general principles which constitute the basis of political economy, and of the doctrine of free trade; on the special reasons of each country for or against free trade; on the influence of the freedom of interchange on the working classes; on the arts and sciences; on civilization in general; and on the maintenance of a good understanding between nations. Any financial questions in connection with the freedom of commerce will also be discussed. The writers on political economy, and statistical writers of all countries, are invited to attend; and the congress, in all respects, is expected to be an important one."

The Belgian Association for promoting the Liberty of Commerce has issued a circular setting forth the advantages of the meeting—

"By assembling at Brussels the individuals who from their exertions and position are at the head of the politico-economical movements of the world, the Belgian Association for the Liberty of Commerce apprehend it should take the shortest road for reducing the difficulties and destroying the prejudices which continue to be opposed to the extension of the commercial relations between different countries. * * * *

"Advantage has been taken of a meeting at Brussels for the extension of reformative punishments, (*congrès penitentiare*,) and of the fortunate coincidence of an exhibition of the products of Belgian industry, to call together the present congress of the friends of political economy and statistics. Its meetings will take place four days before those of the meeting on reformative punishments—that is to say, on the 16th of September.

"The civic authorities of Brussels have placed the great hall of the Hotel de Ville at the disposal of the committee.

"A special committee, composed of Messrs. Corr-Vandermaeren and Fortamps, members of the Tribunal of Commerce and of the Committee of the Belgian Association, and Ad. Le Hardy de Beaulieu, civil engineer and secretary of the committee, has been appointed to arrange the construction of the congress, and make provision for the personal comfort of its foreign associates during their stay in the Belgian capital."

The new regulations respecting the removal to Australia of the young prisoners who have completed their term of confinement in this country, were carried into effect on Saturday last, for the first time; between seventy and eighty male prisoners being conveyed from the Millbank Prison to Woolwich. They will there be joined by another batch from the Model Prison, and will be shipped for Australia; the ship calling at Cork on the way for more. They will all be provided with "free tickets," and on their arrival in Australia will be free, like other settlers and emigrants.

A writer at Berlin, speaking of the protracted trials of the Polish prisoners for treason, says it is scarcely possible to imagine the conceit, the love of display and evident desire to attract attention,

Digitized by Google

which are manifested by the accused. Their studied and theatrical manner, from Mieroslawski downwards, shows very plainly the weakness of their character. Dombrowski's answer to his counsel was very characteristic. "How do you mean to defend yourself?" inquired the counsel.—"In a black dress coat and yellow kid gloves."

Mr. George Green, the son of the veteran aëronaut, ascended in his balloon at Frankfort, on Sunday, the 22d of August, during a storm. The voyager thus describes his trip—"The ascent, which took place at a quarter to five, excited great alarm and astonishment, because, just after a violent peal of thunder, the balloon rose almost immediately under the clouds from which the storm proceeded: when at about four thousand five hundred feet high, and on a level with them, several electrical discharges occurred; which afforded me the long wished for opportunity of observing the effect of lightning upon the air, as the clouds and the balloon were going abreast of each other at only a few hundred yards distant. The air was very much disturbed; it seemed full of eddies, which agitated the balloon a good deal. Every fresh discharge communicated a vibrating motion to the balloon, and caused it to oscillate considerably; while the rain falling on the earth made a noise like a waterfall at a great distance. In descending, we fell in with a current blowing a few points more to the north, which bore us away from the storm; and after being up about an hour, I descended at Windeeken."

Mr. Charles Ellerman, of Pelham Place, Brompton, has been taken into custody on a charge of having been concerned in the recent manufacture of counterfeit Turkish piastres. It is alleged that he got the false coin shipped to Turkey as "iron nails." The accused was taken to Marlborough street police-office, on Thursday; and the magistrate authorized his removal to Birmingham.

The *Gazetta Piemontese* states that the illustrious composer Rossini is acting as captain of the National Guard of Bologna, and displays extraordinary energy in that capacity.

Drainage of Land.—We have received a circular, issued by Mr. Hutchinson, of Manthorpe Lodge, Grantham, demonstrating the great advantage in draining which arises from the construction of air-drains for connecting head-drains in addition to the ordinary parallel drains. This improvement is shown by an experiment made by Mr. Hutchinson in a ten-acre field of strong loamy soil, upon a clay subsoil, where the system answered perfectly. The conclusion at which Mr. Hutchinson arrives is, that drains two feet deep, with air-drains to facilitate evaporation, &c., are equal to drains two feet six inches deep without such auxiliaries.

Poetry.—A Dream of Summer, 170—Death of Thomas Clarkson, 176—Farewell to the Sea, 188—Randolph of Roanoke, 189.

Scraps.—Disinfection; Telegraph and Locomotives, 160—Dr. Chalmers' MSS.; Channel Islands, 170.

The Living Age is published *every Saturday*, by E. Littell & Co., at No. 165 Tremont St., Boston. Price 12½ cents a number, or six dollars a year in advance. Remittances for any period will be thankfully received and promptly attended to. To insure regularity in mailing the work, remittances and orders should be addressed to the office of publication as above.

Twenty dollars will pay for 4 copies for a year.

Complete sets to the end of 1846, making eleven large volumes, are for sale, neatly bound in cloth, for twenty dollars, or two dollars each for separate volumes. Any numbers may be had at 12½ cents.

Agencies.—The publishers are desirous of making arrangements in all parts of North America, for increasing the circulation of this work—and for doing this a liberal commission will be allowed to gentlemen who will interest themselves in the business. But it must be understood that in all cases payment in advance is expected. The price of the work is so low that we cannot afford to incur either risk or expense in the collection of debts.

THOMAS ELLWOOD.

COMMEND me to autobiographies! Give me the veritable notchings of Robinson Crusoe on his stick —the indubitable records of a life long since swallowed up in the blackness of darkness, traced by a hand the very dust of which has become undistinguishable. The foolishest egotist who ever chronicled his daily experiences, his hopes and fears, poor plans, and vain reachings after happiness, speaking to us out of the Past, and thereby giving us to understand that it was quite as real as our Present, is in no mean sort our benefactor, and commands our attention, in spite of his folly. We are thankful for the very vanity which prompted him to bottle up his poor records and cast them into the great sea of Time, for future voyagers to pick up; for we note, with the deepest interest, that in him too was enacted that miracle of a conscious existence, the reproduction of which in ourselves awes and troubles us. He, too, had a mother; he hated and loved; the light from old-quenched hearths shone over him; he walked in the sunshine over the dust of those who had gone before him, just as we are now walking over his. These records of him remain, the footmarks of a long-extinct life, not of mere animal organism, but of a being like ourselves, enabling us, by studying their hieroglyphic significance, to decipher and see clearly into the mystery of existence centuries ago. The dead generations live again in these old self-biographies. Incidentally, unintentionally, yet in the simplest and most natural manner, they make us familiar with all the phenomena of life in the by-gone ages. We are brought in contact with real flesh and blood men and women, not the ghostly outline figures which pass for such, in what is called History. The horn lantern of the poor biographer, by the aid of which, with painful minuteness, he chronicled, from day to day, his own outgoings and incomings, making visible to us his pitiful wants, labors, trials, and tribulations of the stomach and of the conscience, sheds, at times, a strong, clear light upon contemporaneous activities; what seemed before half fabulous, rises up in distinct and full proportion; we look at statesmen, philosophers, and poets, with the eyes of those who lived perchance their next-door neighbors, and sold them beer, and mutton, and household stuffs, had access to their kitchens, and took note of the fashion of their wigs and the color of their breeches. Without some such light, all history would be just about as unintelligible and unreal as a dimly-remembered dream.

The journals of the early Friends or Quakers are in this respect invaluable. Little, it is true, can be said, as a general thing, of their literary merits. Their authors were plain, earnest men and women, chiefly intent upon the substance of things, and having withal a strong testimony to bear against carnal wit and outside show and ornament. Yet, even the scholar may well admire the power of certain portions of George Fox's journal, where a strong spirit clothes its utterance in simple downright Saxon words—the quiet and beautiful enthusiasm of Pennington—the torrent energy of Edward Burrough—the serene wisdom of Penn—the logical acuteness of Barclay—the honest truthfulness of Sewell—the wit and humor of John Roberts, (for even Quakerism had its apostolic jokers, and drab-coated Robert Halls,) and last, not least, the simple beauty of Woolman's Journal —the modest record of a life of good works and love.

Let us look at the "Life of THOMAS ELLWOOD." The book before us is a hardly-used Philadelphia reprint, bearing date of 1775. The original was published some sixty years before. It is not a book to be found in fashionable libraries, or noticed in fashionable reviews, but it is none the less deserving of attention.

Ellwood was born in 1639, in the little town of Crowell, in Oxfordshire. Old Walter, his father, was of "gentlemanly lineage," and held a commission of the peace under Charles I. One of his most intimate friends was Isaac Pennington, a gentleman of estate and good reputation, whose wife, the widow of Sir John Springette, was a lady of superior endowments. Her only daughter, Gulielma, was the playmate and companion of Thomas. On making this family a visit, in 1658, in company with his father, he was surprised to find that they had united with the Quakers—a sect then little known, and everywhere spoken against. Passing through the vista of nearly two centuries, let us cross the threshold, and look with the eyes of young Ellwood upon this Quaker family. It will doubtless give us a good idea of the earnest and solemn spirit of that age of religious awakening.

"So great a change from a free, debonair, and courtly sort of behavior, which we had formerly found there, into so strict a gravity as they now received us with, did not a little amuse us, and disappointed our expectations of such a pleasant visit as we had promised ourselves.

"For my part, I sought, and at length found, means to cast myself into the company of the daughter, whom I found gathering flowers in the garden, attended by her maid, also a Quaker. But when I addressed her after my accustomed manner, with intention to engage her in discourse, on the foot of our former acquaintance, though she treated me with a courteous mien, yet, as young as she was, the gravity of her looks and behavior struck such an awe upon me, that I found myself not so much

Digitized by Google

master of myself as to pursue any further converse with her.

"We staid dinner, which was very handsome, and lacked nothing to recommend it to me but the want of mirth and pleasant discourse, which we could neither have with them, nor, by reason of them, with one another; the weightiness which was upon their spirits and countenances keeping down the lightness that would have been up in ours."

Not long after, they made a second visit to their sober friends, spending several days, during which they attended a meeting, in a neighboring farm-house, where we are introduced by Ellwood to two remarkable personages—EDWARD BURROUGH, the friend and fearless reprover of Cromwell, and by far the most eloquent preacher of his sect; and JAMES NAYLOR, whose melancholy after history of fanaticism, cruel sufferings, and beautiful repentance, is so well known to the readers of English history under the protectorate. Under the preaching of these men, and the influence of the Pennington family, young Ellwood was brought into fellowship with the Quakers. Of the old justice's sorrow and indignation at this sudden blasting of his hopes and wishes in respect to his son, and of the trials and difficulties of the latter in his new vocation, it is now scarcely worth while to speak. Let us step forward a few years, to 1662, considering meantime how matters, political and spiritual, are changed in that brief period. Cromwell—the Maccabeus of Puritanism—is no longer among men; Charles the Second sits in his place; profane and licentious cavaliers have thrust aside the sleek-haired, painful-faced Independents, who used to groan approval to the scriptural illustrations of Harrison and Fleetwood; men easy of virtue, without sincerity, either in religion or politics, occupying the places made honorable by the Miltons, and Pyms, and Vanes of the commonwealth. Having this change in view, the light which the farthing candle of Ellwood sheds upon one of these illustrious names will not be unwelcome. In his intercourse with Penn, and other learned Quakers, he had reason to lament his own deficiencies in scholarship, and his friend Pennington undertook to put him in a way of remedying the defect.

"He had," says Ellwood, "an intimate acquaintance with Dr. *Paget*, a physician of note in London, and he, with *John Milton*, a gentleman of great note for learning throughout the learned world, for the accurate pieces he had written on various subjects and occasions.

"This person, having filled a public station in the former times, lived a private and retired life in London, and, having lost his sight, kept always a man to read for him, which usually was the son of some gentleman of his acquaintance, whom, in kindness, he took to improve in his learning.

"Thus, by the mediation of my friend, *Isaac Pennington* with Dr. *Paget*, and through him with *John Milton*, was I admitted to come to him, not as a servant to him, nor to be in the house with him, but only to have the liberty of coming to his house at certain hours when I would, and read to him what books he should appoint, which was all the favor I desired.

"He received me courteously, as well for the sake of Dr. *Paget*, who introduced me, as of *Isaac Pennington*, who recommended me, to both of whom he bore a good respect. And, having inquired divers things of me, with respect to my former progression in learning, he dismissed me to provide myself with such accommodations as might be most suitable to my studies.

"I went, and took lodgings as near to his house (which was then in *Jewen street*) as I conveniently could, and from thenceforward went every day in the afternoon, except on the first day of the week, and, sitting by him in his dining room, read to him such books in the *Latin* tongue as he pleased to have me read.

"He, perceiving with what earnest desire I had pursued learning, gave me not only all the encouragement, but all the help he could. For, having a curious ear, he understood by my tone when I understood what I read, and when I did not, and accordingly could stop me, examine me, and open the most difficult passages to me."

Thanks, worthy Thomas, for this glimpse into John Milton's dining-room!

He had been with "Master Milton," as he calls him, only a few weeks, when, being one "first day morning," at the *Bull and Mouth* meeting, *Aldersgate*, the train-bands of the city, "with great noise and clamor," headed by Maj. Rosewell, fell upon him and his friends. The immediate cause of this onslaught upon quiet worshippers was the famous plot of the Fifth Monarchy men, grim old fanatics, who (like the Millerites of the present day) had been waiting long for the personal reign of Christ and the saints upon earth, and, in their zeal to hasten such a consummation, had sallied into London streets with drawn swords and matchlocks. The government took strong measures for suppressing dissenters' meetings or "conventicles;" and the poor Quakers, although not at all implicated in the disturbance, suffered more severely than any others. Let us look at the "freedom of conscience and worship" in England under that irreverent Defender of the Faith, Charles II. Ellwood says: "He that commanded the party gave us first a general charge to come out of the room. But we, who came thither at God's requiring to worship Him, (like that good man of old, who said, *we ought to obey God rather than man*,) stirred not, but kept our places. Whereupon, he sent some of his soldiers among us, with command to drag or drive us out—which they did roughly enough." Think of it, grave men and women, and modest maidens, sitting there with calm, impassive countenances, motionless as death, the pikes of the soldiery closing about them in a circle of bristling steel! Brave and true ones! Not in vain did ye thus oppose God's silence to the Devil's uproar—Christian endurance and calm persistence in the exercise of your rights as Englishmen and men to the hot fury of impatient tyranny! From your day down to this, the world has been the better for your faithfulness.

Ellwood and some thirty of his friends were marched off to prison in old Bridewell, which, as well as nearly all the other prisons, was already crowded with Quaker prisoners. One of the rooms

Digitized by Google

of the prison was used as a torture chamber. "I was almost affrighted," says Ellwood, "by the dismalness of the place; for, besides that the walls were all laid over with black, from top to bottom, there stood in the middle a great whipping-post."

"The manner of whipping there is, to strip the party to the skin, from the waist upward, and, having fastened him to the whipping-post, (so that he can neither resist nor shun the strokes,) to lash his naked body with long, slender twigs of holly, which will bend almost like thongs around the body; and these, having little knots upon them, tear the skin and flesh, and give extreme pain."

To this terrible punishment aged men and delicately nurtured young females were often subjected during this season of hot persecution.

From the Bridewell Ellwood was at length removed to Newgate, and thrust in, with other "Friends," amidst the common felons. He speaks of this prison, with its thieves, murderers, and prostitutes, its over-crowded apartments, and loathsome cells, as "a hell upon earth." In a closet, adjoining the room where he was lodged, lay for several days the quartered bodies of Phillips, Tongue, and Gibbs, the leaders of the Fifth Monarchy rising, frightful and loathsome, as they came from the bloody hand of the executioners! These ghastly remains were at length obtained by the friends of the dead, and buried. The heads were ordered to be prepared for setting up in different parts of the city. Read this grim passage of description:—

"I saw the heads when they were brought to be boiled. The hangman fetched them in a dirty basket, out of some by-place, and setting them down among the felons, he and they made sport of them. They took them by the hair, flouting, jeering, and laughing at them; and then, giving them some ill names, boxed them on their ears and cheeks; which done, the hangman put them into his kettle, and parboiled them with bay salt and cummin seed: *that* to keep them from putrefaction, and *this* to keep off the fowls from seizing upon them. The whole sight, as well that of the bloody quarters first, as this of the heads afterwards, was both frightful and loathsome, and begat an abhorrence in my nature."

At the next session of the municipal court at the Old Bailey, Ellwood obtained his discharge. After paying a visit to "my Master Milton," he made his way to Chalfont, the home of his friends the Penningtons, where he was soon after engaged as a Latin teacher. Here he seems to have had his trials and temptations. Gulielma Springette, the daughter of Pennington's wife, his old playmate, had now grown to be "a fair woman of marriageable age," and, as he informs us, "very desirable, whether regard was had to her outward person, which wanted nothing to make her completely comely, or to the endowments of her mind, which were every way extraordinary, or to her outward fortune, which was fair." From all which, we are not surprised to learn that "she was secretly and openly sought for by many of almost every rank and condition." "To whom," continues Thomas, "in their respective turns, (till he at length came for whom she was reserved,) she carried herself with so much evenness of temper, such courteous freedom, guarded by the strictest modesty, that as it gave encouragement or ground of hope to none, so neither did it administer any matter of offence or just cause of complaint to any."

Beautiful and noble maiden! How the imagination fills up this outline limning of thee by thy friend, and, if truth must be told, admirer! Serene, courteous, healthful—a ray of tenderest and blandest light, shining steadily in the sober gloom of that old household! Confirmed Quaker as she is, shrinking from none of the responsibilities and dangers of her profession, and therefore liable at any time to the penalties of prison and whipping-post, under that plain garb and in spite of that "certain gravity of look and behavior" which, as we have seen, on one occasion awed young Ellwood into silence, youth, and beauty, and refinement assert their prerogatives; love knows no creed, and the gay, and titled, and wealthy, crowd around her, suing in vain for her favor.

"Followed, like the tided Moon,
She moves as calmly on,"

"until he at length comes for whom she was reserved," and her name is united with that of one worthy even of her—the wise, and gifted, and world-renowned WILLIAM PENN.

Meantime, one cannot but feel a good degree of sympathy with young Ellwood, her old schoolmate and playmate, placed, as he was, in the same family with her, enjoying her familiar conversation and unreserved confidence; and, as he says, the "advantageous opportunities of riding and walking abroad with her, by night as well as by day, without any other company than her maid; for, so great, indeed, was the confidence that her mother had in me, that she thought her daughter safe, if I was with her, even from the plots and designs of others upon her." So near, and yet, alas! in truth, so distant! The serene and gentle light which shone upon him, in the sweet solitudes of Chalfont, was that of a star, itself unapproachable. As he himself meekly intimates, she was reserved for another. He seems to have fully understood his own position in respect to her; although, to use his own words, "others, measuring me by the propensity of their own inclinations, concluded I could steal her—run away with her and marry her." Little did these jealous surmisers know of the true and really heroic spirit of the young Latin master. His own apology and defence of his conduct, under circumstances of temptation which St. Anthony himself could have scarcely better resisted, will not be amiss!

"I was not ignorant of the various fears which filled the jealous heads of some concerning me, neither was I so stupid nor so divested of all humanity as not to be sensible of the real and innate worth and virtue which adorned that excellent dame, and attracted the eyes and hearts of so many, with the greatest importunity, to seek and solicit her: nor was I so devoid of natural heat as not to feel some sparklings of desire, as well as others; but the

Digitized by Google

force of truth and sense of honor suppressed whatever would have risen beyond the bounds of fair and virtuous friendship. For I easily foresaw, that, if I should have attempted anything in a dishonorable way, by fraud or force, upon her, I should have thereby brought a wound upon mine own soul, a foul scandal upon my religious profession, and an infamous stain upon mine honor, which was far more dear unto me than my life. Wherefore, having observed how some others had befooled themselves, by misconstruing her common kindness (expressed in an innocent, open, free, and familiar conversation, springing from the abundant affability, courtesy, and sweetness of her natural temper) to be the effect of a singular regard and peculiar affection to them, I resolved to shun the rock whereon they split; and, remembering the saying of the poet—

'Felix quem faciunt aliena Pericula cantum,'

I governed myself in a free yet respectful carriage towards her, thereby preserving a fair reputation with my friends, and enjoying as much of her favor and kindness, in a virtuous and firm friendship, as was fit for her to show or for me to seek."

Well and worthily said, poor Thomas! Whatever might be said of others, thou, at least, wast no coxcomb. Thy distant and involuntary admiration of "the fair Guli" needs, however, no excuse. Poor human nature, guard it as one may, with strictest discipline and painfully cramping environment, will sometimes act out itself; and, in thy case, not even George Fox himself, knowing thy beautiful young friend, (and doubtless admiring her too, for he was one of the first to appreciate and honor the worth and dignity of woman,) could have found it in his heart to censure thee!

At this period, as was indeed most natural, our young teacher solaced himself with occasional appeals to what he calls "the Muses." There is reason to believe, however, that the Pagan sisterhood whom he ventured to invoke seldom graced his study with their personal attendance. In these rhyming efforts, scattered up and down his journal, there are occasional sparkles of genuine wit, and passages of keen sarcasm, tersely and fitly expressed. Others breathe a warm devotional feeling; in the following brief prayer, for instance, the wants of the humble Christian are condensed in a manner worthy of Quarles or Herbert:

"Oh! that mine eye might closed be
To what concerns me not to see;
That deafness might possess mine ear
To what concerns me not to hear;
That Truth my tongue might always tie
From ever speaking foolishly;
That no vain thought might ever rest
Or be conceived in my breast;
That by each word, and deed, and thought,
Glory may to my God be brought!
But what are wishes? Lord, mine eye
On Thee is fixed, to Thee I cry:
Wash, Lord, and purify my heart,
And make it clean in every part;
And when 't is clean, Lord, keep it too,
For that is more than I can do."

The thought in the following extracts from a poem, written on the death of his friend Pennington's son, is trite, but not inaptly or inelegantly expressed:

"What ground, alas, has any man
To set his heart on things below,
Which, when they seem most like to stand,
Fly like the arrow from the bow!
Who 's now atop ere long shall feel
The circling motion of the wheel!

"The world cannot afford a thing
Which to a well-composed mind
Can any lasting pleasure bring,
But in itself its grave will find.
All things unto their centre tend—
What had beginning must have end!

"No disappointment can befall
Us, having Him who 's ALL IN ALL!
What can of pleasure him prevent
Who hath the Fountain of Content!"

In the year 1663 a severe law was enacted against the "sect called Quakers," prohibiting their meetings, with the penalty of banishment for the third offence! The burden of the prosecution which followed fell upon the Quakers of the metropolis, large numbers of whom were heavily fined, imprisoned, and sentenced to be banished from their native land. Yet, in time, our worthy friend Ellwood came in for his own share of trouble, in consequence of attending the funeral of one of his friends. An evil-disposed justice of the county obtained information of the Quaker gathering; and, while the body of the dead was "borne on Friends' shoulders through the street, in order to be carried to the burying-ground, which was at the town's-end," says Ellwood, "he rushed out upon us with the constables and a rabble of rude fellows whom he had gathered together, and, having his drawn sword in his hand, struck one of the foremost of the bearers with it, commanding them to set down the coffin. But the Friend, who was so stricken, being more concerned for the safety of the dead body than for his own, lest it should fall, and any indecency thereupon follow, held the coffin fast; which the justice observing, and being enraged that his word was not forthwith obeyed, set his hand to the coffin, and with a forcible thrust threw it off from the bearers' shoulders, so that it fell to the ground in the middle of the street, and there we were forced to leave it; for the constables and rabble fell upon us, and drew some and drove others into the inn. Of those thus taken," continues Ellwood, "I was one. They picked out ten of us, and sent us to Aylesbury jail.

"They caused the body to lie in the open street and cartway, so that all travellers that passed, whether horsemen, coaches, carts, or wagons, were fain to break out of the way to go by it, until it was almost night. And then, having caused a grave to be made in the *unconsecrated* part of what is called the churchyard, they forcibly took the body from the widow, and buried it there."

He remained a prisoner only about two months, during which period he comforted himself by such verse-making as follows, reminding us of similar enigmas in Bunyan's Pilgrim's Progress:

Digitized by Google

"Lo! a Riddle for the wise,
In the which a Mystery lies.

"RIDDLE.

"Some men are free whilst they in prison lie;
Others who ne'er saw prison, captives die.

"CAUTION.

"He that can receive it may,
He that cannot, let him stay,
Not be hasty, but suspend
Judgment till he sees the end.

"SOLUTION.

'He 's only free indeed, who 's free from sin,
And he is fastest bound, that 's bound therein."

In the mean time, where is our "Master Milton?" We left him deprived of his young companion and reader, sitting lonely in his small dining-room, in Jewen street. It is now the year 1665—is not the pestilence in London?—A sinful and godless city, with its bloated bishops, fawning around the Nell Gwyns of a licentious and profane Defender of the Faith—its swaggering and drunken cavaliers—its ribald jesters—its obscene ballad-singers—its loathsome prisons, crowded with God-fearing men and women—is not the measure of its iniquity already filled up? Three years only have passed since the terrible prayer of Vane went upward from the scaffold on Tower Hill: "When my blood is shed upon the block, let it, oh God, have a voice afterward!" Audible to thy ear, oh bosom friend of the martyr! has that blood cried from earth; and now, how fearfully is it answered! Like the ashes which the seer of the Hebrews cast towards heaven, it has returned in boils and blains upon the proud and oppressive city. John Milton, sitting blind in Jewen street, has heard the toll of the death bells, and the night-long rumble of the burial-carts, and the terrible summons, "BRING OUT YOUR DEAD!" The Angel of the Plague, in yellow mantle, purple-spotted, walks the streets. Why should he tarry in a doomed city, forsaken of God! Is not the command, even to him, "Arise! and flee for thy life?" In some green nook of the quiet country, he may finish the great work which his hands have found to do. He bethinks him of his old friends, the Penningtons, and his young Quaker companion, the patient and gentle Ellwood. "Wherefore," says the latter, "some little time before I went to Aylesbury jail, I was desired by my quondam Master Milton to take an house for him in the neighborhood where I dwelt, that he might go out of the city for the safety of himself and his family, the pestilence then growing hot in London. I took a pretty box for him in Giles Chalfont, a mile from me, of which I gave him notice, and intended to have waited on him and seen him well settled, but was prevented by that imprisonment. But now being released and returned home, I soon made a visit to him, to welcome him into the country. After some common discourse had passed between us, he called for a manuscript of his, which having brought, he delivered to me, bidding me take it home with me and read it at my leisure, and when I had so done, return it to him with my judgment thereupon."

Now, what does the reader think young Ellwood carried in his great-coat pocket across the dikes and hedges and through the green lanes of Giles Chalfont that autumn day? Let us look further: "When I came home, and had set myself to read it, I found it was that excellent poem which he entitled PARADISE LOST. After I had, with the best attention, read it through, I made him another visit; and, returning his book with due acknowledgment of the favor he had done me in communicating it to me, he asked me how I liked it, and what I thought of it, which I modestly but freely told him; and, after some further discourse about it, I pleasantly said to him, 'Thou hast said much here of Paradise *Lost;* what hast thou to say of Paradise *Found?*' He made me no answer, but sat some time in a muse, then brake off that discourse, and fell upon another subject."

"I modestly but freely told him what I thought" of Paradise Lost! What he told him remains a mystery. One would like to know more precisely what the first critical reader of that song "of man's first disobedience" thought of it. Fancy the young Quaker and blind Milton sitting some pleasant afternoon of the autumn of that old year, in "the pretty box" at Chalfont, the soft wind through the open window lifting the white hair of the glorious old poet. Backslidden England, plague-smitten, and accursed with her faithless church and libertine king, knows little of poor "Master Milton," and takes small note of his puritanic verse-making. Alone, with his humble friend, he sits there, conning over that poem which, he fondly hoped, the world, which had grown all dark and strange to the author, "would not willingly let die." The suggestion in respect to Paradise Found, to which, as we have seen, "he made no answer, but sat some time in a muse," seems not to have been lost; for, "after the sickness was over," continues Ellwood, "and the city well cleansed, and become safely habitable again, he returned thither; and when afterwards I waited on him there, which I seldom failed of doing whenever my occasions drew me to London, he showed me his second poem, called 'PARADISE GAINED;' and, in a pleasant tone, said to me, '*This is owing to you, for you put it into my head by the question you put to me at Chalfont, which before I had not thought of.*'"

Golden days were these for the young Latin reader, even if it be true, as we suspect, that he was himself very far from appreciating the glorious privilege which he enjoyed, of the familiar friendship and confidence of Milton. But they could not last. His amiable host, Isaac Pennington—a blameless and quiet country gentleman—was dragged from his house by a military force, and lodged in Aylesbury jail; his wife and family forcibly ejected from their pleasant home, which was seized upon by the government as security for the fines imposed upon its owner. The plague was in

Digitized by Google

the village of Aylesbury, and in the very prison itself; but the noble-hearted Mary Pennington followed her husband, sharing with him the dark peril. Poor Ellwood, while attending a monthly meeting at Hedgerly, with six others, (among them one Morgan Watkins, a poor old Welshman, who, painfully endeavoring to utter his testimony in his own dialect, was suspected by the Dogberry of a justice of being a Jesuit trolling over his Latin,) was arrested, and committed to Wiccomb House of Correction.

This was a time of severe trial for the sect with which Ellwood had connected himself. In the very midst of the pestilence, when thousands perished weekly in London, fifty-four Quakers were marched through the almost deserted streets, and placed on board a ship, for the purpose of being conveyed, according to their sentence of banishment, to the West Indies. The ship lay for a long time, with many others similarly situated, a helpless prey to the pestilence. Through that terrible autumn, the prisoners sat waiting for the summons of the ghastly Destroyer; and, from their floating dungeon,

"Heard the groan
Of agonizing ships from shore to shore;
Heard nightly plunged beneath the sullen wave
The frequent corse."

When the vessel at length set sail, of the fifty-four who went on board, twenty-seven only were living. A Dutch privateer captured her, when two days out, and carried the prisoners to North Holland, where they were set at liberty. The condition of the jails in the city, where were large numbers of Quakers, was dreadful in the extreme. Ill-ventilated, crowded, and loathsome with the accumulated filth of centuries, they invited the disease which daily decimated their cells. "Go on!" says Pennington, writing to the king and bishops from his plague-infected cell in the Aylesbury prison, "try it out with the Spirit of the Lord, come forth with your laws, and prisons, and spoiling of goods, and banishment, and death, if the Lord please, and see if ye can carry it! Whom the Lord loveth, He can save at pleasure. Hath He begun to break our bonds and deliver us, and shall we now distrust him? Are we in a worse condition than Israel was when the sea was before them, the mountains on either side, and the Egyptians behind pursuing them?"

Brave men and faithful! It is not necessary that the present generation, now quietly reaping the fruit of your heroic endurance, should see eye to eye with you in respect to all your testimonies and beliefs, in order to recognize your claim to gratitude and admiration. For, in an age of hypocritical hollowness and mean self-seeking, when, with a few noble exceptions, the very Puritans of Cromwell's Reign of the Saints were taking profane lessons from their old enemies, and putting on an outside show of conformity, for the sake of place or pardon, ye maintained the austere dignity of virtue, and, with king, and church, and parliament arrayed against you, vindicated the rights of conscience, at the cost of home, fortune, and life. English liberty owes more to your unyielding firmness than to the blows stricken for her at Worcester and Naseby.

In 1667, we find the Latin teacher in attendance at a great meeting of Friends, in London, convened at the suggestion of George Fox, for the purpose of settling a little difficulty which had arisen among the Friends, even under the pressure of the severest persecution, relative to the very important matter of "wearing the hat." George Fox, in his love of truth and sincerity, in word and action, had discountenanced the fashionable doffing of the hat, and other flattering obeisances towards men holding stations in church or state, as savoring of man-worship—giving to the creature the reverence only due to the Creator—as undignified and wanting in due self-respect, and tending to support unnatural and oppressive distinctions among those equal in the sight of God. But some of his disciples evidently made much more of this "hat testimony" than their teacher. One John Perrott, who had just returned from an unsuccessful attempt to convert the pope, at Rome, (where that dignitary, after listening to his exhortations, and finding him in no condition to be benefited by the spiritual physicians of the Inquisition, had quietly turned him over to the temporal ones of the Insane Hospital,) had broached the doctrine that, in public or private worship, the hat was not to be taken off, without an immediate revelation or call to do so! Ellwood himself seems to have been on the point of yielding to this notion, which appears to have been the occasion of a good deal of dissension and scandal. Under these circumstances, to save truth from reproach, and an important testimony to the essential equality of mankind from running into sheer fanaticism, Fox summoned his tried and faithful friends together, from all parts of the United Kingdom, and, as it appears, with the happiest result. Hat-revelations were discountenanced, good order and harmony re-established, and John Perrott's beaver, and the crazy head under it, were from thenceforth powerless for evil. Let those who are disposed to laugh at this notable Œcumenical Council of the Hat, consider that ecclesiastical history has brought down to us the records of many larger and more imposing convocations, wherein grave bishops and learned fathers took each other by the beard upon matters of far less practical importance.

In 1669, we find Ellwood engaged in escorting his fair friend, Gulielma, to her uncle's residence in Sussex. Passing through London, and taking the Tunbridge road, they stopped at *Seven Oak* to dine. The Duke of York was on the road, with his guards and hangers-on, and the inn was filled with a rude company. "We hastened," says Ellwood, "from a place where we found nothing but rudeness; the roysterers who swarmed there, besides the damning oaths they belched out against each other, looked very sourly upon us, as if they grudged us the horses which we rode and the clothes we wore." They had proceeded but a

little distance, when they were overtaken by some half dozen drunken rough-riding cavaliers, of the Wildrake stamp, in full pursuit after the beautiful Quakeress. One of them impudently attempted to pull her upon his horse before him, but was held at bay by Ellwood, who seems, on this occasion, to have relied somewhat upon his "stick," in defending his fair charge. Calling up Gulielma's servant, he bade him ride on one side of his mistress, while he guarded her on the other. "But he," says Ellwood, "not thinking it perhaps decent to ride so near his mistress, left room enough for another to ride between." In dashed the drunken retainer, and Gulielma was once more in peril. It was clearly no time for exhortations and expostulations, "so," says Ellwood, "I chopped in upon him, by a nimble turn, and kept him at bay. I told him I had hitherto spared him, but wished him not to provoke me further. This I spoke in such a tone as bespoke an high Resentment of the Abuse put upon us, and withal, pressed him so hard with my Horse, that I suffered him not to come up again to Guli." By this time, it became evident to the companions of the ruffianly assailant that the young Quaker was in earnest, and they hastened to interfere. "For they," says Ellwood, "seeing the contest rise so high, and probably fearing it would rise higher, not knowing where it might stop, came in to part us; which they did, by taking him away."

Escaping from these sons of Belial, Ellwood and his fair companion rode on through Tunbridge Wells, "the streets thronged with men, who looked very earnestly at them, but offered them no affront," and arrived, late at night, in a driving rain, at the mansion house of Harbert Springette. The fiery old gentleman was so indignant at the insult offered to his niece, that he was with difficulty dissuaded from demanding satisfaction at the hands of the Duke of York.

This seems to have been his last ride with Gulielma. She was soon after married to William Penn, and took up her abode at Worminghurst, in Sussex. How blessed and beautiful was that union may be understood from the following paragraph of a letter, written by her husband, on the eve of his departure for America to lay the foundations of a Christian colony:

"My dear Wife! remember thou wast the love of my youth, and much the joy of my life—the most beloved, as well as the most worthy of all my earthly comforts; and the reason of that love was more thy inward than thy outward excellences, which yet were many. God knows, and thou knowest it, I can say it was a match of Providence's making; and God's image in us both was the first thing and the most amiable and engaging ornament in our eyes."

About this time, our friend Thomas, seeing that his old playmate at Chalfont was destined for another, turned his attention towards a "young friend, named Mary Ellis." He had been for several years acquainted with her, but now he "found his heart secretly drawn and inclining towards her." "At length," he tells us, "as I was sitting all alone, waiting upon the Lord for counsel and guidance in this, in itself and to me, important affair, I felt a word sweetly arise in me, as if I had heard a voice which said, *Go, and prevail!* and faith springing in my heart at the word, I immediately rose and went, nothing doubting." On arriving at her residence, he states that he "solemnly opened his mind to her," which was a great surprisal to her, for she had taken in an apprehension, as others had also done, that his eye had been fixed elsewhere and nearer home. "I used not many words to her," he continues, "but I felt a divine power went along with the words, and fixed the matter expressed by them so fast in her breast that, as she afterwards acknowledged to me, she could not shut it out."

"I continued," he says, "my visits to my best beloved friend until we married, which was on the 28th day of the eighth month, 1669. We took each other in a select meeting of the ancient and grave Friends of that country. A very solemn meeting it was, and in a weighty frame of spirit we were." His wife seems to have had some estate; and Elwood, with that nice sense of justice which marked all his actions, immediately made his will, securing to her, in case of his decease, all her own goods and moneys, as well as all that he had himself acquired before marriage. "Which," he tells, "was indeed but little, yet, by all that little, more than I had ever given her ground to expect with me." His father, who was yet unreconciled to the son's religious views, found fault with his marriage, on the ground that it was unlawful, and unsanctioned by priest or liturgy; and consequently, refused to render him any pecuniary assistance. Yet, in spite of this and other trials, he seems to have preserved his serenity of spirit. After an unpleasant interview with his father, on one occasion, he wrote, at his lodgings in an inn, in London, what he calls "A Song of Praise." An extract from it will serve to show the spirit of the good man in affliction:

"Unto the Glory of Thy Holy Name,
Eternal God! whom I both love and fear,
I hereby do declare, I never came
Before Thy throne, and found Thee loth to hear,
But always ready with an open ear.
And, though sometimes Thou seem'st Thy face to hide,
As one that had withdrawn his love from me,
'T is that my Faith may to the full be tried,
And that I thereby may the better see
How weak I am when not upheld by Thee!"

The next year, 1670, an act of parliament, in relation to "Conventicles," provides that any person who should be present at any meeting, under color or pretence of any exercise of religion, in other manner than according to the liturgy and practice of the Church of England, "should be liable to fines of from five to ten shillings; and any person preaching at or giving his house for the meeting, to a fine of twenty pounds—one third of the fines being received by the informer or inform-

Digitized by Google

ers." As a natural consequence of such a law, the vilest scoundrels in the land set up the trade of informers and heresy-hunters. Wherever a dissenting meeting or burial took place, there was sure to be a mercenary spy, ready to bring a complaint against all in attendance. The Independents and Baptists ceased, in a great measure, to hold public meetings, yet even they did not escape prosecution. Bunyan, for instance, in these days, was dreaming, like another Jacob, of angels ascending and descending, in Bedford prison. But upon the poor Quakers fell, as usual, the great force of the unjust enactment. Some of these spies or informers, men of sharp wit, close countenances, pliant tempers, and skilled in dissimulation, took the guise of Quakers, Independents, or Baptists, as occasion required, thrusting themselves into the meetings of the proscribed sects, ascertaining the number who attended, their rank and condition, and then informing against them. Ellwood, in his journal for 1670, describes several of these emissaries of evil. One of them came to a Friend's house, in Bucks, professing to be a brother in the faith, but, overdoing his counterfeit Quakerism, was detected and dismissed by his host. Betaking himself to the inn, he appeared in his true character, drank and swore roundly, and confessed over his cups that he had been sent forth on his mission by the Rev. Dr. Mew, Vice Chancellor of Oxford. Finding little success in counterfeiting Quakerism, he turned to the Baptists, where, for a time, he met with better success. Ellwood, at this time, rendered good service to his friends, by exposing the true character of these wretches, and bringing them to justice for theft, perjury, and other misdemeanors.

While this storm of persecution lasted, (a period of two or three years,) the different dissenting sects felt, in some measure, a common sympathy, and, while guarding themselves against their common foe, had little leisure for controversy with each other; but, as was natural, the abatement of their mutual suffering and danger was the signal for renewing their suspended quarrels. The Baptists fell upon the Quakers, with pamphlet and sermon; the latter replied in the same way. One of the most conspicuous of the Baptist disputants was the famous Jeremy Ives, with whom our friend Ellwood seems to have had a good deal of trouble. "His name," says Ellwood, "was up for a topping Disputant. He was well read in the fallacies of logic, and was ready in framing Syllogisms. His chief art lay in tickling the humor of rude, unlearned, and injudicious hearers.

The following piece of Ellwood's, entitled "*An Epitaph for Jeremy Ives*," will serve to show that wit and drollery were sometimes found even among the proverbially sober Quakers of the seventeenth century:

"Beneath this stone, depressed doth lie
The Mirror of Hypocrisy—
Ives, whose mercenary tongue
Like a Weathercock was hung,
And did this or that way play,
As Advantage led the way.
If well hired, he would dispute,
Otherwise, he would be mute.
But, he 'd bawl for half a day,
If he knew and liked his pay.

"For his person, let it pass;
Only note his face was brass.
His heart was like a pumice stone,
And for Conscience he had none.
Of *Earth* and *Air* he was composed
With *Water* round about enclosed.
Earth in him had greatest share,
Questionless, his life lay there;
Thence his cankered Envy sprung,
Poisoning both his heart and tongue.

"Air made him frothy, light, and vain,
And puffed him with a proud disdain.
Into the Water oft he went,
And through the water many sent,
That was, ye know, his element!
The greatest odds that did appear
Was this, for aught that I can hear,
That he in *cold* did others dip,
But did himself *hot* water sip.

"And his cause he'd never doubt,
If well soaked o'er night in Stout;
But, meanwhile, he must not lack,
Brandy, and a draught of Sack.
One dispute would shrink a bottle
Of three pints, if not a pottle.
One would think he fetched from thence
All his dreamy eloquence.

"Let us now bring back the Sot
To his Aqua Vita pot,
And observe, with some content,
How he framed his argument.
That his whistle he might wet,
The bottle to his mouth he set,
And, being Master of that Art,
Thence he drew the *Major* part,
But left the *Minor* still behind;
Good reason why, he wanted wind;
If his breath would have held out,
He had *Conclusion* drawn, no doubt."

The residue of Ellwood's life seems to have glided on in serenity and peace. He wrote, at intervals, many pamphlets in defence of his society and in favor of liberty of conscience. At his hospitable residence, the leading spirits of the sect were warmly welcomed. George Fox and William Penn seemed to have been frequent guests. We find that, in 1683, he was arrested for seditious publications, when on the eve of hastening to his early friend, Gulielma, who, in the absence of her husband, Governor Penn, had fallen dangerously ill. On coming before the judge, "I told him," says Ellwood, "that I had that morning received an express out of Sussex, that William Penn's wife (with whom I had an intimate acquaintance, and strict friendship, *ab ipsis fere incunabilis*, at least, *a teneris unguiculis*) lay now ill, not without great danger, and that she had expressed her desire that I would come to her as soon as I could." The judge said, "He was very sorry for Madam Penn's illness," of whose virtues he spoke very highly, but not more than was her due. Then he

Digitized by Google

told me, "that, for her sake, he would do what he could to further my visit to her." Escaping from the hands of the law, he visited his friend, who was by this time in a way of recovery; and, on his return, learned that the prosecution had been abandoned.

At about this date his narrative ceases. We learn, from other sources, that he continued to write and print in defence of his religious views up to the year of his death, which took place in 1713. One of his productions, a poetical version of the Life of David, may be still met with, in the old Quaker libraries. On the score of poetical merit, it is about on a level with Michael Drayton's verses on the same subject. As the history of one of the firm confessors of the old struggle for religious freedom, as a genial-hearted and pleasant scholar, as the friend of Penn and Milton, and the suggester of PARADISE REGAINED, we trust our hurried sketch has not been altogether without interest; and that, whatever may be the religious views of our readers, they have not failed to recognize a good and true man in Thomas Ellwood.

From Chambers' Journal.

BELIEF AND CONVICTION.

BETWEEN these two there is all the difference in the world. Perhaps there are scarcely ten thieves or dishonest tradesmen in England who do not *believe* that "honesty is the best policy;" but the actual conduct of each shows clearly enough that they are not *convinced* of this truth. Men scarcely ever act from opinions to which they have given merely theoretical assent. Unless the mind has been compelled into conviction by the reasons and grounds of assent having been repeated over and over again, brought before their eyes, and forced into their attention by instances and examples constantly renewed and impressed indelibly by the frequency with which they are presented—unless, I say, this be the way in which opinions are formed, they have not the slightest influence over men's actions. Just as in the material world the unceasing operation of some force, such as gravitation, is necessary to carry on and keep up with constancy the movement of the universe, where no mere casual impulse would suffice to produce aught beyond a momentary start, so in the world of thought and moral action, it is no bare and momentary sight of the truth which can effect anything practical. The wisdom of age and experience is precisely this —*conviction from long familiarity with the proofs* of those truths which the young and inexperienced have merely read in books or heard from others. If you tell a young and vigorous man that he will injure his health by this or that practice, he will probably give his verbal assent; but no *impression* is made on the mind, and he proceeds to do that which the older man has so strongly associated with the feelings of pain and disease consequent on it, that even if he were as young and healthy, he would not, and could not neglect the danger. The statements of science are *believed* by the great mass of peoplo of course on trust. If you tell one who is totally ignorant of astronomy, that on such a day a hundred years to come there will be an eclipse, he will believe it; but if any great stake depended upon it, such as his fortune or his life, he would immediately become restless and unsatisfied, showing clearly that his *belief* was not *conviction*, whilst the astronomer, who had gone carefully through every step of the investigation, would be perfectly at ease.

No one can ever become a man of decided character, whose opinions are not thus founded on "conviction," as opposed to mere "belief." For some excellent remarks on this point, the reader is referred to that admirable work, "Foster's Essays." For, without firm grounds for his "belief," he will "waver about with every wind of doctrine." If we examine the daily conduct of all classes of society, we see in every one this want of "conviction." If a set of propositions were drawn up, on which half a million of people agreed, by nine tenths of them would the greater portion be violated in their conduct. Take, for instance, a set of such assertions as those relating to the preservation of health. "Fresh air is necessary," "Exercise is necessary," "Moderation in eating and drinking," &c. &c. Now, if people really were *convinced* of these facts, their conduct would show it. But they are *not* convinced, or anything like it. Nothing is so difficult as to *convince* people of the most obvious and generally admitted truths, especially if their own welfare depends upon acting on these truths. You may easily enough find persons to support aërial machines, impossible railways, or any other absurdity; but directly you try to make them *act* in accordance with principles, the truth of which they have admitted all their lives, you find you are talking to empty air. If one ten-thousandth part of the money, time, and energy were employed in putting into practice the most simple and evident truths, which are now squandered in useless vagaries, the comfort, health, wealth, and happiness of all classes throughout Europe would be more advanced in two years than in the last two hundred years. What is wanted is not a crusade to preach new opinions, but to get everybody to act up to those he already has. The object to be aimed at is the substitution of that thorough, clear-sighted, determined "conviction" which impels a man on as effectually as if the pains and punishment of neglect were staring him in the face, and about to fall on him immediately—the substitution of this for that lazy "belief" which gives assent because it is no more trouble than to dissent. Money won easily is lost again easily: opinions taken up without much care are either changed in the same way, or at any rate remain barren, lifeless, useless things. It is only by going carefully through every reason on which they are founded, and by thus having the mind deeply and frequently impressed with the reality of the truth, that these profitless and empty "beliefs" can be converted into practical principles. The difference between one man and another will be found to depend very greatly on the attention he has given to the *proofs* and *reasons* of things. The creed of one man is his own property, for he has made it himself; that of another is made up of odds and ends borrowed from all sources, often disagreeing with each other, and having no firm foundation whatever. Such a man is "unstable as water, and shall not prevail."

THE MERCHANT.

CHAPTER I.

We might discover an interesting chapter of human life, well filled with curious facts, could we board that noble East Indiaman just entering the Plymouth docks, and read the hearts and the lives, as well as scan the features, of the anxious crowd who, gathered together on her deck, appear all impatient to land. Seldom could we find more variety of character and circumstance.

We must, of necessity, mingle with that group, for from among it have we to single out the chief subject of our tale. Ah! now you cast a curious eye around. It is not that young dragoon, with twisted moustache, and sallow skin, who, on account of ill-health, is returning to join the depot of his regiment; nor is it that very lovely, delicate-looking woman, who, for the same cause, has been sent by a husband, far more advanced in years, to reside for a while with his family in England, on whom the young soldier we have just mentioned is bestowing many little attentions, of the same class as those by which he has striven to alleviate the dulness of the long voyage to her. It is not that veteran hero who has fought on so many bloody fields; not that imperious judge, whose arbitrary behests are obeyed by his servants with trembling haste; nor is it that pale, sickly widow, who presses her young child to her breast, and anxiously reflects on what welcome will await her and her orphan at the family hearth of him who was her protector and support. It is none of these (though each may have a tale to tell) that I am seeking earnestly. But I discover him now; and though you did not fix on him for a hero, and exclaim triumphantly, "This is he!" yet, when you mark him closer, you shall acknowledge that perhaps I have chosen well, or at least, that twenty years ago he must have been admirably qualified to sustain the character. Nay, reader, when you are as well acquainted with him as I intend to make you, you shall confess that (strange as it seems to talk of romance at forty!) he yet retains most of the necessary ingredients of a hero. You hinted at twenty years ago. Well, it is exactly twenty years since Edmund Neville quitted his native land, never to set foot on her shores till this very day; and at his departure he was all that you may suppose him to have been, from what you see now. Those locks, now whitened by a fiery sun, by arduous toil, by grief of heart, were then of a glossy chestnut; those lips, now habitually compressed, wore then a smile of uncommon sweetness, into which they can still occasionally relax; those thoughtful, mournful eyes, then sparkled with hope; that well-proportioned figure, that wears an air of becoming dignity, had then an elasticity and freedom of motion at once graceful and exhilarating to behold. No young adventurer ever set out with a more sanguine spirit than did Edmund Neville; and now he returns with feelings of loneliness and depression even far beyond those usually entertained by the exiles of many years. He had quitted England an orphan, but not, therefore, without leaving fond hearts to mourn at his departure. Destitute of fortune—loving passionately the beautiful sister of a friend, by whom he was in turn beloved, and who was as portionless as himself—he turned with the ardor of youth, and of a sanguine and energetic temperament, to bright prospects which opened to him in the East, promising to return in a few, a very few years, to claim Juliet Markham as his bride, and again to seek with her a golden land. It was twenty years ago that he gave that promise—and it is yet unfulfilled. The most indefatigable application was rewarded by gradual advancement; but she for whom all his efforts were made, meanwhile sickened and died, while he labored for her in a distant land, and did not learn, for months after the event, that she who animated all his endeavors had passed into that state in which all he could bestow could profit her nothing. Still he did not abandon his avocations; he was far too wretched to be idle. In vast and splendid attempts he ran bold risks, and amassed princely wealth. At length he wearied of his labors; he felt a yearning for his native land, and yielded to the impulse, though to do so at that moment asked the sacrifice of thousands. He set sail for England, and proposed, the moment he reached her shores, to seek the dearest friend he possessed in her, the brother of his betrothed—a man happy in those domestic ties which Neville wanted, but slenderly furnished with the riches with which he was so amply supplied.

CHAPTER II.

Mr. Markham, holding in his hand an open letter, which conveyed the welcome promise of Neville's arrival that very evening at the Grange, was standing with his wife before a picture representing a very beautiful girl in the costume worn twenty years before. Both gazed on it with mournful reflections. At length Mr. Markham said, "Shall we remove this picture, or shall we leave it here, Maria? Do you think that Edmund Neville will perceive Juliet's strong resemblance to it? Do you think the sight of it will distress him?"

"I know not what to advise," replied Mrs. Markham; "he cannot come here without being reminded of his youth; he must be aware of that, and yet, you see, he comes. If he must see Juliet, he may as well see the picture; it is one and the same thing."

"She is so exactly in age and person what my sister was when he parted from her," said Mr. Markham, thoughtfully and sadly—"so exactly what he may imagine her to have been when grieving over his absence. Poor Juliet! had he come a few months ago, when she was gay and happy, he would not have found a resemblance so distressing!"

"Does he ever mention his betrothed to you in his letters?"

"Never. He is one of those who never speak or write on subjects on which they feel acutely, unless duty calls for the exertion."

At this moment a pretty child ran into the room. "Tell me, dear papa," she said, "is the great 'Indian Nabob' really coming to see us?"

By this name the wealthy merchant often went in his friend's family, and it conveyed very mysterious ideas of him to the younger members of it. He was half identified in their minds with the strange idols which once arrived in one of the boxes of rich Indian curiosities which had often found their way to the Grange. Little Marion, having procured an answer to her first question, had still an important one to propound.

"Papa," she said, "we all very well know how beautiful and good Juliet is, and that she deserves much more than any of us; but how did Mr. Neville guess this, that he should always mark all his prettiest gifts with her name?"

Her father patted her cheek, amused by her

Digitized by Google

earnest curiosity, and replied with a smile, "Probably the benevolent fairy who presided at her christening, and gave her all her good gifts, floated across the ocean to whisper this in the ears of the nabob, Marion; what do you think?"

"Why, I really think that is very likely, papa," cried Marion, who loved the marvellous, and in her merry mood always feigned to credit the wildest fancies with which her favorite books abounded; and those favorite books, I almost fear to confess it, were no other than the Arabian Nights and other tales, with which I and those of my generation were allowed to delight ourselves; and which Mr. Markham, remembering the exquisite pleasure which he had enjoyed, had the good nature, if I may not say the good sense, to let his children enjoy also. And now Juliet entered; and you, my reader, seeing her thus for the first time, will wonder why Marion talked such nonsense as to call her beautiful, and why Mr. Markham appeared to hold the same opinion. Why should this pale girl, with her sad and serious countenance, and her listless step, be termed beautiful? Wait a little; perhaps she will raise those drooping eye-lids, fringed with their long black eye-lashes; then shall you behold eyes of a wondrous lustre—large, liquid, gray eyes—that beam with intellect and with feeling. Perhaps she will speak, and you will see a brilliant glow mount up on her cheek, and fade away again as quickly; you will see two rows of pearly teeth; and, if Marion can make her smile, you will see a hundred dimples play around her mouth. Ah! if you had beheld her a few months since, I need not have written all this to convince you that she is lovely.

Juliet has not yet seen her nineteenth birth-day. What can have worked so great a change in one so young? Nay, reader, why ask the question? Sure I am that every one who reads this passage can answer it. It is true that the heart of youth is not easily cast down; it triumphs over dangers, difficulties, hardships, sufferings, poverty; it recovers the loss of friends, the defeat of projects; it can hope on, and continue to pursue the happiness which has a thousand times eluded its grasp; it can do all this; but there are pangs at which older hearts mock, and at which it will mock too, in its turn—pangs which, to the young, fresh, ardent heart, are as the severing of soul and body, inexpressibly agonizing.

And Juliet, this beautiful young girl, what is it but that she has drunk the first draught of the bitter waters of Marah—the waters of disappointment! And before she tasted of them she fancied herself in the garden of Eden, so happy and rejoicing was she; but now it seems to her that she has suddenly discovered herself to be a wanderer and an outcast in the waste howling wilderness. Now may she, with George Herbert, say, not repiningly, but with a grateful, though a broken, spirit:—

"At first thou gav'st me milk and sweetnesse—
I had my wish and way:
My days were strewed with flowers and happinesse—
There was no moneth but May;
But with my yeares sorrow did twist and grow,
And made a party, unawares, for woe."

Juliet, languid as she was, shared the eager wish for the arrival of her father's noble-hearted merchant friend. She knew well the history of his early love and grief, and could trace in memory a fair vision of her aunt, which she cherished with the utmost tenderness. Everything that remained of her, in the hearts and minds of those who had known and loved her, and in the memorials which she had left behind, conveyed the impression of so much tenderness and truth, such meekness and devotion of spirit, such touching resignation, that Juliet could not but believe that she had been a being rarely equalled, and never to be forgotten. She felt that she could conceive and sympathize with the feelings of him who was now about to return to her home, and would find her not. She contrasted their fates with her own; and, though she wept for them, the tears which she shed for herself were far more bitter. They had loved with unbroken constancy and unshaken trust. Juliet sickened as she remembered the beautiful image which had once been enshrined in her heart, and then looked on it disfigured and dethroned, lying in shame and degradation in the dust; and, first to love, and then to despise—Juliet thought that no dart from the quiver of Death could inflict a wound like this.

CHAPTER III.

At length evening came, and with it came Mr. Neville, and the merchant was quite unlike what any one of the expecting group had supposed that he would prove. Mr. Markham, who had parted from a fiery, enthusiastic youth, was scarcely prepared for the calm dignity of his manhood. The children, who regarded him from a distance with something of the awe and curiosity which a Bengal tiger might inspire, were amazed by the sweetness and gentleness of his voice and manner. Juliet had not thought that he would look so old, but, in spite of his whitened hair and bronzed skin, the unquenched fire of his dark eye, the whiteness of his teeth, and the freedom of his movements, quickly removed the impression of advanced age. Mrs. Markham was surprised to find him so young.

After the first warm greeting of the friends was over, and the feelings excited by it had partly subsided, Mr. Neville showed how desirous he was to make acquaintance with each member of the little group. Juliet was quite in the background, and her little brothers and sisters crowded round her, and completely shut her out from view. Her father put them aside, and called her to him. She well knew the tide of painful associations which must fill the stranger's breast on hearing her name, and on beholding her for the first time. She advanced with head and eyes inclined downwards; her raven hair was drawn back from her classic brow; the color mounted visibly on her cheek, then rushed back, leaving her colorless as marble. She breathed quickly with agitation. Her father glanced at his friend as she approached. He saw him start, and briefly, but tenderly, he said:—

"This is my eldest child, my Juliet."

Taking her hand, he placed it in that of Neville, and by a kind pressure spoke his acquaintance and sympathy with all that was passing in his breast. Neville was in a dream;—one of those heart-sickening dreams in which we act over again the happy scenes of youth.

"Oh, miserable power to dreams allowed!"

None of the supernatural horrors, the terrific perils, which we often encounter in sleep, cause half the pain which we experience in retracing reality step by step.

Juliet felt Neville's hand tremble; the moment that she could withdraw hers, she fell back, and a few hot tears rolled down her cheek unperceived.

Neville grew absent in his replies, and declined all refreshment, though he had travelled far. His

Digitized by Google

friend interpreted these signs as weariness, and conducted him to the chamber prepared for him. When alone together, they could not abstain from retrospections of the past. At length Neville himself alluded to the perfect resemblance which Juliet bore to her whom he had left as fresh a flower, blooming in the same soil. As he spoke his countenance changed, his manly voice faltered. Emotion banished self-possession. He resolved that this comment should be made for the first and last time. He would never again venture to approach this subject.

When Neville was left to himself, he found it impossible to obtain rest. Old recollections haunted and agonized him. Visions of an hour's birth flitted before him. In vain did he attempt to separate the Juliet who was not, and the Juliet who was. He trembled on the brink of a discovery, that to him they must henceforth be the same. He passed a night of restless pain, shamed and harassed by this strange intermixture of the past with the present. He rose with the dawn, and threw open the window of his chamber to breathe the morning air, which seldom fails to refresh the sickest head or heart. He gazed forth on a scene once so familiar to him, and retraced with little difficulty every feature of it. While thus employed, he forgot the lapse of time. Suddenly the sound of the church-bell struck his ear. What village ceremony is about to take place? He felt a superstitious desire that no funeral train should meet his eye, as the omen attending his first return to the Grange. He was diverted from his fears by beholding his host issue from the house with his family, and, quitting the garden, take the winding path over the rising common, which he so well knew led immediately to the church porch. He quickly descried among the group the slight form of Juliet. He saw, too, how the younger children hung about her with fondness, and her father drew her tenderly to his side. Neville's eyes were fixed upon her till she disappeared among the trees which bounded the common. Then he covered his face with his hands, and in his loneliness he wept. It was as if he had returned to find Juliet in unimpaired youth and beauty, while, in himself, all freshness of feeling, all liveliness of hope, all elasticity of spirit, had been numbed by the touch of time. The contrast was bitter.

CHAPTER IV.

Neville was roused from his deep reverie by the merry shouts of the children as they came bounding over the common on their return. The merchant prepared to join his friend, and, after their first greeting, asked an explanation of the proceeding he had witnessed. "Was it not uncommon?"

"No, not uncommon," replied Mr. Markham; "for it is of daily occurrence. At this hour Mr. Villiers, the excellent clergyman whom we have now possessed more than six months, performs the Morning Service, and many, with little detriment to their necessary avocations—though few, I believe, without some slight self-sacrifice—are able to attend. We find it the most beneficial, the most pleasurable mode of commencing the day that we can follow."

"To-morrow I will so commence it with you," replied Neville, readily; and Juliet, who had just reached the spot where they stood, was pleased with the cheerful alacrity of his voice. Neville's eye rested attentively on her as soon as she appeared. Her cheek was glowing, and her eyes were sparkling, with the exercise she had taken; but he watched all this brilliancy fade away, and an expression of mournful resignation overspread her countenance. "She does not look happy," he thought; and throughout the day he could not banish from his mind this distressing supposition.

The time passed chiefly in familiar conversation between the two friends; by which, in a few hours, they realized the existing circumstances of each other more than they had done in the correspondence of years. Neville found that Markham enjoyed few of the superfluities of life. His children were frugally reared, and simply attired, which added vigor to their health, and charms to their beauty. His sons were carefully educated, and were already fitted for introduction into the world; to advance their fortunes Neville resolved should be his earliest care. Juliet owed chiefly to her aunt and god-mother a cultivation of mind and taste which might be a solid basis for further acquirements. Nature had gifted her with talents for the arts which she had formerly exercised with great delight, though with little knowledge; but that delight did not now exist. Her most pleasing occupation now was the instruction of her little sister in such rudiments as she could impart; and she was no unskilful teacher, as the progress of the lively, intelligent little Marion evinced. Neville saw, with vexation, that while Juliet welcomed him with all the cordiality due to her father's friend, yet, as much as possible, she withdrew from the conversation generally held, and her silence was less that of timidity than of abstraction. Clearly to ascertain whether the grief which he suspected did or did not exist—if it did, to proceed to the discovery of its cause, and finally to relieve it—became, ere evening, Neville's prevailing wish and design. But he was resolved that the impression made on him should receive corroboration solely from his own observation, and, actuated by delicacy, he abstained from communicating his doubts, by the slightest hint, to the parents of Juliet.

The following morning found him walking at her side towards the village church. She conversed with intelligence and animation until her father overtook them. Then she immediately fell back, and walked and talked with Marion, evidently with more real satisfaction. But in the church they were again side by side, and Neville could not but be sensible, that while they joined in the most impressive prayers which man ever framed wherewith to address his Maker, Julia wept—silently—as secretly as might be—but, calm as she ordinarily was, she could not here wholly restrain the emotion which betrayed a heart full to overflowing. Neville's first inquiry was answered.

CHAPTER V.

The merchant had not yet visited all his friends, and he wandered away by himself in the direction of a little thatched cottage on the borders of the common. Some yew trees, trimmed in grotesque shapes, formed an archway over the entrance into the garden, which was in perfect order. The most scrupulous cleanliness and neatness reigned within and without this little abode, and were equally remarkable in the person of its proprietor, an old, attenuated, wrinkled dame, in closely crimped cap and folded kerchief, who sat in a wicker chair, so placed as to afford her a view of her garden and gate. Neville cast a look around, which was evidently not the scrutiny of a stranger, but that of one who was seeking familiar things. The old woman, whose curiosity was easily stirred, cried: "Won't you walk in, sir, and gather some flowers?"

Neville silently accepted the invitation, and enter-

Digitized by Google

ing the garden picked some rich, dark wall-flowers as he passed them.

"Hester," he said, as he stood beside the old woman's chair; "you do not recollect me!"

"No, indeed, sir, I don't," she replied, after steadfastly surveying him.

Neville smiled, but it was mournfully.

"Bless me!" cried the old woman, resting her hands on her knees, and gazing up in his face; "there certainly is something in your smile that I ought to know."

"Indeed there is, Hester; and my name you cannot have forgotten,—it is Neville."

"Neville!—Is it possible!—You are Mr. Edmund, then. That ever I should live to see it! My poor young mistress! Ah! Mr. Edmund, how little did you or I think that you would come back to find this poor old withered body, and not to find her!" And she raised her bony hands to her face, and was for a while overpowered with the painful recollections which his presence awakened in her.

Neville was silent. His companion never was so for many minutes together, so she now recommenced:—

"When you stopped at my gate, I felt, I don't know why nor wherefore, for you are altogether changed, Mr. Edmund, that it was no stranger that was there. Now, if Miss Juliet had come down to me, as she often does, and said, 'Mr. Edmund is coming home, nurse,' I might have fancied that old times were come back again—for she is just my young lady to my eyes."

Neville started. How chanced it that his own wild thoughts were the first that found utterance from the lips of her whom he sought that he might learn the history of the past? He conquered his agitation, and replied:—"Hester, I should think that you could tell me as much of what passed after my departure as any one can."

Now perhaps it may seem strange that Neville thus sought the side of this aged rustic to listen to facts and comments—nay, more—to give utterance to feelings—all of which he would hush to silence in the intercourse between himself and Markham. Why does he feel it more endurable to listen to her unhesitating rehearsal, in her common phraseology, of circumstances which Markham would tremble to make known in the most guarded terms? There is something in the simplicity with which the poor mention the most startling and heart-breaking truths, which has a less painful effect than the timid allusions made to them by the more educated. Again and again the old woman touched on the likeness which his friend's daughter bore to her who should have been his bride, and declared that the likeness was borne out in her sweet and gentle temper; and Neville felt, that again and again could he return to her cottage, to hear her pursue the same theme. At length he said:—

"She seems to be more grave and silent than—than is natural at her age."

"Aye, indeed, she was blithe enough when you were here;—but, Mr. Edmund, if you had come a few months ago, you would not have had occasion to complain that Miss Juliet wanted life;—no, indeed. It did me good to see her coming with her merry laugh, that I was sure to hear before she was in sight; but now I watch her creeping along the common; and once, I declare, she passed the very gate, not knowing it, and turned back again with a start. Oh! it is a sad thing to see her; and enough to make your heart ache! She looks so like her who went before her, that I can't but think she 's a going the same way!"

Neville gave a deep sigh.

"What ails her, nurse!—Do they not mark this change, and care for her health?"

"What ails her! Ah! Mr. Edmund, what is it that ails young folk?—You have not yet forgotten! But the other day she was standing just where you stand, looking so pale and sad—and I said to her: 'Don't let things press too heavily on your young heart; pray don't!' In a moment she was as red as that damask rose, and she cried: 'What do you mean, nurse? Nothing presses on my heart.' But I know very well that there does."

"Tell me all you know, Hester. I don't ask from curiosity."

"But here she comes herself, sir;" and Juliet was within a few steps of the gate. Her arrival entirely changed the nature of the discourse. A few kind and cheerful words passed between her and Hester, and then she left the cottage, accompanied by Neville.

"I hope Hester is a favorite with you all," he said. "She stands high in the list of the few friends England has to afford me."

"Oh, yes, we all love her for her warm heart, and for a cheerfulness and merriment which one little expects to find at her age, and not often in her class. I don't think such gayety is common among the poor; I suppose hard toil and hard fare wear down their spirits, and of the first Hester has had her share. Whenever we come to see her, however sick or weary we find her, she is always full of life before we quit her."

"You," said Neville, in a low voice, "must be especially dear to her, not only for your own sake, but for the sake of one whom she sees again in you."

He felt as if, in painfully uttering these words, he taught Juliet to expect from him that deep and fervent love which filled his heart, and revealed to her the necessity of its existence; and so to have done was some relief.

CHAPTER VI.

Neville, during the remainder of their walk, was as abstracted and spiritless as Juliet in her most dejected moments. She attributed his sadness to the remembrances of the past brought before him by the old domestic with whom he had been conversing, and she was deeply touched and interested when she perceived that years had not impaired his constancy, nor chilled his affections. She was inclined to muse on what seemed to her, smarting from recent disappointment, almost a phenomenon. She could not consider this faithful love without a disposition to repine, for she deemed his sufferings, bitter as they were, in nature preferable to those which she had undergone. Absorbed in these reflections, she walked sadly and silently by his side, little aware how much his thoughts were occupied by her; at length she felt that his eyes were fixed on her face, and that tears were stealing down her cheek. She turned her head away hastily.

"Juliet," said Neville, kindly, "surely I am a very old friend, if a very new acquaintance. There need no preliminaries to intimacy between us. Let me speak to you henceforth always in the former character. My first visit to your home must soon end. Impatience to see my dearest friend brought me here in such haste that I must depart again with no less speed; but I would, before I go, speak to you on subjects with which no stranger intermeddleth. Why should I speak to you as a stranger, Juliet—to you, the child of my friend, and far more to me than that alone could make you. I have

Digitized by Google

returned to England, Juliet, without relations, without friends; I bring with me princely wealth, and my chief object is to advance the interests and the happiness of my friend's children. I came here hoping to find no uneasiness that I could not remove. I discover it where it grieves me most to see it. From your own lips I would learn if I can do anything to promote your happiness."

Juliet made no reply, nor raised her eyes to his. She turned very pale, and trembled violently. Neville, in some alarm, drew her arm within his, exclaiming:—

"I have been too abrupt where I should have spoken most guardedly. Do not try to answer me, Juliet! Only think on what I have said, and communicate your wishes to me in any way you like. Consult with your parents, and let your father speak with me. All that I ask from you is candor, and believe me that to serve you will be the utmost happiness I can know."

Juliet strove to speak, but could not. The anguish of her countenance betrayed no common grief, and deeply distressed her companion.

"I will not leave you till you reach home," he said, in tones of regret and self-reproach, and they moved slowly down the shady lane which led to the grange. When within a short distance from the house, Juliet began in a low voice, which trembled at first, but grew firmer as she went on:—

"Mr. Neville, I cannot part from you without saying a few words in reply to an offer of such unbounded generosity and kindness. I feel indeed that you are no stranger to us in heart, and I will show you the candor you desire. The grief which you have marked in me is one which no remedy which you can propose could possibly remove. Pray forget its existence, and never recur to it again."

"I cannot bear to see you as you are, Juliet," said Neville, in a tone of deep feeling.

"Nor shall you," replied Juliet, with a dignity beyond her age. "I have said that you can do nothing for me, but I can do much for myself, and with the aid of Heaven, so I will. I will not long sadden those who love me by outward dejection."

"Nay, Juliet," interrupted Neville, glancing with alarm at her slight form and pallid cheek, "tax not your strength too severely."

"I am much better than I have been," she said, in her former tremulous tone, and for the first time a flood of tears came to her relief.

"Oh, Juliet! if, on further deliberation——"

"Urge me not, urge me not," exclaimed Juliet, vehemently. "You tempt me—and it is to certain misery!"

These mysterious words ended their discourse. She hastily opened the gate of the shrubbery, and, pointing out to Neville a path which led to the house, she abruptly turned into another.

CHAPTER VII.

Neville did not ask himself directly, whether any secret joy mingled with the pain which it cost him to see his scheme for Juliet's happiness overthrown. He soon forgot himself, to think solely of her, and the compassion which such thoughts awakened led him back again to his generous projects. As he passed the evening with his friend, he could not abstain from approaching the subject, and at length he repeated to him all that had passed. Mr. Markham's eyes glistened as he heard him; joy beamed in them though they swam with tears.

"She is a matchless girl!" he exclaimed, with irrepressible emotion. "She is the most high-minded, the noblest creature! She speaks truly," he continued, after a pause, with more calmness. "Juliet has a natural energy which will not allow her to remain downcast. She has many to love, and she has many duties to perform, and she does perform them with all the ardor of an affectionate heart and a high spirit. I trust confidently that there is enough around her to enable a strong mind in all the vigor of youth to rally from deeper affliction than hers has been; for, though bitter, it is not of a nature to be lasting. Still I confess that to see, as we do at present, resignation holding the place of happiness, is a spectacle which touches us deeply."

"But must this be?" cried Neville. "Can nothing be effected to restore the latter?"

Mr. Markham extended his confidence further, and related these facts to his friend. The former incumbent of the living now held by Mr. Villiers, (and the resident at the rectory, so near to the grange,) had been a man of good education and considerable abilities, who eked out a scanty stipend by preparing young men for their entrance into the universities. These so-called pupils enjoyed, however, the main disposal of their own time, and profited as little or as much as pleased themselves by the powers of instruction certainly possessed, but not certainly exerted, by their tutor. Among those intrusted to his care, was the son of a great man, at least in his own estimation very great, for Sir Ralph Harvey was a man of very old family, and of unbounded pride, though by no means superabundantly wealthy. His son, Lyttelton Harvey, was handsome, impetuous, evidently headstrong, apparently resolute. His society was generally fascinating to those of his own age; it was especially so to the young and lovely girl whom he felt impelled to please by every means in his power. In a short time he was Juliet's passionate adorer. Mrs. Markham was not a very wise woman, Mr. Markham not a very prudent man—at least so Neville gathered from the details he heard. The first built castles in the air, and believed them founded on earth; the second did not recognize the danger till the evil was accomplished. Then he behaved like a man of honor and of resolution. He reminded Lyttelton of his youth; he forbade his visits to his house; he referred him to his father for a sanction of his passion, to time as a test of his earnestness. In consequence of these injunctions, he discovered that Lyttelton was rather rash than resolute. His arbitrary father had been from his earliest years the object of his fear, and he quailed in his presence, though, apart from him, he boasted of independence. Time also led him to consider that it was not wise for a man so young, and born to such hereditary honors, who might command a choice of the beauty, or rank, or wealth of England, to ally himself with one as destitute of the two more solid advantages as she was richly endowed with the first, and with "all with which Nature halloweth her daughters."

He began to acquiesce in the superior wisdom which had withheld him from carrying out a rash purpose, and, though he blushed to avow the complete change, he went so far as to inculcate resignation to Juliet, and to evince that he was an apt scholar in the lesson he taught. Juliet was quick-sighted, and had more than a common dignity and delicacy of perception. She recognized the alteration, and, smarting under the grief and the humiliation, she made it clearly known to Mr. Lyttelton Harvey, that she fully appreciated the wisdom of

Digitized by Google

her father's conduct, and the meek submission of his own. She returned some foolish tokens which were to have lived with her in life, and to have lain with her in the grave. Life is short, but we outlive many things which had a promise of durability. Mr. Lyttelton Harvey returned no more. It was almost equally fortunate for Juliet that Mr. Halifax, his tutor, departed soon afterwards, giving place to Mr. Villiers. The advantages which Juliet derived from this change were not confined to those which he conferred on her by his full and excellent discharge of all the pastor's duties. He brought with him to the rectory a sister whose whole life had been passed in his home; one who was endeared to him not only by her devoted love and excellent qualities, but by being one of those doomed to pain which admits of little alleviation from human skill —set apart to serve in suffering—a spectacle involved in mystery, and never to be looked on but with awe. Miss Villiers became to Juliet the best and wisest of earthly friends. To a heart of peculiar tenderness she joined the most enlightened and impartial views of life. Her understanding was highly cultivated, her judgment sound, her penetration acute, and her sympathy lively. Beside her couch Juliet spent many hours, and none without learning some lesson of high import. She had already regained her calmness; for cheerfulness she was yet striving. The strength of her resolution had this day been tested, and her father rejoiced to find that it had withstood all temptation to strive to win back what he esteemed well lost. He was convinced that Juliet's happiness could not be ensured by the recall of her youthful lover. Whether this truth was equally impressed on the mind of his wife he somewhat doubted, and, though she offered no contradiction to his comments on the facts which he communicated to her that night, she fell asleep and dreamed that she saw Lyttelton Harvey repentant at the feet of her pale child; and, before it was clear whether she would spurn him from her with majestic scorn, or whether she would melt into forgiveness, she awoke again to contemplate what she considered as sober certainty, Juliet's future endowment with at least a vast portion of the merchant's wealth.

CHAPTER VIII.

The merchant's first visit to the Grange was a very short one, but he promised that it should soon be repeated. His departure was followed by the arrival of a box of Indian treasures which he had promised to Mrs. Markham; but there were not, as there used to be, many things marked with Juliet's name, only a very beautiful and costly gold chain. An accompanying letter acquainted Mrs. Markham that Neville had chosen for Juliet a harp, and some drawings which her pencil might be worthily engaged in copying. Juliet saw that her father and mother were gratified. She sighed, and thought that Neville was very generous, more than she felt that he was very kind. She was averse to the occupation with which he had provided her; nevertheless, when once engaged, as she felt constrained to be, she derived a pleasure from them which won her from herself. She had never touched so fine an instrument before; never looked on any representations of nature so excellent as those which Neville had selected for her. She often thought of him, and went with pleasure to tell Hester that he was coming again, and for a much longer time than before. The old woman rejoiced, and detained Juliet to tell her tales of the past. She ended:

"Ah, Miss Juliet! the tears stood in his eyes when he spoke to me of your likeness to her that is gone. And you look more like yourself, and more like her as he knew her, than you did when he came. Now you must do all you can to cheer him; indeed you must."

"Well, so we will, all of us, and Marion too, and it will do him good to hear her laugh."

"No, Miss Juliet, it will do him more good to see you smile."

Juliet thought of these words as she went away, and she felt touched by the tender consideration in which it was evident that Neville held her.

Neville came, and he was rejoiced to see that Juliet met him with a countenance more animated, and a step less listless. He also perceived that the gold chain which the box had contained hung round her neck.

"Let us take our friend to see Mr. Villiers and his sister, Juliet," said her father, the day after Neville's arrival.

"Oh, yes," replied Juliet with alacrity, "let us take him to Miss Villiers without delay. Indeed, I promised to do so as soon as he returned. I have shown her all the beautiful drawings you have sent me, and have inspired her with a wish to make acquaintance with you."

"And Mr. Villiers?" said Neville.

"He is more silent, less clever than his sister; not less good. His countenance tells you how benevolent he is, but in society he speaks little on ordinary topics. I like better to meet him in a cottage or the school; his voice and his smile when he is with children are so gentle and so affectionate."

"Pray do not engage Juliet in the praises of her friends, if you wish to see them to-day," cried Mr. Markham, and they set out to the rectory.

Miss Villiers received her visitors with a courtesy of manner peculiarly her own. She possessed quick perception of character, and had a readiness in adapting herself to the tastes and habits of others, which caused every one, however much they differed from each other, to find time pass easily and delightfully in her society. The constancy and severity of her sufferings had never rendered her selfish, nor taught her to believe that the feelings and convenience of others must be without hesitation sacrificed to her own. On the contrary, every trifling instance of accommodation to her, and of sympathy for her, she received, not as a right, but as a favor.

Juliet had never yet seen Neville to such advantage as on this occasion; he was perfectly at his ease. With her he was often harassed by contending feelings; with Miss Villiers he readily followed in the track on which she led him, and conversed with her with remarkable judgment, knowledge, and taste, on subjects to which he had given previous thought. At length the two gentlemen rose to depart, for Mr. Villiers was not expected home. Juliet, much as she had enjoyed Neville's conversation, proposed to remain with Miss Villiers. With an affectionate smile, her friend acquiesced in her desire, and, as soon as they were alone, she said—

"My dear, what a very charming person your friend has proved; I had no idea you would bring me any one so handsome and so accomplished. It must be very delightful to spend days in his society, as you do, and it ought to be very improving, too, Juliet. I hope you will persuade him to come and see me again."

Juliet felt surprised that she had not made these observations for herself, for she acknowledged their

Digitized by Google

truth, and that they proceeded from Miss Villiers' mouth, gave them great additional weight. Juliet had previously told her of the circumstances which had connected Neville with their family, and they now recurred to that theme, with an interest diminished in neither by their intercourse with him.

"I see that he regards you with peculiar affection," said Miss Villiers. "I could hear the very tone of his voice alter when he spoke to you. You see, my dear, neither my eyes nor hearing are grown very dull yet."

As Juliet walked home, she reflected on the favorable impression which Neville had made on Miss Villiers, and came rapidly to the conclusion that hitherto she had not at all duly appreciated him. As she went through the village, she saw him at a little distance, and no sooner did he turn and perceive her, than he came towards her.

"May I accompany you in your walk?"

"Yes," replied Juliet, with frank satisfaction. "I have but a word to say at a cottage which we pass. I shall not delay you a moment, though, indeed, I know not why I should not defer this visit till to-morrow morning."

"I beg you not to do so. I like to see your English ways, Juliet, of which you know I have long lost sight. Above all, I like to see how you love these people, and how they love you. I prefer accompanying you now to doing so in a course of formal visits to people of elegance or fashion."

"Do you!" cried Juliet, with pleasure; "then we are quite agreed. I deplore my fate when the necessity arises which you describe. I yawn in anticipation—in retrospection; and it is only politeness and a little awe of mamma's indignation which prevents me from doing so at the time; but, when I go to yonder neat little cottage, I commonly stay twice as long as I intended. But don't look alarmed; I will not do so to-day."

"The reason why you do not find the conversation of these poor people dull, is probably because, however trivial their subject, it is usually one in which they themselves take a lively interest, and this gives them the power of exciting your sympathy. This is a law of our nature."

"Much that one hears from them is indeed interesting," replied Juliet, "but it is usually of a mournful nature. How seldom the poor seem gay! I suppose it is because they realize, so much more than any other class does, the curse under which man labors of earning his bread in the sweat of his brow."

"Apparently they do; but depend upon it, Juliet, that the curse falls not unfulfilled to the ground in any one instance. It extends from the peasant in his hut, to the king upon the throne."

"But those feel it most sharply who must toil unceasingly, or starve!"

"I would not depreciate the hardships which the poor undergo. I would only assert, on a broader scale, that, of all the modes of maintaining existence which necessity has invented, there is none without its peculiar sufferings, to which numbers of those who pursue it annually fall victims. The lawyer, the soldier, the physician, the statesman, those who encounter the perilous climate from which I return, all bear witness to this fact as much as the worn-out laborer, or the wretched artisan perishing of the pernicious atmosphere which he daily inhales. What is this but the universal working of the curse?—The curses of the fall have never been revoked. Men toil and die as they did before the Saviour of mankind came on earth, but, according to the merciful law of God, who ever works good out of evil for his faithful servants, there is a call heard by those who meekly listen: 'Come unto me, ye who are heavy laden, and I will give you rest;' and the sting of death is plucked out."

"I see the truth of all your words," replied Juliet, "but still the sufferings of the poor are of a more sacred character than any others can assume. Our Lord shared their lot in life, and committed them to our charge, even as if they were himself —'*I* was an hungered.' Nor can I behold, without awe, pain such as the dear friend whom we saw to-day is visited with. Surely in those to whom pain is sanctified, as it is to her, we seem most plainly to discover the servants of a suffering master."

Juliet's countenance showed how deeply she felt on the subjects on which they spoke, and the mention of such themes created a stricter intimacy between her and her companion than had hitherto existed. Neville led her to speak of those with whose necessities she was well acquainted, and who were the objects of her sincere commiseration, and he did this with the generous design of enabling her to relieve them. There were not many cases of pressing and unalleviated distress in this small and happy village, but Juliet, with a beating heart, reflected on one act of charity, far beyond her own power, and which she had often most ardently wished to see effected. This was the apprenticeship of the son of a poor widow to a trade which he had been learning under his father during his lifetime, which he was incapable of pursuing alone and in which his mother could afford to give him no further instruction. Now Juliet knew these people well; she was quite sure that into this channel Neville's generosity might be safely directed. She could not speak without agitation. Her cheeks glowed and her eyes filled with tears as she tried to explain all the circumstances to Neville. He was not difficult to satisfy, and he proposed to visit the widow, and carry their purpose into execution before they returned home.

"It was there I was going," replied Juliet; and, quickening her steps, and not speaking again, her heart was so full, she eagerly led Neville in the desired direction.

Juliet was soon at the door of the widow's cottage.

"Go in by yourself," said Neville; "I will wait your return under that lime tree."

"You ought to have the pleasure of doing this," replied Juliet, hesitating.

"No, no; the poor woman would only be embarrassed by seeing me."

Juliet, feeling that he was equally delicate and generous, entered alone.

"Oh! my dear Mary!" she cried with delight, (taking both the hands of the poor widow in hers,) "I have some very, very good news for you, concerning George. Oh! my good little Anna, (she said to a child who was trying to attract her notice,) I cannot attend to you now—run and play."

"Go into the garden, dear," said her mother, and putting the child out at the door, she returned with a face of great agitation.

"Well, now I will tell you all," continued Juliet; "there is a friend staying with us, a friend of my father's. He is most kind, and good, and generous. He is rich too, and he inquired of me if I knew any case of distress which he could relieve; and I thought of George, and how glad you would be to

Digitized by Google

have him bound as an apprentice—and this he has promised to do."

Now if Juliet had not known her poor friend too well to expect words of thanks she would have been disappointed, for none came. Mary changed color, and looked ready to sink. Juliet made her sit down, and when she had done so, she took Juliet's hand, and pressed it repeatedly, but she could not speak. At length Juliet said, "I will come again to-morrow—you will then have had time to think over all this—and I will bring the gentleman with me."

Tears now came freely to the relief of the widow's full heart. "Thanks, thanks," she whispered, and Juliet, leaving the room, called Anna from the garden, and sent her to her mother, while she herself sought Neville. Her face wore a most touching expression of joy, for the tears of sympathy were still on her cheek; she took Neville's proffered arm, and exclaimed:

"I know not how to thank you, and I am sure she will never know how to thank you either;—with our lips I mean—with our hearts we do."

Neville made no reply; at length he said, in a voice of much emotion:

"Oh! Juliet, how have I desired to see you happy, and now I see you so; but it is only in the happiness of others."

Juliet answered in a low but firm voice:

"I am happy now." Then smiling she added, "Soon you will see me very happy, for my brother is coming home."

The next day Juliet and Neville did not forget their visit to Mary's cottage, nor did they omit anything that was requisite for the fulfilment of their benevolent purpose.

CHAPTER IX.

One morning, Juliet received a letter, the seal of which Neville saw her break with glowing cheeks and sparkling eyes. After the first glance, she ran to the window, and beckoned to the younger children, who were playing in the lawn, to come to it. "Are there news of Albert!" they cried, as they obeyed her call.

"Yes, yes; he will be here this evening. Oh! what joy!" Mr. Markham entered the room. Juliet hastened towards him, and throwing her arms round his neck, cried: "Albert will be here to-night!"

Neville knew that Albert was the eldest son of his friend, or a year or two younger than Juliet. He was now at Sandhurst, receiving a military education. During the day, Neville talked with Mr. Markham of his future intentions with respect to his son, and told him that he thought his interest could procure him a cadetship, if it would be acceptable. This offer was received with gratitude for the kindness which prompted it, but Mr. Markham requested a little time for consideration ere he closed with it.

Evening came, and seven o'clock; the happy party walked down to a little bridge at a turn in the road, beyond which the coach did not come, and there awaited Albert's arrival. The children, ere long, wandered into the field at the road side, to play. Mr. and Mrs. Markham walked up and down, the latter wondering that Neville did not join them; but Juliet had placed herself where she should see the coach the moment it appeared; and Neville was at her side, as if his interest were as lively as her own. At length the trampling of horses' feet caught Juliet's ear; then the children came running to the spot, and Mr. and Mrs. Markham followed. Now the horses gallop up the slight ascent—they stop—a young gentleman descends in haste from the coach-box and runs to greet them. Now they have all welcomed him, and they gaze with fond admiration on his tall, active figure and handsome face; his clear brown eye and chestnut curls, and complexion glowing with health and joy. Neville has shaken hands with him, and they begin to move homewards. Juliet is hung on Albert's arm, as if he engrossed every thought and feeling; and they talked earnestly to each other in a low voice, as if they neither wished to be addressed or to be heard by any one else. Neville felt his first sensations of depression and restraint return in all their force; he felt quite out of place, at least quite out of the only place he cared to fill. His sudden gloom was perceptible to Mr. Markham, who would gladly have given Juliet a hint not to allow her brother wholly to distract her attention from a friend so lavish of kindness to her. But it was in vain that he called Albert to his own side, and made him reply to numerous interrogations. Neville did not avail himself of these exertions in his favor.

Never had Neville's reflections been more dispiriting than they were on that night. He felt convinced that he had deceived himself most absurdly, in supposing that Juliet had any real pleasure in his society. At last he resolved that in the morning he would plead a necessity for returning to London the following day. This resolution calmed him, and allowed him to taste of sleep. The next morning he wavered a little, but he heard Albert's voice calling to Juliet to come out and walk with him, and from his window he saw her hastening to join him, with a light step, which spoke a gayer heart than he had ever known her to possess. He sighed, and resolved that he would leave her to companions more congenial to her than he could be. Accordingly, as soon as the rest of the family had retired from the breakfast room, he announced to Mr. Markham his intention of returning to London. Mr. Markham expressed annoyance, —could not guess the reason of this sudden decision, —but Neville was firm, and said that if Mr. Markham wished to consult him further about Albert, he must write to him. Mr. Markham left the room; in a few minutes Juliet entered it, and came to the window at which Neville was still standing. His first glance at her face told him, that, however glad her feelings were a few minutes since, they were quite changed now; he felt anxious to know the cause, and Juliet meant not to leave him in ignorance of it. Her voice was a little tremulous, her cheeks a little flushed.

"Mr. Neville," she said, and paused; "is it possible that, as papa tells us, you are going to leave us to-morrow? Must you really do so? You never said so before, and I am so disappointed. Just as Albert is come, whom I so much wished you to know; I said I would try to make you change your resolution; now, pray, do not send me away with a refusal." And Juliet, instead of smiling, as she probably expected to do, was forced to turn away her head to conceal the tears which had started to her eyes: she was as much surprised at her own emotion as Neville could be. He could not resist the impulse of the moment; he took her hand, and said in a low earnest voice; "Juliet, I will not deceive you by pleading any false necessity for departure. I go from the sight of so much happiness which I may not share."

Digitized by Google

"I hoped that you would share it more from day to day," replied Juliet, sorrowfully.

"If I were to tell you the mad, vain wishes, the accomplishment of which could alone make this place any longer tolerable to me, you would bid me go, you would bid me to grow wiser and calmer ere I saw you again. Juliet, you are too sincere, too generous to counsel me untruly." The blood rushed crimson to Juliet's cheek and brow. She burst into tears; but Neville thought he read more than compassion in them. He bent over her, and murmured: "Must I go?" "Yes," replied Juliet, "if you wish to destroy the happiness which you have striven to create."

"So, Juliet," cried her father, "you have prevailed on Neville to remain! But the enchantress was forced to try her most potent spells ere she could lure the knight back to her bower."

Juliet tried to smile at her father's bantering, but her heart was too full; she threw herself on his neck, and clung silently to him.

"My dear child," said Mr. Markham, with emotion, "I am heartily rejoiced that you sent him not away in despair. May his noble heart never know another pang! Well! I suppose now he has some chance of sharing your thoughts, looks, and words, with Albert!"

"Ah! dearest father," cried Juliet, smiling joyfully, "I hope to reverse all his schemes, for Albert shall never go to India."

THE London correspondent of the N. Y. Tribune says of the manuscripts of Dr. Chalmers, lately purchased by Mr. Constable:

Among the most interesting documents are a vast quantity of letters, which passed between Dr. Chalmers, and nearly every distinguished person in the various spheres of life. Clergymen, authors, artists and statesmen, of England, of Europe, and of the United States have, within the last twenty-five years, corresponded with Dr. Chalmers. This most interesting correspondence, with a memoir, will form four or five large octavo volumes. In addition to this work, the next in importance and value is, perhaps, an elaborate commentary on the Bible, which, it is to be regretted, is unfinished, as it extends only to the book of Jeremiah. Another manuscript of great value is Dr. Chalmers' series of Lectures to Students, when he was professor of divinity in the Edinburgh University. As a class-book, this work will become widely popular. It will be seen from this sketch that the religious and literary world will soon become possessed of one of the richest, most interesting, valuable and important contributions to the literature of the day that has been published during the last half-century

From the same letter we copy a notice of Miss Eliza Cook:

Miss Eliza Cook, the poetess, is now residing at Great Malvern, for the benefit of her health. When Miss Cook was only "sweet sixteen" she contributed several very beautiful pieces of poetry to the *Literary Gazette*, and occasionally the effusions of her pen graced the pages of the New Monthly, and the Metropolitan Magazines. It is singular that she discontinued writing for these highly respectable journals, and wrote exclusively for the *Weekly Dispatch*, a paper which enjoys a wide circulation, but that circulation is confined principally to the pot-houses, gin-palaces and rookeries of the metropolis! She certainly secured through this channel a wide popularity among the masses, but Miss Cook's effusions one seldom finds copied into any of the higher class journals; hence she is not read by the more intelligent portion of the public. Miss Cook has written for the *Dispatch* for the last ten years, and during that time she has most undoubtedly fully equalled Mrs. Hemans, Mrs. Norton, or the most popular writer of Great Britain. In every line that she writes there is to be found the true essence of poesy. Her versification is smooth, her lines are musical her sentiments are pure and always contain a fine moral. Look at her deeply affecting song of the "Old Arm Chair;" but that is only one among scores of equally charming pieces. Her very last, written at Great Malvern, and during illness, is a composition of superior merit, and shows that the fire of her genius burns as brightly now as ever. It is called a "Song for the Season." The first verse will show its style.

"Look out, look out, there are shadows about;
The forest is donning its doublet of brown,
The willow tree sways with a gloomier flout,
Like a beautiful face with a gathering frown!
'T is true we all know that Summer must go,
That the swallow will never stay long in our eaves;
Yet we 'd rather be watching the wild rose blow
Than be counting the colors of Autumn leaves!'

In the following stanzas, speaking of the withering "hedge-row boughs," she says:

"Oh! well it will be if our life, like the tree,
Shall be found, when old Time of green beauty bereaves;
With the fruit of good works for the Planter to see
Shining out in Truth's harvest, through Autumn leaves!"

Miss Cook commences this song by telling us to "look out, look out," for the shadows, the trees and the swallows, and then she tells us to "look high, look high," and then to "look low, look low," and to "look on, look on," and finally,

"Look back, look back, and you 'll find the track
Of human hearts, strown thickly o'er
With Joy's dead leaves, all dry and black,
And every year still flinging more.
But the soil is fed where the branches are shed
For the furrow to bring forth fuller sheaves,
And so is our trust in the Future spread
In the gloom of Mortality's Autumn leaves!"

Eliza Cook is now about forty years of age, although she looks much younger. She has quite a masculine countenance, which is remarkably expressive. Her forehead is broad and high, indicative of great genius. Her father was formerly a tradesman in London, but afterwards took a farm in Sussex, where Eliza, the youngest of eleven children, first became enamored of nature and her glorious works, and where, it is believed, she first attempted to pour out her thoughts in delicious verse. Miss Cook was born in the London Road, Southwark, London.

4. *China and the Chinese Mission.* By the Rev. JAMES HAMILTON, National Scotch Church, Regent Square. London, 1847.

CHINA is undoubtedly the most singular country in the world. Possessing a population amounting to at least a third of the whole human race, and occupying a vast yet continuous and well defined portion of the globe, it has existed as a peculiar and entirely secluded kingdom for a longer period of time than any other nation on the face of the earth. While migrations and wars and foreign conquests were making vast changes on the rest of the world—while nations were rising up from barbarism, flourishing for a season, and then sinking into insignificance, the Chinese held on in one uniform tenor—with the same arts, the same government, the same laws, unchanged and uninterrupted, except by casual outbreaks and tumults within themselves, which were soon calmed and smoothed over. While many mighty nations of the western world were still in a state of comparative barbarism, the Chinese had their various arts to embellish domestic life—they were clothed in their silks and cottons—were expert in the culture of the soil—knew something of the nature of the magnetic compass—of gunpowder, and various other inventions still unheard of in Europe.

The extreme caution of their natures, a certain timid and exclusive policy, which has all along characterized their intercourse with surrounding nations, as much, perhaps, as their self-conceit, which made them look down upon all others as barbarians, had the effect of keeping them for so long a time in such a state of singular seclusion. At last, however, the spell has been broken; an almost unavoidable war of aggression has done to them, what wars and conquests seem to have been the chief agents in performing among all the nations of the world—it has opened up this vast empire to the intercourse, and influence, and example of other races, and other modes of civilization. If it be not good for man to live alone, neither is it for nations; for we find that the same narrow, contracted, and selfish notions which arise in the solitary and secluded individual, are no less apt to take possession of a whole community. Hence the exclusive jealousy of strangers, the vain boasting, and ignorance of the manners and history of all other nations, so conspicuous in the Chinese.

Hitherto our information regarding the actual state of China has been derived from the hasty survey of ambassadors quickly passing through it, or the casual reports of a few missionaries who had been permitted, under many restrictions, to enter the country. But now that five of the largest maritime cities have been opened up by treaty to the trade and free intercourse of all nations, we begin to have the accounts of travellers who have made themselves acquainted with the language, and whose opportunities of observation have been more extensive and more unreserved than those of any of their predecessors. Of the works more recently published on this subject, we have selected a volume by the Rev. George Smith, of the Church Missionary Society; another volume by a diplomatist, resident in Canton; and a third by a scientific traveller;—all of whom have spent from two to three years in China, and have acquired a knowledge of the language. It is true that the range of these travellers has been limited to the maritime cities and surrounding districts, and has not extended into the central parts of the empire, or even to the capital, Pekin; but when it is considered that such a uniformity and sameness pervade the whole empire—that the people and institutions of any one province are so like to those of any other—it may be presumed that we glean from their partial observations a pretty accurate conception of the average condition of the whole empire.

The population of China, both from native statements and the calculations of foreigners, has been estimated at not less than 360 millions. Immense as this amount of human beings appears, it is perhaps not an over-estimate. The city of Canton is said to contain a million of inhabitants; that of Foo-chow 600,000; and the other cities visited are reported to be generally swarming with inhabitants. But even supposing the estimate above given to be correct, the whole area of China Proper contains 1,300,000 square miles; so that we have to each square mile 277 human beings. Now, if we compare this rate of population with that of England, as afforded by the last census of 1841, we shall find that in it there are 297 persons to every square mile. We must not then be deceived by exaggerated conceptions of the extreme density of the population of China. With a comparatively level and arable country, a rich soil, that in many localities bears two crops a year, and an industrious and frugal people, the average density of the population comes considerably short of that of England.

With an extent of surface, and an amount of population equal to twenty-five Englands, this vast empire is ruled by the despotic sway of one individual. The genius of a people most frequently moulds their government. The mild and submissive, and generally unimpassioned character of the Chinese, peculiarly fits them for implicit subjection. Their leading mental characteristic is plain homely common sense—they have not the imaginative qualities or passionate enthusiasm of other oriental nations, neither have they the profound, excursive, and restless intellects of the nations of the west. Filial respect and veneration is their

Digitized by Google

most prominent instinct—their notions of rule are patriarchal. From their fathers and kindred their respect extends to their rulers and their emperor, who again, on their parts, take care to foster and encourage such feelings, and not to outrage them. Public opinion exists and prevails to such an extent as to keep a check on bad government, or outrageously corrupt administration; but there is neither the desire nor energy to carry it further. There is no permanent or hereditary nobility among this people. There are many old families who are held in estimation, but the two great distinctions of the people are into the literary class and the plebeian. Admission into the literary class is open to every individual of the empire, however poor or unknown; and from this class alone are selected all government officials, from the lowest clerk up to the greatest mandarin. Candidates for admission are subjected to a strict and generally an impartial examination. After having passed this first examination, they undergo a second and more searching one before they can become eligible for office; and a third is necessary for those who aim at the highest posts. The candidates for these literary honors are always very numerous, and an intense interest is shown at the periods of examination, both by the individuals themselves and their relatives. A great many are of course rejected, but these return again and again to their studies, and make repeated attempts to pass the ordeal. Once accepted, they are almost sure to succeed in time to some government employment, and the highest appointments are open to all. So highly is admission into this literary class prized by the people, that a successful aspirant sheds a lustre on his family, and even ennobles his more humble parent.

The same government and laws extend over the whole of the empire, and each province has its full complement of government officials. If we call to mind that each province is in extent equal to an ordinary European kingdom, we need not be surprised at the number of these officials. There are, in the first place, three grand orders of mandarins: 1st, the civil; 2d, the literary, who superintend the examinations for degrees and admission into the literary class; 3d, the military. Each of these orders may again be subdivided into other three, so that there are in all nine mandarins, or higher officers, in each province—all these being distinguished by the quality and color of the buttons on the top of their caps. A simple enumeration of the different denominations of the several officers of the province of Kwang-tung will so far indicate the nature of their duties, and afford a general idea of the officials of the other provinces. There is first the tsung-tu or governor-general, whose power not unfrequently extends over more than one province. Then a governor, superintendent of finance, provincial judge, collector of salt duties, grain collector, intendant of circuit, prefect of department and three sub-prefects, district magistrate and assistants, township magistrate and assistants, inspector of police, inspector of river police, secretary, treasurer, prison master, superintendent of customs. The government salaries of these officials are very small; the highest, that of the governor-general, amounting only to £60 of English money, and the lowest ranging from £12 to £20. The consequence is that their incomes are made up by extortion and bribes, levied on the community. This, like the arrangements of some of our European governments, (the Russian, for example,) is a most unfortunate one, and leads to endless abuse of justice. The vast extent of the empire, too, and the impossibility of the most vigilant central government taking due cognizance of the whole, tends greatly to peculation and abuse of authority, and to that feebleness of the executive power which prevails throughout China.

"I have found it impossible," says Mr. Meadows, "to learn, with any degree of certainty, what the real incomes of mandarins, as increased by illegal fees and special bribes, may amount to. They vary with the harvests, which, according as they are good or bad, render it easy or difficult to collect the land-tax—a proceeding in connection with which much extortion is carried on. They vary also with the number of law-suits, and the wealth of the litigating parties; and, lastly, they vary with the characters of the individual mandarins. The legal incomes of the lower mandarins are, indeed, so notoriously insufficient, that they have little hesitation in speaking, even to a foreigner, of their other gains in a general way; but they have many reasons for not entering into particulars. Under these circumstances it is little better than a guess when I assume the highest mandarins to get about ten times, the lowest about fifty times, the amount of their legal incomes. One of those in the receipt of about £22 legal income, once complained feelingly to me about his poverty, and on my hinting that his post was after all not a bad one, he protested, with some earnestness, that his whole income did not exceed 7,000 taels, (£2,333,) of which he had, he said, to give a great deal away."—P. 100.

Mr. Meadows exhibits a table of the government salaries of the state officials, and the actual incomes which they derive by extortion, and other means, deduced from the best information he could obtain. Thus, a governor-general receives from government £60 per annum, but he contrives to make his actual income £8,333. A governor of a province gets, nominally, £50, and makes it up to £4,333. A judge has, £43 of salary, and makes up £2,000. The collectors of taxes from £1,500 to £1,000. Even a subordinate officer, with a nominal salary of £10 or £12, eks it out, by various means, to £200 and £300.

The *yamun* is a large building, where the courts of justice, prisons, and offices and houses of the mandarins, and other officials, are situated. It consists of four divisions. The outermost contains the gaols, and places of confinement for short periods, as also the dwellings of the inferior officers. The second contains a hall of justice, for the formal trial of causes and criminals, as also apartments for public records, treasury, &c. The third includes the office of the mandarin himself, and rooms for the public reception of visitors;

Digitized by Google

while the innermost division comprises the private residence of the mandarin and his family. Attached to each of these establishments are the shiye, the judicial advisers, and private secretaries of the mandarin. These men are the only people in China who devote themselves solely to the study of the law, and in so far they resemble our advocates, barristers, and sergeants-at-law; but they are scarcely ever made mandarins, (judges,) and none of them act as counsel for either of the litigating parties in an action at law; their sole business is to protect the interests of the mandarin their employer, to point out to him the proper way of conducting his judicial examinations, and to see that the decisions he pronounces are in strict accordance with the laws, so as that he may not incur any of the penalties laid down in the code of the Board of Civil Office, and thus be subjected to degradation or dismissal. These lawyers are not recognized as official servants of government, but are in the private employment of the mandarins. Certain of these devote their attention to the criminal, and others to the civil law. Besides these, there are a set of nondescript retainers, who hang about the mandarin, and are the negotiators of all the special bribes, and other illegal gains of their master, and a number of inferior government clerks, who keep accounts of the revenue, and make copies of all law papers, and other government business. The judges alone investigate, and decide in all causes and trials; there are no counsel for the prisoner, and of course nothing corresponding to juries. Threats and torture, too, are of daily occurrence. The interior of a yamun is said to present a very strange and bustling scene.

"The almost unceasing flail-like sounds of beating with the bamboo, either as a punishment for ascertained guilt, or to extort confessions and evidence—the cries of the sufferers—the voices of the examining mandarins questioning, bullying, and wheedling—the voices of the porters stationed at the doors, between the first and second and the second and third divisions, transmitting, in a loud singing tone, orders for different officers to repair to certain places where they are wanted—the constant running hither and thither of some of the inmates of the place, and the frequent appearance of criminals and witnesses being escorted to and from the prisons and rooms for examination—are sounds and sights that bewilder and agitate those who have not been accustomed to them, and serve to heighten that dread which all Chinese entertain of entering a yamun."—*Meadows*, p. 115.

The yamun of a district magistrate thus comprises within itself what may be called the general police station on a great scale—the county gaol, as it were, for the custody of debtors and of criminals, awaiting trial or execution—the place where quarter-sessions and assizes are held—the offices of all the subordinate officers of these courts, and the office and residence of the chief mandarin, who is at once judge, sheriff, coroner, and commissioner of taxes. In a populous district such a building is calculated to contain from 300 to 500 individuals, and in a less populous place about 200. The Chinese, however, in their domiciles, contrive to pack into amazingly little room, so that their buildings do not at at first view appear so extensive.

In general, the habits of the Chinese population, especially in the country districts, are peaceful and submissive. In the large towns, however, especially in Canton, there are frequent tumultuous ebullitions of the mob. Their contempt and hatred of foreigners cannot be easily restrained, and the appellation "Fanquee," or "foreign devil," is a term of common reproach. Canton, however, affords not a favorable specimen of Chinese manners. In the more northern cities, and in the country districts, a stranger may safely mingle with the people, without any other inconvenience than that arising from their excessive curiosity. They are almost uniformly kind, hospitable, and good-humored.

A great proportion of the lower orders of the community fare but poorly, and have great difficulty in making out their daily bread, while hosts of beggars are to be found in all the cities. For these a tax is levied in Amoy, and perhaps in other cities throughout the kingdom, the collector of which is called "the king of the beggars." This tax is partly optional with the payers, and is indirectly under the cognizance of the government. "The king," who is duly elected from among the number of the beggars, calls on each householder at the beginning of the year, and ascertains the monthly subscription which he is willing to give, in order to be free from the annoyance of their visits for alms, and the clatter of the sticks by which they implore relief. For the sum of five or six hundred *cash** a month, he gives a red piece of paper, inscribed with three copies of the characters for "great good luck," inclosed within an outline of a jar or vase; this is affixed to the door-post as a sign of immunity, and is renewed at the commencement of every year. Any beggar overlooking this bill of exemption, and entering a shop for relief, may be seized by the householder, and be beaten on the spot. "The king," after giving a certain proportion to the mandarins, and appropriating a certain fund for the support of the incorporated society of beggars, contrives to appropriate the remainder to his own use, and to become a rich man. The beggars are covered with tattered rags, wear long dishevelled hair, and are not very particular in the mode of satisfying their hunger.

"I observed," says Mr. Smith, "one of these beggars pass the shop of a confectioner, and stealthily slip a cake into his hand, and throw it into his sleeve. One of the partners, who saw the theft, ran out and followed the thief, caught him by the hair, made him restore the cake from the folds of his sleeve, and then, by a species of lynch-law very common in a country where ordinary law is expensive, and bribes must precede justice, gave the beggar a severe beating, and let him depart, amid the applause of the crowd, the good humor of the tradesman himself, and a remarkable *nonchalance* on the part of the offender."

The Chinese cities have a general resemblance

* A hundred *cash* are worth fourpence half-penny of our money.

Digitized by Google

to each other. They are irregularly built, crowded within a small space—have a dirty appearance, have few large or fine streets, but innumerable narrow lanes, and are generally traversed by canals in all directions, and are surrounded by walls and ramparts. There are few public buildings which make any show, with the exception of pagodas and temples, which are common both within the walls and in the suburbs. Mr. Smith thus describes his first impressions of Canton :—

"The recently-arrived stranger naturally manifests surprise and incredulity on being told that the estimated population of Canton exceeds a million. As soon, however, as he visits the close streets, with their dense population and busy wayfarers, huddled together into lanes from five to nine feet wide, where Europeans could scarcely inhale the breath of life, the greatness of the number no longer appears incredible. After the first feelings of novelty have passed away, disappointment, rather than admiration, occupies the mind. After leaving the open space before the factories, or, as the Chinese call them, the thirteen hongs, and passing through Old China street, New China street, Curiosity street, and similar localities, the names of which indicate their propinquity to the residence of foreigners, we behold an endless succession of narrow avenues, scarcely deserving the name of streets. As the visitor pursues his course, narrow lanes still continue to succeed each other, and the conviction is gradually impressed on the mind, that such is the general character of the streets of the city. Along these, busy traders, mechanics, barbers, venders, and porters, make their way; while occasionally the noisy, abrupt tones of vociferating coolies remind the traveller that some materials of bulky dimensions are on their transit, and suggest the expediency of keeping at a distance, to avoid collision. Now and then the monotony of the scene is relieved by some portly mandarin, or merchant of the higher class, borne in a sedan-chair on the shoulders of two, or sometimes four men. Yet, with all this hurry and din, there seldom occurs any accident or interruption of good nature. On the river the same order and regularity prevail. Though there are probably not fewer than 200,000 denizens of the river, whose hereditary domains are the watery element that supports their little dwelling, yet harmony and good feeling are conspicuous in the accommodating manner with which they make way for each other. These aquatic tribes of the human species show a most philosophic spirit of equanimity, and contrive, in this way, to strip daily life of many of its little troubles; while the fortitude and patience with which the occasional injury or destruction of their boat is borne, is remarkable.

"To return from the wide expanse of the river-population to the streets in the suburbs, the same spirit of contented adaptation to external things is everywhere observable; and it is difficult which to regard with most surprise—the narrow abodes of the one, or the little boats which serve as family residences to the other. There is something of romance in the effect of Chinese streets. On either side are shops, decked out with native ware, furniture and manufactures of various kinds. These are adorned by pillars of sign boards, rising perpendicularly, and inscribed from top to bottom with the various kinds of saleable articles which may be had within. Native artists seem to have lavished their ingenuity on several of these inscriptions, and, by their caligraphy, to give some idea of the superiority of the commodities for sale. Many of these sign-boards contain some fictitious emblem, adopted as the name of the shop, similar to the practice prevalent in London two centuries ago. On entering, the proprietor, with his assistants or partners, welcomes a foreigner with sundry salutations; sometimes advancing to shake hands, and endeavoring to make the most of his scanty knowledge of English. They will show their saleable articles with the utmost patience, and evince nothing of disappointment if, after gratifying his curiosity, he departs without purchasing. At a distance from the factories, where the sight of a foreigner is a rarity, crowds of idlers, from fifty to a hundred, rapidly gather round the shop, and frequent embarrassment ensues from an incipient or imperfect knowledge of the colloquial medium. In these parts the shopkeepers know nothing but their own language, are more moderate in their politeness, and, as a compensation, put a less price on their wares. To write one's name in Chinese characters is a sure method of enhancing their good favor. Sometimes no fewer than eight or ten blind beggars find their way into a shop, and there they remain, singing a melancholy dirge-like strain, and most perseveringly beating together two pieces of wood, till the weary shopman at length takes compassion on them, and provides for the quiet of his shop by giving a copper *cash* to each; on receiving which they depart, and repeat the same experiment elsewhere. The streets abound with these blind beggars, who are seldom treated with indignity. A kindly indulgence is extended to them, and they enjoy a prescriptive right of levying a copper *cash* from every shop or house they enter. It is said that this furnishes a liberal means of livelihood to an immense number of blind persons, who, in many instances, are banded together in companies or societies, subject to a code of rules, on breach of which the transgressor is expelled the community, and loses his guild.

"In every little open space there are crowds of travelling doctors, haranguing the multitude on the wonderful powers and healing virtues of the medicines which they expose for sale. Close by, some cunning fortune-teller may be seen, with crafty look, explaining to some awe-stricken simpleton his future destiny in life, from a number of books arranged before him, and consulted with due solemnity. In another part, some tame birds are exhibiting their clever feats, in singling out, from amongst a hundred others, a piece of paper enclosing a coin, and then receiving a grain of millet as a reward of their cleverness. At a little distance are some fruit-stalls, at which old and young are making purchases, throwing lots for the quantity they are to receive. Near these again are noisy gangs of people, pursuing a less equivocal course of gambling, and evincing, by their excited looks and clamors, the intensity of their interest in the issue. In another part may be seen disposed the apparatus of some Chinese tonsor, who is performing his skilful vocation on the crown of some fellow-countryman unable to command the attendance of the artist at a house of his own."

The five cities which by treaty have been opened up to the general trade of all nations are, Canton, Amoy, Foo-chow, Ning-po, and Shang-hai. All foreigners have free access to these cities. They may reside in any of them, but they are not per-

Digitized by Google

mitted to penetrate into the country beyond, further than one day's journey. Canton and Amoy have been the sea-ports longest known to British merchants; but they are nevertheless the cities where the greatest hatred against the British prevails. No foreigner is yet allowed to pass through the gates which inclose the city of Canton, and frequent insults have been offered to strangers by the population. To such a degree had these insults proceeded of late, that while we now write, accounts have reached this country of a warlike demonstration, which the British government of Hong Kong was compelled to make in order to overawe the Chinese authorities, and again extort from them renewed assurances of better treatment. Foo-chow is the capital of the black-tea district, and is computed to contain upwards of half a million of inhabitants. It is situated on the river Min, across which is a bridge containing a thousand arches, or rather a series of openings, covered with large slabs of granite. This city has comparatively little trade, and is said to be falling to decay. Ning-po, further north, and situated on the mainland, nearly opposite to the island of Chusan, is also a place of considerable size, and has the reputation of being the finest city on the coast open to foreigners. It is also regarded as one of the most literary cities in the empire, and inferior only to Loo-chow and Hang-chow, in the refinement and taste of the people. According to the statistics of an intelligent native scholar, as communicated to Mr. Smith, of the people included within the city walls, four fifths may be estimated as engaged in trade, merchandise, and labor, while one fifth were calculated as belonging to the literary class. This included the graduates and candidates for literary promotion, as well as the writers and clerks in the public offices. Of the population in the suburbs and on the level plain, extending to the hills, six parts out of ten are estimated as deriving their livelihood from agriculture, three parts as artisans of various kinds, and the remaining tenth as consisting of fishermen and boatmen. The manufacture of carpets and mats furnishes employment to a large proportion of the people. The female part of the population are employed to a considerable extent in weaving cloth. The city is surrounded by a wall of about five miles in circuit, through which there are six gates opening into the suburbs or upon the river. There are 100,000 houses and shops assessed in taxes to the government, and the population may amount to 400,000. In the city there is an unusually large proportion of temples and of spacious private buildings, and the width and cleanliness of the principal streets give a favorable impression of the wealth and rank of the inhabitants; yet, from many of the houses being empty, and the dilapidated state of others, it appears evident that the city is on the wane. Shang-hai is the most northerly of the free cities, situated on an extensive alluvial plain, watered by a number of streams. It is surrounded by a wall of about three miles in circuit, and may include about 200,000 inhabitants. The character of these is peaceful and industrious; and they are friendly and respectful to foreigners. Though suffering considerable extremes of climate, the thermometer ranging from a summer heat of 100° to 24° of winter cold, it is said to be very salubrious, the sky in spring and autumn being clear, mild, and delightful. Shang-hai is the great emporium of the central and northern parts of China, and in regard to its commercial and export trade, is greatly on the increase. In this respect it already rivals Canton, and from its central position is likely to become in time the first trading port of the empire. Cotton is extensively cultivated in the vicinity of Shang-hai, as well as rice and wheat; and tea and silks are brought from the interior to this as a shipping port, where, in consequence of the shorter inland carriage, they may be purchased ten per cent. cheaper than at Canton.

Mr. Fortune, while at Shang-hai, was particularly anxious to visit the famous city of Soo-chan, situated about fifty miles inland. As this was far beyond the limits that strangers are permitted to proceed from any of the free-port cities, Mr. Fortune resolved to adopt the Chinese dress, and visit it incognito. In this he succeeded, and found this grand city, which is the great emporium of the central provinces of China, very similar in its general features to the other towns he had visited, only it appeared more the seat of luxury and wealth, and has none of those signs of dilapidation and decay which are apparent in such towns as Ning-po. A noble canal, as wide as the river Thames at Richmond, runs parallel with the city walls, and acts as a moat, as well as for commercial purposes. This canal is carried through arches into the city, where it ramifies in all directions, sometimes narrow and dirty, and at other places expanding into lakes of considerable beauty, thus enabling the inhabitants to convey their merchandise to their houses from the most distant parts of the country. Junks and boats of all sizes were plying on this wide and beautiful canal, and the whole place presented a cheerful and flourishing aspect. The city gates were well guarded, and the streets and lanes inside were intersected at intervals with gates, which are closed at nine or ten o'clock at night. Groups of gay and cheerful-looking people loitered on the bridges, and sailed along the canals. The ladies here are considered by the Chinese to be the most beautiful in the country, and, judging from those seen by our traveller, they deserved this character. Their dresses were of the richest material, and made in a graceful and elegant style; the only faults he could discern were their small feet and the white powder with which their faces were too unsparingly covered.

Chusan, the island taken possession of by the British during the war, and again resigned to the Chinese, is allowed by all visitors to be a very delightful spot—well cultivated, and abounding in grain, fruit, and vegetables; the natives, who are of the same character as those on the neighboring main-land, being peaceable, friendly, and, at the same time, orderly and industrious. They regret

Digitized by Google

the departure of the British troops; and it now begins to be apparent that this would have been a preferable spot for planting the British flag as a permanent commercial station to that of Hong-Kong. If friendly relations continue to be preserved with the Chinese, Shang-hai and the neighboring group of cities will in time become the centre of trade, as possessing advantages of locality superior to that of Canton, and thus the island of Chusan would have possessed great local advantages as a British station.

Hong-Kong is a mountainous, rocky island, about ten miles in length and five in breadth. Its northern side bends into a capacious bay, well adapted for shipping, and forming a secure harbor. Only small portions of the surface of the island are capable of tillage, the greater part consisting of bare rugged cliffs, with only a partial vegetation of green herbage during the rainy season. Already has British enterprise cut roads and streets out of the solid rocks, and the town of Victoria has risen up, containing many buildings of magnificent structure. The native population has more than trebled since the English gained possession of it, and it is now entirely under British rule and jurisdiction. The powerful heat of the sun on this bare and rugged spot, the want of a free current of ventilation from the hills of the adjoining main-land, and the noxious exhalations from the surface, all conspire to render this a trying climate for Europeans, and latterly the health of the inhabitants has suffered greatly.

Notwithstanding their inherent suspicion of all strangers, the Chinese are neither unkind nor inhospitable. Mr. Fortune, whose botanical pursuits frequently led him into the country, almost invariably met with a good reception from the peasantry, and from the inmates of such temples and religious houses as he visited. One of these excursions we shall detail in his own words, as it affords a characteristic sketch of the timid yet inquisitive and kindly manners of the Chinese peasantry :—

"I was one day travelling amongst the hills in the interior of the island of Amoy, in places where I suppose no Englishman had ever been before. The day was fine, and the whole of the agricultural laborers were at work in the fields. When they first saw me they seemed much excited, and from their gestures and language I was almost inclined to think them hostile. From every hill and valley they cried, 'Wyloe-san-pan-fokie,' that is, 'Be off to your boat, friend;' but on former occasions I had always found that the best plan was to put a bold face on the matter, and walk in amongst them, and then try to get them into good humor. In this instance the plan succeeded admirably; we were in a few minutes excellent friends, the boys were running in all directions gathering plants for my specimen-box, and the old men were offering me their bamboo-pipes to smoke. As I got a little nearer to the village, however, their suspicions seemed to return, and they evidently would have been better pleased had I either remained where I was, or gone back again. This procedure did not suit my plans; and though they tried very hard to induce me to 'wyloe' to my 'san-pan,' it was of no use. They then pointed to the heavens, which were very black at the time, and told me that it would soon be a thunder-storm—but even this did not succeed. As a last resource, when they found I was not to be turned out of my way, some of the little ones were sent on before to apprize the villagers of my approach, and when I reached the village every living thing, down even to the dogs and pigs, were out to have a peep at the 'Fokie.' I soon put them all, the dogs excepted, (which have the true national antipathy to foreigners,) in the best possible humor, and at last they seemed in no hurry to get rid of me. One of the most respectable amongst them, seemingly the head man of the village, brought me some cakes and tea, which he politely offered me. I thanked him, and began to eat. The hundreds who now surrounded me were perfectly delighted; 'He eats and drinks like ourselves,' said one. 'Look,' said two or three behind me, who had been examining the back part of my head, 'look here; the stranger has no tail!' and then the whole crowd, women and children included, had to come round me to see if it was really a fact that I had no tail. One of them, rather a dandy in his way, with a noble tail of his own, plaited with silk, now came forward; and taking off a kind of cloth which the natives here wear as a turban, and allowing his tail to fall gracefully over his shoulders, said to me in the most triumphant manner, 'Look at that!' I acknowledged that it was very fine, and promised if he would allow me to cut it off I would wear it for his sake. He seemed very much disgusted at the idea of such a loss, and the others had a good laugh at him."—*Fortune*, pp. 39, 40.

Much has been written in praise of Chinese agriculture.* No doubt, they have been diligent cultivators of the soil from a remote period; and some centuries ago, when their agricultural and gardening operations were viewed by Europeans, they appeared to be superior to much which was practised in the west. But like all their other habits and arts, agriculture has been and still continues stationary amongst the Chinese; while in Europe, and in Britain especially, it has made great advances. The consequence is, that Chinese agriculture, as compared to British, is now far behind. It evidently appears a mistaken notion, too, which we have all along adopted, that every acre and inch of land in China is under a state of high cultivation. It is true, that the level plains and hills of moderate height, are all under cultivation, and especially so in the neighborhood of cities; but Mr. Fortune, in his botanical excursions, roamed for many miles over mountains and ravines that were still in a state of nature; some of the hills were perfectly bare and rocky, and destitute of all vegetation; and others were covered with wild plants and brush-wood. The houses of the peasantry and small farmers were also of a very mean description, built of mud and stones, with mud floors, and very few domestic conveniences. The agricultural implements are of the simplest kind, and not in the very best condition; in short, everything betraying a state of matters

* The Chinese excel in horticulture. Mr. Fortune, who, we understand, was educated in the Botanic Garden of Edinburgh, has obtained from them a number of new and rare plants, to be added to our British collections.

Digitized by Google

somewhat similar to what prevailed in Scotland some fifty years ago, when agriculture had not generally attained that perfection to which it has now arrived with us. The generally fertile soil, however, the favorable climate, and the really industrious habits of the people, are all conducive to an abundant production of the fruits of the earth over the whole extent of the country.

Rice is the staple production in all the valleys of the warmer southern provinces. As it forms a chief article of food among the Chinese, its cultivation is extensive. In the south, two crops of this grain are raised in the hot months, besides a crop of some more hardy vegetable in winter. The ground is prepared in spring for the first crop of rice, as soon as the winter grain crops are removed from the fields. The plough, which is commonly drawn by a buffalo or bullock, is a rude instrument, but light, and perhaps more suited to the kind of work than the British plough, which has been tried and found too heavy and unmanageable. As the land is always flooded with water before it is ploughed, this process consists in turning up a layer of mud and water, six or eight inches deep, which lies on a solid floor, or hard stiff clay. The plough never goes deeper than this mud and water, so that the ploughman and his bullock, in wading through the field, find a solid footing at this depth below the surface. The water buffalo, generally employed in the south, is well adapted for this work, as he delights to wallow amongst the mud, and is often found swimming and amusing himself in the canals on the sides of the rice fields. But it must be an unhealthy operation for the poor laborer, who, nevertheless, pursues it cheerfully and apparently happy. After the plough comes a harrow, without long teeth like ours. The laborer stands upon the top of it, and its use is to break down and pulverize the surface of the muddy soil, and to press in the manure. Previously to the preparation of the fields, the rice seed is sown thickly in small patches of highly manured ground, and the young plants in these seed-beds are ready for transplanting when the fields are in a fit state to receive them. Sometimes, especially in the south, the seeds are previously steeped in liquid manure. The seedling plants are carefully dug up from the bed, and removed to the fields. The fields are now smooth and overflowed with water to the depth of three inches. The operation of planting is performed with great rapidity. A laborer takes a quantity of plants under his left arm, and drops them in bundles over the land about to be planted, as he knows, almost to a plant, what number will be required. These bundles are then taken up in succession. A dozen plants are selected at a time, and plunged by the hand into the muddy soil. The water, when the hand is drawn up, immediately rushes into the hole, and carries with it a portion of soil to cover the roots, and the seedlings are thus planted and covered in without further trouble. In the south the first crop is fit to cut by the end of June or the beginning of July. Before it is quite ripe, another crop of seedlings is raised in the beds or corners of the fields, and is ready for transplanting as soon as the ground has been ploughed up and prepared for their reception. This second crop is ready for cutting in November. In the north, where the summer is shorter, a different plan is followed. The farmers here plant a second crop, two or three weeks after the first, in alternate rows. The first planting takes place about the middle of May, and the crop is reaped in the beginning of August. After the early crop is removed, the ground is stirred up and manured, and the second crop comes to maturity about the middle of November. In the Shang-hai district the summers are too short to get two crops of rice, but an autumn crop of vegetables is not unfrequent. Rain falls in great abundance during the change of the monsoon in May, and the Chinese are very expert at irrigation, so that during the growth of the rice the fields are flooded with water. The terraced bases and sides of hills are supplied with water by mountain streams, and the valleys by canals, the water being raised by a simple but very effective water-wheel. The mountain terraces, which rise one above the other like the steps of a stair, are so constructed both for facilitating the process of irrigation, and for preventing the mountain torrents from washing down the soil.

The Chinese or Nanking cotton plant—the *gossypium herbaceum* of botanists, and the "*Mie wha*" of the northern Chinese—is a branching annual, growing from one to three feet in height, according to the richness of the soil, and flowering from August to October. The flowers are of a dingy yellow color, and remain expanded only for a few hours. They are followed by the seed-pod, which swells rapidly, and, when ripe, the outer coating bursts, and exposes the pure white cotton, in which the seeds of the plant lie imbedded. The yellow cotton, from which the beautiful Nanking cloth is made, is called "*Tze-mie-wha*," and differs little, except in color, from the other variety. This latter is chiefly cultivated in the level ground around Shang-hai, in a strong, rich loamy soil capable of yielding immense crops year after year, although it receives but a small portion of manure. Early in spring the cotton grounds are ploughed up, and manured with a rich mud dug from the drains and ditches. In the end of April or beginning of May, the cotton seed is sown, generally in broadcast, and trodden by the feet of laborers into the soil. The spring rains now commence, and the vegetation of the cotton makes rapid progress. During the summer months the plants are carefully thinned and hoed. Much now depends on the season. If dry, the plants are stinted; but if refreshing rains fall, the crop proves a good one. The cotton plant produces its flowers in succession from August to the end of October, and even, in mild seasons, during November. As a succession of pods burst every day, it is necessary to have them gathered with great regularity, otherwise they fall upon the ground and are spoiled. Little bands of the Chinese are now seen in the after-

Digitized by Google

noon in every field, gathering the ripe cotton, and carrying it home to the houses of the farmers. As the farms are generally small, they are worked almost entirely by the farmer and his family, consisting sometimes of three or even four generations, including the old gray-haired grandfather, or great-grandfather, who has seen the crops of four-score years gathered into his barns. Every member of such a group has a certain degree of interest in his employment. The harvest is their own, and the more productive it is, the greater number of comforts they will be able to afford. In such a delicate article as cotton, much of the success of the crop depends upon a dry and mild autumn; for wet and cold are both inimical to it. When the cotton is brought from the field it is spread out to dry, and then it undergoes a process to separate the seeds, which is done by passing it through a machine with two rollers. It is then put into bags, which, slung across a bamboo stick, are thus carried into the towns, on the shoulders of the farmers, and disposed of to the cotton merchant. Every family retains a portion of the produce for its own use, and this the female members clean, spin, and weave at home. The spinning-wheel and the hand-loom, both once so common in this country, are still in use in China, and to be seen in every village in the cotton districts. The cotton stalks are used as fuel, the refuse as manure, and the cleared fields are immediately planted with clover, beans, or other vegetables, for a second crop.

The tea districts are situated in the provinces of Canton, Fokein, and Chekiang. There are two *species*, or probably only *varieties* of the tea shrub, the *Thea Viridis* and *Thea Bohea* of botanists. It has been frequently stated and believed that our black teas are derived from the Bohea shrub, and the green teas from the *Thea Viridis*. Mr. Fortune, however, ascertained, by actual inspection, that both shrubs yield green and black teas, and that, in fact, although the Bohea plant is that which grows in the southern districts, and the *Thea Viridis* in the northern, both green and black teas are regularly prepared in all the localities, and that the difference arises from the quality and mode of preparation of the leaves. The tea plant requires a rich soil, otherwise the continual gathering of the leaves would soon destroy its vigor. In the north of China, the tea plantations are always situated on the lower and most fertile sides of the hills, and never on the low lands. The shrubs are planted in rows about four feet apart, and about the same distance between each row, and look at a little distance like little shrubberies of evergreens. The farms are small, each consisting of from one to four or five acres; indeed, every cottager has his own little tea garden, the produce of which supplies the wants of his family, and the surplus brings him in a few dollars which are spent on the other necessaries of life. The same is the case with the cotton, rice, and silk farms; all are small, and managed by the members of the family. In the green tea districts, near Ning-po, the first crop of leaves is generally gathered about the middle of April; this consists of the young leaf buds, just as they begin to unfold, and forms a fine and delicate kind of hyson, which is highly esteemed by the natives, but it is scarce and expensive. About the middle of May the shrubs are again covered with fresh leaves, and are ready for the second gathering, which is the most important of the season. The third gathering produces a very inferior sort of tea, which is rarely sent out of the district. When the weather is fine the natives are seen in little groups, on the hill sides, stripping the leaves off, and throwing them into baskets. These leaves are then carried home to the barns adjoining their cottages, and dried in pans held over little furnaces constructed in the wall. They are then rolled up by the hand on a bamboo table, and twisted and curled into the shape we see them. After this they are exposed upon a large screen, and dried further in the sun, when they are again subjected to a second drying in the pans, and are then picked, sifted, and sorted, and finally packed up for market. For the European markets this green tea undergoes a further process of coloring, which is done by the addition of Prussian blue and gypsum; but this adds nothing to the flavor or other qualities of the tea, except heightening the color.

When the teas are ready for sale, extensive tea-dealers come from the towns and make purchases from the small growers. The tea is then conveyed to the shipping ports, and packed and shipped for the European and American markets.

"There are few sights," says Mr. Fortune, "more pleasing than a Chinese family in the interior engaged in gathering the tea-leaves, or indeed in any of their other agricultural pursuits. There is the old man, patriarch-like, directing his descendants, many of whom are in their youth and prime, while others are in their childhood, in the labors of the field. He stands in the midst of them, bowed down with age. But to the honor of the Chinese, as a nation, he is always looked up to by all with pride and affection, and his old age and gray hairs are honored, revered, and loved. When, after the labors of the day are over, they return to their humble and happy homes, their fare consists chiefly of rice, fish, and vegetables, which they enjoy with great zest, and are happy and contented. I really believe that there is no country in the world where the agricultural population are better off than they are in the north of China. Labor with them is a pleasure, for its fruits are eaten by themselves, and the rod of the oppressor is unfelt and unknown."—p. 202.

There is no state religion in China, the government permitting a general toleration of all sects. The doctrines of Confucius are adopted by the literary class, and a considerable proportion of the people. Instead of a religion, it may rather be termed a system of philosophy, commonplace enough, and possessing no great depth, yet of a practical worldly nature, suited to the tone of the general mind. It consists chiefly of moral and political maxims, and avoids entering on the existence or nature of Deity, or allusions to a future

Digitized by Google

state. Another sect, the Tauists, or followers of Laou-tsze, seem to be identical with the Schamanists, or demon-worshippers of the ruder tribes of the great Mongolian race. This sect now seems to have few votaries in China, or at least little or no mention is made of them by recent travellers, except the casual notice of a temple dedicated to their gods. It no doubt prevailed more in the earlier and ruder stages of their history. Budhism, introduced from India probably about the commencement of the Christian era, has spread to a considerable extent in China; but it is less its mysticism and abstract speculations than its image-worship, its external observances, and its monastic system, which have taken hold of the people's minds. In general, its priests and votaries are extremely ignorant, few comparatively being able to read or write, and it is only the lower and more ignorant classes of the population who belong to this religion. Budhist temples and monastic institutions are not unfrequent in the cities and country, but in general they are on the decay, and are regarded by the people with less interest and reverence than formerly. Yet image-worship is in universal practice. Their temples, houses, streets, roads, hills, rivers, carriages and ships, are full of idols, and their houses and shops, and corners of their streets, are plastered with charms, amulets, and emblems of idolatry. In external forms and regulations, there are some singular coincidences between the Romish religion and Budhism. The existence of monasteries and nunneries, the celibacy, the tonsure, the flowing robes and the peculiar caps of the priesthood, the burning of incense, the tinkling of bells, the rosaries of beads, the intonation of service, the prayers in an unknown tongue, purgatory, and the offerings for the dead in their temples, and, above all, the titles of their principal goddess, the "Queen of Heaven," and "Holy Mother," represented by the image of a woman with a male child in her arms—present features of mutual resemblance which must strike every one. Mr. Smith paid a visit to Pootoo, an island of about thirty miles in extent, in the neighborhood of Chusan, which is entirely tenanted by Budhist priests. At the time of his visit there were about six hundred resident priests, besides three hundred mendicant friars and itinerant priests, who were absent on the neighboring mainland. This island, he was informed, had been ceded to the Budhists, as an endowment for the diffusion of their religion, by one of the Chinese emperors, of the Han dynasty. This date would make the origin of their endowment contemporaneous with the earliest centuries of the Christian era. The priest who was Mr. Smith's informant said that Pootoo had seen brighter days, and he spoke with regret of the degeneracy of the present age in respect of zeal for idolatry. He especially mentioned the fact of there having been three hundred more priests on the island a century ago, and accounted for the diminution in their number by the want of interest and devotion shown by the people on the mainland, who suffered the temples, one after the other, to fall to ruin, without incurring the expense of rebuilding them. The endowment of the temple in which he himself resided arose from 200 acres of land assigned to it as its revenue on the opposite island of *Chew-ko-tze*. Besides this, they enjoyed an uncertain revenue from the offerings of casual devotees visiting the sacred locality. He stated his opinion, that out of every hundred priests in Pootoo, only twenty were men of education.

A great proportion of the inmates of these temples consists of those who have been brought thither when they were mere children, by needy relatives, or of those who, by poverty or crime, have been forced to take up their abode there as an asylum for the remainder of their lives. Without any kind of employment, either bodily or mental, and in a state of lonely celibacy, cut off from all the usual pursuits or enjoyments of society, they spend a miserable existence in indolent vacuity. By means of self-righteous asceticism they hope to be delivered from the grosser elements which form the compound being—man, and to be assimilated to, and at length finally absorbed into, the immaterial substance of the holy Budh. For this purpose they abstain from animal food, and repeat their daily routine of *O-me-to-fuh*, till the requisite amount of purity and merit has been gained, and the more devout are enabled to revel in the imaginary paradise of absorption, or, in other words, of annihilation. This is the grand hope of Budhism—this is the only stimulus to present exertion which it offers. The material part of man is to be purged away, and after transmigration through certain stages of animal life, more or less numerous, in proportion to the guilt or merit of the individual, the soul is at last taken into the deity, and becomes a part of Budh himself. This is the purely imaginative invention of a more poetical race than the prosaic Chinese. In fact, Budhism in China appears to be a mere religion of external form. The most intelligent of its priests do not believe its doctrines, and even on its more ignorant votaries it can have no heart-influence.

As little effect does the cold and lifeless morality of Confucius appear to exercise on the characters of the mass of the people. With naturally mild dispositions, and patient and industrious habits, they have no regard for truth—they are guided by expediency alone, and will lie, deceive, and cheat, just as it suits their own personal interest. No high or pure motives actuate them. They look with great indifference, or even levity, on the misfortunes of their companions, and though vanity and self-conceit make them boastful, yet they have no true and genuine patriotic love for their country. Their unimpassioned nature does not permit them to be ferocious or terribly wrathful, but they have a host of minor vices, and few of the more ennobling active virtues of humanity. Thus they are sensual, coldly cruel, insincere, mendacious, devoid of general philanthropy. Yet it must be allowed that they have the domestic attachments—

Digitized by Google

filial piety—a sense of gratitude, and a cool and reasonable way of settling and cementing disputes. From the general insincerity and duplicity which prevails, one would be apt to suppose that a total want of confidence in the ordinary affairs of life would be common, and so it would, were this not rectified by what appears a strange adjustment.

"In England," says Mr. Meadows, "we trust a man because we put some confidence in his own honesty, and because we know we can, through the law, obtain redress for breach of trust. In China, people place little or no confidence in each other's honesty, and there is so much uncertainty, difficulty, and even danger, in obtaining redress for breach of trust or contract, by applying to the authorities, that few will venture on an application. Every Chinese, therefore, who expects to have any kind of trust placed in him, is provided with a guarantee of a standing and respectability sufficient, in proportion to the nature and extent of the trust, who, according to the custom, makes himself responsible, in the fullest sense of the word for any unfaithfulness on the part of the person guaranteed. It may be objected that the guarantee himself might violate his guaranty—and at first sight there certainly appears no cause why he should not; he is, however, effectually prevented from this by the power of public opinion. Every man, without reflecting deeply on the subject, feels that some reliable bond of mutual security is necessary; the guaranty form, by the general consent of the nation, is that bond in China, and any man who would venture deliberately to contemn it, would lose—what to most people is of the highest importance—the good opinion of all classes of society, and the fellowship of his own; while even in a pecuniary point of view he would not be permitted to derive any benefit from his breach of good faith. I may state as a fact, that I have never yet known an instance of a Chinese openly violating a guaranty known to have been given by him; and though I have remarked, that under strong temptations they will sometimes try to evade it, yet instances of this are extremely rare, and they generally come promptly forward to meet all the consequences of their responsibility."—p. 218.

Mr. Smith, after giving the people credit for their good qualities, thus proceeds with the other side of the picture:—

"Facts of daily occurrence, brought to the knowledge of the missionaries, and frequently gained through the medium of the missionary hospitals, revealed the prevalence of the most fearful immoralities among the people, and furnished a melancholy insight into the desolating horrors of paganism. Female infanticide openly confessed, legalized by custom, and divested of disgrace by its frequency—the scarcity of females, leading as a consequence to a variety of crimes habitually staining the domestic hearth—the dreadful prevalence of all the vices charged by the Apostle Paul upon the ancient heathen world—the alarming extent of opium indulgence, destroying the productiveness and natural resources of the people—the universal practice of lying, and suspicion of dishonesty between man and man—the unblushing lewdness of old and young—the full, unchecked torrent of human depravity borne along in its tempestuous channel, and inundating the social system with the overflowings of ungodliness—prove the existence of a kind and degree of moral degradation among a people, of which an excessive statement can scarcely be made, and of which an adequate conception can rarely be formed."—p. 490.

With regard to the truth of the commonly received reports of infanticide among the Chinese, there can be no doubt. Mr. Smith took special care personally to inquire into this fact. It is practised chiefly among the poorer classes, and it is the female infants who suffer; a poor man in his old age usually receiving support and assistance from his sons, whereas his daughters are generally married early, and are then no longer considered as part of the family. On repeated occasions, and before a numerous assemblage, fathers, when questioned by Mr. Smith regarding this subject, seemed to have no hesitation in openly and simply avowing the fact. He was told that in the province of Fokeen, at a place called Kean Ying-Chou, five days' journey above Canton, there were computed to be from 500 to 600 female infanticides in a month. The comparative infrequency of the practice at Canton, arose from the establishment by government of a foundling hospital there, where 5000 female children, of the lowest classes, were annually received. While visiting some of the villages in the vicinity of Amoy, the subject of infanticide was introduced to the people. They stated that out of six daughters it was customary to kill three. Some murdered four, and a few even five, out of the same number. They said that the proportion of female children which they put to death entirely depended on the poverty of the individual. They told that the death of the infant was effected immediately after birth, and that four different modes of infanticide were practised amongst them: drowning in a vessel of water, pinching the throat, stifling by means of a wet cloth over the mouth, and choking by a few grains of rice placed into the mouth of the infant. If sons were alternately interspersed with daughters in a family, the people esteemed it good luck, and were not accustomed to murder the female children. One old man who was questioned, confessed publicly before the crowd, that out of six daughters he had murdered three. At first he said that he did not remember whether he had murdered two or three. He said that he smothered them by putting grass into their mouth. The people, perceiving the disgust and indignation which the recital of these facts caused, at last became ashamed of their conduct, showing how easily the conscience may be awakened to the enormity of such actions. In the other parts of China visited by Mr. Smith, no well authenticated cases were brought within his notice, sufficient to prove that this crime prevailed to any considerable extent. In the vicinity of Shang-hai and Ning-po, the moral atrocity, if perpetrated, lurks in secret, and is comparatively too rare an occurrence to be regarded as possessing the sanction of public opinion.

Another prominent vice of the Chinese is opium smoking. This to a certain extent has been practised for a long period, but of late years has in-

Digitized by Google

creased. An opium house in Amoy is thus described by Mr. Smith :—

"The first opium house which we entered was situated close to the entrance to the Taou-lais palace. Four or five rooms, in different parts of a square court, were occupied by men stretched out on a rude kind of couch, on which lay a head pillow, with lamps, pipes, and other apparatus for smoking opium. In one part of the principal room the proprietor stood, with delicate steel-yards, weighing out the prepared drug, which was of a dark, thick, semi-fluid consistency. A little company of opium smokers, who had come hither to indulge in the expensive fumes, or to feast their eyes with the sight of that which increasing poverty had placed beyond their reach, soon gathered around us, and entered into conversation. They formed a motley group of sallow, sunken cheeks, and glassy, watery eyes, as with idiotic look, and vacant laugh, they readily volunteered information, and described the process of their own degradation. There was to be seen the youth, who, just emerging from boyhood, had only commenced the practice a little time before, and was now hastening to a premature old age. There was the man of middle age, who, for half his life a victim of this pernicious indulgence, was bearing with him to an early grave the wreck of his worn-out constitution. There was again the more elderly man, whose iron strength of frame could better ward off the slow but certain advances of decrepitude, but whose bloated cheek, and vacant stare, told of the struggle that was raging within. There was again the rarely seen spectacle of old age, and the man of sixty lived yet to tell of forty years consumed in the seduction of this vice. They all assented to the evils and sufferings of their course, and professed a desire to be freed from its power. They all complained of loss of appetite—of the agonizing cravings of the early morning—of prostration of strength, and of increasing feebleness, but said that they could not gain firmness of resolution to overcome the habit. They all stated its intoxicating effects to be worse than those of drunkenness, and described the extreme dizziness and vomiting which ensued so as to incapaciate them for exertion. I subsequently visited about thirty other opium shops in different parts of the city. The people say that there are nearly a thousand such establishments in Amoy."—pp. 433—4.

A confirmed opium smoker generally consumes daily about a mace of opium, which is equal to one drachm, of sixty grains, the price of which is about eight-pence sterling, a large sum of money in China. In fact, many of the poorer classes consume from a third to a fourth of their whole earnings in this pernicious practice, notwithstanding they may have a wife and family depending on them for support. This is a melancholy account, and can only find a parallel in the gin and whiskey consumers of our own island. For one million pounds' worth of opium, however, which is thus used in the extensive empire of China, there are at least twenty millions' worth of intoxicating liquors consumed in Great Britain. Both are clamant evils, and are potent means of debasing society; but evils cannot be banished from this world of ours—our chief aim must be, by God's blessing, to elevate men's minds above temptation, and fight the battle on the side of strenuous resistance. It is, no doubt, unfortunate that this pernicious, and in a certain degree illegal traffic, should be carried on by Britons; and the missionaries have frequently had this retorted to them in the midst of their expostulations and advices to the misguided victims of opium smoking. The usual good common sense of the Chinese, however, will soon be able to distinguish the true position in which this traffic, or any other of the kind, as regards the intercourse of nations, must be put, and they will cease to confound the philanthropic endeavors of the missionaries with the gain-seeking pursuits of other members of the community to which they may belong. The opium trade, though still nominally illegal, is now tacitly recognized by the Chinese authorities, and perhaps the best plan for all parties would be to legalize it at once, imposing a certain duty on it as we do on the similar luxuries of tobacco and alcoholic liquors.

Drunkenness does not appear to be a prevailing vice among the Chinese. In general the people are temperate both in eating and drinking. Rice, vegetables and fish, eggs, poultry, form the simple diet of the rural districts, though, amongst the richer inhabitants of towns, a considerable degree of epicurism is common. Long protracted dinners, with an absurd and hurtful profusion of dishes, are as common among the city mandarins of China as among the city aldermen and higher castes of Britain. Like us, too, they range over earth, sea and air for delicacies to stimulate the satiated appetite. Hence we hear of the marvellous dishes of swallows' nests, sharks' fins, and the *trepang*, a species of *holothuria* or sea-slug fished up from the Indian Ocean, and served up as a rarity at the feasts of the rich and wealthy. So generally is the country under cultivation, and such has been the density of population for many ages, that wild animals, especially game, are very rare in China. To make up for this, however, domestic animals are reared in considerable quantities, such as bullocks, sheep, pigs, fowls, and even dogs, which are admitted into the category of culinary beasts among this people. In Chusan, and probably in many other places throughout the country, young ducks are hatched in thousands by artificial heat, and then fed up for the table; and on the rivers and estuaries, cormorants, are regularly trained to catch fish and bring them to their masters.

Mr. Smith thus describes his reception at a mandarin's table :—

"On Sept. 3d, I went with some friends to visit the principal mandarin in Ning-po, usually styled the taou-tai. Due notice had been given some hours previously, and there were circumstances attending our visit, which ensured a polite reception from his excellency. We were borne in chairs along the streets to the *ya-mun*, or public office, in which the taou-tai was then residing. As we approached the large folding-doors, leading into the first of a number of spacious courts, a gong was struck, which was immediately answered by other gongs and a bell from within. At the same time a native piper commenced playing a noisy air, accompanied by a kind of cymbal, to do honor to us as we passed.

Digitized by Google

As door opened within door, we saw signs of bustle and activity among the numerous attendants, till our sedan-chairs were set down on a pavement at the bottom of a little flight of steps leading into a vestibule. Here the great man, Ching-ta-jin, descended to welcome us; and after a good deal of bowing and other salutations, we were conducted to a reception-hall, where we were invited to take our seats. But preliminary matters of etiquette had to be settled, which occupied some time. The taou-tai would not occupy the highest seat on the left side, the place of honor; and the members of our little party affected like humility. One pressed the other, and tried to lead him into the uppermost seat, which gentle attempt the other as gently resisted. Under ordinary circumstances this would have been fatiguing; but in the excessive heat of the summer it was doubly irksome; and matters were at last abruptly brought to a satisfactory adjustment by one of our party coolly occupying the highest seat, and thus terminating the debate. One of our friends was a fluent speaker of Chinese, and acted as our spokesman. The taou-tai's cap of authority, which was ornamented with the usual knob or button of a light blue color, indicating his rank as being of the third of the nine orders of mandarins, was now taken from his head, and handed to an attendant, who placed it in a conspicuous part of the room. Soon after, another servant came at his bidding to assist in removing his upper garment of blue silk; and as, notwithstanding the heat, we had paid his excellency the compliment of appearing in woollen coats, we gladly availed ourselves of his invitation to put off the incumbrance, and sat during the rest of our visit in our shirt-sleeves. The room did not afford the signs of any great wealth in the proprietor, the furniture being simple and substantial, rather than elegant. A number of servants were standing outside, and sometimes, in their eagerness to see and listen, pressed around the door. A wave of the hand from their master once or twice seemed to remove them to a little distance on either side. But when he subsequently sat so as to have his back towards them, they quietly returned, and their number was increased by the addition of several others eager to satisfy their curiosity. After we had taken tea, the signs of preparation for a morning collation were apparent in the various dishes brought and set out on a table in the centre of the room. On the announcement being made that all was ready, the same ceremony and delay as to precedence took place. The taou-tai took his seat at the lowest end of the table. As our meal proceeded, he reverted to former topics, especially to our literary degrees. As I had been introduced as a literary teacher, he now inquired what literary degree in my own country I had attained. My friend very inconsiderately replied that I was the same as a *tsin-sze*, i. e., the second of the four Chinese literary degrees, to which Ching-ta-jin had himself attained. The taou-tai then commenced congratulating me on the felicity of my lot in getting literary promotion at so early an age. He proceeded to take a strict survey of my physiognomy, and made some remarks on my personal appearance. At last, fortunately for our preservation of gravity, the conversation was led to the subject of literary examinations and degrees in China, on which he was very lengthened in his observations.

"Meanwhile we endeavored to do honor to the dishes, which in rapid succession were placed before us, our host helping us from each dish with the chop-sticks with which he himself was eating. A kind of spirit, distilled from rice, was poured out into small cups and saucers and placed before us. Deference had been paid to our foreign palates, and in addition to the usual routine of Chinese dainties, small slices of ham, beef, duck, and foul were served on the table. Plovers' eggs, nuts, sweetmeats, formed also portions of our repast. Our host continually watched our saucers, and replenished them from time to time with what he deemed the choicest morsels. Once or twice we ventured to act on our choice, and to taste some of the unknown dishes; but we quickly came to the decision that it was better to trust to his selection. At last we were tired with the number of dishes, which one after another made their appearance. But it was to no purpose that he was informed that we had eaten a sufficient quantity. He begged to assure us that the repast would soon be over; and our apologies for occasioning him so much expense only made him insist more rigorously on our remaining till the end. During this time an animated discussion took place on the subject of foreign customs. He again reverted to the subject of my literary degree, and inquired my family name. This was altered to suit the Chinese sounds, and written *Sze-mei*. He then asked my personal name, which he tried in vain to pronounce, saying it took four Chinese characters to write it. He made several ineffectual attempts to catch the sound *George*, changing it to *Jih-ah-le-jih*. At last, in despair of mastering the outlandish sounds, he ceased from the attempt, and, falling back into his large chair, gave a hearty prolonged laugh. Then he inquired of my friend respecting the *koo-wan*, or ancient classical literature of our country. This led to his being informed of the gradual improvement of our native tongue—the comparatively recent date of English literature—the stores of ancient learning imported from Greece and Rome—the prevalence of Latin as the general medium of communication between the literati of Europe—and the different races who successively peopled Britain. To all these topics, he listened with attention, bringing frequent illustrations from similar events in the history of China. He afterwards inquired about some European country, by a name which we had never before heard. On our further listening to his pronunciation of the word, we discovered the name to be a strange combination of sounds, intended for Denmark. Afterwards the current of topics flowed to America and its twenty-six states; the separation of the United States from Britain in the last century; their common descent and language; their commercial rivalry and political emulation; the number of annual emigrants from Britain to America; the process of clearing away forests and preparing the soil for cultivation; the enterprising character of American merchants; and the political supremacy of Britain. He made some inquiries respecting the causes of emigration, and of the willingness of the British merchants to come to so distant a country as China. He continually responded, sometimes giving a hearty laugh, and not in the slightest degree affecting an appearance of gravity. He mentioned his having been formerly sent on a special mission by the Chinese government to the country of Mongolia, and spoke of the cold temperature and the forests as probably resembling those of America.

"At length, after many unavailing attempts to rise from the table, which he as often prevented, we were enabled to make preparations for our departure. During our stay of more than an hour, he showed us the usual marks of politeness and cour-

Digitized by Google

tesy. As his jurisdiction extended over three of the eleven departments, into which the province of Che-keang is divided, he was an officer of some consequence, and ruled a territory as large as Scotland. He was apparently about fifty-six years of age, and his manners were commanding and graceful. In spite of our remonstrance, he insisted on accompanying us to our sedans, and we took our departure with the same ceremony, and amid the same noise of piping and gongs, as greeted us on our entrance."

Throughout this populous and toiling empire, there is no seventh-day's rest or Sabbath bell to call the minds of the multitude from their gross and worldly pursuits, and elevate them to heaven. New-year's-day is observed as a holiday, and they have frequent festivals in honor of their ancestors, and of their idols, when feasts are spread out either in temples or in the streets, or in groves and gardens. The abundant viands, after being laid out and offered to the manes of their kindred, are then feasted on by the assembled company.

Mr. Smith thus describes a new-year's festival at Amoy :—

"*Jan. 26th.*—This being the last day of the Chinese year, busy preparations were in progress for terminating business, for laying in a stock of provisions, and for celebrating the superstitious observances of the evening. In all directions companies of cooly-bearers might be seen carrying large packages of new-year presents to the friends of their master. In the various houses which we visited after sunset, the head of the establishment, attended by his sons or his partners, was to be observed balancing his mercantile accounts, and settling the debts of the year. So punctilious are the Chinese in the observance of this commendable practice, that they say they could not enjoy the festive occasion, nor sleep during the night, unless they had previously relieved their mind of this burden. The *swan-pwan*, or counting-board, was in constant use; and when the business seemed well-nigh terminated, and the books were about to be closed, a neighbor would hurry into the shop, and pecuniary transactions would again for a season be renewed. While these important matters were in progress, the family were engaged in burning gilt paper, with the occasional discharge of fire-works, and in making preparations for the peculiar annual custom named *hwui loo*, or 'surrounding the furnace.' This is performed by the members of each family sitting down to a substantial supper, with a pan of charcoal placed under the table in the centre of the party. The only explanation which they gave of this odd custom was, that fire is the most potent of the elements; and hence, probably, they derived a notion of its efficacy in averting evil, or in strengthening the bonds of family union. The women observed this custom in an inner room by themselves; while the master of the house, with his sons and his hired assistants, sat down in an outer room. In one of the families, in which we were invited to remain in order to view the detailed observances of the occasion, the proprietor, a man apparently of some little wealth, sat down with his assistants, his younger son, and two little grandsons. The eldest son, a youth of about nineteen, sat near us, attending to our wants, but without partaking of the feast himself. Every minute he was on his legs, attending to the beckoning motions of his father, on whom he waited without the least appearance of its being esteemed unusual. At one time he brought a spoon, or a pair of chop-sticks; at another time he fetched a paper-napkin for his father's use, or re-filled his glass with samshoo. The old gentleman, after a short time, became silent and drowsy. But the rest of the party meanwhile increased in mirth, as they rapidly consumed the good fare placed before them. The conversation became increasingly animated, and some of the women soon entered at the further end, and joined in the subjects of amusement. These were the secondary wives of the household, the proper wife and the daughters-in-law being never permitted to mingle in the free, unrestrained conversation with strangers, which is sometimes allowed in the inferior class of female domestics. Great civility was shown to us, but we declined to partake of the feast. It was very melancholy to witness the habit of reckless lying, which manifested itself so frequently in their replies; both the old man and the son showing not the least compunction or sense of shame in telling flagrant falsehoods whenever it suited their purpose. In reply to our question about one of the women present, the old man said, first, that she was an acquaintance; then, shortly after, that she was a daughter-in-law; and, at last, the plain truth came out, that she was one of his secondary wives. Not the slightest jealousy appeared to be cherished in regard to the latter class of wives, though the mistress of the family did not once make her appearance. This lower class of women are generally purchased from poor parents as domestic servants, with the liberty of degrading them to the rank of inferior wives, which practice is generally prevalent, and is considered, even by their sages, to be strictly in accordance with moral rectitude, if the proper wife has given birth to no son. The offspring of both classes of wives are considered legitimate, although the sons of concubines, in inheriting the patrimony, receive only half as much as the son of the proper wife, or mistress of the household.

"The supper being ended, they next prepared for burning the small wooden frames of the lamps, which are generally kept burning day and night in the dark interior of their houses. From the ashes which remain, they profess to derive means of ascertaining the exact period of the rainy and dry seasons of the coming year; the knowledge of which is very important in a land where famine often exposes so many thousands to the danger of starvation, from the destruction of their crops. Three little frames of lamps were brought, and placed ready for lighting on the pavement. The eldest son went forth into the street, and discharged some crackers, to drive away the evil spirits, while some of the domestics folded up about a bushel of gold and silver paper into the shape of lumps of silver. The eldest son returned and set fire to the materials, and in about ten minutes the whole was consumed to ashes. The live embers were then carefully distributed into twelve little heaps, answering to the twelve months of the year. They were then anxiously watched, the heap which first burned out showing the most rainy month, and that which last burnt out indicating the month in which there would be most sunshine and least rain. Particular attention was directed to the third, fourth, fifth, sixth, and seventh months, as the rain, if excessive in those months, would cause mildew and blight of the harvest. Acclamations of joy arose, as the second heap first died out, and predicted the

Digitized by Google

greatest quantity of rain in the month when it would be most seasonable and least injurious. The fifth month was to be clear weather and without rain. The sixth and seventh heaps, as the partially-consumed embers were left half red-hot and half black, denoted that there would be partly fine and partly rainy weather in the corresponding months. The result of the experiment seemed to give the assembled party great satisfaction, which was only slightly interrupted by our asking whether the next neighbor's heaps of consumed embers would coincide in the favorable prediction. To this they replied by begging us to mark the result in the course of the year; and also by saying, that they had nothing to do with their neighbor's house. The samshoo now passed around, and we left them to prolong their festivities for an hour or two, when they retired to rest, till the booming of the midnight watch-gun roused them from their slumbers, and they hastily rose to offer each other their new-year's congratulations, and to renew their feasting.

"The next morning the city authorities commemorated the new-year, by assembling in a body, at dawn of day, and going forth in procession to an imperial temple in the suburb outside the north gate. There they made nine *ke-tow*, or knockings of the head on the ground before a large yellow screen, which, for the occasion, occupied the place of imperial royalty. This custom is renewed also on the emperor's birth-day, and denotes the most decided act of submission. It was this ceremony which the imperial officers tried in vain to extort from former British ambassadors, as a token of vassalage."

That entire seclusion of females from all intercourse with strangers, which former accounts led us to believe in, appears to have been exaggerated. In consequence of the practice of polygamy, and other causes, females have not attained that equality in the estimation of the other sex which prevails in Christian Europe; still they appear to enjoy a considerable degree of liberty and influence in their families. Any man in China may have as many wives as he chooses, but the number is generally regulated by a prudent regard to circumstances and station of life. The marriage ceremony is a very simple one, and is entirely of a civil nature, religion having nothing to do with the contract. Filial piety and affection is very strong among this people, and is cherished long after the decease of parents and relatives. Ancestral tablets are kept in their houses and ranged in the temples, and great care is taken in embellishing, and frequent visits are made to, the graves of their kindred. There are generally no fixed places for the interment of the members of a community, but each individual or family selects the site of their grave, according to their fancy. The sides of hills, and the most beautiful spots in valleys, are thus often chosen, or gardens or groves adjoining their own residences. Their graves are generally planted with the choicest flowers. A pleasing domestic scene is thus described by Mr. Smith:—

"The wife came out after a little time, and having modestly paid her respects at a distance, soon retired into an inner room. The old mother was, however, more officious, and brought out her two young grandchildren smartly attired. She seemed to be the presiding authority in the family; and it was pleasing to observe the extreme deference universally paid to this elderly class of females. All the inmates of each family appeared to be united in the closest bonds, and to bring together their earnings to a common fund, from which they defrayed the expenses of supplying their daily wants. The old lady of the household acted in the useful capacity of nurse, house-keeper, and adviser, and exercised over the members of the family a general control, which was never resisted. Her word was law, and her influence appeared to be paramount. The teacher was a poor man, earning only six dollars a month from tuition. He seemed, however, contented; and the old lady especially thanked my companion for his kindness to her son. When a grandmother dies, the wife then comes into her full share of influence, and the position which she holds in the family circle presents the social condition of females in China, as an anomalous spectacle of mingled degradation and independence."—p. 414.

The Chinese afford a striking moral spectacle among nations. The civilization of many thousand years has done its utmost for them. It has tamed and subdued the fierce passions, and introduced all those domestic arts which tend to make life agreeable; while the elements of education have been very generally diffused, and a mild and peaceful philosophy, not devoid of the general precepts of morality, has been engrafted in the minds of the people; yet nowhere is public and private virtue at a lower ebb. This assertion is not made with regard to any particular locality, or any one grade, but applies to the whole mass of society, from the highest official down to the lowest member of the community. It shows the effect of a utilitarian philosophy, and a moral code of expediency, without the element of some higher and nobler aim to guide and direct the grovelling and ever-wavering mind. Thus, for instance, Confucius teaches, that speaking the truth is a right and proper thing; but then he allows that children, on some occasions, may tell a lie for the good of their parents. Once admit a qualification of this kind, and a parent may think it no great harm to tell a lie for his own benefit, and thus the tide of falsehood flows abroad. No doubt, Confucius holds it a very detrimental thing for society, that one person should murder another; but then some zealous advocate of the "greatest happiness principle," may discover, that by cutting off in the bud—that is, by simply murdering one half of his babes, he will have a larger support for himself and the survivors. In short, we have exemplified here the result of all those delusive speculations which would teach men to live for their mere appetites and pleasures alone, instead of living for another and a higher state of existence.

In many respects China, as now situated, holds out a most inviting field for missionary labor. The government has granted a full religious toleration. Missionaries of all denominations have access to the five free cities stipulated in the treaty of peace with Britain. One written language is common to the whole of this immense and populous empire, and already more than one complete translation of

Digitized by Google

the Scriptures has been made into this language. The educated portion of the people are fond of reading, and receive with great eagerness books and tracts circulated amongst them. This desire of information exists among the higher mandarins, as well as among the lowest class of literati. The Chinese intellect is by no means deficient in acuteness and sound common sense; and the existing religions having but slender hold of their minds, they are but little preöccupied with or prejudiced in favor of any particular doctrines. On the other hand, their temperaments are cold, worldly, and unexcitable. Yet not a few have listened to and become converts to the Christian faith; and He who hath destined this faith ultimately to prevail throughout all the earth, can open up and quicken the hearts even of the coldest and most sceptical.

The first Christian missions to China were undertaken by the Jesuits, at the dawn of the Protestant reformation in Europe. They met with various success, were sometimes tolerated, and sometimes persecuted, according to the dispositions of the reigning monarchs. At present there are 170 Roman Catholic missionaries in the empire, and they are said to have about 200,000 adherents. But Mr. Medhurst observes that there is nothing in the Catholic worship, or in the character of the priests, calculated to give the Chinese a very exalted idea of Christianity. In the former, they witness graven or molten images, processions, tinkling of bells, candles, and incense, exactly resembling their own religious rites, and, in the latter, a number of ignorant and idle monks, professing celibacy, but with indifferent moral characters, shaving their heads and counting beads very much after the fashion of the Budhist priests. A few Catholic missionaries still make converts of the lowest and poorest Chinese, who occasionally appear at the churches, and receive, each of them a small donation of rice, for which service they are sometimes called, in Portuguese, "Rice Christians." The first Protestant mission to China was sent out by the London Missionary Society in the year 1807, and amongst the earliest missionaries was the celebrated Dr. Morrison, who, after a labor of ten years, succeeded in mastering the Chinese language, so as to compose a dictionary of it, and a translation of the Scriptures into the Chinese tongue. Within the last few years a great impulse has been given to missionary enterprise in China. Medical missionaries, both from Britain and America, have gone out, and hospitals have been established in Canton, Shang-hai, and some of the other cities, where relief has been afforded to many thousand native patients; and every opportunity has been taken, at the same time, of circulating tracts, and expounding the doctrines of Christianity. These medical hospitals are highly prized by the Chinese. The art of medicine is at a very low ebb with them, and the gratuitous relief so extensively afforded has been duly appreciated by their naturally kind dispositions, and has tended much to soften the asperities arising out of a national defeat. According to a list given by Mr. Smith, there are at present forty-four missionaries in the different towns along the coast; and others are on their way, both from England and America.

"The present lamentation," says Mr. Hamilton, in his spirited little tract on Chinese Missions, "is, that China does not contain the power which can evoke the highest goodness or allay the most abandoned vice. The emperor cannot do it—the ancient laws cannot do it—the maxims of the sainted Confucius cannot—the magic of Taouism cannot—the miracles of Buddha cannot—and we may add, the Madonna cannot—the priests with their Latin prayers cannot—the monks who are to sail for Marseilles this summer, with their cargo of crucifixes and beads and dead men's bones, cannot. But the Gospel can! The Gospel can open the fount of tenderness in bosoms where it has forgot to flow. It can pluck the deadly drug from the opium-smoker's skinny hand—it can wrench the infatuating dice from the gambler's delirious clutch—like the Egyptian princess it can snatch the drowning babe from the whelming stream, and rescue the outcast infant from the vagrant's blinding steel:—and it can put truth in the trader's inward soul, and give new meaning to his language—it can make the Chinese yea be yea, and their nay be nay. All this the Gospel can effect; and, with the help of God, all this the Gospel will. And it is the true ennobler of the affections and sublimer of the feelings. Let but its gladness thrill through spirits which in the apathy of ages hardly know what gladness is, and with what a grasp of earnestness will brother seize the hand of brother! With what a look of admiring affection will the Christian husband recognize that Christian partner, whom he now despises as a cipher and oppresses as a drudge! And with what starts of wonder will the quickened spirit view the glorious things of creation, and the blessed things of life issuing in rapid resurrection from under the tomb-stone of old custom—from their long burial in the grave of ancient commonplace! That Gospel is mighty; and let but its clarion-peal—let but its jubilee-reveille echo through the sleep of these enchanted ages—let its omnipotent blast dispel the nightmare of these supine but uneasy years, and the millennium of misery end in the vision of a Saviour present and divine;—and oh! what a shout of power will bespeak the nation born! what a song of praise that proclaims the three hundred millions alive again!"

From Chambers' Journal.

TERRESTRIAL MAGNETISM.

For many years the tendency of philosophical research has been towards the resolution of the apparently multifarious operations of nature into effects of one general cause—results of one universal law. Attempts have been made, and in some instances successfully, to reconcile the seeming discrepancies between different natural phenomena; and, in cases of failure, the impression has been, not that the phenomena are irreconcilable, but that we have missed the clue to the explanation. The relations between chemistry and electro-magnetism, between animal and vegetable physiology, are becoming apparent: astronomy is unveiling the secrets of remotest space; and geology, while explaining the structure of our planet, finds itself dependent on mighty natural agencies, working in obedience to a fixed law. The latter science has often been de

Digitized by Google

signated as preëminently the science of dreams and vague speculations; but by the diligent accumulation of facts, such a degree of certainty has been attained, as to enable us to predicate with some confidence on the phenomena which it comprehends. Opinions, it is true, are still divided as to the source of central heat—the cause of volcanic and other disturbances of the earth's crust—some writers ascribing it to an interior fluid mass of fire, others to chemical action; the latter, as before observed, is now but another term for electro-magnetic action.

In the present paper, we propose to give a summary of the views entertained with respect to what may be called geological or subterranean magnetism.

Whatever may be the direction of magnetic currents within the earth, it is not permanent on the surface. A chart of magnetic curves requires to be reconstructed every ten years. Halley was the first to attempt their delineation; and he threw out some ingenious speculations as to the cause of the variations, attributing them to the revolution of a magnet in the interior of the earth. The subject remained in abeyance until 1811, when Hansteen of Christiana investigated the phenomenon, and defined the variations of the curves, during a period of two hundred years, with geometrical accuracy. In 1576 the needle stood 11 degrees east of north, from which point it returned until 1657–62, when it was due north. Continuing its march, the maximum of westerly declination, 27 degrees, was reached in 1815, since which period it has been again moving slowly to the east. Hansteen supposed the existence of two magnetic poles at each of the polar points of the earth, to whose revolutions the variations of the compass and of the magnetic curves were to be ascribed; but this view has been shown to be untenable. The labors of Barlow, Sabine, and Faraday, have gone far to divest the subject of many of its difficulties. The relation of magnetism to all matter, as discovered by the latter gentleman, is pregnant with important results towards a solution of the mystery; the objection that it was physically impossible for the earth to be a magnet, is now effectually set aside. Gauss of Göttingen, to whom this branch of science is so deeply indebted, computes the magnetic power of each cubic yard of the earth as equal to that of six steel magnets, each of one pound weight. With so tremendous a power, vitalizing, so to speak, every inch of the globe, we are enabled to account for the eruptions, upheavals, and other disturbances by which it is visited.

The researches of Becquerel and Crosse have demonstrated that minerals, whether earthy or metallic, and crystals, can be produced by weak electric currents; and it is a remarkable fact, that electric currents are found to exist in mines. Wherever the test has been applied to the metalliferous deposits in Cornwall, Wales, on the continent, or in South America, the result is the same. Mr. R. W. Fox has shown, in his communications to the Philosophical Transactions, and other scientific publications, that in the lead and copper mines of this country the direction of the positive currents is generally from east-west; subject, however, to local influences, by which they are sent in the opposite direction, or north and south, where the lodes are parallel. So certain were the indications of the galvanometer in detecting the presence of metallic substances or solutions, that the miners exclaimed, "The little thing knows ore, but does n't know the country;" the latter part of the observation referring to the absence of movement in the needle when the instrument was applied to non-metallic rocks or earths. Mr. Fox succeeded in magnetizing an iron bar, and in one case obtained an electrotype plate by the action of these natural currents. By the same agency he has converted copper pyrites into vitreous copper; and produced artificial veins of carbonate of copper and zinc "in a wall of clay placed between the poles of a galvanic series. It appears to be highly probable," he adds, "that the metalliferous veins, and perhaps even the rocks themselves, impregnated as they are with different mineral waters, and thereby rendered imperfect conductors, if not exciters of electricity, may have an important influence in the economy of nature."

In a recent number of the Journal, we quoted Professor Ansted's views as to the conversion of granite into mica-schist and clay-slate by the passage of galvanic currents; and Mr. Fox has clearly demonstrated, that by such currents laminæ are produced in masses of clay and other substances. The more recent experiments of Mr. Hunt have extended and confirmed the former in all essential particulars. According to Mr. Evan Hopkins, who published a work about three years since "On the Connection of Geology with Terrestrial Magnetism," magnetic currents are continually passing from the south to the north pole, through and around the earth. He shows that the southern aurora, which observation has proved to be accompanied by a similar phenomenon in the north, differs from the latter in appearance, in consequence of the greater amount of vapor produced by the preponderance of ocean in the south. The form is alike in both cases; but the light of the southern aurora is white, while in the north it inclines to red and purple. We read that "the saturated or hydrogenous nature of the currents coming from the south pole towards the north, will account for the observed peculiarity of the southern hemisphere in its general temperature, moisture, rains, the growth of vegetation, &c., as compared with that of the northern." Magnetic and galvanic currents are shown to be identical, except that the action of the latter is in some degree restricted to liquids; and as all metals may exist in solution, their deposition, by means of the currents, admits of demonstration. In this case nature accomplishes on a large scale what experimentalists achieve with the galvanic battery; and, as Mr. Hopkins explains, "If we admit the existence of subterranean currents, and that these exert a slow decomposing power, like that of the voltaic battery, we have a sufficient power for our purpose. In the first place, we have a mechanical tension on the consolidated parts of the rocks, by the linear action of the currents passing through them; and should the intensity of the currents be very great, fractures would ensue more or less at right angles to the direction of the force. These fractures would admit air and water, and thus produce intense heat, by the avidity with which the metallic nature of the bases of the earths and alkalies combines with the oxygen. That nearly all the substances which constitute the crust of the globe are found *in solution* as well as solid, saturated throughout the rocks, and to such a degree sometimes as to issue out and form springs, is well known; therefore, judging from the violent effects on a small scale which we are able to produce by experiments, a heat would be engendered quite adequate to occasion all that takes place in earthquakes and volcanic eruptions."

In this way may be explained the formation of veins that have long puzzled the geologist. That

Digitized by Google

it is in obedience to some law, is evident from the general direction of metalliferous and crystalline deposits being the same in different parts of the world. The oblique direction apparent in some instances arises from the force of tension acting at right angles to the line of structure, which is northerly and southerly. The parallelisms are, in fact, most remarkable. Humboldt found the primitive rocks, in which metallic veins chiefly occur, in South America following the same line as those of Germany and England; the same parallelism has also been traced between the upheaved rocks of Russia and Africa. It is assumed that the intensity of electric action increases in proportion as we descend deeper into the earth; and there are many striking effects witnessed in mines, which the existence of electric currents, disturbed by local causes, will alone explain. The heat in mines, particularly those of South America, is not constant; patches which at one time are at a very high temperature, become gradually cold, without any apparent cause, and after a time resume their warmth. The growth of minerals in old workings, as a mossy excrescence, is a fact well-known to miners; and in some instances, as observed in Durham, Hanover, France, and in the gold mines of America, when a vein has been worked out, and the galleries left closed, they become filled with solutions of the rocks between which they are dug, and in course of time the deposits thrown down render them again worth the working—the mineral being solid, or in a powdery form, according to the intensity of the current. As is well known, crystals are hardly to be obtained by fusion, but may readily be produced from soft and moist substances; a point admitting of experimental proof. "In order," writes Mr. Fox, "to exhibit the mode of filling, and the formation of different crystals in the same fracture, place a mass of clay-slate between the poles of a battery, immersed in a metallic solution; it will be seen that the currents pass *only* in the direction of the cleavage. If the slate be broken across, so as to represent veins of fractures, crystals will be observed to grow in each fracture transversely; that is, in the direction of the cleavage planes."

The igneous theory—the doctrine of central fire—has for some time been slowly yielding to other views. All the phenomena attributed to fire may be produced by electro-magnetic currents. It is difficult to imagine the existence of fires unsupplied with the oxygen of the atmosphere; and a singular fact has come to light with regard to the earthquakes in South America, based on observations continued during nine years; the oscillations are from east to west, while the rumbling sound by which they are accompanied travels north and south, showing the influence of some law similar to that by which magnetism is governed. "Even the cause of the variation of the needle, mysterious as it has hitherto appeared to be, may probably be referred to the relative energies of the opposing electrical currents, which are perhaps subject to occasional modifications; and the appearance of earthquakes and volcanic action from time to time seems to countenance the probability of such changes."

Taking the ocean as the connecting medium between pole and pole, Mr. Hopkins shows it to be the universal menstruum whence all the variety of materials that constitutes land is derived. The great ocean currents are from south to north, which, with the upheaval and subsidence of continents and islands, the changes of level continually going on, may be referred to the action of magnetic currents passing from one to the other pole. Everywhere, in fact, there appears to be a tendency towards the north, or pole of decomposition, from whence the decomposed substances are carried back to the south, to take on new combinations, and resume their part in perpetuating the operations of nature. In various parts of the world, the latitude of places is found to be slowly moving northwards, at the rate of from ten to twenty minutes in a century. It is a generally received fact, that the climate of Europe is colder at the present time than in the earliest periods of history. The first settlers in Iceland described it as fertile in many parts, and covered with trees; and there is evidence that the vine was cultivated where now is nothing but an icy desert. Mr. Lyell observes, with regard to the material diminution of temperature in the northern hemisphere, "we know that there are constantly some small variations in the respective geographical positions." And it is worthy of notice, that while in the north we find fossils, and other remains of the torrid and southern regions, we never find in the south any but those of the adjacent seas, or peculiar to the locality. In the coal-beds of Melville Island, fossil plants are found which required tropical heat and light for their growth, and could not possibly have flourished through the cold and six months' night of the arctic regions. An island or continent moving from the south would naturally carry its sponges, ferns, corals, and animals to the north, modified by the changes of temperature through which it passed; and the immense deltas of floating wood in process of formation at the embouchure of the Mississippi and other rivers, to be alternately elevated and submerged during their ages of transit, would seem to be the means of providing an endless succession of coal-beds for the inhabitants of the chilly north.

As bearing on this subject, we may notice a paper by Mr. Dana, in the American Journal of Science, on the "Grand Outline Features of the Earth," in which the phenomenon of parallelisms above referred to is ably discussed. The trends of coasts, mountain ranges of various continents, groups of islands, including the Pacific group—five thousand miles in length, although thousands of miles apart—are shown to lie in the parallel curved lines. It would appear from these facts, that the geographical distribution of the land is not a confused chance-arrangement, but that the earth has a systematic physiognomy—the directions of the leading lines being north-west and south-east. Taking the earth as an entire mass, it has a facility for splitting most readily in two directions, indicating a rupturing force and a structure by which the lines have been determined. Necker has shown the coincidence between coast-lines and mountains and magnetic curves; and, according to Sir David Brewster, the lines of magnetic intensity, corresponding with those of equal heat, manifest a mutual dependence of the two phenomena.

This brief sketch of the opinions of scientific men on this interesting subject, places geology and magnetism in quite a new light, disclosing a field of labor that promises a brilliant harvest to the persevering investigator. The wasting away and degradation of the land, which have often been viewed with alarm, are now shown to be compensated for by a process tending to the renewal and perpetuation of the physical universe. We look forward to the labors of Professor Faraday as destined to throw further light on this interesting branch of science, in which he has already done so much. According to Sir John Herschel, we are to look to "electro-

dynamics for the *vera causa* of the Newtonian philosophy;" and we may borrow the words of that distinguished philosopher in conclusion, and say—"There are secrets of nature we would fain see revealed while we yet live in the flesh—resources hidden in her fertile bosom for the well-being of man upon earth, we would fain see opened up for the use of the generation to which we belong. But if we would be enlightened by the one, or benefited by the other, we must *lay on power*, both moral and physical, without grudging, and without stint."

From Chambers' Journal.

ASCENT OF THE BUET.

If the Alpine tourist be possessed of tolerable activity, and be desirous to obtain an unequalled mountain view—and, more particularly, a view of the monarch of mountains, Mont Blanc, sublimely seated in his awful state—let him, the tourist, if he be within any moderate distance of the mountain, by no means omit to ascend the Buet; for many years, until English perseverance and activity proved the contrary, supposed to be the highest accessible point of the Alps.

It was on the 24th of July, 1844, that I left Chamouny, with my guide, Ferdinand Tissay, each mounted on a mule, at half-past three in the morning, on our way to the Buet. At half-past four we reached Argentiere; and here I could not help stopping for several minutes to admire, though I had many times seen it before, the wonderful ice-battlemented glacier of Argentiere, and the sublime granite spire of the Aiguille Verte, now tinged with the earliest beams of the sun, which, for peaks of such stupendous elevation, had already risen. At half-past five, we stopped for a short time at the Chalets of Poyat; after which we took the direction of the Col du Bérard. Our way at first lay over a stony and rather boggy ascent; and afterwards up an exceedingly wild and picturesque valley, with a loud torrent foaming as usual through it. Here the path became so exceedingly rough and steep, that I confess I was not sorry to leave the mules before we came to the Pierre de Bérard, which we were obliged to do, in consequence of our finding so much yet unmelted winter's snow. We left our mules with a youth who had preceded us on foot from Chamouny, and began our own journey on foot at half-past six, passing over a bed of snow, with a torrent audibly running underneath, for half an hour or more. At a quarter past seven we reached the Pierre de Bérard, a point beyond which mules *never* pass. Travellers have frequently made the Pierre de Bérard their halting-place for the night; and indeed there is a hollow under this rock large enough to shelter several people; and an additional poor protection is afforded by a rough wall of stones to keep out the wind. But it is needless to add that bivouacs in such places, though no doubt highly romantic, should for obvious reasons be avoided, unless in cases of extreme necessity. For, after all, even "for beggars or thieves," a worse lodging could scarcely be found. I am always, I confess, for a good night's rest; and am apt to suspect the energy and perseverance of those who affect to despise conveniencies. The hovel, formed in this desolate spot almost wholly by nature, was very damp and dirty, and contained a large patch of snow, yet remaining from the blasts and drifts of the winter. At this spot we first obtained a sight of the Oberland Alps, and from hence our way, though steep, was for a time free from snow. The weather was quite perfect; not a cloud was visible; the sky was clear of haze, and the air mild, yet not close. This pass of Bérard is one of those better known to shepherds and smugglers than to any other description of travellers.

At a quarter past eight we had of course gained somewhat in height; but we nevertheless saw cattle passing the snow, one by one, at a great height above us, and in a few minutes more we again entered on the snow. At a quarter before nine we caught sight of Mont Blanc appearing over the range of the Aiguilles Rouges. At twenty minutes past nine we attained a rough slaty ridge, quite free from snow; in fact the ridge of the pass. From hence we had a wonderful view of mountain-tops in all directions. It was not cold, but the sky now put on the appearance of the weather being about to change for the worse. Every peak, however, even the most distant, was quite clear; nor was there the slightest cloud or haze upon any part of Mont Blanc. From this pass we might have descended directly to Servoz; but our purpose was of a much more aspiring nature. After pausing a few minutes, we commenced and completed a fatiguing ascent of the now eternal snow, which was succeeded by a heart-breaking slope of bare slaty débris, occupying us together till forty minutes after ten o'clock. Again another slope of snow succeeded, and again another ascent of slaty fragments, which brought us, at a quarter past eleven, to the remains of the stone hovel of the philosopher Pictet, in which he used to take shelter when overtaken by bad weather in this elevated desert. One more short slaty ridge, and a steep slope of soft snow, brought us to the summit of the Buet, 10,154 English feet, according to De Saussure, above the level of the sea, at half-past eleven, after a fatiguing walk of five hours from the place where we left the mules, and eight hours exactly from Chamouny. The sun at half-past eleven was exactly over the Aiguille du Midi, as seen from hence. From this fine mountain-summit we looked clear away over the summit of the Brever, and of the Aiguilles Rouges (which we had so often looked up to from Chamouny) to Mont Blanc, and his attendant Aiguilles in all their glory. Mont Blanc, seen from this height, and at this distance, towered in kingly state over all his vassals. There were some clouds about, but none to impede the view; nor was there a breath of wind. The air, too, was quite mild; but my feet now became excessively cold, from my having been so long walking in the soft snow. The mountain summits visible from hence are so numerous, that to mention them all would be to make a catalogue of a considerable portion of the Alps. Beyond the range of Mont Blanc, towards the west, far in the Taxentaise, I saw very many undulating snowy summits, with a light thrown over them that gave them the appearance of the colored waves seen in a surface of mother-of-pearl; in another direction, through a mountain gap, we got a peep at the Lake of Geneva. The Jura range, on the other side of the lake, was very distinct; so were the summits of the Oberland Alps, and all the heights quite round towards the Simplon. We were here, although the air was perfectly calm, at a height to which the voice of the torrent did not reach; and the impression of stillness I shall never forget. Close on the edge of the highest point of the mountain, where the precipice suddenly sinks down with frightful rapidity, and to which we scarcely dared approach, for fear of dislodging a mass of the soft

Digitized by Google

snow, we saw the track of a chamois, that must have very lately passed. I observed several insects half dead lying on the snow during our ascent; and whilst we stood on the summit—oh, satire on human ambition!—several common butterflies flew over our heads.

The view from the summit of the Buet reminds one forcibly of one of the old-fashioned maps of all the mountains in the world at one view. In a word, it is the most unpicturesque thing possible, but possessing a grandeur and sublimity peculiar to itself, which, once seen, is never through life forgotten.

We could not remain on the actual summit for any length of time, for the snow was so soft, that we could not sit down, and no dry rock was visible, and my feet were aching excessively with the cold of the wet snow; so we descended to some dry rocks a little way down, where we changed our stockings, and got quite warm, and enjoyed the luncheon we brought with us very much. We remained here until one o'clock. Neither on the summit, nor during the ascent, did either I or my guide experience any inconvenience from the rarity of the air. During the ascent, I twice heard that peculiar solemn noise, difficult to describe, something between a deep sigh and a *lourd*, heavy, sullen, subdued sound of an explosion, which no doubt is frequently to be heard in these upper regions. It is probably occasioned by some slip or giving way of the snow under the influence of the mid-day sun. Beneath the snow-cliffs, my guide pointed out to me a place which, he told me, was that in which, in the year 1800, Mr. Eschen, a Dane, lost his life. In the spot which he pointed out, the snow appeared deeply crevassed; and, to the most unpractised eye, it was evidently not the way up the mountain. It was hard to believe that any one would have ventured into such a place.

I have already mentioned the stone hovel on the summit of the Buet, erected for the accommodation of the philosopher Pictet. I believe he made on this spot many observations with the barometer, as well as experiments on heat and radiation; the Buet is also alluded to by name, in a paper by him in the English "Philosophical Transactions," concerning the measurement of an arch of the meridian, dated 1791.

The steep and fatiguing slopes of slaty débris which I have mentioned before, are enriched with some of the rarest of the Alpine plants.

In descending, we glissaded the greater part of the slopes of snow; but where we kept the track of our ascent, I was surprised to find that our footsteps, though very deeply impressed, were almost entirely effaced by the action of the sun. Our descent was very rapid, and varied with frequent falls; the ensuing *glissading* of which may, without care, be carried far beyond a joke. So overpowering was the glare from the snow on the Buet, that I did not find a large goggling pair of green spectacles, together with a thick black crape veil, more protection to the eyes than was necessary.

We finally reached the spot where we had left our mules, below the Pierre de Bérard, at a quarter before three o'clock; that is, in an hour and three quarters from the summit of the mountain, it having taken us five hours to ascend the same distance. I continued my way on foot, leaving the guide and mules to follow all the way down, and had now ample leisure to admire the scenery of the valley we had ridden up in the morning, which presents one of the wildest and most thoroughly picturesque scenes I ever beheld. Some of the rock and water scenes are scarcely to be exceeded for beauty and grandeur. No one should omit, if possible, during a séjour at Chamouny, an excursion as far at least as the Pierre de Bérard.

We arrived at the Chalets de Poyat at four o'clock, and I got back to Chamouny on my mule at a quarter before six. Thus the expedition from Chamouny to the summit of the Buet, and back, occupies just about fifteen hours.

Extract of a Letter from Canton, China. —A foreigner has just started a newspaper in the Chinese language. Whether it will succeed or not remains to be seen. It is a novelty to the people. The only paper published by the Chinese that can at all be depended upon is the Pekin Gazette. This is published at *irregular* periods at the capital, and thence distributed throughout the empire. It is a matter of great importance for the mandarins to secure an early reading of the Gazette, in order that they may be enabled to proceed in their official duties; for it generally seems that the only means by which the officers of government arrive at a knowledge of the will of their sovereign is through the medium of that Gazette.

Express riders are in readiness at Pekin to carry the Gazettes in different directions over the empire as soon as published. The *same rider* carries the Gazette from Pekin to any one city, as for instance Canton, performing the distance on horseback by means of relays of horses at short distances. The distance from Pekin to Canton is performed in six days, riding incessantly night and day; and, as you may readily imagine, proves fatal to a great portion of the riders. As a general rule, no rider is able to make more than two trips, as he either dies or becomes permanently disabled.

A high mandarin who is under the necessity of securing an early perusal of the Gazette, pays not far from $20 per month for his paper—whereas those who are content or who are able to defer the perusal to a *later* date, pay proportionably less, say $2 per month.

We missionaries are not enough interested to subscribe for the paper, and if we did so, the perusal of it would scarcely repay the trouble and expense. It is generally filled with court gossip and court ceremonies, alike insipid and uninstructive.

In the spirit of most men, lies a creative power, which only needs the right moment to call forth the spark. But external influences, the incessant working of what is called civilization, the machinery of state affairs, the eternal teaching and preaching with the smallest opportunities for action—all the pressure which is brought gradually to bear upon man, in order to give one form to all, and bring them suitably near to each other, and the endless drilling and polishing, which goes to make a well-formed man; these and many other things stifle the living powers of man. And as this process continues, the number of these men will increase, who, in the inactivity of their unmanned souls, in order to have something, will strive after foreign command, influence, and thoughts. When this kind of formation shall have reached its height, the world will slumber in the much-praised quiet of a Paraguay; there will be but one church, and one doctrine; and it will be indifferent whether a rational head, or a mere automaton, administers the state and church.—*Jacobs.*

A SOIREE IN A PORTER'S LODGE.

Monsieur and Madame Bichonnet were not ordinary porters. They resided in the handsomest house of a respectable street of Paris; their lodge, situated on the ground-floor, on the left-hand side of the passage, at a convenient distance from the stair-case, was large and airy, and looked upon the street. Their duties, which consisted in attending to the door, and keeping the house clean, were unusually light, and very liberally remunerated—considering that, like all the members of their worthy class, they were lodged rent-free, and kept by their landlord and the joint contributions of the lodgers in wood and candlelight all the year round, without mentioning the presents they regularly received on new-year's day. In short, M. and Madame Bichonnet were, as the reader can see, very comfortable people in their way; and they might have been perfectly happy, had not an unlucky spirit of ambition taken possession of their hearts, and made them resolve to shine, no matter at what cost. They gave parties to which the whole neighborhood was invited; and so conspicuous did they render themselves, that the lodge of the Bichonnets became ere long a term synonymous with the focus of porter-scandal and refinement. Of course, though they were highly popular with some individuals, they were also much ridiculed by others; but on this head, M. Bichonnet wisely observed, that they only met with the common fate of genius; "they were envied and admired." Like many illustrious individuals, the porter and his wife did not, however, differ greatly from the common race of mortals. Madame Bichonnet was a tall, muscular, raw-boned woman, whose florid complexion beamed with health, but who was, nevertheless, in a very delicate state; for, as she frequently assured her lodgers and friends, in a low, languishing tone, "she knew she was in a deep decline, and had already given up all worldly thoughts." M. Bichonnet was a thin, tan-skinned little man, with a bright, restless, brown eye, and a highly pragmatical and consequential eye-brow. He seldom spoke, but the little he did say was all concerning his rank and importance in society. He had also a few profound ideas on politics, and "our duties to our fellow-men," of which he occasionally allowed his friends to catch a glimpse; for as those ideas were so very deep, they could scarcely be said to fathom them. Amongst M. Bichonnet's favorite notions, was the firm belief entertained by him, ever since the year 1830, that Louis Philippe had not six months to remain on the throne. This assertion, which he made with many mysterious nods and hints, had given him, amongst the timid and prudent people of the neighborhood, a reputation of carbonarism. It was even strongly suspected by some wise heads that the convivial parties given in his lodge were only offered to republicans in disguise. These malicious rumors did not, however, prevent M. and Madame Bichonnet from resolving to have a party on Twelfth Night of the year 183–. According to the usual custom, they were to have a cake; and in the earlier part of the evening, M. Bichonnet went out to order it at the pastry-cook's before the arrival of the guests, leaving his wife, or, as he loved to call her, his spouse, alone in the lodge, seated in a soft-cushioned arm-chair opposite the fire, and dozing very comfortably; for, under pretence of making up for her bad nights, Madame Bichonnet was always dozing. She had not been long alone when her husband came in. Approaching the fire, he ceremoniously observed, "The night is very cool, my dear; I must beg your leave to keep on my hat."

M. Bichonnet would never have committed the solecism of doing such a thing without his wife's permission. Madame Bichonnet merely nodded assent, and seemed to expect something else; but as her husband remained silent, she said, after a pause, "And the cake, my dear?"

"The cake is in the oven. I saw it myself; a large, golden-colored cake."

"Perhaps I shall never live to eat another," mournfully sighed Madame Bichonnet. "Will it be here soon?" she added, after a pause.

"In less than half an hour, my dear." Another pause.

"Will it be quite hot?" asked madame, opening her half-shut eyes.

"Quite hot."

The portress uttered something which sounded like a hum of satisfaction, and remained silent. In less than half an hour the cake arrived, carried by the pastry-cook's boy. It was immediately placed between two earthen dishes, which had been kept warming for this purpose; and, as Madame Bichonnet observed, "It really looked like a cake you might wish to eat on your deathbed." Some time elapsed, and though it was past seven, none of the guests arrived. Madame Bichonnet, who sat near the cake, became very impatient at this unreasonable delay, and in a querulous tone inquired "if they were coming?" Her husband answered he did not know, but that he strongly suspected M. and Madame Miroiton, with their young ladies—he scorned the vulgar expression of daughters—would soon make their appearance; upon which Madame Bichonnet observed, with a significant smile, they had done well to invite M. Tourneur to come. The fact is, both husband and wife had quite a passion for match-making. The portress delighted in it for the sake of the thing, and her husband, because "he felt it was a duty he owed to his fellow-men;" but there were evil-minded persons, who asserted their thoughts went no further than the marriage-dinner. "As though," exclaimed Madame Bichonnet, when she was told of this, "*she* could think of such things with one foot in the grave!" Whatever were their real sentiments on this subject, it is, however, certain that the Bichonnets never gave a party without having at the same time some matrimonial design in view.

On this occasion the person for whose conjugal felicity they felt so lively an interest was a young shoemaker, M. Tourneur, who had recently settled in the street, and whose handsome shop was precisely opposite the window of the lodge. Antoine Tourneur was not yet a rich man, but his business promised well; his character was irreproachable; and though he could not exactly be termed handsome, good-temper was written on his frank, open features. He had, moreover, that smart, tidy look so characteristic of the Parisian journeyman. Indeed, Madame Bichonnet averred, that of all the shoemakers who met at Montmartre on Saint-Crispin's Day—their yearly festival—he undoubtedly cut the most gallant figure; and that the dark mustache which he wore, notwithstanding his peaceful avocation, was perfectly irresistible. It is true that, notwithstanding those advantages, Antoine Tourneur had not expressed to Madame Bichonnet the least wish for a wife; but as she concluded that he wanted one, she resolved to provide him with one without delay. Fortunately for her purpose,

Digitized by Google

she found two ladies—in the street too—who seemed quite willing to enter into her views. Perhaps it will be objected that one lady was enough for the purpose; but the prudent portress was of another opinion; she thought that if one did not suit, the other might; and that, in all cases, they would set one another off. This had been her plan hitherto; and, to say the truth, she had vast experience in those matters.

The eldest of those ladies—both of whom were well known to Tourneur, whose customers they were—was Mademoiselle Ursule, the staymaker, who lived next door to him. She was, according to her own assertion, twenty-five years of age; but her features—without speaking of common report, which said ten—assigned her at least six or seven more summers. She was thin and withered-looking; she dressed very richly and tastily; and there was certainly nothing vulgar about her. It was reported that she had money in the bank; and this, as Mademoiselle Miroiton, her rival, spitefully observed, was her only attraction. It was seemingly a powerful one, for it had enabled her to refuse several good offers of marriage. Mademoiselle Miroiton, who was a dressmaker, and the daughter of one of the neighboring porters, had no money like Mademoiselle Ursule; but she was a good figure, had a brilliant complexion, a tolerable quantity of glossy dark hair, and a sparkling, though rather scornful, black eye; so that, as Madame Bichonnet wisely concluded, if Antoine Tourneur liked beauty, Mademoiselle Miroiton would do remarkably well for him; whereas, if he preferred wealth, Mademoiselle Ursule would be quite the thing. Having first delicately sounded the two ladies, and found them very favorably disposed, she next invited them to come and spend with her "The Evening of the Kings," as Twelfth Night is termed, intimating to them that Antoine Tourneur would be there, with only a few friends.

Just as Madame Bichonnet's patience was exhausted, and she observed very snappishly that the cake was quite ruined, a knock at the door announced the arrival of her expected guests. It was Antoine Tourneur, who came in with the Miroiton family; for, instead of taking Madame Bichonnet's hint, and bringing only their eldest daughter, M. and Madame Miroiton had thought fit to come accompanied by four of their children; the fifth, a lad of about fourteen, had remained at home to take care of the lodge. On seeing them enter, and on thinking of the size of her cake, Madame Bichonnet's heart failed her; but she nevertheless received her guests with every demonstration of joy. Shortly after their arrival, Mademoiselle Ursule made her appearance, very richly attired as usual; and, as Mademoiselle Miroiton observed in a whisper to her sister, as usual giving herself airs. These airs consisted in holding a delicate cambric pocket-handkerchief in her hand, and, when she meant to be highly disdainful, in applying a scent-bottle to her nose, which, as she often observed, was of the truly aristocratic form. Besides the stay-maker, there were several other guests whom Madame Bichonnet now bitterly regretted having invited, as she had only meant them to "fill up" the vacant spaces of her tableau, now quite thronged with Madame Miroiton's young family. These individuals were two ladies'-maids, who resided in the house, and a mysterious, melancholy-looking young man, who lived nobody knew how, and always sang comic songs wherever he was invited. When they were all seated, and there was some talk of cutting up the cake, Madame Bichonnet perceived a circumstance she had hitherto overlooked: they were in all thirteen individuals present. Now, amongst Madame Bichonnet's weaknesses, was the vulgar belief that when thirteen persons met, one of them must certainly die within the year. On noticing this ominous fact, she therefore gave a very dismal groan, and intimated to her friends *they* need not have any fear, as she was certainly the doomed one. Everybody immediately sympathized with her, with the exception of Madame Miroiton, who, being a strong-minded woman, loudly asserted that this was a weakness she must overcome, and that she would not encourage her in it by sending home one of her children. Antoine Tourneur gallantly offered to absent himself, but Madame Bichonnet would not hear of it; and she at length decided that her husband should go and invite Rosine, a young bonnet-maker who lived in one of the attics, to come and share their mirth. M. Bichonnet departed on his errand, and after some time, made his appearance with Rosine, whom he had, however, found some difficulty in inducing to accompany him.

Her entrance into the lodge was witnessed with anything but pleasure by Mademoiselle Ursule and the daughter of the Miroitons. The former, especially, was highly indignant: the idea of associating with a bonnet-maker seemed to her perfectly preposterous; and notwithstanding the beseeching and timid glance which the young girl cast towards her, Mademoiselle Ursule immediately set her down for an artful, designing creature, and applied her scent-bottle to her nose with great contempt. Mademoiselle Miroiton was at first equally annoyed; but on noticing the paleness of the new-comer, who was, moreover, in deep mourning, she immediately made room for her near herself, concluding that the contrast would greatly enhance the brilliancy of her own complexion, and the freshness of her attire.

The first impression which Rosine's appearance was calculated to produce, was not indeed to her advantage. But though she might at first be thought plain, few persons who examined her closely thought so long. Her features were not remarkably regular, but she had a profusion of fair silken tresses, which beamed like gold beneath her black crape cap, eyes of a deep azure blue, dark eyebrows and eyelashes, and a sweet smile and pleasant voice, which rendered her at times quite fascinating, notwithstanding the languid and sickly expression her features had contracted during a life of privation and poverty. Having lost her mother a few months back, she was now an orphan; and as she was not a native of Paris, she had remained wholly friendless and alone in the great city. Fortunately for her, she found some employment in the house of a great milliner, who lived in the street; and although she had to toil almost constantly, in order to earn enough for her support, she was never heard to repine or to complain. "In short," as Madame Bichonnet observed to her guests shortly before she entered, "she was a very nice girl indeed, whom she loved to patronize."

Immediately after Rosine's entrance, Antoine Tourneur proposed to uncork two bottles of champagne, which he had brought with him; Madame Bichonnet instantly volunteered to find the champagne glasses from the cupboard of the first-floor lodgers, who had confided to her the key of their apartment whilst they were away; and Mademoiselle Ursule immediately sent out one of the young Miroitons for two dozen of those biscuits, without which, the orthodox drinkers assert, champagne cannot be

Digitized by Google

drunk. In the meanwhile a good deal of talking went on in different parts of the company: M. Bichonnet, who was more than usually dignified, conversed in a mysterious tone with M. Miroiton, a simple-minded man, discussing the respective merits of Thiers and Guizot, and assuring him, in a low, subdued voice, that before six months he might expect to see Louis Philippe dethroned. On hearing this piece of intelligence, the pacific M. Miroiton looked uneasily round, and, with a cough of dismay, inquired of his friend how he had learned this. M. Bichonnet gave a mysterious nod, and merely said "he knew it."

"But, my good Monsieur Bichonnet," urged the alarmed Miroiton, "I hope you have no ill-will against the king?"

"Sir," solemnly replied Bichonnet, "I entertain no evil sentiment against Louis Philippe; fate has never thrown us together, and we have, I may say, nothing in common either in feelings or opinions; but it is my duty to my fellow-men to inform them, when the opportunity occurs, that before six months have passed over their heads, he will have ceased to sit on the throne of France." And leaving M. Miroiton in a state of unutterable dismay, he turned from him with a mysterious glance, as though thinking that enough had been said on the subject. Whilst this political discussion was going on, Mesdames Bichonnet and Miroiton were engaged in informing one another of the faults and merits of their respective lodgers. Madame Miroiton greatly inveighed against the avariciousness of hers; Madame Bichonnet made no similar complaints, but only lamented the want of politeness which existed in their conduct towards her. Thus, if a letter came, they insisted to have it brought up instantly; or they actually desired that Madame Bichonnet should not read their newspaper in the morning before it was sent up to them. In short, they went to such lengths, that M. and Madame Bichonnet had been compelled to draw up a little code of regulations, which was placed at the foot of the staircase for their benefit. By the first regulation, all the lodgers were requested to wipe their feet well before they went up stairs; by the second, they were recommended to keep no dogs, and not to receive visitors who were likely to be accompanied by those animals; by the third, they were informed that, on account of their portress' delicate health, they were expected never to stay out later than twelve o'clock at night. After that hour, M. and Madame Bichonnet hinted that they should lie under the painful necessity of not opening the door to them. To this regulation there was, however, affixed a *N. B.*, by which the lodgers were told that they could be admitted even after one or two, on paying a fine of fifty centimes [5d.] On hearing this admirable code, Madame Miroiton sighed, and only wished they could have it too; but their lodgers were so restive, they would never agree to it, and Miroiton could never be induced to propose it to them.

"We never propose those things to our lodgers," superciliously observed Madame Bichonnet. "We do them, and they submit as a matter of course."

Whilst the two portresses were thus engaged, the younger portion of the company had gathered round Antoine Tourneur, whose good-humor rendered him a general favorite. The young man who sang the comic songs, and the two ladies'-maids, whom Madame Bichonnet had invited because they were neither young nor pretty, as much as through any other motive, listened to his sallies in silence; but the Miroiton part of the family were in perfect ecstacies. Mademoiselle Ursule was too genteel to seem much amused; but as her vigilant eye noticed that though his discourse was directed towards her and Mademoiselle Miroiton, yet his glances more frequently wandered in the direction of Rosine, she began to look very superciliously on the young milliner once more, setting her down as an "artful, designing creature." As somebody said something about the champagne, which had in the mean while been forgotten, Madame Bichonnet proposed to cut up the cake first. This was accordingly done, and Rosine, as the youngest lady present, was requested to hand it round to the company. She complied, and though somewhat embarrassed, acquitted herself of her office with much grace and modesty. Antoine was the last person to whom she handed his share of the cake, and perhaps for this reason, or perhaps because, as Mademoiselle Miroiton now began to think, he was engaged in gazing on the young milliner, he neglected to examine his portion of the cake, in order to see whether it contained the bean always inserted in it, and which renders him to whose lot it falls king for the evening.

The young man who sang the comic songs immediately discovered that he had not the bean; the ladies'-maids found out as much; Madame Miroiton declared she had not got it; all her children echoed the words; M. Bichonnet did not speak, not thinking it dignified; and M. Miroiton, because his mouth was full.

"I suppose Mademoiselle Ursule is queen!" ironically observed Mademoiselle Miroiton.

"I am not queen," sharply answered the staymaker, with a tone and look which seemed to say she might have been if she would.

Mademoiselle Miroiton colored, and in a softened tone said to Antoine, "Are you king, Monsieur Tourneur?"

Antoine started, and turning his eyes from Rosine, for the first time opened his portion of the cake. No sooner had he done so, than the dark bean appeared, enshrined in the yellow crust. Immediately a loud cry of "Tourneur is king! Long live the king!" resounded in the lodge. Antoine laughed, and bowing, intimated his wish of speaking; but the loyalty of his new subjects was not thus easily checked, and the Miroiton part of the company especially showed their delight by making an unusual noise. When he was at last allowed to speak, he returned thanks in a short speech, and concluded by drinking the health of all present. No sooner had he raised his glass to his lips, than the cries of "The king drinks! Long live the king!" again echoed round. But when this first excitement had somewhat subsided, Antoine was requested by Madame Bichonnet to use his privilege, and name a queen for the evening. On hearing this, Mademoiselle Miroiton looked modestly on her plate, whilst Mademoiselle Ursule applied her scent-bottle to her nose. "Ho, ho!" continued Madame Bichonnet, with a knowing wink, and glancing towards the spot where Madamoiselle Miroiton and the staymaker were both seated, so that it could not be known precisely to which of the two she meant to allude, "I think I know who will be queen." She paused, struck aghast with astonishment and dismay —for Antoine had, with a low bow, placed the bean in the glass of Rosine, thus proclaiming her queen for the evening.

A deep, ominous silence followed this daring act. Madame Miroiton gazed on Madame Bichonnet with an indignant glance, as much as to say, "You see it!" and Madame Bichonnet turned up her eyes,

Digitized by Google

and clasped her hands in amazement. M. Miroiton did not seem to know what to make of it; and M. Bichonnet solemnly shook his head two or three times, like one whom nothing can astonish. On perceiving Antoine's meaning, Rosine had colored deeply, and, by the timid, deprecating look she cast around, seemed to implore indulgence for her involuntary fault. But the singer of comic songs was staring point-blank at the wall; the two ladies'-maids, who readily took their cue, seemed, by the glances they exchanged, to say, "What a shocking creature!" the looks of the Miroitons and the Bichonnets were equally stern and forbidding. Mademoiselle Miroiton was too desperately incensed to strive to hide her feelings; and though Mademoiselle Ursule partly triumphed in the mortification suffered by her younger and more attractive rival, her whole attitude showed the consciousness of injured dignity. Antoine alone looked kindly on her, and seemed to resent very much the manner in which the object of his choice was treated. The truth was, that, having perceived the drift of Madame Bichonnet's hints and allusions, he had felt piqued at being disposed of without his consent, and would have asked either of the ladies'-maids to be queen sooner than Mademoiselle Miroiton or Mademoiselle Ursule. Wishing to relieve Rosine from her embarrassment, he drank her health with studied politeness; but when he cried out, "Long live the queen!" no voice save M. Bichonnet's, who felt himself bound in honor to reply, echoed his. Poor Rosine grew pale, and laid down her untasted glass, whilst Antoine frowned on the silent and rigid Miroitons. Willing, however, to make an effort towards conciliation, the young shoemaker said with a smile, addressing the company, "Ladies and gentlemen, let me hope you will drink the health of your queen."

The melancholy-looking young man who sang the comic songs immediately drank a glass of wine, first muttering something which might sound as an assent to or a protest against the toast, just as the parties were inclined; but no one else pledged Antoine. Mademoiselle Miroiton, indeed, eyed him with great contempt, yawned audibly, and looking at her mother, carelessly observed it was late enough to go home. To this Madame Miroiton assented, and rising immediately, helped her daughter to put on her cloak and bonnet—for Mademoiselle Miroiton had lately assumed this badge of distinction. It was in vain that Madame Bichonnet begged of them to stay a little longer; they smiled scornfully in reply to all her intreaties; whilst, heedless of his wife's indignant glance, M. Miroiton, determined to make the best of the little time left, hastily gulped down two or three glasses of champagne.

"Pray, do stay," urged Madame Bichonnet.

"No, ma'am, thank you," dryly answered Mademoiselle Miroiton. "I can assure you, ma'am, we are not blind; we can see very well through your schemes, and those of other people."

"Yes, indeed we can," echoed her mother, with a scornful toss of the head; whilst even M. Miroiton, roused at last, and having now quite done with the champagne, repeated, "Ay, sir, we can," addressing M. Bichonnet; and with his wife on one side, and his daughter on the other, stalked out of the lodge, followed by his children, and closed the street door behind him with a thundering slam.

When they were gone—she would have scorned to do it before—Mademoiselle Ursule rose; and though she only opened her lips to say "Good-night," the manner in which she uttered the words spoke volumes. The singer of comic songs, perceiving that his services were no longer necessary, departed, under pretence of seeing her home—she lived in the house opposite; and the two ladies'-maids took the same opportunity of saying something about their mistresses—who were both out-wanting them, and left the lodge, where only Antoine, Rosine, with the porter and his wife, now remained. After their departure, Antoine made several ineffectual attempts to create a little mirth: the Bichonnets were both dismally solemn; and Rosine, who began to fear she had been the occasion of a vast deal of mischief, was too ill at ease to enjoy herself any longer. Seeing the uselessness of his efforts, Antoine at length took leave of his hosts, without taking any particular notice of Rosine.

When he was gone, M. Bichonnet turned towards the young milliner, and in a solemn tone began, "Mademoiselle, I feel it is a duty I owe to my fellow-men——" But there was something in Rosine's mild appealing glance which seemed to reprove him: he paused, looked embarrassed, and observed in a gentler tone, "Well, well, I see you understand me; and so—good-night." Rosine made no reply; but rising somewhat proudly, she retired, bitterly regretting having accepted the unlucky invitation, which had so disturbed the harmony of the evening.

Several days elapsed, during which nothing of importance seemingly occurred. Mademoiselle Ursule, who, since the evening of the Day of the Kings, had taken upon herself the office of observing whatever was going on in the street, nevertheless found the opportunity of making several curious and interesting remarks. Thus she noticed that, on the Friday which followed that memorable evening, Madame Bichonnet, notwithstanding the delicate state of her health, and the severe cold, actually left her lodge, and ventured to cross the street, in order to enter the abode of the Miroitons; that she remained there upwards of an hour; and that, when she left at last, her features wore the expression of one highly satisfied with the success of a momentous enterprise. Mademoiselle Ursule, moreover, perceived that a very unusual agitation prevailed in the porter's lodge: through some mysterious means she even learned that, during the course of the day, several secret conferences took place between Madame Bichonnet and the cook of the first-floor lodgers. M. Bichonnet himself seemed more solemn and dignified than ever. At last the important truth came out: the Bichonnets were, on the next Sunday, to give a dinner, to which the Miroitons and Antoine Tourneur were invited. The mystery was, however, kept up until the Saturday afternoon. It then happened that the portress let out an inkling of the fact to one of her neighbors, the consequence of which was, that, in less than five minutes, Mademoiselle Ursule entered the shoemaker's shop.

"Sir," said she, addressing Antoine Tourneur, who stood behind the counter, "I am in want of a pair of shoes; will you take my measure?" The young man bowed, and very politely led the way to a little back parlor, where the staymaker took a seat, and in a very slow and stately manner gave him numberless recommendations concerning the size, color, and shape of her chaussure. Although Antoine heard her patiently to the end, Mademoiselle Ursule seemed to mistake the nature of his feelings, for she observed, "I see you are in a hurry, and I am sorry to detain you; but I shall

Digitized by Google

be very busy next week, and as I shall not see you until the shoes are made——"

"What!" interrupted Antoine, "do we not meet to-morrow evening?"

"Where should we meet, sir?" asked the staymaker with much seeming surprise.

"At Madame Bichonnet's of course," said the young man.

Mademoiselle Ursule seemed to endeavor to recollect who the Bichonnets were; then, as though suddenly remembering, she loftily observed, "Oh, bless me, no! I shall spend to-morrow at home, sir, with poor dear Rosine."

"And is not Mademoiselle Rosine to be there either?" eagerly asked Antoine, whose features expressed some disappointment.

"Really, Monsieur Tourneur," sharply observed the spinster staymaker, "you must have an extraordinary opinion of myself and Rosine, to imagine that, after the insults we have there endured, we could ever be induced to cross again the threshold of Madame Bichonnet's lodge."

"I beg your pardon," confusedly answered Antoine; "but when Madame Bichonnet spoke of my meeting pleasant company to-morrow, I really thought she meant you."

Though somewhat soothed by the compliment, Mademoiselle Ursule smiled with unutterable scorn. "Sir," she loftily said, "I will not speak of myself; I will speak of Rosine, whom Mademoiselle Miroiton has maliciously slandered, for what motive I know not"—Mademoiselle Ursule uttered the words in so significant a tone, as to leave no doubt but she was perfectly aware of it—"and whom, but for me, she would have deprived of the means of earning her bread." Antoine looked up with astonishment: the staymaker continued—"Rosine works for a great milliner, who resides in the house where Mademoiselle Miroiton's parents are porters. Since the evening of the Kings, this creature has so contrived her vile insinuations, that Rosine has been refused any more work. Seeing her pass by the day before yesterday all in tears, I called her in, and, as she can fortunately stitch very neatly, engaged her to work for me on the instant, so that she shall have work in spite of the whole Miroiton brood."

"And has everything really happened as you relate it?" very gravely asked Antoine.

"Exactly so, sir," dryly replied Mademoiselle Ursule. "Pray do not forget my shoes. Good-day to you. I suppose," she carelessly added, "you go to the Bichonnets to-morrow?"

Antoine bowed in token of assent; and without seeming to notice the smile and glance of contempt which she cast upon him, he ceremoniously conducted Mademoiselle Ursule to the door. The staymaker went home, sorely puzzled to make out the shoemaker's real intentions, and quite disposed to quarrel with him for taking no heed of poor neglected Rosine, and dining with those odious Miroitons and Bichonnets; but though in such ill-humor, that her first act on entering the workroom was to scold Rosine for some imaginary fault, she had enough of self-control not to say a word about Antoine Tourneur, or the step she had taken. Perhaps the reader will feel surprised to see the staymaker now taking part for the young girl whom she treated with such contempt on the evening of the Kings; but Mademoiselle Ursule did not pique herself in the least of acting upon logical principles: she boasted that she had "strong feelings and lively sensibilities—that she was the creature of impulse," &c.—which of course explained everything. The truth was, that although, as she herself truly asserted, she had never experienced the passion of love, she had, however—partly through Madame Bichonnet's hints—begun to think lately that her young neighbor, M. Tourneur, might prove an acceptable partner for life. His politeness she construed into a deeper feeling, veiled by profound respect; and although she felt no strong affection for him, yet there is no knowing to what pity might have led even her rather unsusceptible heart, when the rivalry of Mademoiselle Miroiton awoke all her jealous feelings, and for the present stifled tenderer emotions.

When Rosine entered the porter's lodge on the evening of the festival, she immediately looked upon her as on another rival, and found her artful, designing, &c. It is very likely this impression might never have been effaced, if Mademoiselle Miroiton had not chanced to take precisely the same view of the subject; which Mademoiselle Ursule no sooner saw, than she immediately perceived she must have been in the wrong. There could be no possible sympathy between her and her rival. When she learned the unworthy treatment the young milliner had met with from the porter's daughter, she felt highly indignant; and, as much from a feeling of justice, as from the wish of annoying Mademoiselle Miroiton, she took her into her employment. As she was naturally kind-hearted, the simplicity and gentleness of Rosine soon charmed her; and reflecting—for, from his conduct on the evening of the Kings' festival, she began to suspect she might have been deceived in Antoine's feelings—that she had lived too long single to resign herself to the many tribulations of wedded life, and that it would be highly imprudent in her to trust herself to the fickleness of man, she prudently resolved to discard Antoine altogether: a task which she found the easier, that her heart had never been in the least affected. But though she might be quite willing to give him up for herself, she was anything but desirous that Mademoiselle Miroiton should enjoy the triumph of surplanting her; indeed, as she had a shocking temper, she felt it quite a charity to prevent their union. In short, she resolved that it should not be her fault if her rival ever became Madame Tourneur. It is true Antoine did not seem very deeply smitten; but then there was no knowing what arts might be employed. Ah! if he only knew what a dear good creature Rosine was; and much prettier than Mademoiselle Miroiton too! There could be no doubt about that! Indeed, it was no difficult task; a shockingly vulgar creature! She herself, though not quite so fresh perhaps, might venture to compare. But even in her thoughts Mademoiselle Ursule was modest; she hated to speak of her personal advantages!

Such being her feelings on this subject, it is no matter of wonder that Mademoiselle Ursule should be exceedingly cross, when, on the Sunday afternoon, she perceived the Miroitons proceeding to the Bichonnets; but when she actually saw Antoine taking the arm of Mademoiselle Miroiton, dressed out in all her finery, and who, as she averred, cast a glance of ironical triumph on her as she passed by, her anger broke out in vehement denunciations against the faithlessness of men in general, and Antoine Tourneur's want of spirit in particular. Rosine gently endeavored to say a few words for the culprit, but she was immediately silenced by the indignant staymaker.

Several days elapsed, and notwithstanding her

Digitized by Google

anxiety on this subject, Mademoiselle Ursule could not ascertain how the dinner of the Bichonnets had passed. The cook of the first-floor lodgers indeed informed her of the number of dishes served on the table, but further than this her knowledge did not extend, and the triumphant bearing of Mademoiselle Miroiton alone left her room to conjecture the issue of this important event. Towards the middle of the week, Antoine Tourneur brought home Mademoiselle Ursule's shoes himself. The stay-maker received him very stiffly in the presence of Rosine, whose eyes seemed rivetted on her work, and sharply observed that the shoes did not fit. Contrary to her expectation perhaps, Antoine, far from disputing the fact, readily admitted it, and instantly offered to make her another pair. Mademoiselle Ursule, who was taken by surprise, and felt somewhat conscience-stricken—for the shoes were, in reality, an excellent fit—abruptly replied, that, as she wanted them for the following Sunday, she must keep them such as they were.

"You can have the other pair by Saturday morning," calmly replied Antoine.

Still Mademoiselle Ursule objected; but taking up the shoes, the young man showed her so plainly they did not fit, that she at length gave up the point, and consented to have the other pair made. This being decided, Antoine, who seemed in no great hurry to depart, entered into a very animated conversation with Mademoiselle Ursule, and after exchanging a few words with Rosine, at length took his leave.

"Well," said the stay-maker, now greatly mollified, "I must confess that, with all his faults, Monsieur Tourneur is really a nice young man. And you see, Rosine, what might happen, if I only wished for it." Rosine started, and looked somewhat surprised. Misunderstanding her feelings, Mademoiselle Ursule complacently continued, "Yes, my dear, did I not prefer leading a single life, I might be Madame Tourneur; but though I may give up this prospect, it is not in order to see that odious Mademoiselle Miroiton marry him; and really, child, I wonder you did not take more notice of him just now; who knows what may happen?" She paused, and nodded very significantly. But Rosine colored, and looked unusually grave.

On the following Saturday Antoine called with the shoes, which were this time an admirable fit; so at least Mademoiselle Ursule said, and Antoine did not contradict her, although he made a longer stay than the last time, and was still more lively and pleasant. But notwithstanding his indirect attempts to enter into a conversation with her, Rosine was so silent and reserved, in spite of Mademoiselle Ursule's encouraging nods and winks, that the stay-maker gave her a good scolding when the young man was gone—upbraiding her for her prudery, stiffness, and so forth. To her reproaches Rosine mildly but firmly answered, "I will not feign to misunderstand you; but, with the exception of a very simple mark of politeness, what reason has Monsieur Tourneur given me to think that he looks upon me otherwise than as a stranger? And he being rich, and I poor, what would his opinion be of me if I seemed to think differently?"

"Very well, my dear," bitterly replied her friend; "see him married to Mademoiselle Miroiton, and live and die an old maid, if such is your choice."

Rosine made no reply, and here the subject was dropped. Although the shoes which Antoine had made for Mademoiselle Ursule were perhaps the best shoes that had ever been made, (so she said at least,) they were worn out in an incredibly short space of time; the consequence of which was, that she had to order another pair. She next discovered that she sadly wanted winter boots; then, as spring was coming on, a pair of summer ones. She even asserted that Rosine had nothing fit to put on her feet; that her shoes were too narrow; that they hurt her; and, in short, that M. Antoine Tourneur must take her measure. It was in vain for Rosine to protest against this; she was compelled to submit. The consequence of this was, that Antoine, who always made it a point—doubtless out of pure politeness—to take the measure and bring home the shoes and boots himself to his customers, was seldom less than two or three times a week at Mademoiselle Ursule's house.

We must now turn to M. and Madame Bichonnet, whom we have neglected too long. On the evening of the second Sunday which followed that on which they gave the dinner to the Miroitons, they were seated as usual in their lodge, Madame Bichonnet dozing in her arm-chair, and her husband looking on the fire, and thinking of nothing, or, as he more elegantly expressed it, "wrapped in profound meditation," when they were suddenly startled by a loud knock at the street-door. M. Bichonnet pulled the string placed near him for this purpose, the door opened, and Mademoiselle Ursule showed her thin and prim countenance at the other side of the glass casement which divided the lodge from the passage, and through means of which M. Bichonnet could reconnoitre every one who entered or left the house.

"Is Mademoiselle Rosine at home?" she hastily inquired. "Bless me, what shall I do?" she continued in a tone of deep disappointment on being answered in the negative.

"I believe," politely answered M. Bichonnet, "Mademoiselle Rosine is gone to vespers."

"Oh dear no," smilingly replied Mademoiselle Ursule; "she is gone to take a walk with her betrothed!"

"Her betrothed!" echoed the astonished porters.

"Yes," carelessly rejoined the stay-maker; "she is to be married to Monsieur Antoine Tourneur, next Sunday week. I wanted to see her, in order to know whether she would have her wedding-dress of white *tulle* or muslin. But I daresay the muslin will look best. But bless me, now I think of it, she must be at home by this time, and I to stand talking here! Good-night, Monsieur; good-night, Madame Bichonnet." And Mademoiselle Ursule hastened away, with a look of the greatest consequence, leaving the porters so astonished, that it was several minutes before they recovered from the surprise into which she had thrown them.

"Poor Mademoiselle Miroiton!" exclaimed Madame Bichonnet, clasping her hands and turning up her eyes, "I thought to have drunk her health at her marriage-dinner before I died; but it is all over now!"

"My dear," solemnly said M. Bichonnet, "this is what comes of mingling with people beneath you; this is ——"

"Nay, Bichonnet," mildly interrupted his wife, "Rosine is a sweet-tempered girl, and she will really do better for Antoine than Mademoiselle Miroiton, with her high spirit. I daresay if I were to give her something, just a bit of lace, on the occasion of her marriage, it would not be thrown away; and I should like to see Antoine happily

Digitized by Google

settled before I die. I am afraid the ceremony might affect my nerves; though I believe I should go, if they were to ask us to the dinner."

"But, my dear, think of Mademoiselle Miroiton," gravely observed her husband.

"Really I don't care about Mademoiselle Miroiton," sharply replied Madame Bichonnet; "her airs are insupportable; whereas I always liked dear little Rosine."

"I believe, my dear," solemnly said M. Bichonnet, "that you are in the right. If they ask us, we will go to the dinner. To be friendly with them, is our greatest duty towards our fellow-men."

In short, it required very few arguments to convince this worthy couple that Antoine Tourneur could not have made a better choice than in the person of the modest little milliner, whom they henceforth treated with the most flattering distinction. On the next Sunday-week Rosine and Antoine were married, to the triumph of Mademoiselle Ursule, and the despair of Mademoiselle Miroiton. M. and Madame Bichonnet, who were amongst the guests, were delighted with the whole affair; which, indeed, they asserted they had wished for and foreseen from the beginning. But though the bride and bridegroom were polite to them, there was not in their behavior the warmth and cordiality which marked their intercourse with Mademoiselle Ursule. This difference became still more marked after their marriage; for whereas the stay-maker was almost constantly their guest, the porters received no further invitations. Madame Bichonnet now began to think poor Mademoiselle Miroiton had been sadly used, and she called on her for the purpose of condoling with her misfortune; but the young lady, who had a high spirit, shut the door in her face, and informed M. Bichonnet's landlord of the code of regulations he had set up in his house; the consequence of which was, that the porters were discharged, and left the neighborhood, "with the consciousness," as M. Bichonnet said, "of having vainly endeavored to serve his fellow-men."

About a year after his marriage—need we say it proved a happy one!—Antoine met M. Bichonnet, in a remote neighborhood. He inquired after the health of Madame Bichonnet, and learned that it had greatly improved since they had opened a commercial establishment. Antoine looked surprised. "Yes," continued the former porter, with his usual dignity, "we sell fried potatoes on the Pont-Neuf."

Antoine smiled, and wishing him every success, bade him farewell. Six months later, he met him again. He was more thin and dignified than ever. Antoine hoped his affairs were in a flourishing state.

"No, sir, they are not," loftily replied M. Bichonnet; "the year has been dreadful for trade, and we have suffered like everybody. I suppose you have suffered too?"

"No, indeed; I was never better off."

"That is strange; all the tradespeople we know failed. But we have not, mind you. No, no sir; we have given up the potato concern, it is true, but our honor is unsullied."

"And where are you now?" asked Antoine.

"We have a porter's lodge in the Faubourg Saint-Antoine. A poor place, sir. Ah! times are changed since we ate the King's cake with you in our comfortable lodge."

Merely inquiring for his direction, Antoine took leave of M. Bichonnet. The same evening he held a long and private conference with his wife. Mademoiselle Ursule saw that something was going to take place; and though too proud to question them, she used her eyes and ears without scruple. The next morning she learned that Antoine was to call on his landlord, who resided in the house where Rosine had formerly lived, and which he had lately bought from its original possessor. What could Antoine want with him? For several days she could learn nothing, but the truth at last became apparent. On a fine morning, a small cart-load of furniture, led by M. Bichonnet, and with Madame Bichonnet perched on the top of a very high bedstead, stopped at the door of the house opposite. As Madame Bichonnet nodded and smiled very benignantly to her, there could be no doubt about it. On learning that Antoine had recommended the Bichonnets to his landlord, who was in want of porters, Mademoiselle Ursule was at first highly indignant. Rosine, however, succeeded in pacifying her, by mentioning their unhappy state, and reminding her that if Madame Bichonnet had not entertained a wholesome apprehension of sitting down to a table when there were thirteen persons present, they would never have become acquainted. As for Mademoiselle Miroiton, she entered into a desperate rage on perceiving her ancient enemies once more in possession of their stronghold. She even sought out every opportunity of injuring them; but the porters had been taught by misfortune. They still occasionally gave parties, but avoided notoriety; and condescended to behave more politely to their lodgers. Ill-disposed persons asserted, however, that the new landlord's presence alone prevented M. Bichonnet from carrying on matters with as high a hand as formerly.

As for Madame Bichonnet, she was marvellously improved in health, and went about the house quite briskly, considering her delicate state—for she still spoke occasionally of her ailments, and indulged in dismal forebodings of not living beyond the spring; but, as Mademoiselle Ursule charitably observed, this was "through habit." Misfortune had not, however, soured Madame Bichonnet's placid temper. She spoke kindly of every one, and never said anything worse of Mademoiselle Miroiton than that, "Poor thing! so, notwithstanding every effort she made, she could not get married after all. It grieves me to the heart; but, indeed, I always thought her too high-spirited for matrimony!"

We have dwelt somewhat lightly on the married life of Antoine and Rosine; but it is happy, and what more could be said? Mademoiselle Ursule, whose somewhat irritable temper they bear with the most praiseworthy patience, is still their best and most constant friend: they are thoroughly happy and prosperous, in the moral and worldly sense of the words.

The Bichonnets are still in their old lodge; they have left off a good deal of their selfish worldliness—would we might say all!—and are quite cured of the temptation of match-making. For indeed, as M. Bichonnet loftily observes, it hardly becomes the dignity of a French porter to meddle in such affairs; and he very much doubts whether his duty to his fellow-men does not forbid it entirely. The last tidings we had of the Bichonnets declare that, on the 6th of January last, an enormous twelfth cake was cut up in their lodge; the persons present were, besides the hosts, Antoine Tourneur, with his wife and two children, Mademoiselle Ursule, and the melancholy young man who sings the comic songs, and who declared, that though they were not yet thirteen, there was no knowing what might happen in time, winking as he spoke, towards

Digitized by Google

Madame Tourneur and the children; a joke which obtained much success, and is not yet forgotten in the neighborhood. The same young man is said to have paid great attention to Mademoiselle Ursule. As she is resolved to remain single, this must be a calumny; and yet it may be true enough, for Mademoiselle Ursule herself was the person who originated the report. On the same evening M. Bichonnet also confidentially informed one of his guests—which, it is not known—that Louis Philippe had only a very short time to remain on the throne. He prudently refrained from saying how long, for fear the police might seek to involve him in some political conspiracy.

From Chambers' Journal.

THE CHIFFONNIER OF PARIS.*

The chiffonnier of Paris differs in national and individual qualities from the street-grubber of London, though earning his bread in a not very dissimilar manner. In one respect both are alike: their trade is easily begun, nor is it usually commenced till everything else has failed. When the victimized Parisian finds himself without character and without resources, he wants but half-a-dozen franks in his pocket to provide himself with a back basket and an iron-pointed crotchet or rake, to begin the world anew, and embark in an independent profession. Once equipped as a chiffonnier, he has no sooner familiarized himself to the ignominy of this wretched trade, than, having adopted it by necessity, he continues it by inclination. He finds a charm and a recompense in his nomadic existence, in his endless wanderings, in his vagabond independence, and indulges a profound contempt for the slaves who shut themselves up from morning to night in a workshop or behind a counter. Let them, mere machines of others, regulate the employment of time by the hands of the dial; he, the chiffonnier, the philosopher, works when it pleases him, and rests when he chooses, without thought for the night or care for the morrow. If the east wind freezes him, he warms his blood with a dram; if the heat incommodes him, he doffs his harness and his tattered frock, stretches himself in the shade, and goes to sleep. Is he hungry—he can soon earn a few sous, and feasts, like Lucullus, upon a crusty loaf and sour cheese. Is he sick—what matter? "The hospital," says he, "was not invented for dogs."

The victim of every privation, the chiffonnier is proud, because he believes himself free. He treats with haughtiness even the rag-merchant himself, to whom he carries the harvest of the day, and from whom he is in the habit of receiving from time to time, a slender advance upon that of the morrow. He gives himself the airs of a patron; and declares that if the dealer does him less than justice, he will transfer his commodities to a rival. His pride is visible through the multiplied fissures of his tattered vesture.

The rag-merchant is the able alchemist who transmutes into gold the offal and refuse of the streets; and with the proceeds of rejected rags and putrefying bones, speculates in the rise and fall of stock. He receives the chiffonniers in a fetid and filthy shed, and his fashionable friends in an elegant saloon. His place of business is hideous beyond description, incumbered with the most disgusting impurities, masses of the foulest tatters, rotten planks, and decaying anatomies that infect the air, the whole brought thither by beings of an aspect scarcely human, and weighed in balances of a formidable and grotesque appearance, under the surveillance of a noisy, quarrelling, and decrepit shrew. But if we pass beyond this forbidding vestibule, and penetrate into the private apartments of the merchant chiffonnier, we shall encounter the usual pomp and appendages of civic luxury—the gilt and gorgeous *pendule*, the collection of showy pictures and prints, the bronze bust of the emperor, the sideboard loaded with crystal and porcelain, and the grand pianoforte of madame or mademoiselle, the latter a well-educated and accomplished lass, the worthy heiress of no scanty hoard. We could mention the name of one of this fraternity, living at present in the Rue Jean Tison, who gave at the marriage of each of his two daughters a dowry of sixty thousand francs.

If the wholesale dealers realize such gains, it is plain, considering the nature of their merchandise, that but little is left for the actual chiffonnier; in fact the most industrious among them seldom get more than three or four francs a day. These are they who, in defiance of a regulation yet in force, that of the 26th July, 1777, perambulate the streets during the night. The chiffonniers, like the moths, are composed of two races—the diurnal, and the nocturnal; and these latter, commencing their peregrinations at the moment when the street-sweepers retire to rest, have the best chance of some fortunate discovery. They adopt certain favorite quarters, generally giving the preference to the Faubourg Saint Germain, the Chaussée d'Antin, the Faubourg Saint Honoré abounding in noble residences of the most opulent classes. Constantly attending the same circuit they become known to the household servants, and particularly the cooks, from whom they receive occasional contributions from the larder, engaging in return to restore any lost article of value which they may discover in their researches among the offal of the establishment. Once established and recognized in a certain beat, they begin to derive an income from other sources than their professed occupation. Lazy and sleepy subjects, whom fortune has condemned to rise early in the morning, fee them to break their slumbers. We have the honor to know a chiffonnier who goes every morning from Mount Sainte Genevieve to the Assomption to knock at the doors of a grocer, a confectioner, and a wine-seller. This commission brings him in thirty centimes, each party paying him ten (or one penny) per day; an amount which this thrifty economist informs us defrays three fourths of his expenses for lodging.

The day practitioner does not consider himself debarred from social pleasures. He will be found at the barriers, on Sundays and holidays, dancing and drinking with his wife; and he patronizes the drama when the piece is to his mind—tender, touching, sentimental and interesting; such as *Lazare le Pâtre*, *Grace de Dieu*, or *Paul et Virginie*, or any other of the class, where, above all other recommendations, *the traitor is punished in the last scene*.

Whatever his prosperity, the chiffonnier has never any furniture of his own; he sleeps in furnished lodgings, at the settled price of twenty cen-

*The principal particulars in this paper are gathered from an article on the same subject in a French work, purporting to describe the humbler trades of Paris.

Digitized by Google

times a-night, which the mistrustful proprietors generally exact in advance—"Twopence down, or you don't lodge here." The individual who can disburse, throws himself, without quitting his rags, upon a straw mattress. In these dismal chambers, open to all the miserable offspring of poverty and crime, the common bed is a long sloping plank, and the common coverlet a remnant of decayed carpeting, nailed to the wall at one side of the room, and fastened with hooks at the other. Should any quarrel arise in the night among these "strange bed-fellows," the keeper of the den makes his appearance, armed with a long and portentous bludgeon, and by angry threats, or the application of his weapon, seldom fails to reduce to order the refractory party.

In such squalid resorts the chiffonniers often come in contact with robbers, of whom they involuntarily become the passive accomplices. They are not expected to take part in the crime; but to reveal the mystery of a criminal enterprise, would be to devote themselves to the implacable vengeance of the gang. An old chiffonnier, suspected of having betrayed two thieves, was found one morning assassinated at the corner of a court. The murderers had surprised him at early dawn; they had severed his head from his body, and, by an atrocious refinement of barbarity, had thrown it into his basket.

The chiffonniers, both male and female, talk slang; the general dialect of thieves, it would seem, in all countries, though not exclusively confined to them. The class under consideration have nevertheless a general character for integrity, which they could never have earned, much less maintained, but by repeated acts of honesty and disinterestedness. Restorations of recovered property are frequent among them, of which we could relate numerous instances. On the 11th of October, 1841, the widow Boursin, an old chiffonnière of the Rue Mouffetard, well known in the neighborhood of the Chaussée d'Antin, discovered in a mass of rubbish a diamond shirt-button of considerable value. She occupied the whole day in going from house to house before she found the owner, to whom she immediately restored his property, demanding the price of her day's labor and refusing all further reward. We should also make honorable mention of Père M——, an old soldier of the Imperial Guard, a chiffonnier, and a chevalier of the Legion of Honor. This veteran had two orphan grandchildren left to his charge: he dedicated his pension to the purposes of their education and establishment; and mounting the basket and crotchet on the shoulders so long familiar with the knapsack and gun, sought his own subsistence in the offal of the streets. For this he is held in honor among the tribe, who duly appreciate his virtue and self-denial.

Perhaps the worse characteristic of this class is their love of strife and tumult, which shows itself in a perpetual inclination to quarrel with one another, and with all the world. In every popular outbreak, they are the first to commence deeds of violence, and the last to be reduced to order. The most stable government has trembled to its base at the mad outcries of the chiffonniers, when, at the head of a torrent of the wan and haggard population of the faubourgs, they have rushed upon the wealthy quarters of the city. The cause of terror is not the apprehension of pillage, but of the overthrow and destruction of the whole social fabric. They feel how feeble are the regulations of public order against an army of insurgents who have nothing to lose.

In quiet times, the chiffonniers make war only on the domestic animals—the dogs and cats, whose carcasses they sell to the knacker. A mastiff fetches from thirty to forty sous; a dog of average size from five to ten; a cat four sous in summer, and eight in winter. The fat of the cat is used by the "tondeur," or dog-barber, a trade peculiar to Paris; and dogs'-foot oil is in continual request among the various craftsmen of the capital. The furriers receive the skins, under whose hands that of the dog becomes the veritable black fox; and the hide of poor puss a genuine zibelline, or sable.

Collateral branches of this delectable profession extend beyond the walls of Paris, and provincial practitioners are to be met with in all the principal towns of the departments: but these are mostly dealers, not doers: the true chiffonnier, such as we have described him—independent, thoughtless, proud, somewhat honest, thoroughly undisciplined, and "*toujours Frrrançais*"—is as essentially Parisian as the Column Vendôme or the Arc de l'Etoile.

A MAIDEN who has received a natural and simple education, which has allowed her faculties to unfold themselves naturally, removing whatever was opposed to this, without itself giving any undue direction, develops her character with her form, in the most perfect accordance with all right rules; as a plant from a healthy seed, in a free soil and pure air, unfolds its leaves and flowers. This harmony of feelings and principles, of thoughts and sentiments, gives to such a woman a wonderful firmness, with which she is enabled to make a noble stand against the pressure of falsehood, temptation, and contradiction. So one sees often small but skilfully built vessels float lightly and swiftly over the smooth sea, and in the storm dancing upon the foamy tops of the swollen waves; which, nevertheless, find their way through the roaring cliffs and wild breakers, to their destined haven. With men this harmony of development is more difficult, and therefore less common. They generally move more slowly, because laden more heavily, and often far unproportionably, so that a single gale sends many of them to the bottom, whilst they, for the sake of greater speed, had spread high every sail. One lacks ballast, and the other rigging; and often while the proud ship glitters in the beams of the sun, and the bright pennant streams gayly in the wind, a skilful pilot is wanting at the helm, and powerful hands to direct and insure its course.—*Jacobs.*

THERE are men enough who, notwithstanding all the noble qualities with which they are endowed, can yet make no right use of them, because they exist only as shining parts destitute of any common bond of connection. As in an arch that would stand, all parts must be bound together by the keystone, so there must be a middle point in man towards which all tends. Where this is wanting, there is, neither in prosperity nor adversity, any sure dependence. All scatters and vanishes like dust away. And thus it not unfrequently happens, that men who, in the ordinary course of things, seem of right to be something, with all their shining gifts, on the smallest trial, show that they are nothing, deceive the hope of the world, and to their own astonishment, sink into insignificance.—*Jacobs.*

Without established principles, our feelings contend against evil, as an army without a leader, and are far oftener vanquished than victorious.—*Jacobs.*

PAGE'S RUTH.

That William Page is a man of genius, no one who knows aught of his career in art, or who has passed an hour in his company, will, we think, for a moment deny. Whether he be judged by the simple rule of Sir Joshua, that genius is but the art of making repeated efforts, or by that standard which every man sets up with more or less definitiveness in his own mind, perfectly plain to himself and perfectly inexplicable, perhaps, to others, he will be acknowledged to be a man of genius. He is a man who, with the utmost faith in humanity, believes that what Raffaelle and Titian did three hundred years ago, can be done as well in this nineteenth century, if we will but pursue, as they did, the method of nature in our attempts to imitate her; and that the secret of Titian's flesh-tints is not to be found by scraping down his pictures to discover whether he used this or that pigment, but in the simple teaching of the arrangement of material in the human body; since in art and nature like causes will produce like effects, and, as he contends, there is but one path to truth, in no other way can such effects be obtained. He does not, with all this, deny to the great masters the inspiration of genius, he is too sincere a worshipper at the shrine of art, to believe that the highest secrets of her temple will be unveiled and laid open to all who may choose to enter; but the mere mechanical execution of a certain end, namely, the imitation of nature, can be as easily attained now as when these master spirits wrought at their canvass. In the poetic world, the genius of Shakspeare and Milton may have departed, yet the same words that glowed in their immortal verses we daily use to express our commonest ideas; but in the world of art the language itself has fled, and left us but a few disjointed phrases and meaningless syllables. All modern art is to Page an useless endeavor to express an end by other than the only proper means by which it can be accomplished; as with Ali Baba in the cavern, the "Open Sesame" has been forgotten, and till this simple conjuration has been found again, no spells can open the fast closed entrance.

Now, it does not require any particular manifestation of the divine afflatus to be able to deviate from the long-travelled and well understood highways of art—any man may do this in mere wantonness; of such vagaries we have had enough, Heaven knows; but where the artist, with a profound conviction of the incompetence of present method, endeavors to establish new principles, not founded in fantastic theory, but in thoughtful attempt to trace the teachings of nature and apply the suggestions of reason, we think him entitled to be considered a possessor of this high quality. Mr. Page has, in the papers he published some two years since in the Broadway Journal, logically shown that he has the authority of reason and nature on the side of his theory. Whether this theory be as correct in practice as in principle, we cannot pretend to judge; experiment only can determine whether the pigments of art can be subjected to the same laws as the materials of nature, and whether her processes of coloring are to be followed in the chemistry of the studio. Nor can we look as yet to his own productions, based upon these principles, to solve this question; there must necessarily be, in the first attempts to establish a new system, much weakness and uncertainty. Only by repeated experiments shall we be able to discover whether we have been following blind guides and have missed the true path from its very directness and openness.

We have been led to make these remarks, from a recent visit to Mr. Page's room, where we found his picture of Ruth just completed. We do not intend to enter into any formal criticism of this painting, since, as it has been as yet only privately exhibited, it would be taking the artist at an unfair advantage. In any difference of judgment, he cannot appeal to the public to decide between the critic and himself. When the picture is publicly shown, as we hear it soon will be, we may recur to the subject again; at present we shall content ourselves with a mere description. It is an upright painting, about nine feet in height, and the three figures, Naomi and her daughters-in-law, are perhaps slightly larger than life. The grouping is excellent and admirably expressive of the story—Naomi stands at the right of the canvass, her left hand is thrown about Ruth, who has cast herself upon the breast of her mother, and whose sinking knees and convulsively clasped hands, and tearful up-raised eyes, betray the agony of the soul, and express all the intensity of the application, "Beseech me not to leave thee." Orpah has turned away her face and covered it with her garment, but her hand still grasps that of Naomi, and it is evident the struggle is severe; she, too, feels all the bitterness of grief, although worldly considerations may weigh more than the affection of her mother-in-law. And here, we think, the artist has shown a beautiful trait of feeling. In most paintings of this oft-repeated subject, Orpah has been represented with a cold and indifferent appearance, serving to contrast with the passionate outbreak of feeling in Ruth; but here her very emotion adds more intensity to the expression of her sister. There is a great deal of very beautiful and very powerful color in the picture, harmoniously arranged and kept remarkably low in tone. It is not an "Exhibition" picture; and on the walls of the academy, surrounded by the chalky absurdities so frequent there, might seem rather dingy. It must be seen by itself, at a proper distance, under a proper light, to be appreciated. It will not be a popular picture; we have too many connoisseurs who thrust their noses close to the canvass and admire "the delicate smoothness, the miniature-like finish." To such as these it is not addressed; but the man of real taste and judgment will not fail to find in the sentiment, in the remarkable relief of the figures, and in the atmospheric distance with its snow-capped mountains that seem miles and miles away, much that is beautiful, and much to convince him that it is a painting of extraordinary power, the production of an extraordinary mind.—*Literary World.*

If ingratitude could extinguish benevolence, the world must daily be destroyed by a deluge, or in flames.

Common minds are hardened by ingratitude; but to superior natures, it is an occasion for new acts of kindness.

Benevolence that can be extinguished by ingratitude, is no true virtue, but, as it were, base tinder, upon which vanity has thrown a spark, which is no sooner kindled than extinguished.—*Jacobs.*

True goodness of heart nourishes itself on the good which it does to others. The good loves him to whom he does good, as the bad hates whom he has injured.—*Jacobs.*

For a heart that cannot escape a sense of obligation, it must be the greatest misfortune to be obliged to those who must despise it.—*Jacobs.*

SMELTING BY ELECTRICITY.—The lately patented process of smelting copper by means of electricity, says a London journal, is likely to effect a change that will be quite prodigious. It produces, in less than two days, what the old process required three weeks to effect. And the saving of fuel is so vast, that in Swansea alone, the smelters estimate their annual saving in coals at no less than five hundred thousand pounds. Hence, it is clear that the price of copper must be so enormously reduced, as to bring it into use for a variety of purposes from which its cost at present excludes it. The facility and cheapness of the process, too, will enable the ore to be largely smelted on the spot. The Cornish mine proprietors are anxiously expecting the moment when they can bring the ore which lay in the mine yesterday into a state to be sent to market to-morrow, and this at the very mouth of the mine. In Australia, also, the operation of this discovery will be of the utmost importance. Ten thousand tons of copper-ore were sent from Australia to England last year, to be smelted at Swansea; and the result was only 1600 tons of copper. But Australia in future will smelt her own copper, by a 36 hours' process: saving all this useless freight of the 8400 tons of refuse, and saving also the cost of the old and expensive process. In a very few years, Australia will send to market more copper than is now produced by all the rest of the world. But if our future penny-pieces are to bear any proportion to the reduced cost of the value of the metal, they must be made of the size of dinner-plates!

PLENTY FINERY, BUT NO AIR.—In a late newspaper, we observe an account of the decorations of a new steam-vessel which has begun plying between Glasgow and Liverpool. The painting, carving, and gilding are described as something beyond all previous efforts at steamboat embellishment. Not a word is said as to whether the cabins are ventilated. How often would passengers give up all the finery which surrounds them for a mouthful of that article so grudgingly dispensed in steamers—fresh air!

CHEAP lodging-houses for the poor have been established in Glasgow, with great success; and the number is about to be increased in different parts of the city. In the original establishment beds are furnished for 3*d*., and breakfast and supper for 2*d*. From the end of June to the end of August, the inmates have been—males, 2,399; females, 152; married couples, 113; and the numbers are steadily increasing.

THE QUEEN'S COLLEGE FOR GOVERNESSES.—This new college, (so named by royal permission,) having been completed, will be opened for academical proceedings in the ensuing month, for which the most eminent professors have been engaged. Its objects are to place female education upon a proper basis, and to grant diplomas and certificates of their qualifications to governesses to enable them to produce satisfactory evidence of their merits, and where the less competent can obtain an adequate and orderly preparation for their work.

HE who calls reason to his aid only in the moment of need, will have less confidence in her. And thus it is also with religion. The instrument does not make the artist, but practice. Of what avail is the arsenal to him who has never fired a gun? The enemy are upon him before he can put his weapon in position, and bring it to bear upon them. But can one who has made religion and wisdom the daily companions of his life ever be placed in such circumstances of doubt and peril that he will feel himself forsaken by these trusty friends? —*Jacobs.*

The LIVING AGE is published *every Saturday*, by E. LITTELL & Co., at No. 165 Tremont St., BOSTON. Price 12½ cents a number, or six dollars a year in advance. Remittances for any period will be thankfully received and promptly attended to. To insure regularity in mailing the work, remittances and orders should be addressed to the office of publication as above.

Twenty dollars will pay for 4 copies for a year.

COMPLETE SETS to the end of 1846, making eleven large volumes, are for sale, neatly bound in cloth, for twenty dollars, or two dollars each for separate volumes. Any numbers may be had at 12½ cents.

AGENCIES.—The publishers are desirous of making arrangements in all parts of North America, for increasing the circulation of this work—and for doing this a liberal commission will be allowed to gentlemen who will interest themselves in the business. But it must be understood that in all cases payment in advance is expected. The price of the work is so low that we cannot afford to incur either risk or expense in the collection of debts.

LITTELL'S LIVING AGE.—No. 182.—6 NOVEMBER, 1847.

From Chambers' Journal.

THE SKATING REGIMENT.

In Norway, the ground is overspread with snow for three quarters of the year, and not unfrequently to a depth of ten feet. When a thaw comes, it is only the surface of the mass that melts; and then the next frost of course covers the whole country with a crust of ice. In such circumstances, there is no getting along in the usual way. The people must still ascend the hills and dive into the valleys in pursuit of game; they must still traverse the hoary forests to gather wood for fuel; and they must still journey to the distant towns to bring food to their isolated hamlets. In these excursions, whether long or short, they use skates. Skating is with them neither a mere amusement nor a gymnastic exercise; it is a means of locomotion which the nature of the ground renders indispensable, and a man who could not skate would be unable to walk to any useful purpose.

It is melancholy to think that one of the most delightful winter customs has, like many other things good in themselves, been pressed into the service of war. In the army of Norway, there is a company of skaters, dressed in the dark-green of English riflemen, and armed merely with a slight musket slung upon the shoulder, and a dagger-sword. They are likewise provided with an iron-pointed staff, seven feet long, resembling those used by the Swiss when traversing the glaciers; which serves to balance them as they sweep along the ice, and which they strike deep into the ground when they desire to stop in their headlong career. The staff is also indispensable as affording a rest for their pieces when they fire. Their skates are of a peculiar construction, being singularly long; and when thus shod, it is a strange sight, and in times of peace, like the present, an amusing one, to see this light company climbing with ease the icy hills, gliding down their precipitous sides, and striding, as Klopstock says, with winged feet over the waters, transmuted into solid ground, as if in defiance of the common laws of nature.

Skating was known to the ancestors of the Northmans, if we take the date assigned by some authors to the Edda as evidence, eight centuries ago; the god Uller being represented in the Scandinavian scriptures as remarkable for his beauty, his arrows, and his skates. The exercise is not mentioned by the Greek and Roman writers, though so well acquainted with all other gymnastics; but Klopstock, Goëthe, Herder, and other German poets, sing the praises of the art. In Holland it is practised, as in Norway, not for its gracefulness, but for its utility; and there it is common for the country people to skate to market. During the famous expedition of Louis XIV., this art of locomotion was used against the Dutch themselves in one of the most curious and daring exploits recorded in history. When the states sued for peace, the terms offered by the pride of Louis were so monstrous, that the people tore open their sluices, and laid the country under water. The frost after a time, however, rendered even this unavailing; and at length General Luxembourg, one dark and freezing night, mounted twelve thousand men on skates, and sent them over the ice from Utrecht to surprise the Hague. The result is given as follows by a writer who takes his facts from a French historian.

"When they left Utrecht, it was clear frosty weather, and the effect of the moon and stars upon the even sheet of ice, over which they swept like a breeze, was truly magical. By degrees, as they advanced, the visible horizon of earth was obscured by vapor, and they could see nothing around, above, or beneath them, but a circular expanse of ice, bounded at the edge by thick gray clouds, and canopied by the starry curtain of the sky. The strange groaning sound which ever and anon boomed along the frozen wilderness, had at first something inexpressibly terrific to the imagination; and as it died fitfully away in the distance, the space surrounding them seemed extended almost to infinity. The sky at length was gradually covered by the vapors rising, as if from the edges of the circle of earth; a veil of dull and hazy white overspread the heavens and obscured the stars; and a dim round spot of watery brightness was the only indication of the site of the moon, by which alone they could now steer their course.

"A rapid thaw had come on; their skates sunk deeper and deeper into the ice at every sweep; and at last, the water gathering upon the surface, as it was agitated by the night-wind that had now risen, assumed the appearance of a sea. The wind increased; the sky grew blacker and blacker; their footing became more spongy and insecure; they plunged almost to the knee; and the ice groaned and cracked beneath them. Every one looked upon himself as lost; and the horrors of a fate hitherto untold in story, and appearing to belong neither to the fortunes of the land nor of the sea, appalled the boldest imagination.

"At length a faint twinkling light appeared in the distance, sometimes seen and sometimes lost in the varying atmosphere; and they had the satisfaction, such as it was, of at least knowing the relative bearings of the place on which they were about to perish. The light proceeded from a strong fort in the enemy's hands, impregnable without cannon; and what added bitterness to their misery, was the knowledge that beyond this fort was a

Digitized by Google

dike, which in all probability afforded a path, however narrow and muddy, by which they could have returned to Utrecht. The fort, however, was the gate to this avenue of safety; and even if they had possessed the requisite means of siege, if it was defended for a single day, they would either be swallowed up by the water, in the continuance of the thaw, or perish miserably through cold and fatigue. But anything was better than inaction. The water creeping insiduously around them was a deadlier enemy than stone walls or cannon-shot; and they determined at least to make a rush upon the immovable masonry of the fort, and provoke the fire of its defenders. It is impossible to account for the result. It may have been that the sight of so large a body of men rushing in upon them, as if from the open sea, their numbers multiplied, and even their individual forms distorted and magnified in the midst, struck a panic terror into the hearts of the garrison; while this may have been increased by the shouts of courage or despair, booming widely over the icy waste, and mingling like the voices of demons with the rising wind. But however it was, the gates of the fort opened at their approach, and the helpless and half-frozen adventurers rushed in without striking a blow."

Correspondence of the Journal of Commerce.

HOLY-WEEK IN LIMA.

LIMA, April 13, 1846.

IN no other place does Holy-Week exhibit so many religious pageantries as here. The spectacles commenced with the entrance of our Saviour into Jerusalem. On a platform, which was carried on the shoulders of men like a bier, stood a wax donkey, on which was mounted a wax figure, intended to represent the person of our Saviour. Around were grouped wax figures, from whose hands, palms had fallen on the platform.

Then followed another platform, on which stood in wax the Virgin Mary, with a sparkling crown on her head, and in a robe of purple velvet, embroidered with gold, and having a long train, which was supported by an angel. This robe cost a thousand dollars, and was a present from a lady, as an offering to the Virgin, for her recovery from sickness. Then followed a third platform, and on it a wax tree, with a little wax man in its branches, representing Zaccheus. These platforms were surrounded and borne on by an immense concourse of people, singing and shouting.

On Tuesday was the ceremony of the Banner. The great cathedral was crowded with spectators. The high altar was lit by a thousand candles. A tall priest, dressed in black silk robes, moved out in front of it, and unfurled a banner of red and black, measuring some eighteen feet by twelve. At this moment the band in the orchestra struck up. The priest waved the banner in front of the high altar some five minutes, knocking over, with the staff, one of the twelve great candles. The candle thus knocked over, represented Judas. He then turned about, facing the spectators, who dropped on their knees. As he descended from the altar, with his train flowing behind him like a vast cloud, and his banner waving in darking magnificenee over head, twenty-four priests, in black robes, and through whom he passed, fell flat on their faces upon the pavement. They remained in that posture some ten minutes, the banner all the time waving, and instruments playing. They then got up, several of them laughing under their hoods; and the banner disappeared through one of the side chapels. Thus closed this spectacle of the Banner, which had with me as little significance and solemnity about it as the display of the green breeches of the prophet at Constantinople.

On Thursday, at twelve o'clock, which corresponds to Friday at Rome, all occupations and amusements ceased. Every shop was closed, and every vehicle laid aside. The bells gave one tremendous peal, and were then all sent, metaphorically, to Rome, to be blessed by the Pope. In the evening the whole populace were abroad, and performed the circuit of the churches. In these were represented, in wax figures, all the last scenes in the life of our Saviour. In one church we found a representation of the garden of Gethsemane, in the midst of which kneeled a figure overpowered with dismay, while near by stood an angel with a cup in hand, and a tear in its eye.

In another church we encountered the Court of Pilate. There stood the accusers, with menace in their attitudes, and malice in their looks; there stood the accused, in meekness and conscious innocence; and there bowed a servant with a washbowl and napkin in his hand, that the Roman governor might wash himself of guilt in the transaction. The whole representation was one that would much better become the nursery than a church. In another of the largest churches we found a representation of the last supper. At each plate was a loaf of bread and a bottle of wine; while the table itself was loaded with all the fruits, fish and fowls of the Lima market. A gourmand might have gazed with interest, but a self-denying Christian would have turned away with indescribable surprise and pain.

In other churches still, the tomb and the Roman guard were represented. During Friday night the military patrolled the principal streets, with their guns trailed, and a band playing the dead march. On Saturday morning, at nine o'clock, all the bells came back from Rome, and rung out a simultaneous exultation to represent the resurrection. Then was there one universal burst of joy. Men, women, and children all seemed to vie with each other in the amount of hilarity which they could express. The priests clapped their hands and ran about here and there, like men in the ecstacies of some paradisical dream; and even the bare-footed monks forgot, for a few hours, to beg.

These jubilations continued through the day, and poured themselves, at evening, in a living tide on the great public square. The whole area of this grand "Plaza" was filled with a mixed multitude of all classes, who sent up through the moon-lit night a roar of mirth. The square was surrounded with stands, from which were served meats, fruits, cakes and liquors, of every description. Around these were grouped hundreds, who were evidently breaking their long Lent. Some were laughing, some shouting, some eating, some drinking, some fiddling, some dancing, some fighting, and some making love. This continued till daylight on Sunday morning. Thus closed Lent, and the celebration of the Resurrection!

As this is a Roman Catholic country, and this a Roman Catholic festival, I wish you would ask my friend, the Rt. Rev. Bishop Hughes, if the celebration has his sanction. Ask him also, if, in case the Roman Catholic faith should predominate in the United States, the resurrection is to be represented and celebrated in this manner among *us?*

From Chambers' Journal.

THE TWO SISTERS.

"As mine own shadow was this child to me,
A second self, far dearer, and more fair."—*Shelley.*

I was born in the village of Offingham, of which my father was the vicar. I have lived long, and have visited many lovely spots, and been the inmate of many happy homes; but never have I seen on earth a paradise like this, my early home. The village was a small sequestered spot, far from the bustling world; our house was an old-fashioned stone dwelling, with deep mullion windows, tall chimneys, and small projecting turrets; a broad terrace ran along the front, from which a bank of soft green turf sloped to the lawn beyond. The house was covered to its roof with myrtles and roses, and the garden was a wilderness of sweet flowers and shrubs. Yet lovely as was the scene without, within there was a far greater charm—peace and content reigned undisturbed. I have often since wondered whether my parents, up to the time at which my tale begins, had known what sorrow was; my remembrance of them is like that of a soft yet brilliant evening sky, where not a cloud chequers the deep blue vault of heaven, or casts a shadow on the earth beneath. I cannot recall one look of sadness on their faces, or remember one anxious or discordant word. Heaven's own peace brooded o'er the house.

But sorrow comes to all sooner or later; and how heavily it falls on the heart grown old in happiness and prosperity! Life opened brightly on me amidst these influences: a happier, gayer child never gladdened its parents' hearts. Soon after I had attained my seventh year, I was awakened early one morning by an unusual commotion in the house. People were hurrying past my door; I heard voices speaking in subdued tones in the passage, and amongst them recognized my father's, giving hurried directions to the servants. An undefined sense of coming evil fell on my spirit; I lay still, scarcely daring to breathe, watching with a beating heart the time when my nurse would come to dress me. Several hours must have elapsed; all was so silent, that even to me, young as I was, the suspense became insupportable: I sprang from my bed, and stealing along the corridor, knocked softly at the door of my mother's room. A strange woman opened it: seeing me, she bent down and whispered, "Go to bed, miss, your mamma is very ill." But I would not be repulsed; and pushing past her, entered the darkened chamber. When my eyes became accustomed to the dim light, I saw my mother lying very still and pale, and my father sitting on the bed beside her, with his head buried in his hands; on a chair by the fire sat my nurse, with a baby on her knee. I did not cry, though my little heart was bursting with emotion; but creeping gently round the bed, I said, "Harris, may I speak to mamma?" I think my father must have heard my voice; for with a convulsive sob he said, "Take her away!" I was led back to my room, and desired to lie still until Harris came to me. I cried bitterly when left alone, but fell asleep while listening for her step. It is needless to dwell on that time. By degrees I was made to understand the truth: my mother had given birth to a little girl, and expired a few hours afterwards. It is difficult, even for a mind inured to these bereavements, to comprehend at first their full extent; how much less can a child realize the truth of such afflictions. They told me that my mother was dead—that I should see her no more on earth. I saw the hearse that bore her away; her chair stood empty by the fireside, and I no longer heard her sweet voice in the house; and yet I believed that I should see her again; and often in the daytime I went to her favorite haunts in the garden, hoping to find her there; and whenever, in the silence of the evening, I could escape from observation, I stole into her room with an assured certainty that she would have come back: not finding her as I expected, I lay down on her bed, and cried bitterly.

Sorrow cannot, however, dwell long in the heart of a child; and mine was soon dispelled by the smiles of my little sister. I could not understand the silent abstraction of my father: his grief was too deep to seek relief from any earthly source; he shut himself up in his study, and allowed no one to enter; he never asked for his children, and I observed that the baby was carefully kept from his sight. Long and fearful must have been the struggle in my father's soul: the wife who had cheered and blest his home was gone, and life for him had lost its brightness. In the first anguish which her loss occasioned, he refused all comfort; but succeeding months brought calmer thoughts; his children, *her children*, remained to him; for their sake he would rouse himself, and devote the remainder of his life to their improvement, and strive, by redoubled tenderness, to supply the loss they had sustained. Selfishness was foreign to his nature, and even in grief he forgot himself in the desire to benefit those around him. The house gradually resumed its cheerfulness; and though we never ceased to feel the change that had fallen on our home, yet we were once again a merry, happy family.

As I grew older, my father saw the necessity of placing me under the control of some judicious lady: the rough and fearless girl, the playmate of many brothers, needed the guidance of a female friend. And never was choice more fortunate than that made for me: Miss Franklin became a blessing to us all. Quietly and gently she assumed the management of the household, and we soon unhesitatingly obeyed; for we respected as well as loved her. Even the impetuous spirit of my brothers yielded to her mild control. I never remember any contention between them; she seemed at once to command their obedience, and to guide them as she chose. With me, no authority was needed: I followed wherever she led, an unquestioning and devoted pupil: to be near her, to listen to her words of kindness and instruction, became the chief pleasure of my life. I had dreaded her

Digitized by Google

arrival, and with childish waywardness had determined not to love her myself; and, above all things, not to allow her to tyrannize over my darling Amy. This sister had already become the first object of my life: I loved her passionately, and had constituted myself her teacher, and controller of all that concerned her; I therefore looked upon Miss Franklin as an unwelcome interloper, a rival in my power over Amy. I met her with little courtesy, and am afraid showed very plainly my predetermined intention of disliking her. It was not, however, in the power of mortal to resist Miss Franklin; at least it was far beyond mine; and I not only yielded myself submissively to her guidance, but, what was far more difficult, learned by degrees to see her gaining influence over Amy. This child loved her with an energy peculiar to her nature, and I felt at times a pang I cannot describe in seeing her growing partiality for Miss Franklin, whose gentle and undemonstrative manners won Amy's love, whilst my own vehement caresses were received with careless indifference. I endured all the torments of jealousy, for Amy's love was the only thing on earth I really cared for; yet, in the midst of my unhappiness, I do not think that I was ever unjust to Miss Franklin. I never blamed her, for I felt her superiority; and while I mourned Amy's preference, I could not but acknowledge how wise it was. I think few people understand how deeply and silently a child may suffer: childhood is regarded as the gay, buoyant period of life; and those alone who make children their study, can tell what a world of joy and sorrow, of struggle and suffering, lies in their little hearts. Insignificant as the events of their baby-life may seem to the matured mind of man, they are all-important in themselves, as the means by which the child is trained for the coming duties of life. From this want of entering into their feelings, I have seen many a one punished for sullenness, when a word of sympathy in its little grief would have saved its temper from the ordeal of unjust correction. At this period of my life, had my silence and irritability been misconstrued, how might my character have suffered! But Miss Franklin read my heart, traced each feeling to its source, and checked the evil that was springing. "Fanny," she said one day when I had long sat moodily at work, "I wonder what you love best in the world!"

"Oh, Miss Franklin, how can you ask? Amy, to be sure; I love Amy better than the whole world beside."

"I am sure you *think* so; but tell me what you mean by love? I think our definitions of the word would differ strangely."

I remained silent, for indeed I did not understand her question. My love for Amy seemed a part of my very life; and I could no more define the feeling, than I could have analyzed the beams of light which shone from the bright sun above our heads. I looked up inquiringly, I believe, for Miss Franklin continued, "Your love for Amy springs from love of yourself, not from pure devotion to your sister: you love her as your plaything, as the creature over whom you have a fancied right. That readiness to yield our own wishes to promote the happiness of others, which I regard as an essential attribute of pure disinterested love, I do not see in you. When Amy is happy with me, and in the simplicity of her heart shows a preference for my company to yours, a cloud gathers on your brow, and the color mounts to your cheeks. Dearest Fanny, this is not love; it is selfishness."

I was deeply mortified, and Miss Franklin, who never willingly wounded the feelings of any one, dropped the subject. I never, however, forgot her words, and as I grew older, I felt them influence my actions more and more. Amy's welfare and happiness became dearer to me than my own, and gradually I learned to feel the bliss of resigning my own desire to hers. It was Miss Franklin's continual study, as we grew older, to render us dependent on each other for amusement and happiness; and often she would say, "Fanny, when I leave you, you must be Amy's guardian friend; she needs your care; the gay, volatile child cannot yet stand alone; to you she must look for everything." I have since felt that the chief aim Miss Franklin had in view, in all her instruction, was to give a right direction to the love I bore my sister, to render me a safe guide and judicious friend to the creature whose beauty and talent already threatened to be dangers in her path. Amy was the idol of the house; caressed and spoiled by all, she manifested the faults peculiar to a child thus situated. To make me aware of these faults, to point out to me the perils that beset her, was Miss Franklin's constant endeavor. It was as if a foreshadowing the peculiar trials that were to be our portion was ever present to her soul. Alas! how soon were my prudence and wisdom to be tested.

My father's health had been long failing. In spite of his efforts to shake off grief, it had slowly done its work; he was no longer young when my mother died, and the ravages made in his constitution by sorrow for her loss were never repaired. He gradually became feebler, and Miss Franklin did not conceal from me the knowledge that death was fast approaching. My brothers had all quitted our home: one by one they had taken their places in the world. Two were already in India, one at college, and the youngest was studying engineering in a distant town. I was therefore the only child left to comfort my father's declining days. I look back with melancholy pleasure to the hours I spent with him at this period. I was old enough to be his friend and companion, and he loved to pour out his heart to me. He talked of his early days, of my mother, of the unbounded happiness they had enjoyed together, of her death, and all that he had since suffered. The thought of rejoining her was ever present to his mind; and as I listened to his hopeful trust in the mercy of God, and his glad anticipation of a reünion with her he had lost, I learned the best lessons of religion.

With his own thankfulness to depart and be

Digitized by Google

at rest, however, mingled many an anxious feeling for his daughters. "My boys," he would say, "must fight their own way in the world; for them I am content; but for you, Fanny, and for my little Amy, I often tremble: yet why distrust our Father's love? When I am gone, will he not still remain, an all-sufficient Friend, the orphan's sure Protector? Trust in His goodness, my child; He will never fail you."

Then he would talk to me of Amy—that precious legacy bequeathed by his dying wife; and with tears in his eyes entreat me never to leave her; to watch over her, and be her guide, adding these words, which sank deep into my soul, and became the spring of my future actions, "Live for your sister; study her happiness before your own: thus when we meet in heaven, you may present her to the mother who died in giving her birth, with the joyful consciousness that you have faithfully fulfilled your mission on earth."

Soon after this my father died; the lonely desolation of the weeks that followed his decease I will not describe. I was stunned by the blow; but soon recognizing the importance of my task, I roused myself to fulfil the duties which now devolved upon me. Had it not been for my excellent friend Miss Franklin, all my efforts would have failed; she was my support, my counsellor; in the painful arrangements which followed our bereavement, she spared me every needless pang; and, consulting with my brothers, she arranged our future plan of life. It was of course necessary to quit the vicarage immediately, as the new incumbent was impatient to take possession. The property destined for us was invested in the hands of my eldest brother, a merchant in Calcutta, and had been the nucleus of his present immense fortune. The interest was carefully remitted to us, and as far as pecuniary means went, we were without anxiety. A pretty cottage, which had formed part of my mother's fortune, was chosen for our future residence. With an aching heart I left the home of my happy childhood; in spite of my better reason, a foreboding of coming evil seized upon me; and as I entered the carriage that was to convey us to our new abode, I felt as if all my happiness were left behind in the dear old vicarage we were quitting. It was not so, however; though sorrow and difficulty awaited me, and long years of self-denial and labor were in store for me, yet peace and content lay beyond. In the severe school of adversity, my spirit gained strength and vigor; and the blessedness which accompanies every act of self-sacrifice, the peace which attends every conscientious effort to perform the painful duties of life, were eventually to be my portion.

We were so far happy as to retain our dear friend with us for some years, until I was old enough to take upon myself the full responsibility of directing our little household. I had attained my twentieth year when she left us. She had, for our sake, postponed her marriage with one to whom she had been long and devotedly attached, and whose urgent and reiterated claim upon her she felt it wrong longer to resist. Her loss was irreparable; but we could not oppose her departure. In quitting Amy and myself, she had the happiness of seeing us united in the closest bonds of affection; sisters in heart and soul, firm and faithful friends. Her lessons had not been lost on either of us. Amy was the joy and pride of my life. Often as I looked at her, I thought how easy was the duty my father had bequeathed me, and recalled the solemnity of his manner with a smile. Alas, alas, for the weakness of human nature! the struggle was yet to come.

Miss Franklin had not quitted us more than a few months, and we were already planning a visit to our friend in her new home, when one morning a letter was put into my hand, the contents of which struck dismay to my heart. Hastily folding it, I rose, and with all the self-command I could assume, walked to my own room. There I again read the letter: it was all true. In plain, legible characters I saw that ruin—worldly ruin—stared us in the face. It contained the news of the death of our brother in India, and at the same time announced to us that, as he died insolvent, all remittances would henceforth cease. The business-like tone of the letter struck a chill sense of the extent of our calamity home to my very heart. I buried my face in my hands, and for a while brooded in utter hopelessness over the fate before us. All passed in rapid vision before my mind: poverty, with all its attendant miseries; poverty, not for myself alone—*that* I could have faced—but for Amy, my sister, the child of so much tender love—the gay, bright, sunny creature, whose step bounded over the earth as if it yielded nought but flowers—must the chill hand of penury blight her young life, and wither ere its prime that bud of promise? The thought had agony in it. Then did my father's solemn injunction recur to me, nerving my heart to bear, and strengthening my soul to do, all that might be demanded from me. In that moment I bound myself to shrink from no effort, to dare all things, so that my beloved sister might be shielded from the impending evil. I prayed for strength, I implored Heaven to guide and aid me in my firm resolve. As I rose from my knees, the sound of her sweet voice came from the garden beneath. "Fanny, sister," it said, "what keeps you away from me so long? I am waiting for you." I hastened to join her; and with all the calmness I could command, told her of our misfortune. The gentle girl scarcely comprehended the meaning of my words; but seeing the sorrowful expression of my face, she laid her head upon my shoulder, and with her sweetest smile said, "We may be poor, dear Fanny, but we shall still be together; poverty cannot separate us." I clasped her to my heart: "No, Amy, our hearts can never be disunited." I already felt that we must part, and her unconscious words pierced me to the soul.

I wrote to our dearest friend, now Mrs. Wentworth, begging her advice. The next day brought her to us, and again she stood between us and

Digitized by Google

sorrow. She saw that we could no longer keep up our little establishment, and wisely counselled us to give it up at once. She arranged all for us; and after seeing everything put in a right train, she carried us to her house, where we were welcomed with cordial kindness by her husband.

I had now leisure to think on the course I must pursue. My brothers were all involved with ourselves in this ruin, and were, moreover, either married, and with families dependent on them, or still struggling to establish themselves in the world: we could look for no help from them. For the first time I stood alone. I could not ask advice from Mrs. Wentworth; she would hear of nothing but our remaining with her and her husband, and this I could not listen to. Their means were limited, and I could not consent to be a burden to our friends. God had given me strength and health; to the liberality of my father, and the care of Miss Franklin, I owed an excellent education; and I felt that I could myself maintain Amy. For her sake labor would be sweet. I resolved to seek for a situation as a governess; and though well knowing the trials and difficulties of such a career, I felt as if the motive would give me courage to meet them all. The thought that my dear sister was safe from harm would animate my drooping spirit, and send me on my way rejoicing. Having taken my resolution, I sought Mrs. Wentworth. At first she opposed my plan, bringing forward all the difficulties it would entail upon me, all the sacrifices I must make, and urging me, with the warmth of a loving friend, not to leave the home she offered me. Seeing that my purpose was unalterably fixed, and in her heart, I am sure, approving the spirit that urged me to seek an independence, she gradually yielded. I accepted, without hesitation, her proposal, that Amy should remain under her care. With her I knew my sister would be happy, and in no other situation could I have been satisfied to leave her. Amy was now thirteen, and from her peculiar disposition, needed the guidance of one who understood her well. Proud and haughty by nature, she would have been a tyrant had she not lived with those whom she respected and loved, whose intellectual as well as moral superiority she was compelled to acknowledge. With a warm, enthusiastic temperament, she loved the few to whom she gave her affection with passionate devotion, and by this love she could be guided like a little child. Mrs. Wentworth and myself alone possessed this power over Amy, and to her I gratefully confided my treasure.

It so happened that my friends had been applied to a few weeks before to find a governess for two little girls whose mother, from delicacy of health, was obliged to give up the charge of their education. The situation promised many advantages, and I thankfully accepted it. My hardest task still remained. As yet, Amy was ignorant of my design. I knew that she would oppose it with vehemence; her pride would rebel against the idea of her sister's becoming a governess; while her generous nature would shrink from the thought that, while she remained idle, I was laboring for her advantage. It was long before I could make her listen patiently to my reasons: she clung to me, and with passionate sobs intreated me not to "degrade" myself—to stay with her. Finding arguments fail, I determined to appeal to her feelings, and gently told her that, by such conduct, she rendered my task doubly difficult; that without her assistance I did not feel equal to the duty that lay before me; that she must try to help me to do that which I was sure her better judgment would show her to be right. She looked wistfully at me through her tears, and struck with the calm sadness of my manner, "Fanny," she said, "I am very selfish. While you are thinking only of me, I am making you more unhappy. Kind sister! teach me to be like you; teach me how I may help you, and you shall not find me ungrateful or unworthy of all your goodness." I then explained to her the various reasons that rendered the step necessary; to which she gradually yielded her assent, ever repeating, however, that when she was old enough, she would work for me; to which I answered, we would then work together. This thought seemed to cheer her, and she soon regained her wonted gayety.

I will not dwell upon our parting, nor detail the many trials that awaited me in my new abode. I am sure that it was the desire of the whole family amongst whom I now became domesticated to be kind and considerate; but none except those who have tried this mode of life can know the lonely feelings that attend it. To exchange a happy home, in which I had been the loved and honored mistress, for the chill and enforced courtesy of strangers, was painful enough; but more than all did I suffer from the contrast between my pupils and my darling Amy. At first, it seemed all labor in vain to endeavor to influence these wild and giddy creatures, and often have I wept to think how little success attended my utmost efforts. I was, however, but a novice in the work of education; and had yet to learn, that before the seed-time comes, the ground must be weeded and tilled, or the harvest will fail. I have lived to see my dear pupils grow into sensible and refined women, and to bless God that I did not abandon my task as hopeless.

The neighborhood in which Sir William Monkton's residence was situated was peculiarly devoid of society, and Lady Monkton's health rendered all formal visiting impossible; the monotony of our life was therefore seldom broken in upon, except by intercourse with the curate of the parish, who was a frequent and ever-welcome guest. He was one of those rarely-endowed beings whom it is a privilege to know, whose presence exerts a powerful influence on all around him; one whose graceful manners and gentlemanly deportment are but the external signs of a pure heart and a cultivated mind. He devoted himself, with heart and soul, to the high profession which had been his early choice; every talent, every energy was absorbed in the fulfilment of the duties it imposed upon him. He was idolized by the poor, while the rich and

Digitized by Google

educated never failed to leave his society the better for his cheerful, earnest conversation and unostentatious piety. At Monkstown his company was welcome to all: in the weary hours of languor and suffering which composed the life of poor Lady Monkton, his presence cheered and supported her; from his lips she learned lessons which turned her sorrows into joy: to Sir William he was a frank and intelligent companion; while his playful humor rendered him a favorite with the little girls. Such was Herbert Somerville when I first became acquainted with him. I saw him day after day, and soon found in his kind sympathy the best support under the trials of my new position. He aided and encouraged my efforts to fulfil its duties, and by always setting before me the purest motives for my actions, made me feel that even Amy's welfare must be subservient to the higher desire of doing the will of God. He taught me to look for happiness alone in the endeavor to do what is right and well-pleasing in the sight of Him who searches the hearts of men; and while he thus elevated my moral nature, he led me on to new and vigorous mental efforts, by opening to me the higher walks of science and literature. Our intercourse became more and more intimate; and it will scarcely be matter of surprise that, as I esteemed him more, I unconsciously learned to love him. I have heard many people call it unmaidenly in a girl thus to bestow her affection unsolicited by the object of her choice; but it seems to me that those who so condemn know little of the innocence and singleness of mind which form that peculiar charm of the female character. I do not speak of those who are trained in the school of the world —who, living amidst its artificial glare, early imbibe a spirit foreign to the native purity of woman—but of the many who walk along the calm, unfrequented paths of life, ignorant alike of the ambitious aims and heartless vices of the world beyond. In the breast of such, love springs unconsciously, and has already grown to be the masterpassion of her nature ere chance betrays it to herself. Thus it was with me; I walked beside an abyss, heedless of danger.

Let me, before proceeding further, exculpate Herbert from all blame, which others, in compassion for my subsequent sufferings, may feel disposed to attribute to him. He never, by word or look, showed me a preference that could have misled one better versed in the world's ways than I was. His affectionate interest in me was such as a brother feels for a dear sister; and when, taught by experience, I retraced his actions, I felt that his kindness sprang from friendship, not from love.

I had resided five years in Sir William Monkton's family, during which time I had frequently visited my dear sister. Each time I saw her, I felt increased surprise and delight at the progress I perceived in her mind, as well as at her surpassing beauty. Her face, lighted by the lamp within, beamed with a radiant loveliness, which nothing but the rare union of high mental power with the gentler virtues of the heart can give. Her form was instinct with grace—that native grace which emanates from a pure and lofty soul, and breathes in every gesture. She was indeed a creature to command the highest admiration, and at the same time win her way to all hearts. On my return from these visits to Mrs. Wentworth, I could not refrain from speaking to my pupils of Amy. They had often expressed a strong desire to see her. Lady Monkton now joined in the wish, and at her request I wrote to invite my darling sister to Monkstown. She joyfully accepted the invitation so kindly given, and soon became the favorite of the house. Never did a mother watch a child with more proud delight than I followed this gay and joyous being, as she moved along, attracting universal admiration.

It was not long before I saw one eye bent upon her with such an earnest gaze that I started as I beheld it. How could it be? I had eagerly desired that Herbert should see my Amy—should admire and love her; it had seemed the one thing needful to my happiness that these two should know and love each other. As day by day passed on, I felt increasing disquietude; my eye restlessly followed Amy whenever Herbert approached her; and a chill sensation crept through me as I saw him pay her those nameless attentions which bespeak the existence of love. Amy's manner of receiving them proved to me how well she appreciated Herbert's noble qualities of mind and heart; I saw that they already loved, and my reason told me they were worthy of each other. Suddenly the truth was revealed; I discovered in the same moment that I too loved, and that he whose priceless heart I would have died to win, already loved another—that other, my own sister Amy. In the stillness of the night did my soul vent its bitter anguish; the first wild burst of grief had subsided, the tumult of feelings too fearful to be dwelt on had been appeased, and my father's voice again, in the deep silence of that midnight hour, sounded in my ears, "Live for your sister; study her happiness before your own." Alas! alas! the moment was come in which I could only insure her happiness by the sacrifice of my dearest earthly hopes. "Yes, father!" I exclaimed, "with God's help I will redeem my pledge;" and falling on my knees, I poured forth my soul in prayer and supplication for wisdom and strength to fulfil the arduous task imposed upon me.

With renewed powers I now began to survey the position I held. One comfort I had—that no one ever suspected the love I had cherished in secret; it must be my first object so to control my feelings, that none might ever guess the sacrifice I must make. I trembled to think of the watchfulness it would require to veil my heart's secret from Amy—from her who had ever read my soul, and from whom no thought had been concealed. I foresaw that I should become the confidant of both parties, and I nerved myself for the task. If I could once see them happily united, I thought I should then have rest; but how to meet the suf-

Digitized by Google

fering which lay between this time and that which would see the sacrifice accomplished! Amidst such reflections I passed the night; the morning with its cold gray light dawned in the east; the time for action was approaching. I could not feign illness, for what illness would have kept my faithful Amy from my side? and it was her searching glance I now shrank from encountering. Sweet, innocent, guileless Amy! Happy in the first consciousness of being loved, she was less alive to any change in me than she would otherwise have been; and thus I was spared many a pang. I do not shrink from the avowal that at times my courage failed; there were moments when the effort of concealment seemed too great for me, when I longed to lay my burden down at their feet and die. My hope in life, or aught it could bring me, was dead. Amy no longer required me; she had found in Herbert a friend and guide whose love was more to her than mine; and though she would indignantly have spurned the idea, yet I felt that my work was done. I have lived to see that this was but a morbid, selfish feeling. The work of life to one earnestly resolved to do his duty can never end; and at this moment while I write, though age has dimmed my sight, and left me helpless and alone as far as the severance of earthly ties can leave us so, yet do I wait in patient hope of still further usefulness to my fellow-creatures. God spares the withered tree with wise design; let us not mar it by our selfish murmurings.

In a few months Amy and Herbert were betrothed. From the moment in which I first became aware of their mutual attachment, I never wished it otherwise. I labored to promote their happiness; I listened to the outpourings of these two hearts devoted to each other; I strove to awaken in Amy's sanguine nature a due sense of the cares and responsibilities she was taking upon herself; taught her to perceive the finer shades of beauty which lay beneath the reserve of Herbert's nature; tutored my mind once more to listen to her praises from his lips without a shudder; and learned, after many struggles, to live for them alone.

At length the day arrived on which I was to give up all claim to Amy, and resign her to a husband's care. The habit of self-command had, by hourly practice, become so strong, that I did not flinch even at this most trying time. The wedding was to take place from the house of our beloved friend, Mrs Wentworth, who in this, as in all former events of our lives, acted a mother's part to us. The morning of the important day dawned brightly. I assisted my beautiful Amy to array herself in her simple bridal attire, and led her down to her expecting friends. My heart was proud of my lovely sister; and happy in her joy, I forgot myself. I placed her hand in Herbert's, and with a firm voice said, "Herbert, I give to your charge my dearest earthly treasure; love and cherish her, as I have done." The ceremony was performed by our kind friend Mr. Wentworth, and we returned to the parsonage [illegible]kfast. While I could look on Amy's happy beaming face, it was easy to bear up; but the time of separation came. I saw them depart, and watched the carriage that bore them away with apparent calmness. When it was out of sight, I hurried to my own room; but ere I reached the door, fell heavily to the ground.

Months passed, and still Mrs. Wentworth devised new excuses for keeping me near her. But my pupils had waited for me; Sir William and Lady Monkton, with a kindness unparalleled, refused to fill up my place; and at length I returned to their hospitable house, and resumed my former duties. Herbert and Amy had pleaded eloquently that I should live with them; but this I firmly, though gently resisted. It was a source of heartfelt joy to think of them, to visit them occasionally; but hourly to have witnessed their domestic happiness, would as yet have been a martyrdom. I continued to live for many years at Monkstown, until the marriage of my two pupils left me no pretext for a longer residence there. Lady Monkton's sufferings had ended in a calm and peaceful death soon after my return from Amy's wedding; and though Sir William would have placed me at the head of his house, and given me the honorable title of his wife, my heart too decidedly rejected the thought of marriage to allow me to hesitate for a moment. I declined his proposal, but retained his friendship.

Amy had four lovely children; and conscious of my own strength, I now gladly consented to become the inmate of their home. Years had changed my feelings; Herbert was to me no more than the husband of my beloved Amy—my own kind brother. Their children became my own in heart; I loved them, and devoted myself to their education with an energy I had thought lost to me forever. People often wondered why Miss Jerningham never married, and prophesied that I should yet renounce my self-imposed duties as maiden aunt; but time rolled on, and found me at my post, still zealously and happily employed.

God has lengthened my days beyond the usual span allotted to man. I have survived all my race; I have wept over the graves of the young and the old, as they one by one fell from my side. Some were taken in full maturity; others dropped like blossoms from the tree. But death cannot separate the hearts that truly love. There is a world beyond the tomb where my beloved ones wait for me; there I shall rejoin the spirits that are gone before me—parents, sister, brothers, adopted children of my love, friends—I shall see you all! And now, while I linger here, the thought that the secret of my heart was faithfully kept, my pledge to my father redeemed, and Amy's happiness secured, will gladden my few remaining days. Let those who would be happy themselves, learn that the only means of attaining their end is to devote themselves heart and soul, without the smallest reservation for the idol self, to the welfare and happiness of others.

OCEAN PENNY POSTAGE.

Under the name of "Ocean Penny Postage," Elihu Burritt, that indefatigable apostle of peace—would that he could impress his hatred of war on his own countrymen!—has for some time been agitating the project of extending the penny post to correspondence with America. As the weight of letters on ship-board must be relatively trifling, it does not appear to us that any physical difficulties could stand in the way of such a scheme, and in other respects we feel assured, with Burritt, that there could be no serious obstacles to the undertaking, at least none that would not disappear on an earnest consideration of the subject. Of course this consideration would require to be mutual on the part of the British and North American governments. The real difficulty, we apprehend, will not be found with England, but with the United States, which have not yet obtained even a domestic penny post. In the following observations of Burritt, contained in what he calls "An Olive Leaf for the English People," the argument as to how an ocean penny post "will pay" seems fairly reasoned:—

"In asking England to give the world an ocean penny postage, we do not ask or expect her to sacrifice a single farthing of revenue. Leaving for a while the consideration of the vast benefits which would accrue to commerce, civilization, and Christianity, from an ocean penny postage, let us discuss the important question, whether such a measure be practicable, or, in other words, whether it would *pay;* whether England would derive, directly and indirectly, as much revenue from a *penny* rate as from the present shilling rate of ocean postage. As the commerce and correspondence between England and America must be greater hereafter than that between any other two sea-divided countries on the globe, and as provisions are made and making for more frequent steam communication between them than between any other two countries divided by such an expanse of water, let us first inquire whether an ocean penny postage would pay, if established between these two kindred countries. In instituting this inquiry, we would present the evidence of certain facts connected with the present and proposed rates of postage between England and America.

"1. The present shilling rate of postage, being exacted on the English side too, in all cases, and thus throwing the whole cost of correspondence upon the English or European correspondents, greatly diminishes the number of letters which would otherwise be transmitted to and from America through the English mail.

"2. In consequence of the present high rate of postage on letters, newspapers, pamphlets, magazines, &c., a large amount of mail matter conveyed across the ocean lies *dead* in the English post-office—a dead loss to the department—the persons to whom it is addressed refusing to take it out on account of the postal charges upon it.

"3. Under the present shilling rate, it is both legal and common for passengers to carry a large number of *unsealed* letters, which are allowed as letters of introduction, and which, at the end of the voyage are sealed and mailed in England or America, to persons who thus evade the ocean postage entirely."

Of the benefits of an ocean penny post, commercial and social, much could be said; as a means of creating and preserving friendship, it would be invaluable.

"It would," continues Burritt, "put it into the power of every person in America or England to write to his or her relatives, friends, or other correspondents across the Atlantic, as often as business or friendship would dictate or leisure permit.

"It would probably secure to England the whole carrying-trade of the mail matter, not only between America and Great Britain, but also between the new world and the old, forever.

"It would break up entirely all clandestine or private conveyance of mail matter across the ocean, and virtually empty into the English mail-bags all the mailable communications, even to invoices, bills of lading, &c.; which, under the old system, have been carried in the pockets of passengers, the packs of emigrants, and the bales of merchants.

"It would prevent any letters, newspapers, magazines, or pamphlets from lying dead in the English post-office, on account of the rates of postage charged upon them; and thus relieve the department of the heavy loss which it must sustain from that cause under the present system.

"It would enable American correspondents to prepay the postage on their own letters, not only across the ocean, but also from Liverpool or Southampton to any post town or village in the United Kingdom; to prepay it also to *England*, by putting two English penny stamps upon every letter weighing under half an ounce.

"It would bring into the English mail all letters from America directed to France, Germany, and the rest of the continent, and *vice versâ*.

"It would not only open the cheapest possible medium of correspondence between the old world and the new, but also one for the transmission of specimens of cotton, woollen, and other manufactures; of seeds, plants, flowers, grasses, woods; of specimens illustrating even geology, entomology, and other departments of useful science; thus creating a new branch of commerce, as well as correspondence, which might bring into the English mail-bags tons of matter, paying at the rate of 2s. 8d. per pound for carriage.

"It would make English penny postage stamps a kind of international currency, at par on both sides of the Atlantic, and which might be procured without the loss of a farthing by way of exchange, and be transmitted from one country to the other at less cost for conveyance than the charge upon money orders in England from one post-office to another, for equal sums."

SHORT MEASURE IN ENGLAND.

Poor, honest, bluff John Bull! He seems to have fallen into an error. Is this roguery the consequence of his commerce with "drab-coats?" or is it merely on old habit which he cannot leave off? We copy from the Spectator.

Some recent proceedings in the drapery trade have ended in the exposure of extreme dishonesty amongst the manufacturers and wholesale houses. The retail dealers have been combining lately to procure a more equitable measurement of various goods supplied to them by the wholesale houses. For this purpose, a meeting was held a few days ago, at which several exporters, were present, to investigate certain allegations against the wholesale dealers. The course of proceeding was, to examine sealed packets of goods which had been sent in;

Digitized by Google

and the results were rather startling. Among other instances, reels of cotton thread marked "warranted 100 yards" were found to measure respectively 92½, 89, 86½, and in some cases even as little as 75; while in no single instance did the measurement reach the full standard. In tapes the deficiency was found to be still more considerable: it is usual to make white tapes in lengths of nine yards, one dozen of these lengths being packed in a parcel, and then issued from the wholesale house with the vender's mark upon it as "warranted." On measuring these "nine yard lengths," it was found that in every instance they fell short. In some descriptions the nine-yard lengths were under seven yards, in others under six; whilst another sample, where the tape itself had been stamped at the end in indelible ink as nine yards, there were found to be but 5¼. Other goods were submitted to the same ordeal with like results. The manufacturers' account of the deception is, that they are compelled to follow the instructions of the wholesale houses; who on their side extenuate their conduct by throwing the blame on the system of competition in respect of low prices, which compels them to resort to dishonest practices. It is some gratification to know that an active movement is in progress to wipe out the stain by adopting at once an honest system.

COSTLY CHEAPNESS.—Essays on the false cheapness of the day are written in the characters of death. We may overlook its hollowness when its consequences only come upon us in the shape of waste or bankruptcy; but when against the penny saved is set off a life lost by an appalling mode of execution, we begin to doubt the infallible economy of so-called cheapness.

The prevalent dogma has led us into grievous mistakes. The government, for instance, benignly interfered in railway affairs for the benefit of the working classes, and compelled railways to be cheap; whence a fertile and continuous crop of accidents. The mode in which that result accrued has been made out before now. The interference of government had the immediate effect of enforcing upon railways a lower scale of fares generally than the rates which would naturally have been fixed by the market according to mere facility of production: the consequence was, that by that kind of forcing process, the passenger traffic on railways grew with unnatural rapidity and outran the physical means of providing for it. Railways, engines, and servants, have been overworked. The most frequented lines became insufficient for the pressure of traffic upon them. It is easy to say, "Make more, then;" but we know that, as it is, the moneyed public has been spending money too fast for its own solvency, in the making of railways. On some lines engines could not be made fast enough—extra prices could not extort what there were not workmen enough to make in the most approved establishments. The next consequence is, that ingenuity is taxed to make the excessive traffic fit into time and space so as to produce the least amount of disaster: and ingenuity is not infallible. Crowded traffic and defective engines cause unpunctuality; unpunctuality causes delays, over-driving to make up for delays, and "collision"—"word of fear!" In this railway matter, then, government sowed cheapness and reaped accident.

Again, in the cheap steam-boat affairs, it is clear that excessive cheapness carries with it the condition of excessive unsafety. Excessive lowness of fare implies lowness of expenditure; and that implies a low scale of service. Accordingly, the additional evidence in the case of the Cricket places beyond a doubt the fact that the servants entrusted with the management of the engine and the lives of the passengers were men of the lowest cultivation in point of intellect and conscience. The most reckless servants were actually preferred; those who made a practice of tying down the safety-valve—one of them positively knew no better than to suppose that that was the proper way of working an engine!—were retained and shielded from reproach; while those who did know better, and remonstrated, were discountenanced and dismissed. The superior officers of the company deliberately adopted the ignorant, stupid recklessness of their worst "engineers." It was an element in the "go-ahead" style of business which made the small returns pay; it was an ingredient in the boasted "cheapness."

Yet after all, death itself is scarcely so terrible as ridicule, especially when the ridicule is self-incurred and self-reflecting. The pending investigations on the linen-drapery trade are as pregnant with instruction as the disasters on rail and river. The "economical" housewife piques herself on beating down the tradesman's prices, chaffering for every odd halfpenny under threat of transferring her custom. The tradesman yields the halfpenny, but pays himself by short measure. Cheapness, however, is still in demand, and the tradesman looks out for the wholesale dealer who will give him goods at the "lowest figure." The wholesale dealer and the manufacturer resort to the short measure compensation; which is at length carried so far as to outrun the retail-dealer's command of face at the counter or calculation of profits on the sale. A hundred yards of cotton, "warranted," turns out to measure but 92, or 86, or 75; a "nine-yards length" of tape may prove to be less than six yards. The tape is a wonder of cheapness to the purchaser—if it were nine yards; but is it so cheap, being only six? The fraud is dissipated with an explosion more shocking to our feelings than that of a disrupted boiler: we thought ourselves so clever, and find ourselves so silly—accomplices in a conspiracy where all are dupes!

BANK OF ENGLAND.—The N. Y. Courier, gives this sketch of a part of the course of business in London:

As soon as a house has failed, the Bank of England picks out the bills accepted by that firm, and returning them to the house from whom it has *received* them, demands instanter the amount less the discount for the time they have to run. As the law does not recognize this proceeding, nor furnish any means of compelling acquiescence in the demand it is quite optional with the endorser to comply with it or not; but if he does not comply, or makes even a momentary hesitation in handing bank notes for the undue bills bearing his endorsement, his credit with the bank is ended, and his discount account closed, and the best and easiest source of obtaining accommodation cut off. Under these circumstances, the unfortunate merchant will make strenuous exertions to uphold his credit in this most important quarter.

PASQUIN.

WHAT is a pasquinade?—A squib, a satire, a lampoon, a scurrility. Why is it so called?—Because such *mauvaises plaisanteries* were affixed, by their anonymous authors, to the statue of Pasquin at Rome. For what reason?—For this reason:—

There was once a tailor in the eternal city, whose heart was filled with bitterness as he reflected on the unmerited jibes to which his profession was exposed as if by a general conspiracy of mankind. Maestro Pasquino, for so was he called, could not, for the life of him, imagine what people could find ridiculous in a calling which concerned itself with the grand distinction between the human race and the inferior animals. "The world is mad," cried he at last; "stark, staring mad!" and as he came to this natural conclusion, he set himself to trace the symptoms of folly around him with an enthusiasm which soon amounted to a passion. It was meat and drink to him to see a fool; and soon the echoes of the jests with which he seasoned this repast extended beyond the shopboard, and were heard in the neighboring piazza Navona. All Rome at last crowded to the tailor's studio, which took the place of the apothecaries' shops in the provincial towns of Italy, and became a kind of public exchange for those who would hear or communicate the news of the day.

But this news, it will be felt, took its coloring from the mind of Maestro Pasquino. Everything was converted into materials for mirth or malice. Great lords were no more spared than if they had been so many tailors; prelates and cardinals were unfrocked without ceremony; and even the pope himself set up as a target for the shafts of ridicule. And what recourse could be had, since all was traced to the shopboard of Pasquin? It mattered not who the speakers really were, since Pasquin and his decimal fractions of humanity were the ostensible authors. It was a part of the jest to clothe it in vulgar language, and no one, however much aggrieved, could think of condescending to take vengeance for anything so low. The tongue, at length, was recognized in Rome as at once a safer and sharper weapon than the dagger; and everything, from a personal lampoon to a political libel, was given out as one of the *pasquinate*, or sayings of Maestro Pasquino.

At length the thread of Pasquin's life was severed by the shears of destiny; and then the pontifical government, rejoicing in the fall of its great enemy, cried havoc, and let slip the dogs of the police. Jibing was no joke now. Every man was held responsible for his own jest, and made to laugh for it on the wrong side of his mouth. Humor was buried in the grave of Pasquin—but not for long; for it arose again, as we shall presently see, with his monument. Opposite the tailor's shop-door the kennel was hardly fordable in wet weather, and a large, irregular, oblong block of stone had been laid down across it to serve as a permanent bridge. This block, as happens frequently in Italy, was of marble; and as it lay prone upon the street, half imbedded in the earth, it bore a kind of uncouth resemblance to a human back. The analogy was first detected by the urchins of the neighborhood, who took a fierce pride in trampling upon the effigy of one of the giants of their race; but after the death of Pasquin, a superstitious awe mingled with their triumph, and when the shades of evening had fallen, they were observed to look upon it with suspicion, and occasionally even to cross over, and, like the Levite, pass on the other side.

At length, in the progress of some improvements that were making in the street, this block of marble was raised out of the kennel, and, to the surprise and joy of the Roman antiquaries, discovered to be a splendid torso. Its place of sepulture was near the piazza Navona, the site of the ancient amphitheatre, were the Emperor Alexander Severus celebrated the Agonalia; and the grand puzzlement was to decide whether it was the remains of a statue of a fighting gladiator—of a Hercules—of an Ajax—or finally, even of a Patroclus carrying a Menelaus, since another torso was found at no great distance, which might originally have been in union with it. Whatever it represented, however, it was esteemed a fine monument of ancient art, and its reputation with connoisseurs continued to increase rather than diminish, till, in the course of another century, it was placed by a critic of some authority above the best remains of antiquity, even the Laocoon and the Belvidere Apollo. We are told, it is true, that a German antiquary took this decision in such bad part, that he was about to box the ears of the panegyrist, whom he believed to be laughing at him; but we shall find that it was the fate of the statue throughout to cause such misunderstandings.

When the kennel-bridge of Maestro Pasquino was discovered to be an antique torso, it was placed upon a pedestal against the Pamphili palace, on the other side of the way; but no change of position could sever its connection with the defunct tailor. The discomfited urchins, looking up in wonder and veneration, gave their great enemy his name; and while the antiquaries were arguing and scolding about its origin, the people decided that it was the statue neither of Hercules, nor Ajax, nor Patroclus, but of Maestro Pasquino. Nay, when the Pamphili palace gave way in 1791 before the construction of that of Orsini, the latter relinquished its own name, like an obsequious heir, and was known thenceforward as the Pasquin palace. This, however, is not to be wondered at, since, at the moment when the mutilated statue was exalted on its pedestal, it was consecrated by the genius of the tailor, that before had seemed buried with him. It spoke with his voice—even with the Doric vulgarities of his tongue; it breathed around his fine and pungent spirit; and every morning the Romans ran in crowds to read on its twisted back the bulletins of Pasquin. Satire, sheltered once more under the venerable name, was now as free as ever. The pontifical police retired discomfited; libels and lampoons became anew the order of the day; and Rome was never off the grin for a moment.

A collection of the sayings of Pasquin would be a curious work; but more curious, we fear, than amusing, since the associations of the time which gave pungency to the wit would now be wanting. A few political squibs are all that are preserved, and even these are not very remarkable to us of the present generation. But Pasquin did not merely speak in his eloquent placards; he assumed, on great occasions, a befitting costume, and became thus one of the *dramatis personæ*. Nor was he always a railer or jester; sometimes, in deference to public honor and virtue, he coverted his natural grin into an approving smile. This was a policy which the professional wits of our own day would do well to follow. There is nothing so dull as a jest-book, and nothing so tame and stingless as an unbroken succession of satires. In 1571, when Colonna re-

Digitized by Google

turned in triumph from the battle of Lepanto, he found Pasquin clothed in warrior's garb, with his helmet surmounted by the watchful dragon, and in his hand the bloody head of the Turkish prince, with a mortal gash on the brow. Twenty years after, when Gregory XIV., on mounting the throne of St. Peter, passed through the street on his way to the Lateran church, he received the homage of Pasquin, who had transformed himself, for the occasion, into a true courtier. He had restored his nose, and his mutilated arm, and wore a gilded helmet; carrying a sword in one hand, and a pair of scales, a horn of abundance, and three loaves, in the other. All this signified generally justice and plenty; but the loaves were a personal compliment to the pope, who had placed loads of bread in the public places, where it was sold to the people at a third of the usual price.

All this, however, is out of the usual character of Pasquin, who generally mingled a sneer even with his commendation. He was a great patron, for instance, of Sixtus V., to whom Rome was indebted for numerous fountains; and he signified his satisfaction with the pontifex magnus by dubbing him fontifex magnus. One day a Swiss of the papal guard struck with his halberd a Spanish gentleman, who promptly returned the blow, and with such effect that the Swiss died of the chastisement. Upon this, the pope caused it to be signified to the governor of Rome that he would not dine till justice was done, and that he wished that day to dine early. Everybody knew that it was needless to plead for the criminal's life; but for the honor of his family, the Spanish ambassador and several of the cardinals interceded with the pope to have him decapitated like a gentleman. "He shall be hung!" was the reply; "but in order to diminish the disgrace of the execution, I shall myself assist at the ceremony." The gibbet was accordingly erected under his windows, and when Sixtus V. had his love of justice fully gratified, he went in to dinner, thanking God for his appetite. The next day Pasquin was seen loaded with chains, halberds, gibbets, cords, and wheels; and being questioned on the subject, replied, "It is a ragout I am carrying to excite the appetite of St. Peter." Numerous other pasquinades were directed against the severities of the pope; but they were too much intermingled with the religious heart-burnings of that day to be read with much interest in ours. Sixtus, however, took everything very tranquilly, being aware of the immunities of Pasquin; till, unluckily, the satirist attacked the dignity of his family in the person of his sister Camilla Peretti. This lady, before her brother's elevation, had been indebted to her own exertions in a particular line of industry for her support; and in allusion to the circumstance, Pasquin was one day seen in a very dirty shirt, which he explained by saying that the pope had made his washer-woman a princess. Sixtus made many vain attempts to discover the author of this insult; till at length he offered him his life and a thousand pistoles for a confession, threatening him with the gibbet if he should be denounced by another. The terms were irresistible. The wit immediately presented himself at the Vatican, acknowledged his guilt, and demanded the reward. Sixtus was, as usual, just. He gave him his life, and the promised money; but had his tongue pierced, and his hands cut off on the spot, in order to prevent him from getting into any similar scrape for the future.

This affair, it may be supposed, shut the mouth of Pasquin for a time; but by degrees he resumed his audacity, till Adrian VI., in a transport of rage, ordered the anonymous joker to be cast into the Tiber. "What!" said he, "in a city where we can shut so closely the mouths of men, is it so difficult an affair to silence a block of marble?" But one of his courtiers turned him from the project, by assuring him that it would be vain to drown Pasquin, since his voice would be heard all the same from the bottom of the river, like that of a frog in a marsh. But the threat appeared to be of more avail than perhaps would have been the actual deed; for it is certain that the spirit which animated the statue became comparatively silent from that moment; and in the present day, the jests of Pasquin are heard only during the sitting of a conclave.

In this brief memorial of Pasquin, it would be improper to omit mention of his rivals. The principal of these was Marforio, a statue discovered about the beginning of the sixteenth century near the arch of Septimus Severus, and eventually placed in the capitol. The connoisseurs quarrelled about its origin as bitterly as about that of Pasquin; but although some would have it to be a Jupiter, some a Neptune, some an Oceanus, &c., it received its popular name from the place where it was found—the Forum of Mars. Pasquin and Marforio were rivals, inasmuch as the one represented the townspeople, and the other the aristocracy; but yet they were likewise comrades and accomplices, lending themselves to each other's jokes, like the clown and pantaloon of a pantomime. This was done by means of questions and answers. When Pasquin, for instance, appeared in the dirty shirt, it was Marforio's cue to ask him what he meant by such an impropriety. In fact the conferences between the two marble jesters became of public importance, and exercised a greater influence over opinion than is commonly imagined. "Be virtuous and humble," says Sabba di Castigline, "for thus only can you escape the tongues of those two old Romans, natives of Carrara—Maestro Pasquino and Maestro Marforio."

The aristocracy and the townsmen of Rome being thus represented, a third interlocutor was in due time added to the society to speak for the people. This was a *facchino*, found near the church of San Marcello, spouting water from a barrel into a carefully-sculptured shell. It was not, like the others, of ancient origin, being born of a chisel of the fifteenth century; neither was there anything very remarkable in its form; but this made it all the more proper to represent the people. The fashion, however, did not stop here. Babuino, an old figure of a satyr, resembling more a baboon than anything else, (whence its name,) put in its word; and then came the Abbé Sevigi, another statue so called by the populace; and finally, Madona Lucrezia, a colossal female, the object of the rival gallantries of Pasquin and Marforio. The court was at length in dread of a general conversation among the monuments of Rome; but fortunately the fashion extended no further than the six we have mentioned; and even these, after a time, grew tired of repartee, and returned to their marble repose. As for Lucrezia, it has been surmised that, notwithstanding the coldness and hardness of the materials of her heart, she was in reality not untouched by the tender assiduities of her admirers; since, on the 25th of April, in the year 1701, the day of St. Mark, and the festival of Pasquin, she was known to wear a new and elegant bonnet, and to have a lace scarf on her shoulders in the very last taste of the day.

From Chambers' Journal.

THE NERVOUS SYSTEM.

THERE is no subject, perhaps, which is so often mentioned, but so little understood by the public in general, as that of the "nerves." How often do we hear all classes of the community refer any unpleasant sensation or fanciful ailment to their being merely nervous; little understanding, however, when they make use of this term, what possible connection there can be between their feelings and their *nervous* system. Perhaps we shall surprise them when we mention that they can neither eat nor drink, walk nor talk, nor perform any action whatever, either voluntary or involuntary, but through the medium of their nervous system—a "system" the nature and functions of which we shall here endeavor to explain.

In man and other vertebrate animals, the great centre of the function is the brain and spinal marrow; the latter a prolongation of the brain, as it were, down the spine. Now this great centre of nervous matter is endowed with two distinct functions. 1. That of being able to convey *motor power* to the muscles, by whose agency we are enabled to perform all the ordinary actions of the body, all the movements of our limbs. 2. That of sensation, which is of two kinds—*common sensation*, or that feeling of pain which is produced on the injury of any part of our body; and *special sensation*, to which are to be referred the five senses—of feeling, of sight, of hearing, of smelling, and of taste. From this mass of matter, capable of endowing the parts of our bodies with the power of motion, and of feeling or sensation, numerous trunks are sent off to all parts of the human frame—ramifying over its structure to such an inconceivable state of minuteness, that we cannot touch any part of our body with even the point of a needle without being conscious of pain, proving that some part of this great nervous centre has been injured or excited into action.

The great nervous trunk which supplies the lower extremity of man is equal in thickness to his little finger; divide it, and he loses all power of moving his limb, all sense of feeling: the limb, to all intents and purposes, is dead; and, deprived of its nervous influence, mortifies. This power of endowing parts with motion and sensation is situated in two distinct structures, of which the brain and spinal marrow are composed; and anatomists, from their color, are accustomed to call them the *white* and the *gray* matter. In the brain, the gray matter for the most part is external, enclosing in its folds the white matter; whilst in the spinal marrow it is internal, being completely surrounded by the white. Now, as a general rule, all the nervous trunks of the body and their branches, with the exception of nerves of special sensation, are composed of fibres derived from these two sources—that is, from the white and the gray matter; and these nervous trunks are conductors of that *change* produced in the nervous centre by the influence of the *mind*, which gives rise either to motion or sensation. But a most extraordinary fact, and one which is capable of being proved by direct experiment, is, that the change which takes place, to give rise to the phenomena of motion, has its origin at the great nervous centre, the source from which the trunks arise; and further, that this change takes places in the white matter. On the other hand, the change which gives rise to the phenomena of sensation takes place at the extremities of the nervous trunks—that is, at their ultimate distribution; and this change takes place in the gray matter.

The anatomist, in his dissections, is able to prove satisfactorily the origin of these nervous trunks; and he finds that all those arising from the spinal marrow, and most of those which are said to arise from the brain, do so by two roots, one of which is connected with the white matter, and the other with the gray. He can and has still further proved, by experiments performed on the living animal, that irritation by pinching or pricking of the root which arises from the white matter gives rise to no sensation. as the animal shows no signs of suffering whatever; but irritate the root arising from the gray matter, and evident signs of suffering are immediately induced. Again: if in the dead animal we excite muscular contraction by means of galvanism, we must send the charge of electricity through the limb by means of the root arising from white matter, as no effect would be produced if we attempted to do it by means of the root arising from the gray. Allowing, then, the fact, that these nervous trunks are composed of two sets of fibres, one conveying sensitive, the other motor influence, let us apply it to practice.

Some part of the body meets with an injury—a change is immediately effected in the extremities of the sentient fibres, sensation is developed, and the change thus induced is conveyed by the sentient fibre to the brain, and through its medium to the mind. Through the mysterious agency of the mind, then, the motor power of the great nervous centre is brought into action, and a change is induced; this change is conveyed by the trunks to the muscles supplying the injured parts, or to other muscles, by whose combined action it is removed from further injury. But it is not necessary that an injury should be inflicted that motor influence should be generated, as the mind has the power of inducing it at will. All the movements of our bodies are effected by muscular action, and through the agency of the will. We move not a hand or foot, nor look at an object, without the mind having first willed that it shall be done.

But there are many actions in the human body which are performed independently of the will, though evidently under the influence of the mind, and through the medium of a nervous system; and this system is called by the anatomist the *sympathetic*. It consists of a number of little knot-like bodies called by the anatomist *ganglia*, which are extended along each side of the vertebral column—the whole of these ganglia being connected, by means of fibres, together. Now, it appears that each of these ganglia is capable of generating nervous influence, independently of the brain; hence each may be considered as a distinct nervous centre. The trunks arising from these ganglia are distributed principally to all those organs on which the vitality of the body depends, which are employed in secretion and its nutrition. It is the medium by which all parts of the body are brought into relation with each other, so that no one part shall become diseased or injured without the rest sympathizing with it, and indirectly, therefore, becoming affected as well. Familiar examples of this fact are of every-day occurrence: a violent blow on the head will produce vomiting, owing to the sympathy which exists between the brain and stomach; and *vice versâ*, a blow on the stomach will produce fainting, and even death, from the shock to the nervous system, and the arrest of its influence through the medium of the brain.

Digitized by Google

And now let us turn our attention once more to the influence of the mind over the functions of the body, through the agency of this part (the sympathetic) of the nervous system. We will here select a few familiar examples. What is referred to when one's mouth is said to be "watering" at the sight of some favorite fruit or food, is dependent on the influence of the mind acting through the medium of the nervous system supplying the organs secreting the saliva. Tears, again, are abundantly secreted under the moderate exciting influence of the emotions of joy, grief, or tenderness. When, however, the exciting cause is violent, they are suppressed; hence, in excessive grief, the anguish of the mind is lessened on the flow of tears. Fear stops the flow of saliva; and it is a common practice in India to detect a thief among the native servants by putting rice into their mouths, and he whose mouth is driest after a short time is considered the culprit. Under mental anxiety, persons become thin; freedom from it favors deposit of fat. It would be an endless task, however, to recapitulate the many examples that could be brought forward proving this influence of the mind; so that nervous complaints must be looked upon as disorders of the mind, and not of the body; cure the one, and you will cure the other.

Mental influence having then this power over the functions of the body, we cannot be surprised at many diseases being a consequence of its depraved or abnormal condition. Nor can we be surprised at many of the remarkable phenomena displayed by mesmerists: their patients on whom they exhibit are generally highly sensitive, with minds naturally liable to become excited under the manipulations of the operator. For this reason, also, homœopathy, hydropathy, &c., have succeeded in curing many patients of their fancied ailments, because it only required some strong excitement to remove the morbid mental impression. Hence change of scene and diet, change of usual habits, (for all the followers of these systems make it imperative on their patients to follow implicitly certain rules,) and lastly, and not least, a full determination, desire, or will on the part of the patient himself to get better—have succeeded, in a variety of complaints arising from mental causes, in effecting a cure.*

THE GENIUS AND WRITINGS OF LEIGH HUNT.

Of all living English writers, there is not one towards whom there exists a more general feeling of kindliness and gratitude than Leigh Hunt. This friendly gratitude has arisen from the peculiar characteristics of his writings—from their sympathy and genuine cordiality—their cheerful, hopeful tone—in short, their fulness to overflowing with that spirit which is best expressed by the beautiful but neglected old English word "loving-kindness." We know of no writer who has done more to make hearths and homes happy by peopling them with pleasant thoughts; for he quickens us into a livelier consciousness of our blessings, and communicates to our ordinary duties, and the simple objects of our daily wayside walk, a freshness and interest which it becomes a kind of grateful duty to him to acknowledge.

The tendency of all that Leigh Hunt has written is to *cheerfulize* existence. He reconciles us to ourselves, draws off our minds from remote visions of some future possible good, or painful remembrances of the past, and fixes our attention upon the actual blessings and privileges about us. He is one of the best teachers we know of that kind of contentment and gratitude which arises from a thankful recognition of those minor joys by which all of us are more or less surrounded, and to the value of which most of us are by far too insensible. And then with what a delicate and fine touch he pierces our selfishness! In what a kindly way he convinces us of our uncharitableness, and puts to rout our self-indulgent fallacies! With what a jovial hilarity he banters us out of our moroseness, and laughs at our ill-humor, until at last we are ashamed of our weakness, and determine to be wiser and better for the future! We never rose from a few hours' perusal of any of his charming books, without a sense of obligation to him for stimulating to a desire of generous activity those sympathies which habit and daily contact too often render languid and inert. Everything that comes from his pen is refreshing, and full of good will to all the world. A belief in good, the recognition of universal beauty, and "a brotherly consideration for mistake and circumstance," will be found pervading every essay he has written. To minds disturbed, or set on edge by crosses and disappointments, we know of no more effectual soother than "a course" of Leigh Hunt. His own buoyant spirit is a fine example of the impossibility of crushing the heart of a true man, be his misfortunes and hardships ever so severe; and no man has suffered the rubs of fortune more bravely than he has done. A popular writer once spoke of him as "the gray-headed boy whose heart can never grow old." Those who are familiar with his writings will recognize the truthfulness of this remark, and remember how this perpetual youthfulness of feeling shows itself, in a thousand different ways, throughout all his works.

Another winning peculiarity of Leigh Hunt's writings is their frank, friendly, conversational tone—the pleasantly-egotistical and almost confidential manner in which he tells us every now and then of his own private notions and sentiments—so that we begin to fancy he is addressing *ourselves* in particular, and not his readers in general. There is such an easy, fireside way about him, that it is like talking with an old intimate friend. He runs on from one theme to another with the most sprightly exuberance—now discussing with hearty sympathy the merits of Chaucer or Spenser, or some other old poet, and pointing out to us the beauty and true meaning of a favorite passage—now bringing out the sentiment of an ancient classical story, or dwelling upon his first impressions of the Arabian Nights' Entertainments—then, perhaps, entering into a curious speculation regarding "persons one would wish to have seen," Shakspeare, for instance, or Petrarch, or Cromwell, or Sir Philip Sydney—or, in a more gossiping vein, relating some characteristic anecdote of Cowley, or Pope, or Lady Mary Wortley Montagu, or Colley Cibber, or Mrs. Centlivre; or reporting snatches of racy court scandal from the diary of Samuel Pepys. Then he will get into a philosophical humor, and discourse "of the slow rise of the most rational opinions," and quote wise and stately sentences from Lord Bacon's "Essays" or Milton's "Areopagitica." On another occasion he comes to us when he is running over with news of the fields and the woods, and can speak of nothing but May-day, and May-poles, and the young spring flowers. He will give an hour's

*The reader will receive this explanation of mesmeric phenomena as a hypothesis representing only the individual opinion of the writer of the above paper.—*Ed.*

Digitized by Google

description of the pleasures of breakfasting in the country on a fine summer morning, with open window looking out upon a bright green lawn, with the air breathing in fresh and balmy, the sunlight streaming through the foliage, and casting its chequering shadows upon the favorite books and pictures with which the parlor walls are adorned; upon the table a few pansies freshly plucked, contrasting well with the snow-white cloth; and a bee humming about from cup to cup, seeking to partake of the honey which she herself probably assisted to furnish. At another time, perhaps, when some calamity has overtaken you, and affliction lies heavy upon a household, he comes in the guise of an old and tried friend of the family, with all a friend's privileges; and sits by your hearth, and suggests many a tender and solemn thought about death and immortality. His manner has more than its usual kindness; his voice sounds gravely, yet there is almost cheerfulness in its tone when he says that "The best part of what you loved still remains, an indestructible possession—that although the visible form be taken away, yet that was only lent for a season, whereas the love itself is immortal, and the consciousness of it will ever abide to strengthen your faith, and soothe you amid the stir and fever of life." Or it may be that he speaks of "The Deaths of Little Children," and then he almost makes you feel as if his true friend's hand were pressing your own, as he goes on to tell you that "Those who have lost an infant are never, as it were, without an infant child—that the other children grow up to manhood and womanhood, and suffer all the changes of mortality; but this one alone is rendered an immortal child; for Death has arrested it with his kindly harshness, and blessed it into an eternal image of youth and innocence." In the rough winter time again, "when wind and rain beat dark December," he will tell you of "A Day by the Fire" which he had not long since—with all its home comforts and accompaniments—the pleasant hour before the candles are lighted—the gazing meditatively into the fire—the kettle "whispering its faint under-song," and the cheerful tea-table with its joyous faces, and the pleasant hours between tea-time and bed-time spent in the free utterance of thought as it comes, with a little music perhaps, or the reading of some favorite passages to stimulate the conversational powers of the circle; while every now and then the rain rattled against the windows, and the wind howled in such a way as to make everybody think of the sea and the poor sailors, and people who have to be out of doors in such weather; and last of all, the quiet half hour after every one had retired but himself—when all around was silent, the cares of the day gone to sleep, and the fading embers reminding him where he should be: all these, and a thousand things else, in-doors and out of doors, in books, in nature, and in men, he talks about in a way so natural, easy, and colloquial—so marked by a pervading kindness of feeling—entering so heartily into all our tastes and thoughts, and enlisting all the while so thoroughly our sympathies, that we cannot but class him in the foremost rank of our most genial essayists, and place his writings among our choicest "parlor window-seat books," to be taken up in the brief intervals of active and social life, sure to find in them something which appeals to our most cherished tastes, and meets with our immediate appreciation.

From Chambers' Journal.

EVERY-DAY ENTOMOLOGY.

THE GNAT FAMILY.

THE gnat family is universally detested, as among the most unwearied, blood-thirsty, and formidable of insect tormentors. Their insatiable appetite, joined to their venomous powers, and these added to their enormous productiveness, and their hateful ubiquity, justify us in regarding them as one of the scourges of the human race. They are excessively troublesome even in our own country, the temperate climate of which is unfriendly to venomous creatures of most kinds; but their annoyance is felt under both extremes of temperature, exasperating alike the unhappy inhabitants of Mosquito Bay, and the wretched tenants of the most northerly regions. In spite of the irritable feelings we can scarcely help bringing to the inquiry, it will be found that there is much that is instructive, much that is even entertaining, in the history and habits of these little blood-suckers.

The proper—that is, the technical—name for this tribe of insects is the *Culicides:* they belong to the order of dipterous or double-winged insects. The common gnat, *Culex pipiens*, is a delicate, pretty insect, rather less than a quarter of an inch in length. It is furnished with a long, slender proboscis, which projects downwards and forwards, having at its extremity a pair of little sucking discs: this organ forms the siphon up which the creature draws its fill from our life-stream. On the sides of this are placed, at different distances, several lancet-like processes, some of which appear intended simply to cut, while others seem adapted also to inject the irritating poison into the minute wound; and these are barbed, and resemble in some respects the sting of the bee. The "hum" of the gnat, or, as the poet Spenser calls it, "its murmuring small trumpet," is a sound familiar to every ear—to most of us far more familiar than agreeable. This, which is really a pretty and not unpleasing sound in itself, were it not that it is a flourish preparatory to an onslaught, is produced by the rapid vibration of its delicate gauze-like wings. The sound has a precise analogue in the deep-toned hum of the "fan" of our blast-furnaces, where the vanes of the blower cut through the air with vast rapidity, and produce, in so doing, the musical notes we hear. The fragile wings of this insect have been estimated by Latour to vibrate at the rate of three thousand times a minute; a rapidity which, when it is regarded as a succession of muscular contractions and relaxations, is something far more wonderful than the most enormous speed to which mechanism was ever driven. The gnat makes its appearance in the greatest numbers at eventime, but its persecutions are by no means confined to that period. It delights chiefly in shady woods and in moist situations, from whence great hosts may occasionally be observed to issue, and in the vicinity also of stagnant pools, which form the nursing-places of the young. It has been frequently remarked, that it is the female insect which pursues us for our blood, and that the male is innocent altogether of the crimes his partner delights to commit. The insect makes its attack in the following manner:—After the flourish as aforesaid, and with a courage equal to all its noise, it flies directly upon its victim, and falls to. Alighting gently upon the surface, it lowers its formidable weapon, gently and gradually thrusting it into the skin until it has pushed home all its lancets. The fluid which produces the subsequent pain in the wound is then in-

Digitized by Google

jected into it, as has been plausibly supposed, for the purpose of rendering the blood more fluid, and better adapting it to the suctorial capabilities of the insect; and now the thirsty creature takes its fill. These operations are repeated until it is satiated, when it flies away, oftentimes becoming gorged and less active, as if completely intoxicated with its potion.

The early history of the gnat is peculiarly interesting. It contains one of those exquisite demonstrations of the skill of the creative hand of which the kingdom of animated nature is replete. The celebrated entomologist Reaumur made it the subject of some of his beautiful and accurate investigations. From his account of the operation, we glean the following particulars relative to the deposition of the eggs of this insect. Let us go to some stagnant pond between five and six in a summer morning, and we shall see this interesting phenomenon, if we watch pretty narrowly, going on over its whole surface. There is a female gnat; she has taken her station upon a broken twig, or a fallen leaf floating on the water. She is then seen to cross her two hind limbs like the letter X, and in the inner triangular interval she commences her ingenious labor. In this interval she places first three eggs in the form of a triangle, which, being moistened with a kind of glue, adhere firmly together. This forms one extremity of a *boat* she is about to make. Her crossed limbs form, so to speak, the "lines" or scaffold by which she regulates the subsequent shape and size of her tiny vessel. She proceeds, laying egg after egg; and by gradually opening her scaffolding, she shapes the boat accordingly, and in this manner proceeds until the egg-boat is completed, each of which contains from two to three hundred eggs. The animated scaffolding is then removed. The mother takes her flight, and commits her craft to the mercy of the wind and waves. This wonderful little structure has been aptly likened by Messrs. Kirby and Spence to a London wherry in configuration, being sharp, and higher at both ends, somewhat convex below, and concave above, and always floating on its keel. It is not the least remarkable fact connected with this amazing feat of nautical architecure, that each individual egg, if dropped into the water, would sink to the oottom. The boat is quite buoyant; it defies the most tempestuous blast which crosses the mimic ocean in which it sails; the waters may go over it, or it may be forcibly pushed down to the bottom, but it will rise again to the surface, its buoyancy unaffected, and without a drop of water in its cavity. How plain and broadly-marked even in these workings of a humble and insignificant insect is the Divine forethought and skill, which, while rearing a universe, and mapping out creation, remembered, and so securely provided for, the wants of the family of a gnat! In hot weather the eggs are rapidly hatched; and in about three days the larvæ, having left their temporary habitations, are to be seen in full activity, with their heads downwards in the water. As these larvæ are uncommonly funny fellows on the field of the microscope, they have the honor of frequently showing off at popular exhibitions; and the surprising feats of agility they perform have long been the admiration of the spectators. They are well known in the north as "*scurrs*," and may be collected in abundance during summer from almost every wayside pool. The larva breathes in a very odd way by means of its tail! at the extremity of which is its respiratory apparatus. It has the power of leaving the surface of the water, and diving to the bottom; but it must always return for fresh air; and most comical it is to see it thrust its tail up for this purpose, while its great head hangs some distance below the surface. This larva has several changes to undergo before it becomes the perfect insect: after moulting several times, it becomes transformed into the pupa; and then comes the final change to the perfect gnat. The pupa now serves as a boat for the emerging insect. The time comes on; the necessary preparations are complete; the insect raises itself from its floating tomb, places its feet upon the water, expands its tender wings, and takes farewell of its former dwelling. From first to last, these transformations occupy about three weeks or a month.

Sometimes gnats make their appearance in incredible numbers, or are unexpectedly seen to pour in dense clouds like smoke from some locality. A correspondent of the "Entomological Magazine" states that in one summer, in a particular district, they appeared in such numbers, as actually to make it necessary to "shovel them" out of the houses. It is related also "that, in the year 1736, they were so numerous, that vast columns of them were seen to rise in the air from Salisbury cathedral;" and an alarm was actually raised that the cathedral was on fire. A letter in an early volume of the "Philosophical Transactions" states, that on one occasion they filled the atmosphere near Oxford, and rose in several tall columns from some apple-trees to a considerable height in the air. At Norwich, an alarm of fire was created by the inhabitants observing a dense volume, apparently of smoke, stream forth from one of the spires of the cathedral. It was mentioned that these insects are numerous and excessively annoying even at the poles. Captain Sir John Ross, in the Appendix to the narrative of his second voyage, states that gnats first made their appearance about the 10th of July, and by the 22d had become so excessively numerous, as to prevent the necessary duties of the ship. They were seen in vast clouds overhanging the marshes, their larvæ contributing the principal food to the trout of those lakes. The poor Laplanders are horribly tormented by them. It is almost in vain that they smear their bodies with fetid unguents, birch oil, and fearful messes of all offensive things; the blood-thirsty insect scorns such defences, and sends its proboscis through them all. They are in the habit of stopping up the vents of their huts, allowing the interior to be filled with suffocating smoke, and thus protected, they betake themselves to rest; yet even then the indomitable creature will scarcely consent to leave them unmolested. In short, what defence can be suggested against an army of invaders so numerous as to be compared to the dust of the earth or the flakes of a snow fall?

The mosquito has been generally considered by naturalists as belonging to the gnat family, the *Culicides*. Some doubt may exist upon the subject, but there can be none that it is the true representative in the tropics of the gnat at the poles and at home. The mosquito is not quite so large an insect as the common gnat; but if less in size, it is a much more dreaded and dreadful enemy. It is, we believe, Mr. Westwood who considers the mosquito to have been "the plague of flies," the emissaries to execute Divine wrath upon the Egyptians. Neither is its sphere of torment limited alone to hot climates; it appears to endure the intense winter of the Crimea, and does dreadful mischief in its

Digitized by Google

summer to the Russian soldiers. Dr. Clarke says they are actually compelled to sleep in sacks! and even this does not prove an efficient protection, as cases of mortification in consequence of their bites are not unfrequent. In America, the accounts of mosquito-bitten travellers are most painful to read. We sometimes meet with the travels of a learned enthusiast, who gives us a glowing picture of the glories of the banks of the Orinoco: let us take some scattered remarks from Baron Humboldt's "Personal Narrative" as a set-off against these romancings. He says there are three different species of mosquito. Some will sting from an early hour in the morning all day long until five in the afternoon, when they disappear, and a second set "mount guard." These have their hour of attack, and then retire, and are followed by the night army, the most dreadful and venomous of all. During the intervals of the disappearance of one host, and the appearance of the next, a brief and delightful repose is given to the tortured Indians. All along a particular district of this great stream, the lower strata of air, from the surface of the ground up to the height of fifteen or twenty feet, are filled with these insects to such a degree, as to give the appearance of a condensed vapor. The Indians say there are "more mosquitoes than air." The swelling caused by their bites does not disappear for several weeks. An old missionary, in accents of despair and grief, said "he had spent his twenty years of mosquitoes in America;" and his limbs were so much covered with the enduring marks of their wounds, as not to have a single spot of native whiteness about them! Some of the Indians living in these districts are so hard put to it, as to be compelled to bury themselves in sand, only leaving out their heads, which they cover with a handkerchief. A curious anecdote is related in "Loudon's Magazine of Natural History" regarding the effect of mosquito bites upon the countenance. A gentleman having indulged over-freely in wine, lay down to sleep on a sofa without the customary protection of a mosquito net. He reclined in such a way, as to expose exactly half of his face to the operations of the enemy, which soon attacked him in great numbers. His appearance the following morning was something wonderful; one side of his nose and face preserved their usual expression, but the other was so hideously contorted and swollen, as to make him appear on that side a totally different person.

Expedients for defence against these plagues are frequently almost in vain; but such as are in use it may be as well to mention. In India, mosquito curtains are the common preservatives; but woe to him who suffers even one of his little tormentors to get within his white walls! Just before retiring to rest, a kind of whisk is whirled about in the air, putting the ranks of the enemy in confusion; the favorable moment is seized, and the individual leaps into his cot, while the curtains are rapidly drawn behind him. The Indians in America go at night to sleep on islets in the midst of the cataracts, where few mosquitoes will follow them. They also anoint themselves, with turtle oil, and cover their bodies with paint and bolar earth, but are wounded through these. In some fenny districts in England, where gnats are very numerous, it is said to be the custom to wear veils. The pain of the bites may in some cases be alleviated by a solution of ammonia, or soothed by a weak lotion of hydrocyanic acid. With these remarks, we take our leave of this tiny but troublesome family.

From Chambers' Journal.

PHILOSOPHY FOR FARMERS.

The relation of commercial restrictions has had, among other effects, that of giving an impulse to agricultural industry, which has long borne the reproach of being behind the age. According to some authorities, agriculturists generally have proved themselves the most unteachable of mortals, willing rather to obey a mechanical routine, than to be guided by true principles. Whether such be the case or not, the ceaseless labors of the press are doing much to remove ignorance in every quarter; and science, which gradually insinuates itself into all human operations, is doing for agriculture what it has done for manufactures—taking it out of the domain of uncertainty, and showing it to be equally dependent on natural and philosophical principles. With these aids, and a more active competition, there can be little doubt but that agricultural pursuits will soon become characterized by a high degree of commercial activity.

It frequently happens that valuable scientific treatises are published, which remain totally unknown to the general reader, and thus become lost for purposes of practical utility. A paper of this character, on "The Philosophy of Farming," which appears to us to be deserving of wider circulation, has just made its appearance in the last volume of the "Manchester Philosophical Society's Memoirs." According to the author, Mr. Just, "all cultivation consists in bringing to the plant, or placing within its range of action, such a supply of material as natural means cannot furnish it with in the situation where it grows. In order to cultivate well, it is therefore as necessary to know what plants want, as for the builder and contractor of material to know what is required for building." It is now pretty well understood that the growth of plants depends less on solid nourishment, than on fluid and atmospheric agents, of which the chief are carbonic acid gas, azote, and water. In chemical language, these comprise four atomic elements; and according to their presence in the soil, is the abundance and deficiency of the crop. On the continent, the investigations of Liebig and Dumas on this important subject, as well as those of scientific men in this country, have brought to light many important facts and data, the whole extent of whose application is yet a matter of research.

Perfect drainage appears to be no less essential for fields than for towns: to secure an abundant supply of the elements above enumerated, the main requisite consists in due permeability of the soil, so as to admit of proper drainage. Hence it is that clayey lands, by favoring accumulations of stagnant water, are in so many instances unproductive. The disposition of the drainage should, however, be such, that the whole of the soil concerned in the growth of the plants is permeable by the air, promoting a constant filtration and succession of materials that contribute to vegetable formations. Rain brings down ammonia from the atmosphere, and its beneficial effect on lands is greatly increased where the drainage is good, as the atmospheric particles then find their way readily to the roots of the plants, and the mineral substances in the soil are more effectually dissolved. "The two fundamentals of all good farming," says Mr. Just, "consist in thorough percolation of water through the soil, and a constant accession of air." Rapid drainage is not less important; main drains ought to cease discharg-

Digitized by Google

ing at the end of four or five days, instead of, as at present, as many weeks, ceasing only in long droughts; and to be dug so low, that the superabundant moisture of the surface shall be at once effectually discharged, with a constant current, otherwise the drains soon become choked by mud. It is evident that the mechanical arrangement of drains must vary with the nature of the locality to be drained; and no attempts at drainage should be made without first ascertaining the nature of the subsoil. The following data are given as guides to the inexperienced:—"If, when the soil has been carefully removed from an area of a few yards in extent, and the surface of the subsoil has been left to dry, water is found to accumulate within it, when dug into, then that subsoil is drainable, and will draw water from the surface according to the depth dug; and the ground may be made perfectly dry by the usual kinds of drains, provided those drains be laid sufficiently deep, and allowed a free discharge. Whereas, if, after the same preparation, the subsoil or clay, when dug to a greater or less depth, be perfectly dry, then no drainage can be effected therein by ordinary methods, and recourse must be had to opening transit for the surface water into channels, so that the supersaturation of the soil may run off as directly and quickly as possible." The author contends that land cannot be drained too dry, as fluids are not so essential to the growth of plants as aërial and gaseous matters, and perfect aëration is as much required as perfect drainage. Air brings constant supplies of material from every quarter; and where the soil is kept properly drained, conveys nourishment in certain but invisible forms to the roots of crops. Another advantage attendant on aëration of the soil, is the increased economy and effect of manure; the more perfect the pulverization of land, the more immediate is its contact with, and absorption of, the manures thrown into it; the descent of new particles into the subsoil is facilitated, and the whole quantity of productive soil is increased, with a fund of capability, so to speak, always at command within it.

From discussing the mode of treating soils, Mr. Just passes to that of sowing seeds. "Scattering seeds," he says, "indiscriminately over the surface of the ground previously prepared for their reception, is no more sowing them, than tumbling stones into trenches properly dug for the foundation of a building is laying those foundations." The object of sowing is to secure proper germination of the seed. Seeds are to vegetables what eggs and ova are to animals; the condition of development of the latter is warmth and protection. With seeds it is "a proper degree of temperature, a sufficiency of moisture, and a free access of air, with exclusion from the direct action of light." Hence the great advantage of complete pulverization of the soil, that the seeds may not be buried deeply, and yet at the same time sufficiently covered; for, if within the influence of light, the chemical change of the farinaceous matter of the seed into living tissues is retarded; on the other hand, if buried too deeply, the plant is so much exhausted by its efforts to reach the surface, as to impede materially its future growth. A large amount of seed is annually lost by falling into the hollows between the furrows of ill-ploughed land. "It is not to please the eye only that the ploughmen of Westmoreland, Cumberland, and other well-cultivated counties, take so much pains in drawing their deep furrows as straight as a line can make them, and laying them so compact, that not a crevice between them can be found in fields of many acres; but it is to favor this grand and fundamental principle of growth, though perhaps in few instances this service may either be known or appreciated by them." The importance of these considerations becomes manifest, when regard is had to the physiology of seeds. The greater part of their substance is simple nutritive matter, intended for the support of the young plant until it can take care of itself. But if this nutritive matter is to be expended in efforts to escape from unnatural circumstances, it is clear that the capacity for growth will be diminished. A starved seed can no more grow up into a healthy plant, than a starved infant into a healthy man; and if so much care be bestowed on exposing steeped barley frequently to the air, to insure simultaneous germination, while being converted into malt, ought less care to be shown to seeds while in the soil, when the food of millions is dependent on their proper growth!

The waste and misapplication of manure in this country is deplorable, and have been so often complained of by writers, that it might seem supererogatory to insist upon it further; but there are some subjects to which attention can only be successfully directed by constant iteration and reiteration. In many parts of Germany and in Belgium, the most rigid economy prevails with regard to all waste animal and vegetable matter, and its proper application to land. In China, the same course has been pursued for ages; and, according to Mr. Fortune's recent work, is still maintained in full activity. The measures now in contemplation for the effectual sewerage of towns are fraught with incalculable advantage to the agriculturist; but without some acquaintance with chemistry, no person can be certain that the manure he applies is that required by the soil, and a distinction must be drawn between germination and vegetation. Highly azotized manures are favorable to the latter process, but unfavorable to the former. Mr. Just says, "Guano sown along with the seeds of turnips prevents their germination, whereas, when scattered over the soil, or buried in the drills beneath the seeds, it promotes the vegetation of the plants to a very great extent afterwards. The same is the case when liquid manure, from banks in farm-yards, is applied to soils previously to sowing the seeds. I have known turnips sown on ground so treated fail to germinate entirely; and by injudicious application of night-soil, as a dressing for crops of barley, I have seen numbers of the grain totally destroyed by contact with it, and those which escaped pushed on to such a rank vegetation after this destruction, that they could neither fructify properly nor ripen."

The same principle holds good with regard to propagation by means of buds and tubers; and here, at the risk of prolonging what is felt by many to be a wearisome subject, we quote Mr. Just's observations on the treatment of the potato. "The cuttings of potatoes," he writes, "or the whole tubers which we plant, have to undergo a similar change in spritting as seeds undergo in germination, and require similar conditions to favor that change and aid germination. Yet in our treatment of this most valuable and accommodating of all plants given to man for food, we err more against nature than in all others put together. Patient of every climate under the sun, we forget that it can be subject to any wrong, or require any of our care or concern for its welfare. Prolific beyond our wants, we have glutted our domestic animals with it, and employed it largely in the arts and distillery to contribute to our luxuries. Yet there is a limit to all

Digitized by Google

things, and we are approaching the limits of the abuse which we can unrequitedly heap upon it. Something is wrong already both in the field and in the store; already it has partially failed in its germination during the spring; already it has become the prey of disease in its vegetation and maturation in the autumn. Nature is vindicating her right to be obeyed; and since we have neglected to learn from her by lessons of examples which she has offered, she seems determined to make us wise by dear-bought experience—to make us feel, that we may remember.

"The first law of nature against which we transgress with regard to the potato, is in our total neglect of the due preservation of our seed potatoes. If they are only good for food, we never inquire whether they are fit for planting. Yet were we but to reflect one moment, we should soon see how unnaturally we treat them. Nature, when she alone takes care of them, keeps them within the soil—like all other subterranean buds—during their season of repose; and because, in the warm climates, where they are indigenous, they cannot easily be cut off from a due temperature for their germination, she checks it by keeping them dry in the soil. We, on the other hand, dig them up from the ground, because we fear, and properly, the effect of the frost upon them; but instead of keeping them dry, we heap them up wet in immense quantities on the ground, and cover them over there, to keep them so, *with soil*, thereby furnishing them, if they do not rot, with one requisite for germination; while the masses themselves raise and keep up the temperature to supply them with another, so that germination has not only commenced, but proceeded considerably, when we dig them up again for planting. Then, calculating upon the extraordinary degree of vitality with which nature has endowed the tubers, we pull off the sprits, cut up the potatoes, and endeavor to reduce that vitality to as low an ebb as possible before we plant them. If, by the spritting of potatoes, the whole of the diastase, situated just below the embryo in seeds, be expended, then there is no provision left for the conversion of fecula into saccharine matter for the formation of the first tissues of germination, and germination must therefore fail."

When it is borne in mind that the cuttings, weakened as described, are in most instances planted in highly azotized soils, surprise at the general failures which have taken place will be greatly lessened. The remedy consists in storing up the potatoes intended for seed in places perfectly dry and dark, and, instead of one large mass, in small heaps, so that all tendency to generate heat may be obviated. The precautions with regard to the aëration of young grain crops are equally to be attended to with the young plants of potatoes. Without frequent stirring of the soil while the roots are forming, and complete aëration or ventilation, however favorable other circumstances may be, proper growth is not to be expected. The objects to be striven for by the agriculturist and cultivator are of such importance, as to reward any degree of perseverance. Implicit obedience to natural laws never fails of commanding success. Nature is not to be forced or diverted from her economy: the bringing to bear a little plain, practical, common sense on her multifarious modes of action, must tend to the realization of the sound theoretical views of the chemist and meteorologist.

From the Times of Sept. 30.

ENGLISH OPINIONS OF THE ARMISTICE.

It has been anticipated that the accounts from the United States and the seat of war in Mexico, which have just reached us by the Caledonia steamer, would put an end to the long period of suspense and perilous inactivity in which Gen. Scott's army has passed several weeks, and would probably announce either the entry of that general into the Mexican capital, or the discomfiture of his scanty forces. The intelligence, which will be found in another column, bears much more resemblance to the latter than to the former of these alternatives. Although the American journals record another victory, they acknowledge that the honors of the day were disputed with great resolution by the Mexican army. They publish a list of officers killed and wounded, which shows the extreme severity of the action; and above all, they announce an armistice proposed, not by the Mexicans, but by Gen. Scott himself. This last circumstance demonstrates that, although the spirit and firmness of the little American army eventually prevailed over the numbers and the field fortifications of the enemy, they were not in a condition to take any political advantage of the contest, though they remained masters of the field. Indeed, considering their feeble numbers, the immense difficulties of transport, and the imperfect organization of their supplies, which have prevailed throughout the war, it is evident that 6000 men, isolated in the heart of a hostile country, decimated by fatigue, fever, and actual fighting, and cut off from reinforcements by the conditions of this armistice, are much more likely to capitulate to the enemy they have insulted and despised, than to hoist the American flag on the towers of the city of Mexico. The moral effect of a decisive action and a tremendous defeat might, indeed, have paralyzed the Mexicans, and induced them to accept the terms they had hitherto rejected; but, if the particulars are to be believed which reach us through American channels, the battles of Contreras and Cherubusco are more likely to raise the confidence of the Mexicans, than to destroy all faith in their cause or commanders.

The Mexican generals are said to have taken up a very strong position, on which they had concentrated a large amount of artillery, within sight of the capital. These batteries of St. Augustine and St. Antonio, were served with great activity and effect, and their fire was especially directed against the position which was occupied by General Worth and his corps. On the 19th of August, an attack was made by the Americans on these points, which, as may be inferred from our accounts, was altogether unsuccessful. The American field batteries were soon silenced by the heavier guns of the enemy, and we observed that the loss of officers in the artillery corps was unusually great. For six hours this terrific cannonade lasted, and at the close of the day General Scott and General Twiggs retired, "completely exhausted, not anticipating 'the great strength of the works of the enemy.'" The troops were obliged to bivouac on a tempestuous night, which must ill have prepared them for a renewal of such a battle on the morrow.

On the morrow, however, the state of things seems suddenly to have changed. Early in the morning of the 20th, the position of Valencia, at Contreras, had been attacked by Gen. Smith with complete success; and upon the precipitate retreat of the Mexicans from this point, Gen. Worth fell back on San Antonio. A second most severe en

Digitized by Google

gagement took place, which lasted some hours, until the Mexican troops retired in disorder upon the city, leaving their heavy guns and a large number of prisoners in the hands of the invading army. The forces of the Mexicans in these actions are stated to have been at least three times as numerous as those of Gen. Scott's army; and although defeated to a certain extent, it is probable that the Mexican generals have still a body of men under their command, sufficient to repel any open attack on the city.

In fact, having arrived under the walls of Mexico by dint of extraordinary perseverance and hard fighting, it is by no means clear that Gen. Scott is nearer the grand object of his gallant efforts than when he started from Vera Cruz; whilst, on the other hand, it is evident to the merest tyro in military affairs, that an army of 6,000 men, at such a distance from its base, and so inadequately supported from home, is, in reality, in a position of great peril. Conferences for the negotiation of peace have, it is said, been opened, the alternative being another battle of a still more perilous character than the last; for it must be observed, that in Gen. Scott's present position the least reverse must be annihilation. He has absolutely no retreat. We should, therefore, not be surprised to learn that he is willing to conclude a peace on terms by no means flattering to the vanity of the United States.

But the moment we arrive at this point we are met by various political considerations, peculiar to the institutions of the United States, which render the solution of the question extremely complicated. Mr. Polk undertook this war on his own account, and it has proved to be the principal affair of his presidency. The attractions of military adventure and the pride of military success have induced the people of the United States to indorse his bills and to recruit his armies; and we have accordingly seen the chief magistrate of what was once the model of pacific governments indulging himself in the royal luxury of a bloody war. All this may be of some temporary advantage to Mr. Polk and his adherents; but they must be well aware that advantages so dearly bought by the nation will prove fatal to those who have speculated in them, unless the burdens of the war can be terminated with this campaign, and unless this campaign can be closed with an amount of success sufficient to screen the enormous injustice of the invasion. In the present state of public opinion in the world, we should have thought it extraordinary if the most absolute of European sovereigns had dared to embark in such a war, but that a man, temporarily invested with a limited power like that of the President of the United States, should, by his own will and pleasure, have plunged his country into such a series of embarrassments, is, without exception, the most extraordinary event which has ever occurred in the history of any modern republic. The sequel will show whether the mere *prestige* of military achievements is sufficient to overthrow all the principles on which the constitution of the United States is professed to be founded; and even in this affair of the armistice and the alledged negotiation for peace, we shall be curious to learn how far Gen. Scott's conduct will be approved and supported by his government, which no doubt anticipated a more brilliant result from the march to Mexico.

From the Morning Chronicle.

The American papers regard the contest as concluded, and congratulate themselves, in a heartier and more creditable fashion that we had anticipated from them, on the termination of this useless and unrighteous contest. The Caledonia has, as we anticipated, brought the news, sufficiently confirmed, but unaccompanied by any details, of one sanguinary battle, if not more, having been fought in the neighborhood of Mexico. That must have indeed been a desperate contest, wherein, in the course of a couple of hours, 1,200 Anglo-Americans and 5,000 Mexicans fell, and among the latter many citizens of note. It seems after all, that Mexico does produce men who can fight bravely and die cheerfully in defence of their homes and altars. Had the Mexicans possessed mechanical appliances equal to those of their enemy, had they a barely tolerable ordnance and commissariat, the result of the battle might have been different. As it is, by their own showing, the loss of the invaders has been very severe—one eighth or more of their available force. The readiness, too, with which General Scott consented to remain outside the city until the Mexican congress had deliberated on terms of peace, would imply that even after his victory he dreaded the consequences of driving the Mexicans to despair. His feelings, in fact, would appear to be somewhat of a Pyrrhus complexion. It would be rather an untoward result if these dear-bought defeats became a school for that military genius for which the Spanish race is remarkable, and at length made the Mexicans adepts in the art of war. Truly, Gen. Scott may be pardoned for some slight misgivings as to the strength and safety of his remaining forces, in the centre of a hostile population, at such a distance from succors and supplies, and with bodies of guerillas, ever increasing in numbers and audacity, threatening to break up his lines of communication, and cutting off by scores his most adventurous and bravest men. On the whole, it seems tolerably certain that a peace has been concluded ere this. Whatever bargains may be struck in respect of territorial and financial adjustments, we trust that the treaty will be in other respects so clearly defined and so satisfactory to both parties, as to afford a reliable guarantee, that so unwarrantable an aggression as this war has been on the part of the states, will not be hastily or inconsiderately renewed.

From the Spectator.

The position of the United States army in Mexico is not to be accurately learned from the accounts received this week from America. Of course they put upon it the best color they can; but there must necessarily be much that is not stated. General Scott had advanced almost to the capital of Mexico, after a difficult march and hard fighting; in his last engagement he confesses to have lost about a thousand out of six thousand men; the Mexicans are *estimated* to have lost five thousand out of an army of twenty thousand men or less. Santa Anna had been outgeneraled, and had retreated, it is said, rather prematurely. But his countrymen must have fought in earnest. General Scott, who had scoffed at offers of peace, now volunteered to make them himself, and concluded an armistice to facilitate negotiations. This looks like a conscious sense of that weakness which his position implies—his army enfeebled by a hard-won victory, and stationed in the heart of the enemy's country. There the accounts leave him.

[We are sorry for the Spectator. An intelligent, honest English criticism on American affairs would be very desirable. This taunt about Gen. Scott's scorning peace, must have been invented by the Spectator itself—at least, this is the first notice we have seen of such a thing, and is in direct contradiction of what is well known to be the truth.]

CHAPTER III.

In the evening Edith joined Mrs. Dalton in a window, where, apart from the rest of the company, she seemed to enjoy a reverie. She did not speak, but pointed to the massy outline of a distant hill, behind which the moon was rising, huge, dim, and red; but, in proportion as she departed further and further from the earth, seeming to gain in purity what she lost in splendor. The mute symbolism of nature is indeed expressive. Two years ago Edith would have felt that shame-facedness which is the mark of a keen and delicate enthusiasm in woman; she would have shunned to make the silence of her rapture a spectacle for a mixed and unsympathizing party of mere acquaintance. But she had now acquired a fearless freedom of action infinitely more comfortable to herself, and perhaps only to be regretted on account of the mixture of the motives which gave rise to it. She had become so accustomed to be admired for whatever she did, that she had nearly learned to think that everything she did must be in itself admirable; not that this was the conscious and definite working of her mind, but rather that, being sure of obtaining approbation, she forgot to inquire whether she deserved it or not; she had got the current coin, and she cared not to test the purity of the metal. Yet the adulteration was very slight—quite imperceptible to herself—it was only, in the strictest sense of the word, a *beginning*. So is an acorn only a beginning, and a small one—but the end of that beginning is the mightiest of trees; and in every beginning the whole progress, development, and final consummation, are, as it were, folded up and contained, ready for gradual expansion. The thought is as full of comfort as of warning, though, alas! the warning is the more needful of the two.

"Some music, Amy," said Mr. Thornton's voice, behind the ladies, "you have indulged your meditations long enough, and must now think a little about the enjoyment of others."

Mrs. Dalton looked round with a smile, and immediately moved to the piano. She put her cousin back with one hand as he offered to escort her, whispering at the same moment, "No, no; I don't want you. I am going to *exhibit*, so you may talk at your leisure." She sat down, and, under cover of Schulhoff's Galop di Bravura, which was presently electrifying the room, Mr. Thornton returned to the window and to Edith. He began with a platitude, such as even the most brilliant genius must occasionally utter if he be resolved to talk in season and out of season.

"So you prefer moonlight to conversation," said he.

"To *some* conversation," returned the lady, looking very intelligibly at the scattered human beings who adorned the chairs, sofas, and ottomans around her.

"But not to *all*? I am afraid I can scarcely hope to be classed among the exceptions." This timid speech was accompanied by a very decided assumption of the vacant seat next Edith. She laughed slightly, as though she perceived that the words and the movement were a little inconsistent with each other, and answered frankly, "Why, I scarcely think I do prefer even such a scene as this to the conversation which we had with Mrs. Dalton before dinner. It was very interesting."

"Almost too interesting," replied he; "such moments unfit one for the trivialities of every-day life and common-place people. Though all beauty is said to arise out of contrasts, yet there are some contrasts which at once and irremediably destroy beauty;—you would not mix moonlight and lamplight in a picture."

"Yet they are very beautiful in reality," said Edith, looking from the brilliant room to the still, silvered woods without.

"I suspect," said Mr. Thornton, "that, as in most things which we call beautiful, the charm lies rather in the mind of the interpreter than in the interpreted. Is that too philosophical for you?—I know you are a student of German."

"I delight in listening to what is beyond my comprehension," returned Edith. "Either the mystery pleases me, or else the feeling that I have the power to reach it if only I have time and help afforded me. So pray go on with your theory—you think that there is no such thing as beauty, really, but that it all depends upon the mind of the person who is looking. I don't know how to express it; but you see what I mean."

"Yes," replied he, "what is noonday to you and me would be midnight to a blind man."

"But the sun is the same," retorted Edith.

"Not to you, if you are blind," he answered. "It is, to you, as if it did not exist. But these analogies are very deceptive; one can't carry them out. To illustrate what I mean by plain facts—the pagoda which is beautiful to the Chinese would have been monstrous to the Greek; and again, the worshipper in Cologne Cathedral would find little to excite his devotion at Pæstum."

"And you believe in none of them?" cried Edith.

"Just the reverse," said Thornton, smiling; "I believe in them *all*. I believe that the elements of truth, goodness, and beauty, are everywhere for those who can see them—the whole, nowhere for anybody. To disbelieve in their existence would be as absurd as to restrict them to any particular forms or systems. Some possess more, some less; the man who has emancipated himself from all has the best chance of collecting the fragments which all contain."

"I think I understand," said Edith; "I see how this leads naturally to universal toleration."

"True," he replied, "toleration—charity—love, becomes the law of life, and Christianity assumes her proper place, as the system containing the highest development of that law which has yet been granted to us. Viewed in this way, can anything be more ludicrous than the conventional rules which would seek to conform all characters to the same model? Rather find out, in the countless variety of materials submitted to you, those with which your own inner voice accords, and associate yourself with them, if you would attain happiness. All the misery that we see around us seems to me a blunder, not a necessity."

"Nay," said Edith, half doubtingly, "but if we sin we must needs suffer, must we not? Is not that the real cause of misery?"

"Every fault," returned he, "brings an inevitable portion of suffering with it, which is the best safeguard against repetition of it. But repentance is in itself restoration; the idea of punishment, except in so far as it is needful to procure amendment—the idea of *retribution* is absolutely preposterous. We are all imperfect and in a state of progress, and of that progress purification is a necessary part."

"Yes," said Edith, "because we have not merely to do what you said just now, to choose

Digitized by Google

the outward circumstances which best suit us, but, as we cannot create circumstances, we have also, and more frequently, to adapt ourselves to them."

"Perfectly true," he rejoined. "This is the difficulty of life, and in this its pain consists to those who will persist in refusing to use it rightly. But out of the discord gradually arises a fuller and more glorious harmony."

"A glorious harmony! Yes, indeed," cried Mr. Delamaine. "You were speaking of Mrs. Dalton's playing. Did you observe how that discord was first prepared and then resolved?"

"Some people seem resolved to prepare nothing but discords," murmured Mr. Thornton, with a mixture of annoyance and amusement.

But at that moment Mrs. Dalton ceased the marvels with which she had been delighting or deafening her audience, and broke into music of a very different strain—a low, quick accompaniment, like the rustle of abundant leaves, through which the notes of the melody stole like drops of water falling in twilight. You must watch heedfully if you would see each one glisten as it passes; the breathlessness with which you listened would have moved the repose so essential to musical beauty, but for the lulling stillness of the undersong. Mr. Thornton held up his hands as if imploring silence, and then putting them before his face, seemed to abandon himself to enjoyment. And he did really so abandon himself, that the only reminiscence of his conversation with Edith which flitted across his mind, might have been contained in the following words: "Strange, that I have been talking philosophy instead of sentiment! I don't believe she will touch me, after all!"

Edith's reflections were somewhat deeper. The refined epicureanism to which she had been listening had singular fascinations for her; and it was, moreover, so interwoven with truth that she could not separate the one from the other. Life was then no burden to be borne, no struggle to be encountered. Sorrows were anomalies and exceptions in this system, not chief and necessary parts of it; they were the results of imperfection, to be endured, and surmounted, and forgotten. Sins, if forsaken, were no subjects of grief; discipline was necessary as a means of happiness, not of holiness. Vaguely did these results of the principles presented to her pass before her mind—so vaguely that they seemed not to testify to the falsehood of the principles which involved them. Would Edith have entertained these thoughts three years ago? Certainly not. Was she, then, a better logician at eighteen than at one-and-twenty? Scarcely—her logic at either age did not exceed due feminine limits. But Edith had been living for amusement for three years; living, in fact, to speak plainly and shortly, to and for herself. Her conscience had learned to suggest her actions by the assurance that there was "no harm in them," not by the authoritative injunction, "Do this because it is right." The woman who leads such a life as this must make up her mind to two dangers:—first, she is sure to encounter temptation; secondly, she is sure to be unprepared for it. The rule of quiet obedience, of childlike faith, of daily self-denial, excludes the evil simply by leaving no room for it. It keeps the heart as in the shadow of some cool and voiceful cloister, and has the twofold virtue, that it is at once a safeguard from temptation and a strengthener against it. But of such a rule Edith had known little at any time, though the kindly influences of her childhood and early youth had in some measure supplied its place; they were, however, rather a shield from the foe than an armor on the body—the shelter was withdrawn, and she was found weaponless. Yet who shall say that with her noble impulses, generous feelings, amiable temper, warm heart, and (to speak in popular phraseology) *innocent* life, she was not a favorable specimen of her class, sex, and age in this our Christian England? Who, to take lower ground, could expect her even to *fear* that she was gradually departing from such a standard as Philip Everard carried in his heart of hearts? But we will not anticipate.

Mrs. Dalton's fantasia, or whatever it is to be called, came to an end, and Mr. Delamaine was at her side in a moment, begging for a song. She smiled her most bewitching smile, but immediately played an air with variations. "Do you like that?" inquired she, as she concluded. "It is one of Thalberg's."

"Oh—ah—yes—indeed," was his reply, "I should have recognized it immediately. So orchestral—there is no mistaking his style."

Mrs. Dalton looked a little mischievous, and Lord Vaughan, as he read on the title-page of the music the name of Mendelssohn, smiled to her with the open and gleeful significance of one who is not often in the secret of a private morsel of satire, and who inwardly congratulates himself on understanding it.

"But," pursued Mr. Delamaine, "you used to sing 'Ah luce di quest' anima!' used you not? You have not forgotten it?"

"Oh, no," answered she, graciously; "music that I have once learned keeps a most pertinacious hold on my memory."

"I am sure it is here; do let me find it for you," cried her persevering admirer, dropping suddenly down on his knees before the music-stand, thereby causing Lady Selcombe to start, and dislodging from her lap a perfect avalanche of colored wools. Having duly apologized for and repaired his misdeed, he proceeded to institute a vigorous search for the song, during which Mrs. Dalton chatted about music with Lord Vaughan and Sir Mark Wyvil, and finally began to play Irish airs, with intense feeling and variety of expression. "Ah luce di quest' anima" was at length found, and placed before her; she acknowledged the service by another smile and a most grateful bow, but continued to play without heeding it for at least half an hour. Then, leaving her chair, she addressed a young lady who was seated near the piano, listening to her with a kind of sullen and reluctant admiration. "My dear Miss Mainwaring," said she, "Mr. Delamaine is longing to hear you sing this song. We all know it is one of your favorites. Now, pray oblige us—as for me, I am really quite tired." She retreated as she spoke, and spent the rest of the evening in walking on the terrace, whither she would not allow either Edith or Mr. Thornton to follow her. Miss Mainwaring, who was cultivated and commonplace, obliged the company with untiring assiduity, and Mr. Delamaine, though looking at first a little blank, was politely attentive and vivaciously critical. Ere they separated for the night, however, Mrs. Dalton approached one of the open windows, and leaning her arms upon the sill, warbled Mozart's pretty and familiar "Buona notte, buona notte amato bene!" without accompaniment, with a richness and delicacy which astonished even those who were best acquainted with the wonderful beauty of her voice. The music was appreciable by all, the silence was

Digitized by Google

breathless, the applause unbounded; and when the fair songstress had glided up-stairs to her apartment, Mr. Delamaine observed, with much animation, "What a fascinating woman Mrs. Dalton is!" From this sentiment no one dissented, unless Sir Mark Wyvil's significant clearing of the throat might be so interpreted.

By the end of a fortnight Mr. Thornton had made considerable progress in his portrait of Edith, and had advanced yet further in his intimacy with her. His cousin watched them with much interest, but could not satisfy her mind as to whether they were becoming really attached to each other or not. Mutual admiration was very evident; close attention on the gentleman's part, extreme graciousness on the lady's; but then Edith was gracious to all her admirers; indeed, a stern observer might not unjustifiably have pronounced that she coquetted with them. Lord Vaughan's devotion, though quiet and unobtrusive, was most profound. Mr. Delamaine's compliments were offered with a hardy and perpetual earnestness, which left no room to doubt their sincerity; yet both were encountered by her with just that mixture of piquancy and gentleness which was sufficient to keep hope alive, though it could scarcely be called encouragement. Total indifference or complete preöccupation might have blinded her to their real sentiments; but she appeared to like their attentions so well that these motives could scarcely be attributed to her; so the only conclusion left was, that if she were blind, it was partly for the very sufficient reason that she would not see.

"It is to-morrow that Captain Kinnaird comes, is it not?" said Mr. Thornton, as he uncovered his canvass, and prepared for the morning's labor. "You must give me a long sitting—I am quite anxious about his opinion."

"Oh! do not hope for Frank's approbation," returned Edith; "if you were to paint me with a palm-branch in my hand, and a glory round my head, he would still think you had not done me justice."

"The very circumstances under which it would be impossible to do you justice," cried the artist, laughing. "If you will allow me to say so, that is the only character under which I could not portray you to advantage."

"And what character is that, pray?" inquired Lord Vaughan, very quickly, and half affronted.

"That of a saint," replied Mr. Thornton. "Miss Kinnaird has not severity enough for an artist's ideal of a saint; and I am heartily glad of it, for if she had, I am sure I, for one, should be exceedingly afraid of her."

"So I should think," said Edith, a little more dryly than was her wont.

"Yes, indeed," exclaimed Lord Vaughan; "only just fancy a young English lady of the present day looking like a saint! Just imagine a saint in embroidered muslin, with all those frills and flounces, and hair, which it must take at least an hour to plait and curl!"

Everybody joined his laugh at the juxtaposition of two ideas so glaringly incongruous as those of a saint and a "young English lady of the present day."

"Where is Kinnaird now?" pursued he.

"He is staying with the Verners."

"Ah, poor Verner!" cried Mr. Thornton, "what a wreck he is! It is positively painful to me to sit in the room with that man. He used to be the most brilliant companion; he had more refinement than any man I ever met with. In that respect he was absolutely feminine; and then such inexhaustible spirits! he would keep you roaring with laughter a whole evening; and then, when you were lounging off to bed, perfectly worn out, and scarcely able to speak from sheer fatigue, there was he as fresh and as cool as if he were just going to breakfast!"

"And what has changed him?" asked Mrs. Dalton.

"Marriage," was the laconic reply.

His cousin fixed her deep reproachful eyes on him without speaking.

"Such a marriage!" reiterated Lord Selcombe. "Yes, now that is a man whom one regrets to lose. Everybody liked Verner; with all his faults he was the most popular man of my acquaintance."

"What sort of woman can Mrs. Verner be," observed Edith, "to neutralize such an abundance of good qualities?"

"She is pretty, accomplished, tolerably amiable, and by no means stupid," said Mr. Thornton; "but—to sum it up in one tremendous word—she is vulgar."

"Yes, it was indeed a pity," chimed in Lady Selcombe; "she was low in family, and is decidedly underbred."

"Besides," said Mr. Thornton, "Verner never liked her—how could he? They were so perfectly uncongenial. A woman who would talk of her carriage-and-four, and tell you the cost of her drawing-room furniture at a dinner party! And he the most fastidious of men!"

"He never liked her!" repeated Edith, in a bewildered tone.

"She cannot conceive the possibility of a marriage without love," said Mrs. Dalton, quickly, to her cousin. Then turning to Edith, she added, with a mixture of sarcasm and sportiveness, "Did you never in all your life hear of such a thing as a *mariage de convenance*—as marrying for money, for station, for a home, or any other motive except the schoolgirl's idea of "Love in a cottage?" Oh, my dear Edith! if we could only stand in Madame de Genlis' Palace of Truth for five minutes!"

Edith blushed painfully. Perhaps friendship is the most sensitive of all affections; the first doubt—the first neglect—the first seeking of another for that sympathy which we thought it our own special privilege to give—these are moments which burn their traces on the heart, and leave a scar which, though it may possess the dubious advantage of callousness to future impressions, inflicts agony ere it hardens. And to such wounds friendship is specially liable. Love confers an equality, whether real or imaginary; there is a balance of feeling; its very essence is reciprocation. But friendships are for the most part unequal, existing between persons whose characters are dissimilar, either fundamentally, or in the aspect which they present to each other. The keen tenderness, the watchful reverence, the fear, the passion, are not equally divided, and much must he suffer in whom they predominate; much must he forbear, long must he persevere, ere the bond of full and perfect confidence is finally established. But, if there be indeed that hidden basis of sympathy, without which no true friendship is conceivable, it is well worth the struggle; for the reward shall overpay the labor. Forbearance, trustfulness, hope—on these three pillars may the temple be reared—but if one of these fail, especially if the second fail, there will be nothing but a shapeless ruin!

Digitized by Google

"I don't think Miss Kinnaird need fear the Palace of Truth on this subject," said Sir Mark Wyvil, with a malicious emphasis on the name, and a glance at Mrs. Dalton.

"Nor Sir Mark Wyvil," retorted the lady instantly. "Both are equally transparent—but with a somewhat different effect."

Sir Mark was discomfited, and Mr. Thornton resumed the conversation, addressing Edith: "Oh, it was one of those sad cases, in which a marriage without affection is almost compulsory. He ran through a fine income; he was not the sort of man who could ever have lived within his income even if he had been as rich as Hudson; and then he had to choose between selling a place which had belonged to the family ever since Queen Elizabeth's time and marrying Miss Jarvis—a pretty girl enough—and devotedly attached to him."

"You must excuse me," said Edith; "but I think the lady is the more to be pitied of the two."

"Not she!" cried Lord Selcombe. "She is as happy as a queen, and has her own way in everything."

"That is just the happiness of a queen," replied Edith; "but not of a woman."

"But she dotes on her husband," said Lord Selcombe.

"And he—is indifferent to her!"

"It is better to worship than to be worshipped," said Mrs. Dalton in an undertone and with a half sigh.

"Verner was a younger brother," said Lord Vaughan; "what became of the elder—of Montague Verner? I remember the rejoicings at his coming of age when I was a good little boy in petticoats."

"Oh," said Lady Selcombe, with a grave shake of the head, "he was always very eccentric! It was a great grief to his family. He took up some religious mania, and would not live on his property."

"Yes—a canting rascal," cried her lord;—"he nearly broke his mother's heart. Some fancy about its being church property—the father was living then, you know, and he was a man who would n't stand any nonsense—so they quarrelled—and the young gentleman took his leave, went into orders, and was off to Van Dieman's Land, or some such place; and I've never heard anything about him since."

"A nice sort of religion," said Lord Vaughan, "which makes a man quarrel with his father!"

"Why," said Lady Selcombe, lowering her voice, "I have heard that there is insanity in the family; and, you know, that kind of religious enthusiasm, if it does n't begin with insanity, generally ends with it. Very few minds are strong enough to hold their balance when those notions get hold of them."

The world's charity and the world's condemnation—both appropriately exercised! Perhaps some such idea was present to Mrs. Dalton, for she had ceased to take any part in the conversation, and at the first pause she began to play. As usual, when she finished her performance, she was implored for a song; and as usual, when implored, she did not comply. She professed to be weary of watching the progress of the picture; engaged Lord Vaughan, who had still something of the schoolboy about him, in a private conspiracy against her cousin's brushes; made the room ring with her musical laugh when Mr. Thornton, having fallen into the trap, and finding himself about to paint Edith's forehead with Prussian blue, uttered an exclamation of disgust; and then darted off into the garden for a solitary ramble.

"She has the spirits of a child," said Mr. Thornton, a little impatiently.

"And how music excites her!" observed Lady Selcombe. "When she began to play she had a brilliant colour, and before the end of the piece she was as white as my pocket-handkerchief."

The rest of the morning was spent in discussing the details of a grand approaching piece of gayety that was to take place under Lady Selcomb's auspices; namely, a bazaar for the benefit of an hospital in process of erection at ——, the town nearest to Selcombe Park. "The celebrated beauty, Miss Kinnaird," though not exactly advertised in the handbills, was reckoned upon as first among the attractions which were to gather the neighbors from far and near for charitable purposes. She was to preside at one of the stalls, under the *chaperonage* of Mrs. Dalton; her costume was to be new for the occasion; and, in his character of artist, Mr. Thornton was allowed to arrange the distribution of colors. Lord Vaughan had asked and received permission to provide her with a bouquet; and Mr. Delamaine, who was never tormented by any importunate self-distrust, had constituted himself critic-in-chief, and soliloquized at great length over the bonnets and mantillas which Edith successively tried on, while she was listening for the more refined compliments of Mr. Thornton, receiving the silent homage of Lord Vaughan, or submitting to the good-humored comments of her host and hotess. Edith's enjoyment of the admiration which she excited did not exceed the limits of what is popularly termed "harmless vanity;" and harsh indeed would the censor have been deemed who should have passed sentence of condemnation upon her, for the manner in which she spent that bright autumn morning. Yet the particulars would have looked a little strange if they could have been faithfully noted down in her diary—especially if the varieties of *feeling* which beguiled the long hours of their tediousness could have been as accurately reported as the outward occupation.

"Edith, love, I vexed you to-day," said Mrs. Dalton, coming into her friend's room, as, weary with amusement, she was languidly brushing her hair ere she retired to rest.

Edith's quick change of color showed that the allusion was understood, though with the sudden impulse which always prompts us to accuse our sensitiveness of absurdity, and to wish to hide it, she, almost involuntarily, disclaimed the imputation.

"No—don't deny it," pursued Amy, kissing her forehead, "you *were* vexed, and I am glad that you were, because it shows that you love me. But now promise me," she added, with singular vivacity, "that you will never take to heart any hasty speech of mine; you may be sure that I shall never mean any unkindness by you; and I have an imperfect temper—that is to say, you don't know what may have happened or have been said to wound me and make me irritable. Even the closest friends know very, *very* little of each other, but that need not interfere with affection. Promise me, Edith!"

Most heartily did Edith return her embrace—most warmly did she give the required promise. The delicious feeling which she experienced at this first distinct avowal of friendship richly overpaid her for the pain which she had suffered. After a moment's pause, she replied—

Digitized by Google

"But I cannot bear the idea that friends know but little of each other, and I can never think it true. It seems to me that confidence is a necessary part of friendship."

"Yes," answered Mrs. Dalton, "but confidence is a word with a great many meanings; the highest of all is the confidence which gives full sympathy to the *feeling* without knowing, or wanting to know, its *cause*. However, I will confide to you," she continued in a lighter tone, "that I was annoyed this morning, because, as I myself never was in love in my life, your words sounded like a reproach to me. I see you are shocked at my confession; and now I want you to confide in me."

"Oh, don't ask me!" cried Edith, quickly, her face becoming crimson.

"Nay, 't is no very searching question," replied Mrs. Dalton; "I only want to know what you think of my cousin Godfrey?"

"I like and admire him excessively," exclaimed Edith, with earnestness; "I think him a genius, not merely in art, but in conversation. How different it has been since he came here! Everything seems to have received a higher impulse—nothing is common-place."

"Quite true," observed Amy; "and he has admitted you into some of the secrets of his mind, which are unsuspected by the world of mere acquaintance."

"Yes," said Edith, hesitatingly, "he talks very freely on all subjects of feeling. Sometimes he quite startles me; but it is very interesting."

"That is his particular charm," cried Mrs. Dalton; "he really lets you know what he is thinking and feeling; he never stops on the surface of anything—he goes into the depths at once."

"Yes," repeated Edith, "that is *one* way you know; but sometimes one finds out that people are feeling very strongly, just by their *not* speaking on the subject."

"Did you ever know any one," pursued Mrs. Dalton, "who so transformed and raised the whole tone of conversation without pedantry or parade? It is *so* refreshing in the midst of the mediocrities of society."

"It is perfectly delightful," answered Edith; "that is what I so especially admire in him. And how curious it is that there should be such different ways of doing the same thing!"

"One of his greatest merits in my eyes," continued Mrs. Dalton, "is in the quickness and refinement of his sympathies; I never can endure a man who laughs at a feeling."

"Oh! but dear Mrs. Dalton," exclaimed Edith, quickly, "that may come from such a different cause. A person may laugh sometimes only because he feels too deeply to like to show it. Sometimes, you know, a laugh is one's only escape from tears."

"That is not often the case," said Mrs. Dalton.

"No, not often, but sometimes," returned Edith; "I think it would be very hard and very unjust to decide that a man was cold-hearted even if he sneered and scoffed at subjects of feeling in company. It may come from some private cause—some early grief, which one knows nothing about, which has changed the whole life; besides, there are other ways of raising the conversation, and impressing you with high notions of character, than those which are distinct and open. One never thinks so highly of a person as when one has found out his merits and his feelings in spite of himself, and, as it were, against his own will."

Mrs. Dalton suddenly lifted her lustrous eyes, and fixed them full upon the face of Edith, who, coloring and shrinking, stooped over the toilette table and began to busy herself in putting into their case the ornaments of which she had just divested herself. Suddenly her friend seized both her hands, and still inflicting on her that merciless gaze, exclaimed, "Edith, you said just now that there should be no reserves in friendship; tell me—were you ever in love?"

CHAPTER IV.

A sudden knocking at the door of the room relieved Edith from the necessity of answering this embarrassing question.

"If you please, ma'am, Captain Kinnaird is come, and wishes to see you before you go to bed."

Mrs. Dalton could not restrain a laugh at the alacrity with which her friend responded to this summons. "Good night," said she, kissing her, "you are *quitte pour la peur* this time, and when next I want to catechise you, I will take precautions against these stage surprises. I do believe it was preconcerted."

"Dear Mrs. Dalton, how can you—!" was Edith's not very intelligible answer. "I am only so very glad to see my brother again; it is six months since we met."

She wrapped herself in a shawl as she spoke, and hurried to the dressing-room to receive her brother, while Mrs. Dalton withdrew to her own apartment.

Kinnaird, having kissed his sister heartily, examined her closely by the light of the lamp, pronounced that she was somewhat paler than her wont, and that dissipation did not agree with her, asked a few scattered questions relative to her proceedings for the last six months, and volunteered a vast quantity of rambling, rattling, and involved information relative to his own, professed himself tired, and wished her good night. But Edith lingered by the table with his candle in her hand, which was assuredly longer in getting lighted than ever candle was before. At last she said abruptly.

"I hope, Frank, you did n't forget my birthday."

"To be sure not, darling," was his rejoinder. "It is just a fortnight since; I was in Wales, drank your health in the very best Château Margaux it ever was my luck to taste. I suppose you are in a hurry for your birth-day present," he added, laughing, "but you must wait till my portmanteau is unpacked. When a young lady like you attains her majority, you know, one can't pay homage to her with a mere trifle, such as one may carry in one's pocket."

"Yes—I am twenty-one," said Edith, sighing.

From the moment in which childhood leaves us, we begin to count our birth-days with sighs instead of smiles. They are involuntary pauses, forcing a consciousness of life, even upon the giddiest—steps are they in the ladder of time, and whether we consider them as leaving the past, or leading to the future, the thought is equally sobering. But Satan's great aim is to paint our life's picture for us without any shadows; where he cannot eradicate them, he gilds them over; well knowing that so he shall destroy the proportions, and confuse the conception of the whole—overpowering the bright composure of the everlasting sky by the gaudy and obtrusive splendors of earth. And so the healthful solemnities which God has provided for man are by man forcibly transmuted into festivals; so we cele-

Digitized by Google

brate a baptism by a dinner-party, and build an hospital by a ball!

Kinnaird looked earnestly at his sister, and then, with his customary straightforwardness, answered the question which he believed to lurk in that sigh. "It is a month since I heard from Everard," said he. Edith started at the name; the idea of the person whom we love is, as it were, compressed, and centred in the name, and so the heart shrinks from it, even when most familiar with the thought which it implies; just as a single speck of intense light will force tears from the eyes which could gaze steadily at the same amount of brightness spread over a larger space.

"He was at Marseilles when he wrote," continued Frank, "and must have been detained, or he would have been home long ere this. I wrote you word I had heard from him, from Marseilles."

"You did," answered Edith, as she moved towards the door. "Good night, Frank," added she, hurriedly and with averted face, pausing as if for a moment ere she left the room. "You never tell me anything about these letters. What does he say of me—of our engagement?"

The words were almost inaudible, but, even so, it cost Edith much to utter them. During the last three years she had regularly received from her brother notice of all Everard's proceedings, as reported in his own letters; but not one word of herself, not one allusion to their engagement. For some time she attributed this to delicacy or thoughtlessness in Frank; then she tried to break the oppressive silence by hints or allusions, but in vain. She could scarcely have given any tangible form to her suppositions, but there could be no doubt that her vanity was piqued, and the fortnight which had elapsed since her twenty-first birth-day, without bringing any tidings of Everard, had not helped to soothe it. At length she was resolved to ask the question; and the embarrassment immediately visible in her brother's face made her heart stop suddenly it its beating, as if a hand had laid cold grasp upon it.

"Oh," replied he, with a little hesitation, "I always give him full particulars concerning you; and as to the engagement, you know, he does not say much about that, because, you see, he takes it for granted;—it is a thing understood—a matter of course."

"Good night," repeated Edith, as, with a flushed face and a step of unwonted stateliness, she left the apartment.

Frank Kinnaird's embarrassment was genuine and profound. The fact was, that, during the whole course of their correspondence, Everard had never once mentioned Edith's name. It is true that Kinnaird had always given abundant information concerning her without waiting to be questioned, and though puzzled by such unbroken silence on a subject so interesting, he had satisfied his own mind by the reflection that Everard was "an odd fellow, who never felt or acted exactly as other men did, and he must be allowed to go his own way." But he did not think these considerations at all likely to satisfy the mind of Edith, who, in Mrs. Dalton's words, was "a woman most unlikely to forego her sex's privilege of being wooed." The manner in which he evaded her question was, however, much less calculated to satisfy her than a simple statement of the fact. The severity of reserve bears witness to the strength of the feeling which it is intended to restrain; a cord may bind a child, but you need chains of iron to fetter a man. Absolute silence may be more expressive than the most eloquent oration;—but small talk seems to be expressive of nothing but indifference. The conclusion which Edith carried away from this conversation was, that Everard had alluded to his engagement in terms so light, so cool, and so easy, that her brother did not like to report them to her.

It is singular how close the union, how strong the affection between brother and sister may be, without their even approaching to a comprehension of each other's characters;—without the smallest admixture of that sympathy, which, as has been before said, is the basis of friendship. One kind of sympathy, indeed, they must necessarily possess: they must be ready to weep for each other's sorrows, to rejoice in each other's happiness—but this, perhaps, without any quick perception of the personal causes which deepen either the joy or the grief. The bond between them is one rather of habit than of instinct, and differs herein most conspicuously from the love of parent and child, which is a part of the life of the heart, acting by secret unisons and spiritual accordances which cannot be put to silence, save by breaking the strings on which they vibrate. Not that this deeper union does not frequently exist in the case of the other relationship to which we are adverting, giving birth to a holy and tranquil friendship, whose sanctuary no light thought or evil doubt is suffered to profane. We are rather calling attention to the fact, that it is quite possible for a very strong, warm, and even tender affection to exist without it. It is quite possible to love a brother with your whole heart, and yet to feel that he is as far from conjecturing what passes in that heart as the stranger to whom you were introduced yesterday.

Now, Frank Kinnaird's affection for Edith was precisely of this latter description. He was proud of her, and fond of her—nay, he positively doated upon her; yet if he had been asked to name any of the particulars which individualized her character, and caused her to differ from other women, he would have answered by a most blank silence. His notions of women in general might have been worth a passing examination, if it were not that he shared them in common with so many of his sex; a heterogeneous compound they were, full of startling contradictions and pleasant inconsistencies. He had a strong theory that woman was a ministering angel; combined with a more practical belief that she was a domestic animal, and a vague doubt whether she really had any more soul than a kitten. Intellect he considered decidedly disadvantageous to her; yet it did not appear that he sought the society, or enjoyed the conversation of those who were destitute of such a portion of it as he was capable of appreciating. Self-dependence in a woman he vehemently detested; yet no one could be more utterly bored by the practical results of the opposite quality, except in the case of the individuals who, for the time, occupied his fancy and commanded his attentions. Intense, but not ungraceful vanity, a kind of shallow tenderness, abundant in tears, but unprepared for sacrifices, a pretty alacrity in white lies and innocent deceptions—these were, according to him, marks of the sex too indisputable to require discussion; and there is scarcely any imaginable instance of frivolity or falsehood which would not have elicited from him the appropriate comment, "What a thorough *woman!*" Nevertheless, no one could more readily recognize the merits of such particular instances as came under his personal observation; no one more indignantly testify to disparities, moral or intellectual, between wife and

Digitized by Google

husband; no one more cordially pity the former—more earnestly condemn the latter, when the case demanded it. But his admiration for excellencies in women arose out of his natural love of whatever was good or noble; his leniency to their faults, out of the poverty and meanness of his ideal;—what woman would accept such charity! Nor let it be supposed that in this any special censure on Frank Kinnaird is intended; like most other men, he had never taken the trouble to combine his scattered opinions, so as to detect the unreality of some and the inconsistency of all. And we suspect that if this operation could be performed on the opinions of most other men, the result would be a theory not very unlike that which we have just described. And what, after all, does it signify! If the harp have three octaves, the most pertinacious playing, for a life-time, on three notes has no power to reduce the compass of the instrument. True, the useless strings may grow untunable, and return discord instead of harmony to the careless touch; but there they are still, undestroyed, for good or for evil; there they are still, and the various melody and the rich concord still sleep in them, ready to awake beneath the hand of a skilful player.

Thus much it has been necessary to say in order to explain what followed upon Frank Kinnaird's arrival at Selcombe Park, and to account for the view which he took of Edith's conduct. He immediately perceived that she was, to use the fashionable phrase, *flirting*, to no inconsiderable extent, with three gentlemen at once. Jealous for his friend, whose faith it never once occurred to him to doubt, and with whose fastidious delicacy he was well acquainted, he became angry with Edith, and he showed his anger in the most injudicious manner possible. His sister was a spoilt child, wayward, high-spirited, and vain; she had been breathing an air artificially softened for three years, and it would have required the most gradual tenderness to accustom her to a healthier temperature:—Frank took her out in an east wind at once, and then was astonished that she caught cold. Though undisciplined in mind, she was full of generous and noble feelings, and an affectionate and judicious friend might have moulded her as he pleased; but the idea that she was doing wrong—that her frivolous and useless life was a perpetual sin—that her constant and unintermitted intercourse with the world,—even with the *amiable* world, was unconsciously lowering her principles and injuring her character, had never once occurred to her; and now, on a sudden, she found the brother whom she had always hitherto ranked as one of her warmest worshippers, encountering her with a most unreasonable petulance, with an apparent resolution to disapprove all she did and dispute all she said, with those broad rebukes and unsoftened taunts which the freedom of family intercourse is sometimes supposed to sanction, but which sadly rub the bloom from family affection. Was it wonderful that she was exceedingly indignant, and felt herself extremely ill-used! Nay, was it unnatural, that she pertinaciously resolved to follow her own way! that she made an object of what had hitherto been only an amusement! that she rather studied to exhibit the pleasure she took in the attentions of her admirers than to withdraw from those attentions, and assume unconsciousness of them! Several days passed, and matters seemed rather to get worse than to improve; there was still no intelligence of Captain Everard; Edith continued to amuse herself and provoke her brother, and the latter, growing more and more surly, resolved at last upon an open remonstrance.

"Edith," said he, encountering his sister in the hall, as he was seeking her for this purpose, "will you come and walk with me in the garden! I have something to say to you."

Edith's rapid step was checked in an instant. "Have you letters!" asked she hurriedly.

"No, no; but I particularly want to speak to you."

"Out of the question!" cried she gayly, "I am going to give Mr. Thornton a German lesson, and shall not be at leisure for at least an hour. If you have anything very particular to say, tell me now—quick—this instant, for my pupil is waiting for me!"

"Your pupil is, of course, a person of far greater consequence than your brother," said Frank, with that sour kind of playfulness in which the joke is only assumed for the privilege which it gives the speaker of saying far ruder things than he could possibly say in plain earnest.

"Oh, I see you are cross!" returned his sister; "how glad I am that I have got an engagement! Anything is pleasanter than being scolded. I hope by the time I am at your service you will be in a better humor;" and, with a curtsey of mock solemnity, she darted away into the library. Kinnaird stood still for a moment, feeling most disproportionately angry, and then slowly followed her, and betaking himself to an easy chair and a newspaper, watched with no indulgent eyes the proceedings of the two students. A formidable array of grammars and dictionaries lay on the table as a sort of challenge to the whole world to disprove that they were going to study; Halm's "Son of the Desert" was open before them, and from this they read alternately, Edith occasionally supplying her pupil (whose knowledge of the language seemed scarcely inferior to her own) with the meaning of a word.

"I wonder how that play would act," said Mrs. Dalton, who was playing *chaperone* as they closed the book. "Exquisite as it is, and full of truth and pathos, the unity of interest is so unrelieved that it is scarcely dramatic."

"Oh, that is the very peculiarity in which I delight!" exclaimed Edith; "there is a kind of repose, even in passion when it is uninterrupted; episodes and contrasts do jar so with one's feelings when they are really interested. I cannot endure that perpetual recurrence of an underplot, or another set of characters, when the first conception has been grand, and true, and simple. It is as if you were to paint every alternate figure in a frieze by way of relieving the eye from the glare of white marble."

"No," said Mr. Thornton, "don't paint the figures, but paint the background, if you please; the white figures of the Parthenon stand upon a ground of pure blue. In the episodes and underplots which have disgusted you, the fault lies in the *execution*, not the *idea*, for it is only by contrast that unity becomes salient. 'Unity in multiplicity' was the old Italian definition of beauty, and we shall not easily find a better. You can trace a silver thread in a crimson web, but make the whole fabric crimson and the separate filaments are no longer to be discovered."

"But is not the life that one lives background enough to throw the conceptions of art into most bold relief!" inquired Mrs. Dalton; "not blue, truly, but russet or lead color."

"There is truth in that remark," said Mr. Thornton; "and perhaps that is the reason why, when

Digitized by Google

daily life has attained the acmé of civilization, that is to say, of artificialness and corruption, art seems to assume a second childhood, as if in despair at its own decrepitude. Vast and complex creations appear no longer possible; we have a new generation of lyrical poets, and we have the lyrical spirit in all art, differing, however, from its earlier manifestation as the twilight of evening differs from that of morning; the one hurries into day, the other loiters into darkness. Simple forms, and short but lofty flights, are the true artist's only refuge from the wearisome varieties of reality as it exists now."

As he spoke he was carelessly turning the leaves of the book, and, lighting upon Parthenia's song, he handed it to Mrs. Dalton with a look of entreaty. "Sing it in English," said he. She complied, and the rich notes of the simple but passionate melody, rang through the room, with a tone irresistibly saddening, though the expression was rather wistful than melancholy.

My heart, I bid thee answer!
How are love's marvels wrought!
"Two hearts, by one pulse beating,
Two spirits and one thought!"

And tell me how love cometh?
"'T is here!—unsought—unsent."
And tell me how love goeth?
"That was not *Love* which went."

"The quiet, almost arch gravity of the last line is inestimable," cried Thornton as she concluded.

"How exquisite," said Amy, "is that first scene in which Parthenia teaches Ingomar the use of beauty, if I may so express it. The wreath upon the vase—how often one thinks of it! how often in life do we find the vase without its wreath, or the wreath withered and scentless!"

"True," replied Thornton. "Here, as ever, in real art, the story is but a parable. We are first taught that beauty makes truth lovable, and afterwards, that without truth she is worthless. Nay, that she is not beauty at all. The noble savage has to learn softness and refinement, and afterwards how do the conventional softnesses and hollow refinements of artificial life crumble beneath his touch, and do him involuntary homage!"

"Oh, don't make it into an allegory!" pleaded Edith, "you will philosophize away the deep personal interest and pathos of the tale. Who could see without tears that last sudden outburst of devotion and reverence in Parthenia, when, having played at goddess and teacher all the way through, she suddenly recognizes his immeasurable superiority, and, without a fear or a scruple, prostrates her whole being before him? It shows how often coldness—immovable, unlovable coldness, is only on the surface; how there may be not only keen tenderness, but passionate fervor of character beneath it!"

"But I like the fervor which shows itself," cried Thornton, glancing at Edith's beautiful and animated face. "Coldness is, as you truly said, utterly unlovable. Feeling may hide itself when it pleases under satire, or wit, or playfulness, and be only all the more attractive; it is forever letting the veil slip a little aside and giving you an instant's peep at its real face. But, once let it wrap itself in the pall of coldness, and (though this may perhaps be its only refuge on account of its very earnestness) it will never win hearts. At least it will never win my heart;—I have not faith enough to believe in that which I don't see, and which, moreover, is not even suggested to me."

"And so," said Mrs. Dalton, "the very temperament which most needs sympathy is, by its own constitution, irrevocably shut out from it!"

"That is hard," said Edith.

"It can't be helped," returned Mr. Thornton. "It is so, and will always be so. Some people are born to suffer—others to enjoy; some to win love without seeking it, and others——"

"To die for want of it," interrupted Amy, "like plants without water."

The conversation was here brought to a sudden pause by the announcement of visitors, Mrs. Willoughby and Miss Brown. They entered;—the former a portly personage, erect even to painfulness, but with a deliberate activity of movement that was the very reverse of stately. Each motion was, if I may so express it, a dignified jerk. Her dress was exceedingly handsome, and her face bore the traces of considerable beauty, but there was invincible vulgarity in the expression of the mouth, and her manners had that conscious and elaborate affability which is incompatible with high breeding, and which, by the force of its very graciousness, makes everybody else feel shy or proud, according to temperament.

"Mr. Thornton," said she, approaching him with a glide and a bend, "I believe I may claim acquaintance with you." Here she vouchsafed an action—brief, chilly, and tremulous, which she considered in the light of shaking hands. "Allow me to present my young friend—Miss Brown."

Miss Brown, a plain, pale, awkward girl, shabbily dressed, and wholly uninteresting, retreated with an embarrassed curtsey, and seated herself out of reach as quickly as she could.

"Will you introduce me?" continued Mrs. Willoughby, with a glance at the ladies. Mr. Thornton, bored, but polite, complied with this request, and the visitor proceeded, "My errand here was to ask permission to see a portrait, which I understand that you have just finished. I hope,"—looking comprehensively at Mr. Thornton and Edith—"I hope I am not asking too much."

"If Miss Kinnaird has no objection," said he, hesitating. Miss Kinnaird, of course, could have none, and the picture was produced.

"I am no critic," said Mrs. Willoughby, with a deprecatory wave of the hand, as if she had received a compliment. "Indeed, I know nothing whatever of painting; I never had a lesson in my life." She looked anxiously towards Miss Brown, but as that young lady remained perfectly silent, she was reluctantly compelled to do the honors to her own untaught genius. "I believed, however," she added, "that I have a correct eye;—that, you know, is quite a gift—it cannot be acquired—it is quite a gift."

This was so decidedly addressed to Mrs. Dalton, that an answer was inevitable. "Quite," said Amy, scarcely opening her lips: she was not practised in that peculiar species of self-discipline, the result of which is universal courtesy.

"Yes," responded Mrs. Willoughby with animation, "the most ignorant person, who happens to have a correct eye, may often be—at least I have been told so—a very useful critic. Some artists have told me that they would rather receive that kind of criticism than any other."

Mr. Thornton did not look as if he sympathized with those artists; but he could do no less than say that he should be much obliged by Mrs. Willoughby's comments.

The lady instantly became more impressively

Digitized by Google

modest than before. "Oh! no, Mr. Thornton," said she. "I could not presume—it is not as if I painted myself. I am wholly incapable of criticising, as far as any real knowledge of the subject is concerned. But a correct eye, you know, is quite a gift. I should be able to tell you directly if the mouth were not quite straight, or if the outline of the face were a little out of drawing, or if one of the eyes were a little too large—that I should find out in a moment. But I am no critic—that sort of faculty is quite a gift, you know. *You know?*" reiterated Mrs. Willoughby with emphasis, and interrogatively addressing Mrs. Dalton.

"Yes," said that lady deliberately, with an exterior politeness thinly concealing contempt.

"Now, I dare say," proceeded Mrs. Willoughby, "that in an exhibition—in any large collection of pictures, I should fix at once upon those that were really good. Probably I should distinguish an original from a copy at a glance—yes at a glance; but I could not tell you *how* I did it. I could not give you the *reason*—that is what connoisseurs can do, and I am anything but a connoisseur. I have no technical knowledge; I have only an accurate eye, which, you know, does not depend upon study—as I said before, it is a gift."

There was a pause after this speech, and the silent portrait seemed pleading to be looked at. Mrs. Willoughby approached it, and stood for some minutes in contemplation. "Do you think it like?" asked Mr. Thornton at last. (We should like to be informed on good authority, whether an artist is ever wholly and really indifferent to the opinion pronounced on his work by *any one;* whether he does not experience an emotion, either pleasurable or painful, even when the verdict proceeds from one whom he deliberately holds to be utterly incapable of judging. Scorn, be it remembered, is *not* indifference—though we do not pretend to define what it *is*.)

"Oh, undoubtedly," she replied. "A most admirable likeness. Miss Kinnaird, you must excuse my staring—the forehead is absolutely perfect."

Edith blushed under the oppressive gaze, and Mr. Thornton laughed, but not offensively.

"There cannot be a doubt of its being an excellent likeness," pursued the fair critic; "but yet—my unfortunate eye—it is quite a trial to be so accurate—one sees the least little divergence from the right line in an instant. But it is very presumptuous in me to say so; I have no doubt that it is perfectly correct."

"Pray, say exactly what you think," said Mr. Thornton, with stately deference to the lady's correctness of eye.

"Well, if you really ask me," returned she, "if I may indeed venture, I should say that the curve of this left nostril comes just a hair's-breadth too low—there—pray be careful—scarcely a touch will do it. (He had taken a brush in his hand and approached the portrait.) One little tiny stroke, you know, makes all the difference in these cases. Ah—h! (a prolonged sound of intense satisfaction.) There it is! You have done it exactly. Wonderful!—and the corner of that eye—do you see what I mean? Raise it the least little bit in the world;—pray, don't suppose that I am criticising. I know very well that I am quite an ignoramus;—only you see (with an appealing look to the ladies) Mr. Thornton is so excessively good-natured—he encourages the most timid person to speak her mind plainly. There! I see in an instant that you have done what I wanted to the eye;—is it not extraordinary what a change of expression is produced by a single touch?—one would scarcely believe it. Yes; now the portrait is perfect—it does not look like the same picture. Surely, Mr. Thornton, you must be struck by the improvement, yourself!"

"I am perfectly satisfied with the likeness now," returned he, with a courteous bow; at the same time silently directing Edith's attention to the fact, that the brush with which he had executed the lady's suggestions had no color in it. The completeness of her self-satisfaction did not allow her to perceive the equivocal nature of his reply. She had so perseveringly taken it for granted that he was encouraging her, that she could not possibly have suspected herself of impertinence. "Well, you see," said she, with a self-congratulatory nod, "even the most ignorant people may sometimes be useful to the most learned. The mouse and the lion, you know! But I was really frightened when I saw you beginning to touch it. I quite longed to take the brush out of your hand. When one sees so *exactly* what is the change required, and when the change itself is so *excessively* minute, one is afraid to trust it to another person, you know."

"Afraid to trust it—another person," muttered Mr. Thornton, in an aside to Edith, "I wonder whether I *did* paint the picture—I believe she thinks *she* did it."

"And now," resumed Mrs. Willoughby, with a decided access of graciousness, "will you allow me to speak of another errand which I have to you, Mr. Thornton? I have some drawings here for your inspection." She took from the table a portfolio which had been brought after her by the servant, and began to untie the strings.

"Are they your own?" inquired Mr. Thornton, as calmly as he could, but with an expression of some alarm.

"Oh no! How could you suppose it! I do believe you are quizzing me. You know I am no artist myself, though, as you have seen, I have some little capacity for art. These are the productions of a young friend of mine; a *protégée*—in fact (lowering her voice and speaking rapidly;) the family are in most reduced circumstances, and this girl has shown immense genius—something quite out of the common way. She is very timid, and they have no interest themselves, poor things! so I have brought her drawings to you, to ask your candid opinion of them. I assure you her genius is quite extraordinary; and she looks forward to supporting herself and her family by her exertions as an artist."

Mr. Thornton turned over the drawings rapidly—"Ha!—not so bad—not so bad," he said, as he glanced at them in succession, "My dear Mrs. Willoughby, these are cases in which I always speak with perfect openness. Your young friend has a very pretty talent, and would do herself much credit as an amateur; but there is nothing like genius here; nothing that would justify me in recommending her to follow art as a profession. She would be only preparing disappointment for herself, and wasting time which might be far more usefully employed."

"Oh—you think so," said Mrs. Willoughby, with a blank look, and an utter change of tone. "It is her only resource: they have scarcely bread to eat."

"She would never earn bread as an artist, I assure you," returned he, very decidedly. "Let her do plain work, or give drawing-lessons to beginners; she might possibly be equal to that. But

Digitized by Google

I do assure you, that you will be no friend to her if you encourage her to imagine herself a genius."

"I am afraid you are ill," said Edith, kindly, to the silent Miss Brown, whose increasing paleness had attracted her attention.

"No, thank you," was the scarcely audible answer. She made an effort to rise, but fell back, and in another moment Edith perceived that she had fainted. All was confusion; bells were rung and essences produced. Edith supported the invalid's head and untied her bonnet, while Mrs. Dalton threw water in her face and held salts beneath her nose.

"I suppose it was too much for her, poor thing!" said Mrs. Willoughby, pompously, but not unkindly. "These are her drawings, you know; and she has been quite living on the thought of being an artist ever since she was old enough to think at all."

"Good heavens, how brutal!" cried Thornton, sadly forgetting his good breeding, in the keenness of a compassion somewhat unusual from man to woman, when the object of it has neither beauty, talent, nor rank to recommend her.

"Nay, do not reproach yourself," said Mrs. Willoughby, instantly affixing her own interpretation to the sentiment. "It is much better, you know, that she should hear the truth at once."

"Take me to mamma," said the poor girl, faintly, half opening her eyes.

"Come, come, my dear, you must n't give way in this manner. Exert yourself, there 's a good girl; you are making yourself quite ridiculous.—It 's always better to scold them a little when they are fainting or hysterical," said Mrs. Willoughby, in an audible aside to Mr. Thornton, and with a little confusion among her pronouns, "but it is a hard trial for her, though, of course, it 's all for the best. People do deceive themselves so—one's own kindness deceives one, and blinds one's discernment in these cases."

CHAPTER V.

Self-conceit is either intensely obstinate or servilely pliant, according to the breadth of the basis of self-confidence on which it rests. Mrs. Willoughby was so anxious to establish her claim to be considered an untaught genius, that she was afraid to oppose Mr. Thornton's opinion, and chimed in with it so readily that she hoped to throw her original view quite into the background. But she was really good-natured, and she therefore proceeded to claim his sympathy for her unfortunate *protégée* on other grounds.

"They are so very poor," she said, "and such deserving people. Quite gentlewomen, too."

Miss Brown rose abruptly. "I would rather go, if you please," she said, in a low, tremulous voice, to Edith, her color varying, and hands shaking as she tried to fasten her bonnet. "Mamma is only waiting for me at the lodge. I——" Edith cut short her distressing effort at composure by drawing her arm within hers, and leading her at once into the garden.

"The air will do you good," said she, soothingly.

"Oh, pray excuse me—I have been very foolish," returned her companion, hurriedly; "I could not help it. Indeed I have not intended to be conceited; I never wanted to be a genius—only we are *poor*, you see;" and her cheek burned as she spoke the word with painful emphasis, "and they all fancied I had talent; and I have been thinking for a long time that I should be able to save mamma from having to work for her livelihood—and she—" Here her assumed strength gave way at once, and bursting into tears, she added, "Oh, how shall I tell her?"

"Let me come with you," said Edith, much distressed. "Pray don't try to restrain your feelings—don't think of me as a stranger. Sit down on this bench—there—(taking her hand) you will be better soon."

"I am better now," faltered she, struggling to repress her sobs. "I will go at once. Pray excuse me. I would rather go alone. You are very kind. I am extremely obliged to you, but I would rather go by myself."

"You shall do exactly as you please," replied Edith, gently, and cordially shaking her young companion's hand, ere she dropped it. "But are you sure that you are able to walk so far as the lodge without assistance?"

"O yes, quite, thank you," answered Miss Brown, with forced cheerfulness and a painful smile. "I am well again, I assure you. It is much better as it is. I shall never be so foolish again," she added, with a dreary, desolate resignation, like one whose life has been robbed of the single hope which gave it light and color, and who is trying to believe that the neutral tint of aimless indifference is better than either.

"I wish I could persuade you"— began Edith, with some hesitation.

"No; do not," interrupted she quickly, "do not persuade me, out of kindness, to *believe* again. It is better to know the truth at once; and hope is only another name for disappointment. Good-bye, and thank you very much." She turned as she was leaving Edith, and suddenly, with an averted face and much agitation of manner, said, "Will you forgive my asking you one more favor? Mrs. Willoughby is very kind, and I am very grateful to her, but—" she stopped, seemingly unable to articulate another word.

"You don't wish to see her again," cried Edith, eager to divine her meaning, and save her from the pain of expressing it. I will take care that she does not follow you."

"Thank you," said the other, half smiling, "but I did not mean that."

"What then?" inquired Edith.

"Why, she may probably—I am afraid—out of mistaken kindness—she might ask to have those drawings bought—for charity—and, *will* you prevent this?" The last words were spoken with sudden vehemence, and she clasped her hands over her burning face.

"Trust it to me," said Edith earnestly and kindly. "Don't let that idea trouble you for a moment. I will take care that it shall not be done. And now, before you go, have the kindness to give me your address, for I assure you I am not inclined to let our acquaintance end here."

"Thank you, thank you," said the poor girl, once more uncovering her eyes.

"Don't thank me," answered Edith, playfully, "but do as I ask, if you please." She drew forth pencil and paper, and wrote the words which her companion tremulously pronounced, "Alice Brown, 5, West-street, Beechwood, Dorsetshire."

"Beechwood!" cried Edith, "why, that is the name of Mrs. Dalton's place, and that, too, is in Dorsetshire."

"Yes," replied Alice, "that is Beechwood Park. It is four miles from the town of Beechwood."

"Then I shall see you before very long, for I am

Digitized by Google

going to Beechwood in three weeks." And the two girls parted—with what different destinations! Edith's heart sank, as in the fulness of her bright and prosperous beauty she stood watching the slow walk of the shabby and drooping figure which had just left her. She involuntarily pictured the meeting at the lodge—the watchful, anxious mother—the agonizing disappointment—the loving attempts at unreal consolation on either side—and the desolate return to the small, dingy, un-home-like room in the sombre street of a third-rate country town. Tear after tear of pure compassion did she wipe from her eyes; but, two little months afterwards, she would have encountered all that gloom, and poured forth double those tears, for leave to change places with the poor, neglected, unattractive Alice Brown, if by so doing she could have undone her experience of life as Edith Kinnaird! She was roused from a reverie, in which such thoughts as this certainly had no part, by her brother's voice.

"Tears, Edith! I am glad you have some sympathy to spare for any but the fictitious, sentimental sorrows of your German hero and heroine!"

The taunt seemed peculiarly unkind and undeserved, and Edith was turning resentfully away, but Frank detained her. "Do not go, Edith, I want to talk to you about your friends. Even you must allow that they did not exhibit the fairest side of their characters this morning."

"You seem determined to provoke me, and I don't know what you mean," replied Edith, indignantly. "Mrs. Willoughby behaved with heartless vulgarity; but I do not see what fault could be found with any one else."

"You think, then," answered Frank, "that it is perfectly consistent with courtesy, and sincerity, and Christian charity, to ridicule an ignorant and conceited woman to her face; to assist in persuading her she is as clever as she believes herself to be; to act submission and obedience to her in such a manner as to make her absurdity more glaring for the enjoyment of the bystanders."

"I think such self-sufficiency as Mrs. Willoughby's is fair game for anybody's wit," said Edith, somewhat embarrassed.

"Yes, if you take a fair shot at it," replied Frank; "but this was laying a trap, which is never fair. And *that* Mrs. Dalton—I do not like her at all; and I wish with all my heart, Edith, that you would n't make a friend of her. I don't like all this German sentimentalism and unreal nonsense; making women discontented with their homes, and teaching them to think themselves unappreciated angels, whom nobody can understand, and whom nobody is worthy to sympathize with. All that is flimsy—so morbid—so thoroughly un-English."

"You don't know Mrs. Dalton," exclaimed Edith; "you were only introduced to her a fortnight ago, and you have never sought her society, so that you *cannot* know anything of her character. Where is the Christian charity, pray, in deciding against her without reason in this manner?"

"But I have reason," retorted Frank, "and I know her quite well enough—that is to say, I should be very sorry to know her better. I know that she is married to a most excellent man, who doats upon her, and that she does not make his home happy, and tries to make the world believe her to be an interesting victim."

"It is *not* true," cried Edith, warmly. "I wonder, Frank, you can believe such stories. I wish you would have a little more consideration, and remember that you are speaking of my dear friend."

"Your dear friend!" repeated Frank, with that sort of sneer which a woman finds harder to bear than the bitterest taunts—a sneer which seems to imply that her feelings are too worthless and unreal even to be discussed. "And as to the stories not being true, I will just ask you one question. Have you not heard her profess that she never was in love in her life?"

"Well," answered Edith, reluctantly, "but you know that may be true—"

"A pretty speech for a married woman to make, whether true or false," interrupted Frank, bluntly; "and to make to her husband's face, too, as I know she does! However, my dear Edith, don't let us talk about her. Seriously, it annoys me excessively to see the manner in which you are flirting—it is not what I like at all; you are making poor Vaughan in love with you again, and you are positively coquetting with Thornton and Delamaine, neither of whom, I do believe, care sixpence for you in their hearts. I am quite sure, to speak plainly, your behavior is the very reverse of what Everard would like."

There was a tone of authority in this unpleasant speech which rendered it peculiarly galling; moreover, after the unexpected and injudicious attack which Frank had just made on her particular friend, Edith felt less than ever inclined to submission. She replied with glowing cheeks and considerable temper, "I am not a child, Frank, and, I assure you, I can judge better what I ought to do than any man—men are no judges of women. And if Captain Everard thinks ill of me, let him speak for himself—he does not seem in a hurry to do so."

These last words were spoken in a low tone of voice and with face averted. They were awkwardly true, and Frank did not quite know how to answer them; he accordingly renewed his attack in another form.

"I wonder you can tolerate the attentions of such a well-known butterfly as Thornton; he was desperately in love with Lady Emily Rivers two months ago, and to-morrow he will be at the feet of Miss Glamis, the Scotch beauty, who is to be the grand attraction at this ridiculous bazaar. Altogether, Edith, I do hope you will be on your guard at this bazaar, and not make yourself conspicuous."

Edith had recovered her temper, though not her equanimity, and she answered with a laugh—

"Oh, my dear foolish brother, please don't agitate yourself into a virtuous fever about poor innocent me, who never flirted in my life. I shall have to put you on a turban and introduce you everywhere as my *chaperon*."

"Well, Edith," said Frank, sullenly, "a joke is not a reason."

"No, nor a solemn speech either," retorted she; "at least I'm sure it is often the most unreasonable nonsense in the world. The truth is," added she, as if speaking gravely to herself, "he is getting very uncomfortable because he has got nobody to flirt with himself, and so he must needs try to find out flirtations in other people. Never mind, Frank, dear, I'll take good care to occupy Mr. Thornton to-morrow, and you shall have Miss Glamis all to yourself."

Frank *would* not smile.

"You are trying to provoke me, Edith," said he, "but it won't do."

"Won't it really?" replied Edith. "Now, do you know, I thought it was doing very well."

The color rushed into his face as he exclaimed with vehemence—

"I do believe there never was a woman in the

Digitized by Google

world who was not a thorough coquette at heart, and who did not love teasing better than anything else."

"And with that pretty sentiment, which must vindicate with every woman your claim to be judge and adviser-general of the sex—I leave you," returned Edith, forcing a laugh as she ran into the house.

Edith's pride was roused and her temper irritated. She felt all the injustice of her brother's remarks too keenly to feel the justice of them at all. If there was a latent spark of real coquetry in her heart it was roused by his most unwise and taunting assertion that "Mr. Thornton did not care sixpence for her." She felt, moreover, as she had said, that she was no longer a child, and that he was treating her as though she were one. She resolved to show her independence, and she felt secretly certain that Miss Glamis would *not* attract Mr. Thornton from her side at the bazaar on the following day. She told herself that she was *not* flirting—that she was only legitimately enjoying herself—that Lord Vaughan was *not* in love with her, and that Mr. Thornton and she were only forming a friendship. When she thought of her brother's strictures on Amy Dalton, she could not contain her indignation. "It shows clearly," thought she, "how determined he is to find fault with everything that I do, and it would be quite weak to give way to it. But it is not like my own dear Frank—it is quite unkind. I know what I will do. I will tease him *thoroughly* to-morrow morning, by way of a little innocent revenge, and then I will talk to him afterwards and coax him, and make him see that he has been foolish, and that I don't deserve all these terrible denunciations."

Such was the satisfactory result of Frank Kinnaird's judicious lecture; such the mood in which Edith went to her stall at the fancy bazaar!

And where was Philip Everard? And what was he thinking? It is time to inquire.

COLONIZING CAPACITIES OF NEW BRUNSWICK.

THERE is a tendency, says Mr. George Pemberton of Canada, on the part of emigrants to pass from British North America to the United States; and this proceeds from the greater amount of public works carried on in the United States. The experience of the British Provinces, taken by itself, goes to confirm this view. New Brunswick, with large natural resources, is not more contrasted with the United States in the backwardness which it exhibits as to the progress of settlement than it is in the paucity and simplicity of its public works; which are almost limited to indifferent roads. Yet such progress as it has made in the process of settlement has mainly followed the course of its road-making. The subject derives peculiar interest just now from the project of forming a railroad to connect Halifax and Quebec, as a means not only of vastly improving the colony and the whole relations of the British North American colonies, but also of facilitating the settlement of large numbers of laboring emigrants from Ireland. We quote in another part of our paper copious extracts from the report of Lord Monteagle's committee: they will be found to bear out the summary which we proceed to give.

In the year 1844, the number of emigrants into New Brunswick was 2,500; in 1846, 9,500. Of the larger number, about 4,500 passed on into the United States; but still the increase in the number that remained was considerable. No difficulty was felt in providing for the increased number: various employments were brisk in the city of St. John; but the chief source of employment was the grant of £40,000 provided by the local legislature for road-making. The effect of the road-making in a country like New Brunswick, thickly wooded and mostly desert, is striking and instantaneous. By providing immediate employment for the emigrant, it attracts greater numbers to the spot; opening a way into the desert, it enables the settlements to be extended; and the productiveness of the colony is directly augmented. Road-making in New Brunswick forms a very appropriate occupation for the new comer: in the first instance, he is employed in kinds of earth-work with which he is familiar at home; by degrees, in the winter season, he becomes acquainted with the more arduous, more valuable, and better-paid labor of the axe; next he gets to learn and to appreciate the opportunity offered to the actual settler, and, withdrawing from the occupation of a journeyman on the roads, he becomes a settler on the land; making room for others to follow in the same course. The witnesses before Lord Monteagle's committee, whose character and information are beyond question, describe some very prosperous settlements thus formed in New Brunswick. In one case, certain destitute emigrants who established a settlement in 1837 are now the owners of property. And it is interesting to find that the Irishman, removed from his native condition of idle hopelessness to the sphere of colonial industry, becomes as good a settler as any. The Irish settlements are not behind others in prosperity or good order.

The evidence places it beyond a doubt, that if railways were substituted for common roads, the same results would be attained with a proportionate rapidity and on a proportionate scale of magnitude. It is proposed to form a line of railway from Halifax to Quebec, which would pass through part of Nova Scotia, the centre of New Brunswick, and part of Canada. The formation of a railroad on the American plan, for such regions, is by no means a work of such expense as one in England: the timber found and felled upon the spot is laid transversely to the height requisite for the level, and the railway thus goes upon an embankment constructed with the cheapest of materials—the refuse of the clearing. The railway will open a path right through the province, and will facilitate the formation of settlements by its sides throughout its length in New Brunswick; besides the direct employment afforded in Canada and Nova Scotia, the railway will virtually call into living existence the dormant wastes of New Brunswick. It will supply a more certain path for much of the produce of Canada. It will politically bind the North American colonies together, and will strengthen their military tenure. But the point which just now most concerns us is the facility which the railway will afford for the process of settling emigrants from the parent country. We have already seen that the common road-making furnishes the main channel for absorbing about 5,000 emigrants yearly; and Mr. Perley, the government emigration agent of New Brunswick, estimates that if the great trunk railway, with some feeders which are already begun, were carried out, it would furnish immediate employment for 40,000 or 50,000 emigrants within the year, or ten times

Digitized by Google

the number provided for under the present system. This is evidently no extravagant estimate.

But, as Mr. Perley says, "emigration makes emigration;" and such employment on one great work would give an immense stimulus to other employments—to the fisheries of Prince Edward Island and Nova Scotia, to the mineral works of Nova-Scotia, to the shipping and trade of Halifax and St. John, to the agriculture of New Brunswick and eventually of Canada; with the increasing resources of the colony, its own internal process of extending the settlements would advance, its demand for immigrant labor would augment; and, in short, the active prosperity of the colony must advance in such an infinite number of modes and to such an infinite extent, that Mr. Cunard is justified in saying that the great railway might become the primary means of providing for "millions" of settlers.

Be it remembered that this is no mere speculation: certain of the data are fixed. The process contemplated is that which is already seen at work. "Very destitute persons"—"paupers"—from England and from Ireland, have been settled on the land, and have become flourishing colonists within ten years, by the process of common road-making which is actually going on. The rule is, that if you make a road, you furnish work for emigrants, they settle on the land to which the road conducts them, and they flourish as colonists. That process is actually going on in New Brunswick at the rate of 5,000 emigrants a year. But the *modus operandi* is no mystery: it is evident that its extent is only limited by the want of disengaged funds for the purpose of road-making: supply the funds, and you may at once multiply the actual process tenfold. The calculation that, with its great railway, New Brunswick could provide employment, subsistence, and settlements for 50,000 emigrants a year, is perhaps one of the most moderate estimates ever framed.

But New Brunswick, to which we have for the present limited the consideration, is only one out of the large number of English colonies. Fifty thousand a year would be a great addition to the annual relief of Ireland; and it would be provided by only one of England's colonies, under a judicious system of public works as a preliminary to settlement. In the course of analyzing the report of Lord Monteagle's committee, we shall show that other colonies can in like manner contribute to that relief, with immense advantage to themselves. The sole want, then, is some intellect among our officials capable of conceiving and of dealing with these large wants and great operations.—*Spectator*.

OUR FLIGHT WITH LOUIS PHILIPPE.

GIRD up thy loins, old Louis, and look abroad with me.
Nay, shrink not back: I know it; there are sorry sights to see.
'T was but late that with a minister o'er London town I flew,
And now, mine ancient gentleman, I have a flight for you.

I showed him the work of centuries, I 'll show thee the work of years;
He heard the cry of poverty, thou shalt mark a monarch's tears;
I bared for him the hut, for thee I 'll open palace gates;
The fester probed in streets for him, I 'll probe for thee in states.

Up, heavy weight of kingship! Up, hoary weight of sin!
Or must I rip thy pockets, before our flight begin?
No soul with silver freighted, on voyage like ours may go;
No eye that 's sealed with golden scales can see the sights I show.

Out come the ducats tumbling—out come dollar and doubloon—
Now for the five-franc pieces—we shall shoot skyward soon!
Now, down with that dotation; down with it—no good-bye!
We 're right at last! So—clutch me fast! How merrily we fly!

We 've left Paris far behind us—on the broad wings of the breeze—
Those glimmering peaks—Dost know them? Those are the Pyrenees.
Nay, pause not over Burgos; there 's cold welcome from the Cid.
Now southward turn—and lo, where burn the dim lights of Madrid!

Look not askance, but brave a glance at yonder palace room;
Dark all, both hall and heart of him that dwells there in his gloom.
So bravely clad, and yet so sad—so wan—so lonely waking—
And yet no widower is he, but the husband of thy making.

Art thou looking for the wedded wife where wedded wife should lie,
In the bosom of her husband? 'T was the wont in days gone by!
Not there—not there. Trace yonder stair, to a chamber far apart,
Where sits the wife, a widow's life, and a widow's woful heart.

Oh, work well done! Prize bravely won! And where 's the fool to rue it?
Thou hast gained Montpensier a dower, and broke two hearts to do it.
Count up that dower, then add the power, to say nought of the bride—
What man of business reckons hearts on the *per contra* side!

Now, left and right, look through the night—see Fraud and Faction working;
See present jars and future wars in rotten cabinets lurking;
See Lies parade, in stars arrayed, that mock the wearer's features;
See sad Truth—if thou canst see her, through the foul crowd of thy creatures!

And now one look on Italy, that stirreth from her sleeping,
And the Eagle nigh, that, hungrily, for the swoop a watch is keeping;
While France, that, erst, such birds obscene from Freedom's cradle scared,
With fettered hands and blinded eyes stands by, her sword unbared.

Nay, dost thou shake, old monarch? Is there grace enough behind,
To wake thee to a better life, a less ignoble mind?
Oh, if there be! the future 's free, the past may be atoned;
If there be not, woe worth the lot, that the last Bourbon throned! *Punch*.

From the Spectator.

ANTWERP.

THERE is not much of literary expectation now-a-days in a steam voyage to Antwerp and a trip thence to Brussels, even although the journey was made in dead winter; neither has a visit to a monastery of Trappists near Westmalle very great promise to assist in eking out a narrative. *Antwerp*, however, though taking the form of a tour, is not so much a book of travels as a description of a city, with its manners and society. The author, with two relatives, sojourned at Antwerp during the winter season, and had access to the best society of the place. And his book mainly consists of descriptions of balls, evening parties, clubs, and the doings there, with little incidents, and what are called sketches; all done in good taste, without breach of social propriety, and calculated to place the scene and the customs of the people before the reader. To these things are added notices of more public matters, such as fêtes and theatres, open to any tourist, though perhaps observed to more advantage in winter than in summer. There is besides, some of the general matter of a common book of travels in sketches of show places, out-of-door views, and anecdotes of the street or the shop, but having the advantage of that greater *selection* about them which the habitué obtains over the bird of passage.

"Brussels" is a mere sketch of the city, as seen in a day or two—though by a person who did not see it for the first time, extended by some reminiscences of a former excursion to Waterloo. "Westmalle," the Trappist monastery, contains the account of a visit of curiosity made as a claimant of the monks' hospitality. Though limited to some four-and-twenty hours, the author made full use of his powers of observation and reflection, and corrected his first impressions by additional information. The narrative will be found a curious and rather discouraging picture of monastic life in a severe order; but by one who, while he freely admits the uses of the monastic institution, and the benefits that have flowed from it, has clearly no vocation that way himself.

Such topics as these must greatly depend upon the writer. A traveller who visits a country rarely or never trodden by civilized man, has broad and new information to impart, and a story to tell of personal adventures, which derive interest from their matter and novelty, let them be told how they may. The descriptions of buildings, landscapes, sights, and manners which, but slightly differ from our own, and only in style, require more accuracy of perception and nicety of delineation. A common draughtsman will suffice for a new or rare animal; but we require an artist for the ox or the horse, even although it may be French or Flemish. And the author of *Antwerp* is sufficiently artistical for the end he has in view. His mind is vivacious, his manner brisk and pleasant, his composition sustained by vigor and smartness; and though, apparently, accustomed to the pen, he is not a mere writer, eking out his space by labored descriptions or reverie. He also appears a man of society, and what is better, a man of sense, who makes allowances for a difference of forms, and does not set up English, or perhaps *his* English customs, as universal rules, but is content to take the world as it is, and get as much as he can out of it. Hence, *Antwerp*, though by no means an important or necessary book, accomplishes the end the author had in view; which was to present a series of city and social sketches, illustrative of Antwerp and its manners.

Balls and evening parties are a pretty frequent topic. For the reader to understand an occasional allusion, it is requisite to know that partners are engaged and booked with all the care and precision of a banker's account.

"As you enter, a servant gives you a card with directions as to the figures of the quadrilles printed on one side, and on the other the order of the dances in general, as galop, contre-danse, valse—contre-danse, galop, and so forth; and also, on the same side, a table for engagements, as 1st, 2d, and 3d contre-danses, &c.; 1st, 2d, and 3d valses, &c.; and your very important business, if you care about dancing, is at once to engage partners for the whole length and breadth of the ball, and for the contre-danses, vis-à-vis also. If you do not look particularly sharp after this duty, you are certain to languish all night in ignoble idleness, among respectable fathers of families, and *les tapisseries*, as the ladies who immovably line the walls are here called. * * *

"One of the programmes distributed at the Union balls is selected for illustration. It is a large paper ticket, with a flowery border in gold, enclosing at top the words 'Cercle de l'Union,' and within as follows.

'*Engagements.*

Contre-danses.	*Valses.*
1	2
2	3
3	4
4	5
5	*Galops.*
6	1
7	2
8	3
9	4
Valses.	5
1	6

"A lady, young and so forth, is soon engaged for all the dances of the night; and when asked for the honor and pleasure, &c., she will refer to her memoranda of engagements before vouchsafing a reply. Some carry about elegant little books for the purpose, and some use the leaves of their fans. Thus, the proposal assumes quite the character of a matter of business—a negotiation. 'Mademoiselle, may I have honor of dancing the first valse with you?' 'I regret, but it is taken.' 'The second?' 'No—stay; I can give you the fourth, or the third galop, if you like,' &c. &c.;—and the two quietly book the engagement. It was laughable to see a crowd of expectant youths standing round the entrance-door, and eagerly closing upon each young lady as she entered, just as tame fish dart upon a piece of bread thrown into their glass vase, assailing her, books and pencils in hand, with petitions, making their night up, and taking a note of it."

After this introduction to the essential preliminary to dancing, we will pass on from the Philharmonic ball, a sort of public "assembly" or club, to a more private affair.

"After dinner to the party, the first fruits of my letter of introduction.

"We were set down on carpeted steps, under a porte-cochère, and shown into a small room, where ladies' maids and a cheval glass were doing duty, respectively active and passive, and where people deposited hats, cloaks, and swords—swords, because here all officers, as a general rule, appear at all dress parties in uniform. As to hats, many men carry a small chapeau bras into the rooms. A

Digitized by Google

servant inquired our names, and leading us through an ante-room, threw open the folding doors at the further end of it, and announced us at the top of his voice. Just within we found the host with his wife and daughter, all radiant with gracious and welcoming smiles.

"I was handed over to a cousin; who took my arm, and plunged me into the midst of a crowd of some three hundred people; where, with his help, I 'made my book' for the night: contre-danses were still to be had, at a fair price, but valses and galops had been nearly all taken up, and were quite at a premium. A dancing stranger, among so many new faces, called by such strange and unfamiliar names, must use his wits, lest he should forget an engagement, or lose his lady or his vis-à-vis—all mortal offences.

"The rooms had been recently decorated, and this ball was, I believe, intended for a sort of house-warming after the process. There were five of them, and a hall, on the ground floor, en suite; completing the square of the house, so that you could walk through them as long as you pleased, without turning back. They were elegantly and richly furnished, with silk hangings, Turkey carpets, marble and ormolu chandeliers and candelabra. The principal dancing-room was a large square, the walls hung with crimson silk damask, let into panels, with white and gold wood-work and decorations, large mirrors, and a costly marble chimney piece. The floor was of elaborate inlaid work, of various light-colored woods and ebony, as fine as the marqueterie of a cabinet, and polished like glass. The lighting, by a profusion of wax candles, was perfect.

"A crowd of guests, so dense that you could scarcely move, here waited for something to do, and talked as fast and as much as they could in the mean time. At a given signal, the curtains of the centre window of three occupying one side of the room, were suddenly drawn back by an invisible hand, and disclosed the orchestra, in a small pavilion, opening by the window into the room, lined with crimson damask, and lighted by a lamp hanging from the centre of the roof; the effect was very theatrical and pretty. Simultaneously arose the preliminary groans and squeaks of the instruments; and immediately partners were singled out, a space was cleared, and the dancing began. The band-master from time to time shouted out the names of the figures of the contre-danse, and directions for the different parts of them; and he did it in the oddest way, opening his eyes wide as he called out, so that they seemed to be worked by strings tied to his jaws, and puffing out his cheeks, and finally appearing to make a violent swallow of a very large plum, exactly as if he went by clock-work—all the time fiddling away as for dear life.

"One large room was appropriated to card-playing, in which both men and women here indulge most systematically. Ices and other pleasant things were carried about, and we had supper in a suite of rooms on the first floor. It was served out by servants standing behind long tables, as shopmen stand behind counters; and a welcome pair circulated about among the guests, one carrying a supply of champagne, and the other a basketful of long glasses.

"It was a well-managed affair, and the company the best of Antwerpian society—the governor, the burgomaster, the two generals, the *nobles*, as they are called here—that is, the class who with us are titled or untitled people as the case may be, of established family and condition—the consuls, leading merchants and bankers, (many of the grandees here are in some way or other engaged in mercantile pursuits,) and a few of the staff and officers of the garrison. Many of the women are strikingly handsome. We were, I think, the only *English* English there.

"It is the established custom for the invited to fee the servants handsomely on leaving the house; and you are sure to find a major-domo at the door, who receives the five-franc pieces quite as a matter of course."

There is some information about dress in *Antwerp*, with some sensible remarks on class costume; though the suggestions are scarcely practicable in a country where there is no distinctly defined class, and almost every one is striving to pass as member of a grade above his own.

"The most noticeable shops in Antwerp seem to be those of the mercers and lace-venders, the gingerbread and cake shops, the braziers, and the tobacconists. Of each sort there is a great number. The lace-work and silks of Antwerp are celebrated. I once took particular pains to ascertain the precise form and fashion of that most graceful garment the Spanish mantilla, which, or at any rate a modification of it, is in common wear here; and found it to be a piece of rich, stiff, black silk, some three yards long for a short woman, and four for a tall one, cut square at the two ends, and finished there with black silk fringe: it is just simply, in fact, an ample scarf. They fold it—I had a lesson in the art—in width once, and arrange it over the top of the head, a little shading the face, and then the ends hang down in front, nearly to the feet; or they throw it off the head, letting it fall gracefully pendant from the elbows or shoulders. The best of these mantillas, of a stiff, leathery richness of silk, unknown in England, costs about one hundred francs. There is a peculiar cap, too, worn by the women, with large semi-circular flaps falling down on each side of the face, very becoming to many. Over this, some wear a sort of straw bonnet, with a high conical-shaped crown, and a mere apology for a brim.

"The women of the lower orders never wear the thing we call a bonnet—the legitimate, shapeless, unmeaning, hideous bonnet. They wear either the peculiar straw pot I have just described, or clean lace caps, or handkerchiefs bound round the head, or the mantilla. The latter is very common; you see it to admirable effect on figures moving about and grouping together in the streets, or kneeling on the pavements of the churches.

"It has always seemed to me to be regretted that the poorer women of England should have no costume of their own—that they should persist in a draggled-tail and vulgar imitation of the dress of those whom by courtesy we will call 'the ladies of the land,' (a sailor, in a police court, once described a *gentleman* as a man who wore a long-tailed coat,) instead of taking to themselves, as in other countries, a certain distinct *class* costume, which, as it would be worn by the great majority, would be in fact a *national* costume, and which, from the cheapness of its materials, they might always afford to have in clean, seemly, and decent condition. It would be a great saving to them, and a real addition to their comfort. As it is, our servant girls, and the wives of our laborers and mechanics, go about so many shabby-genteel reproductions of the costume of her majesty Queen Victoria: it is the same bonnet, the same shawl

Digitized by Google

and gown, the same toute ensemble—only, in greater or less degree, shabbier, coarser, or worse chosen and put on. The real dignity of the poor woman, let it be observed—and it *is* of importance that her dignity should be maintained—would be much promoted by her adopting a costume of her own.

"Apropos of the dress of womankind in Antwerp, I could fancy that many of the women there retain much of the Spanish blood of the land's former rulers: they are frequently tall and dark, with fine figures, and in their black mantillas look as if they had come from Madrid by the last train. Indeed, the Spanish stamp appears indelible here."

We could easily extend our extracts by passages of a similar kind, or by some of a more solid cast in relation to the grades of society, the siege of Antwerp, or the discipline, mode of life, and appearances of feeling among the monks at Westmalle: but the book is not very big, and we have said and quoted enough to indicate its character.

From the Spectator.

THE WOLCOTT MEMOIRS OF THE ADMINISTRATIONS OF WASHINGTON AND ADAMS.

THE form of this publication is that of the life and correspondence of Oliver Wolcott, the American financial administrator, who served under Hamilton as auditor of the treasury, and succeeded that chief of the federalists in the office of secretary. The main purpose of the book, however, is an exposition and defence of the federal administrations of Washington and Adams, from the formation of the new constitution of the United States in 1789 to the downfall of the federalist party in 1801. In the words of the editor, Mr. Gibbs, "The life of the individual has been made subservient to a wider design—the contribution of materials for the biography of a party." The life of Wolcott up to his connection with the government under the new constitution in 1789 is judiciously brief, though not devoid of biographical traits. From that period till 1801, when Wolcott resigned and the volumes close, Wolcott is, so to speak, a medium or centre for political facts and opinions. His offices gave him official influence and weight, which his friendship with Hamilton augmented; his connection by family ties or friendship with some of the most respectable and patriotic people of the revolution made him the receptacle of the opinions of part of a party; while, though seeming to hold himself aloof from politics, he was a follower of Washington in the abstract, but in practice a disciple of Hamilton, and did as much as he quietly could both in giving and receiving suggestions to forward the party's views. Hence his correspondence contains a large amount of the real opinions of politicians, with, of course, their heats and prejudices. It also exhibits the respectable American federalist character of that day in its most private and unguarded sentiments; and this, perhaps, is the curious if not the valuable feature of the volumes.

The family of Wolcott might rank among the most ancient and respectable in the States. The settlement of his ancestor, a country gentleman, who sold his property and emigrated on account of religion to New England, dates from 1630. Oliver Wolcott's father entered the army in 1747 as a captain, and served till the peace of Aix-la-Chapelle. He then practised both as a physician and a farmer, (a conjunction not unusual in the colonies,) was chosen sheriff of his county, and filled other civil offices. On the breaking out of the war of independence, he became an active leader in military and political affairs; commanded a considerable force at the surrender of Burgoyne's army; was a friend of Washington and other leading men of the revolution; and after the establishment of independence, was annually elected lieutenant-governor and governor of his state; which last office he held at the time of his death, in 1797. His son, Oliver Wolcott, the secretary of the treasury, born in 1760, was educated for the law, and called to the bar in 1781. But want of fortune, and the troubles of the times, threw him into public life, and engaged him in the financial and civil business of the state of Connecticut. The assiduity and ability he displayed in various offices, coupled probably with the family influence, procured him the appointment of auditor to the treasury, when Washington and his coadjutors framed the constitution; and he subsequently became secretary, an office analogous to our chancellor of the exchequer. The private and official correspondence in which Wolcott was engaged, together with his memoranda, drafts of papers, and miscellaneous documents, extend to nearly fifty manuscript volumes. Of these, twenty appear to contain the most valuable and important matter; and from them the contents of the present book have been drawn, so far as they consist of original correspondence.

For after the introductory chapters, the literary plan of the work is a species of annals or commentary. The principal events both foreign and domestic are handled pretty much in chronological succession; the chapter sometimes taking a senatorial title—as "Second Congress, First and Second Sessions," sometimes a seasonal—as "Summer and Fall of 1793;" the events discussed following in the order of their occurrence. Each epoch, or in some cases each question, is introduced with a commentary by Mr. Gibbs, giving the federal view of the subject, and so strongly as to admit neither virtue nor merit among the democratic party, while all that the federalists do or propose is generally treated as excellent in itself and necessary under the circumstances. These general accounts are followed by letters, and occasionally by documents illustrative of the subject which the editors has exhibited; epistles *to* Wolcott predominating in number over those written by him. The authors of this correspondence are various, and with very few exceptions federalists. Some—as Washington, Hamilton, and Adams—are historical characters, familiar to all; others—as Ames, Trumbull, and Rufus King—are known here by name at least; others have no European reputation, though distinguished in their day in America as politicians or influential men.

The American value and objects of the book

Digitized by Google

must be judged of by Americans. To us it seems that the historical value is small; throwing little new light and giving little new information, at least as it relates to Washington's administration. The real subjects of most of the letters are not so much facts as comments upon facts, mingled with reflections upon public opponents, elections and other small business, which, however important to the politicians at the time, have nothing *historical* in their nature, and have now little European interest. These, no doubt, are occasionally relieved by epistles of greater weight—especially one by Hamilton *advising* (for in his retirement he seems to have acted as government adviser) the topics and mode of addressing the French government during the misunderstanding that had nearly led to a war with France; which gives a high opinion of his diplomatic skill and prudence. The whole collection, too, has more readable interest than might have been supposed, owing to the reality of the matter, and the sober, sensible views of the writers, although often impregnated with party feeling. For the reader of American history the book has a further value, in the manner in which he is carried over the principal actions, introduced to the private thoughts and views of the principal actors, thrown off very often at the moment of conception, and is carried as it were behind the scenes of the great political drama.

The English interest of the book chiefly arises from the view which it gives of the opinion of the more respectable American public men who conducted the revolution, but were formed under the times which preceded it. We think it is either Abdy or Marryat who remarks that some of the old gentlemen of New England reminded him of the same class at home; and many of the writers in these volumes leave a similar impression upon the mind. There is about them an antique stamp, such as called forth the admiration and exclamation of the later Romans, "O *prisca* fides!" Republican themselves, perhaps from an independent dislike to have subjects ruling over them, they have a deep aversion to theories of liberty, abstract rules of government, or "rights of men;" considering experience, circumstances, and national character, as the given conditions of modes of rule. They had no abstract objection to kings and nobility, no affected contempt for them, or mouthing abuse. Respecting themselves, understanding their position, and their (pecuniary) mediocrity of fortune, they had none of the envious and insolent swagger of the modern demagogue; whom, indeed, they would have hated with that intensity which is always bestowed upon only schismatics. Well read in politics, apparently in the school of Burke, and bringing reflection and a practical knowledge of affairs to the aid of reading, their views of the condition and prospects of Europe, during the height of the French revolutionary war, are frequently curious from their judgment; and the predictions sometimes remarkably sagacious. To these sound and respectable qualities of public men are added freedom in familiar intercourse, subdued in some by a formal kind of politeness, with much worldly sagacity and prudence in the conduct of life. A letter which old General Wolcott writes to his son, (whom, by the by, he always seems to address as "Sir,") on his first appointment in the treasury, is not only a good sample of the old man's character, but contains a rule of conduct which may be applied to many situations in life, as well as to all men in responsible position.

"*From Oliver Wolcott, sen.*

"Litchfield, Nov. 24th, 1789.

"Sir,

* * * *

"Old age is very apt to be vain in giving advice. No one, I believe, of your years requires it less, as you have been long conversant with people of almost every condition, and very readily investigate the principles of human action; yet I will indulge myself once, and, which I shall probably never think it necessary to do again, advise you that in every matter of consequence you depend, in the last resort, upon your own judgment rather than upon that of any other. In this mode of conduct you will less frequently err. It will induce a stricter habit of reflection, and if you mistake, you will not feel the mortification of being misguided by such as may have an interest in deceiving you. The executive officers with whom you will have most intercourse will, I believe, be inclined to treat you with generosity and frankness, from the first magistrate downwards. An open, unassuming behavior will be most agreeable to them; this naturally induces confidence, and may be done consistently with such reservation as may be necessary. It is generally said that courtiers always act in disguise. This is far from being universally the case; and when it is, it is more generally owing to their situation than choice, especially among those who are to be denominated good men; to which character I truly believe the first magistrate, and the heads of the executive departments, all of whom I know, are justly entitled. The habits and manners of a soldier are naturally open and frank; and if at any time it shall seem to be otherwise, such conduct will be rather assumed and politic than otherwise.

"Your service will be complicated and arduous; but you will reflect that those who are to judge of your services will be most capable of making a just estimate of them. You may therefore safely indulge yourself with as much exercise and relaxation as will be necessary for your health. Endeavor further to preserve the *mens sana in corpore sano* by yielding at times to a certain vacuity of thought. As to your mode of living, I need say but very little; your habits of temperance will render it unnecessary."

We have met with various accounts of the state of France during the revolution, as judged by external appearances; but the following is the best we have seen, on account of its deductions. It is from the pen of Trumbull, who was in Europe in a diplomatic capacity.

TRUMBULL ON FRANCE, IN 1795.

"You request me to tell you what I have seen. It is not easy, my dear sir, to describe scenes so immense, so various, and so fluctuating. If, therefore, I give you two or three prominent features of the vast whole, you must be satisfied. The state of cultivation is perhaps one of the most interesting points at the present moment. I have crossed the

Digitized by Google

country from Havre de Grace to Basle, through Paris, by one road, and returned by another; and in all the distance I see nothing that marks a neglect of agriculture, or a want of hands to labor; on the contrary, the earth is covered with all the usual variety of crops, all promising abundance, if the approach of harvest be warm. Up to the time that I left the country, we had too much rain and cold, which have extended also to this country. Another circumstance struck me forcibly; I mean the very few beggars I met with. Formerly, whenever a carriage stopped to change horses it was surrounded by half a dozen, and often by a whole one, of miserable objects who assailed you in the name of God, and whose appearance bore but too forcible a testimony to the justice of their fervent applications. I have now passed many, very many post-houses, without meeting a single mendicant. This and some other observations convince me that the condition of the lowest classes of society is improved, perhaps as much as that of the rich is declined; so that, with all the horrid scenes which have passed, and all the accumulation of wretchedness which has overwhelmed the upper orders of society, I am disposed to believe that the sum of human happiness has rather increased than diminished. This, to be sure, is no apology for those who have drenched the cities in blood; and we can only regard them as we would a pestilence—as horrid instruments in the hand of Providence to scourge, and ultimately to purify, the corruption of men. Again, I have seen the city of Paris exhibit an example of patient fortitude, which I did not expect from such a mass of ignorant and profligate people. I have seen them week after week receive the miserable pittance of *two ounces* of bad bread to a person a day; and support this privation with fewer instances of riot, impatience or murmur, than you would have expected from a race of philosophers."

The late plea of the Philadelphians for the non-payment of their debts was, that the foreign settlers, chiefly Germans, outnumbered the "drab-colored men." From various passages in the correspondence it would seem that the Philadelphians did not rank very high half a century ago. The following is a sketch of them by Wolcott, junior, in a letter to his father. It must be remembered that it was not only a new government, but a new constitution that was just set up and had to work.

"The indications of the public sentiment with respect to the new government are very equivocal. The northern states, and the commercial and money-ed people, are zealously attached to it. The state executives and officers cannot be considered as good friends; many of them are designing enemies.

"This state, [Philadelphia,] though very officious in obtruding their opinions, will have but little influence. The power and respectability which persons not acquainted with their affairs attribute to them, is ideal. A great portion of the members are ignorant men; they are collected from all nations under heaven; many have smarted under the scourges of European tyranny, and act under the influences of old prejudices and habits, though their present condition is entirely different from any which they formerly experienced. Zeal for liberty, the principles of which they do not understand, and envy of abilities and industry which they cannot emulate, induce them to raise objections to every measure of government. If they were a compact, uniform body of people, governed by the same passions and sympathies, and had their present disposition to advise, they would be formidable; but the desultory projects of Quakers, Tories, Anti-Feds, [Anti-Federalists,] Germans, and Irishmen, who mutually despise and hate each other, will be insufficient to overcome the great and substantial influence of property and reason in this state."

The following passage is not only curious for its general spirit of prophecy, singularly fulfilled by the event, but exhibits what seems to have been a *dumb* feeling in the respectable part of American society, at a time when in this country, and probably throughout the world, Americans were supposed to be animated by the fiercest opposition against Great Britain, and desirous of her downfall. There was a doubt at the time whether America might not have been driven to hostilities with France, on account of the intrigues and insolence of the directorial government and agents.

G. CABOTT ON ENGLAND AND FRANCE.

"But after all, my greatest reliance is that Great Britain will keep the monster at bay until he destroys himself, or becomes less dangerous to others; and I cannot believe that any vicissitudes in the internal affairs of England will sensibly diminish their naval strength, or divert its application, as long as France remains formidable. England certainly possesses abundant means of every kind to defend herself against France and as many of the powers on the continent as France can compel to act as auxiliaries. I shall not believe, therefore, until I see it, that England will yield in the present contest. Mr. Erskine, Mr. Waddington, and some thousands of others, will try at every period of misfortune to displace the ministers; but the government, the landed as well as other property of the nation, the weight of character, and essentially the body of the nation, must, and do hate France, and will, under all circumstances, fight France as long as they can. Farewell. G. CABOTT."

In like manner, Burke's letters on the Regicide Peace, were popular with the respectable republicans of America.

CHAUNCEY GOODRICH ON EDMUND BURKE.

"We have received two celebrated letters written by Mr. Burke against the ministry for entering on negotiations of peace. Though but lately put to the press, they have run to the eighth edition. He considers the republic of France as an Algiers in the centre of Europe, with whom the civilized world can hold no communion. Whether he be correct or not in his main point, the pamphlet is full of original sentiment relative to the Jacobins in England, France and the world, highly valuable to every country, and to ours as much as any one. There are but one or two here; I hope they will be soon reprinted."

The text and the original letters in these volumes must be received with allowance, as the representations of writers on a side. Still, with every allowance, they do not show many leading politicians of the "model republic," as any better in its infancy than in its youth—manhood it has not yet reached. Whether Randolph, in 1795, applied

Digitized by Google

to Fauchet, the French ambassador, with the treasonable purpose of fomenting an insurrection against the government of which he was a member, or whether, as we rather think, he attempted to trick the Frenchman out of money for his private uses on a public pretence, it is clear that an American secretary of state applied to a foreign ambassador for funds to be ostensibly used against the ministry of which he was a member. Monroe and other Americans at Paris betrayed, if not their country, yet the government they were serving, for party objects. Mr. Gallatin and some others were untainted by mercenary baseness, but they allowed faction to carry them on to treason; and as for the respectability of smaller men, here is a picture of the "just men" of one city.

PUBLIC CHARACTERS OF PHILADELPHIA, 1796.

"*Chauncey Goodrich to Oliver Wolcott, senior.*

"Philadelphia, Dec. 13, 1796.

"I place under cover to Frederic, a paper of yesterday, in which you will find Governor Mifflin in his address has done the government of Connecticut the honor of particular mention. It merits and I presume will meet only with contempt. A few days after this display of patriotism and a holy zeal against speculation, the president and cashier of the State Pennsylvania Bank had been guilty of an embezzlement of its moneys or malversation. The president had by connivance taken from the bank one hundred thousand dollars and more, without consent of the directors, which, though charged, he kept without interest. He and the cashier are both displaced. It was yesterday rumored that Governor Mifflin, whose son-in-law was cashier, had in the same way taken fifteen thousand dollars, and that he had given his security for restitution. I believe the story; but a few days will make it more certain, and in the mean time no mention need be made of it. This place furnishes indication of great depravity. Bankruptcies are frequently happening. Mr. Morris is greatly embarrassed. 'T is said that Nicholson has fled to England; that Judge Wilson has been to gaol and is out on bail. But there are so many rumors I vouch for the credit of neither. Blair M'Clenachan, lately chosen representative, has conveyed his estate to his children, to cheat his creditors."

The volumes are well edited, with good tables of contents, and an elaborate index. The historical commentary is also done with knowledge, clearness, and strength; though too strongly impregnated with federalist party views to be taken as an impartial account. Mr. Gibbs appears to have the federalist accomplishments as well as their feelings. The following opinion on American independence may be taken as an example of his style on the larger subjects.

"The character and objects of the American war have been often strangely misapprehended. It was in truth what Burke termed it, not a revolution, but a revolution prevented. It was simply the exercise of the power inherent in the organization of society to resist the enforcement of authority inconsistent with its well-being. It was in the outset a revolt, based on the same principles, advocated by the same men, as those which had distinguished and maintained that against Charles. The course of events made it, indeed, a war of independence; but there was in its tone nothing revolutionary, nothing subversive of the established order of things. Some leaders, more far-seeing than the rest, had predicted the result; but what the people wanted, what they took up arms to get, was not some new privilege, some new liberty, but the security of rights, privileges, and immunities, which they had always had. Once committed, they were indeed driven to independence for safety's sake. Even the abolishment of royalty they had not originally intended; for abstract royalty, with three thousand miles of deep water between it and them, troubled them little, so only that they had their own legislatures, and were taxed by those alone. What we find in their speeches, what we read in the writings of those days, has much about birthright and inheritance, charters and the privileges of English-born subjects, and very little about the rights of man. The little of this that came in afterwards was not of native growth, nor indigenous to the soil. New England, the New England yeomanry, the representative of that stubborn orderly race of resistants which had laid the foundations of Old England's liberties, was little given to speculation. Certain definite and distinct ideas the people had touching rights which were the privilege of Englishmen everywhere, and in their view not necessarily the privilege of any other nation; indeed, they rather claimed the exclusive monopoly of them. To maintain these as their inheritance they considered due to their posterity; to maintain them their fathers had cut off the head of one king by sentence of a high tribunal and had deposed another by act of parliament; to maintain them still they were ready to rebel against the usurpations of the throne, or if need be of parliament itself. The doctrine of the divine right of kings was exploded even in England. One protector and two dynasties of monarchs had reigned by divine right of parliament. The principle that government was intended for the good of the governed, was to them self-evident; the consequence, that the governed were to prescribe how it should be exercised, was equally plain; and the attempts of parliament to violate the principle were subjects of resistance as well as those of the throne. This it was that they fought for, and in this there was no revolution—the revolution came afterwards.

"Democracy as a theory was not as yet. The habits and manners of the people were, indeed, essentially democratic in their simplicity and equality of condition; but this might exist under any form of government. Their governments were then purely republican. They had gone but a short way into those philosophical ideas which characterized the subsequent and real revolution in France. The great state papers of American liberty were all predicated on the abuse of chartered, not of abstract rights. The complaints against government were of violation of these."

Digitized by Google

THE BANK ACT OF 1844, AND THE QUESTION OF PRIVATE BANKING.

THE remarks of the *Spectator* last week on the government of the Bank of England have been the subject of a misinterpretation in some journals, which is now common whenever the purely banking concerns of that corporation are alluded to. With the complaints which have lately been urged against the efficiency of the bank directors, the act of 1844, known as Peel's Bill, can have no possible connection: yet these complaints are incessantly misconstrued by the opponents of that bill into an admission that the bill is defective. Now, it must be borne in mind—and it cannot at the present juncture be too distinctly impressed—that the bank act of 1844 did not profess in the slightest degree to interfere with the operations of private bankers, or to protect the public against such evils as might arise from an injudicious management on the part of those firms. It professed, certainly, to furnish by its action an index by which the private banker *might* always regulate his concerns with safety; but it did not and could not pretend to guarantee that to this index he would attend. The sole duty of the bill, to which Sir Robert Peel pledged its infallible performance, was that of maintaining, in all times and under all circumstances, the convertibility of the bank-note: and that it has failed to fulfil this function no one will pretend to assert. For the first time, perhaps, in our commercial history, we have witnessed a pressure of the severest character both with regard to its protraction and its extent, without hearing one word of apprehension that, even when it shall come to the worst, the solvency of the issue department of the Bank of England can be placed in danger: and thus we escape an evil which if it were added to the distress that now prevails might plunge the nation into almost hopeless ruin—namely, the combination of public with private discredit. It is the management of the banking department of the Bank of England that has alone been called in question: and over this the act of 1844 has no more control than it has over the affairs of the London and Westminster Bank, or of Jones Loyd and Co., or Glyn and Co., or any other private establishment. As far as the question of management is concerned, it is as it bears upon this department alone that reform is needed; since the issue department is happily self-working, and it is out of the power of the bank court, or of any body of individuals in the world, to disturb or to avert its operation. During the whole of the spring, when warnings were daily given, not only by the press but by the rapid efflux of bullion, the bank directors poured forth money from their till in increased abundance, just in an inverse ratio to the degree in which the operation of Peel's bill was restricting their legitimate means of pursuing that course; and that this madness was checked at last, was owing solely to their having arrived at that point at which their self-acting monitor could no longer be disregarded. But this course might have been pursued by Jones Loyd and Co. just the same as by the bank, if the partners had been afflicted with similar infatuation. They might have parted from the money in *their* till with increased freedom just as it was becoming more scarce; and so might all the other private bankers of the country: and that they did not do so, is simply owing to the fact that they had the ability to observe the signs of the times, and to conduct their affairs like prudent men. Even now we see, however, that the Bank of England has not learned its lesson; since it was only on the 2d of last month that it absolutely lowered the price of accommodation at the very time when its means were again undergoing week by week a most rapid diminution, and when everything indicated that this diminution must steadily continue until the gigantic speculations by which it was occasioned should be finally arrested; the consequence of this system of mismanagement being, that when a crash ultimately arrives, the bank, instead of being in a position to interpose by timely aid, is the chief actor, (as was again exemplified on Thursday and yesterday,) to add to the general embarrassment by adopting stringent and hurried measures for its own protection.

What the public now demand is, such a reform in the direction of the bank as shall introduce men at least capable of understanding that first principle of business which should prompt a trader to regulate the price of his commodity by the existing demand for it; and also shall secure that the parties selected should be *men of known solvency*—which would probably be the case if their election depended on the proprietors. The arguments for the appointment of a permanent governor rest upon matters of convenience which must be obvious to all; and the only interest that the government can feel in the arrangements must be such as arises from the fact that the issue department is connected with the bank, together with the fact that this corporation is the private banker of the state. Owing to these circumstances, the national repute is liable to be compromised by the utter want of commercial stability which has been manifested during the last twenty years among the directors; and it is on this ground, above all, that the intelligent public call for interference.—*Spectator*, 2 *Oct.*

THE INSOLENCE OF SERVILITY.

THE servility which pursues individuals of the "distinguished," "exalted," or royal classes, to record their minutest and most trivial actions with painstaking elaboration, is a very low and base instinct at all times; ridiculous at the best, sometimes disgusting and defiling. There is mixed up with it a spirit the very reverse of reverential. It can be no genuine reverence which dogs the footsteps of kings and princes to note every paltry movement and make a wonderment of every remark, as though it were surprising that a prince should have his faculties about him. A royal count cannot visit a factory and make an intelligent observation, but that coryphæus of footmen the court newsman repeats the saying with applause, as nurses do when a baby begins to predicate truisms about its pap or its toys. The homage, we all know, is paid to the "exalted station;" but there must after all be something very humiliating to the most hardened recipient of such homage in the gross disparagement which it implies of the individual. A sovereign has senses like other men; if you tickle him he will laugh; if you show to him suffering humanity he will grieve; if you exhibit before him good feeling he will be pleased, and will express his pleasure in suitable terms. But these consequences are matters of course. The exalted personage behaves as all persons of sense and decent feeling would do; and if you express wonder at the fact, you must suppose an exalted person to be something below human nature. You are regarding the crowned creature with the same feelings as the curiosity-hunter who admires an elephant or a

Digitized by Google

monkey for behaving "so like man;" and while you worship that person whom you seek to exalt by your wonder, you debase him by its implication, and are yourself degraded to the level of those who make idol-deities of inferior animals—the monkey worshippers of Japan, or the ox-adorers of Egypt.

Sentiments so low cannot exist without displaying their vileness in some direct form. Let the sycophant forget himself, and he becomes the most sordid of libellers. "No man is a hero," says the moral sceptic, "to his valet-de-chambre." "No," replies the truer moralist, "perhaps not to a valet-de-chambre." The sneer degrades, not the hero, but the utterer, and stamps him with servility: it betrayed the soul of a footman.

So the chronicler that waits upon the footsteps of the exalted, and humbly enumerates every gracious smile upon his tally, must needs have his moments of sombre scepticism and irreverent discontent. Nothing then is sacred from his irreverent familiarity. The royal countenance, which has shined perhaps with too much tolerance upon his sycophancy, is watched with cold stare and insolent outspeaking when it does not smile. On the queen's return from Scotland, one of these royalty-hunters thus ventures to indulge the wandering of his cross-grained imagination—

"When her majesty alighted from the carriage, she took hold of the Prince of Wales with her left hand, and, drawing her mantle closely round her, proceeded down the quay; Prince Albert walking on her right, and carrying an umbrella above her to keep off the rain. The princess royal was conducted to the boat by one of the royal suite. As the royal party passed along, Prince Albert acknowledged the cheers with which they were greeted; but her majesty's countenance bore none of that joyous look which she sometimes exhibits; and upon the whole, whether from indisposition, the rough sail she had had that morning, or the inclemency of the weather, she seemed very indifferent to the manifestations of her subjects' loyalty. She was handed down the stair and into the barge, which was waiting to convey her to the Black Eagle, by Mr. Campbell of Auchindarroch, who likewise lifted the Prince of Wales and the princess royal into the barge. At this time it was very wet; and the protection of the umbrella being temporarily withdrawn while her majesty was stepping on board the barge and seating herself, the rain dashed upon her face, and seemed to create a feeling of discomfort in the royal mind, if we may be allowed to judge from the expression of her countenance."

As if a face that confronted beating rain ever did wear any look but discomfort! There is something doltish in the wonderment this time. But even if the expression of "discomfort" had been of a less purely physical kind, what right has any one to watch over the countenance of another, however "exalted," in order to note every passing shade? What warrant is there for translating every vague expression, and putting upon it the bad construction of vulgar disparagement? Are all minds so much alike that we can understand each other's feelings, precisely, by looks and gestures? Above all, what man of decent manly feeling will fix his stare upon a woman, of whatsoever station, if he merely supposes that her mind is ill at ease?

But the courtly newsman has a twofold right—the born right pertaining to a mean nature, which is "rather his misfortune than his fault;" and the right conferred by the toleration of the "exalted," whose presence he so often outrages.—*Spectator.*

THE BOTTLE-IMP OF IRELAND.

THE anti-rent movement in Ireland is neither a new occasion for alarm, nor new in its cause, or even in its substance. It is only a new shape in which *the* evil of Ireland displays itself—the redundancy of the population.

That evil is like the last article to be packed into the traveller's carpet-bag—the thing too much, that will not be squeezed into the space: reädjust the "traps" how you will, you cannot contrive to get that one in; whether it is your dressing-case, your clothes-brush, your shooting-shoes, your sandwich-box, your portable bootjack, or whatever else you may in turn leave out in the vain hope of poking it in at the last, there it stands, identical in the one material attribute of being *the* thing *de trop*—the realized excess.

So it is in Ireland: her population is redundant as compared with her land and capital, and the redundancy makes itself apparent in various shapes—the two and a half millions of beggars, the feverish emigration, the potato-diet, the famine, the public works, the excessive poor-rates, the anti-poor-rate agitation, the Ribandist hold of pauperism on the land, the landlord clearances, the anti-rent agitation. These are only so many different forms in which the one redundancy of people exhibits itself and its morbid working.

Some of these manifestations are immediately caused by the effort of the redundant people to make the most of the deficient land—such as the potato-diet; some by the effort of the miserable wretches who are extruded to retain a grasp upon the natural source of food, the land—such as the Ribandism, the beggary, and the anti-rent; some by the effort of the landowners to counteract that convulsive pauperism by shaking off the grasp—such as the clearances. But whatever the immediate shape of the tumultuary movement, it is only one symptom of the common disease.

The remedy is obviously to restore the balance in the three elements of national prosperity—introduce more capital, or extend the productiveness of the land, or diminish the people. Easier said than done. Capital will not venture into the region while it is so turbulent. Agricultural systems cannot be altered while the redundant population covers the land, any more than you can take up the carpet in your parlor while the whole family is at breakfast. It only remains to diminish the redundancy of the population by depletion. Get rid of that oppressive burden, and you may then so alter the state of matters as to extend the productiveness of the soil, and admit capital to a peaceful reign over universal prosperity. But until you remove the people who are starving because they are *de trop*, and are savage because they are starving, you will have neither quiet nor room for the effectual amelioration of the country. Ten to one, if you carry in food, the people will attack your messengers, as they have done the relief-officers; or if you were to bring capital, they would probably make a foray upon it, as the new pirates of the west coast did upon the corn-ships. A country with two millions and a half of souls whose redundancy is fatally marked out by their periodical destitution, *cannot* be still while you cure it and reärrange it. You must get rid of the immediate and exciting cause of irritation before you can apply constitutional remedies.—*Spectator*, 25 *Sept.*

From the Spectator.

MR. FRANCIS' HISTORY OF THE BANK OF ENGLAND.

If, in the history of a nation, where actions and the actors are the first things that attract attention, and admit of, if they do not require, narrative or dramatic exhibition, the principles that lurk beneath the narrative, causing events and stimulating persons, ought to be clearly evolved, how much more is this exhibition necessary in subjects that partake of the character of science, where the principle is all in all? An extraordinary criminal, a remarkable suit, a particular decision, or an eccentric clerk of court, may be fitly introduced when they illustrate a law, or, sparingly, as a relief to drier matters. Such things, however, by no means form a history of law; any more than gossipy particulars or curious anecdotes of philosophers form a history of philosophy, even if garnished with some loose accounts of the facts of their discoveries, while the principles embodied in the facts remain unobserved.

From the connection of the Bank of England with the government, its long monopoly of the power of acting upon the circulation of the country, and the principles illustrated in almost every great financial question with which it has been involved, the history of the bank would seem imperatively to require a full exposition of the principles of currency, such at least as they appear to the historian, with an endeavor to show at each great crisis how far the conduct of the directors was influential for good or for evil, and how far their decisions were guided by true principles or by *any* principles. How Abraham Newland "cut up," and the means by which he gained his money —the adventurous arts and frauds of Price, the once celebrated forger, with his anticipation of Jack Ketch by hanging himself—the forgeries and execution of Fauntleroy and others—the rush and crush at the doors of the bank when popular loans were to be subscribed for—with biographical notices of governors and directors—are all well enough as gossip, but by no means fitting topics to occupy a prominent place in a professed history of the Bank of England. The formal statistics of the subject—the amount of capital at various times, the terms on which the successive charters have been granted, the prices of bank stock, with the dividends thereupon, and the bonuses given to the proprietors, as well as the various runs the bank has encountered, and the financial crises or panics in which it stood conspicuous—are topics more germane to its real history. Still, they are the superficials of the matter. The economical condition of the country at the last-named occurrences—the causes which produced them—how far they were inevitable, or to what extent they were owing to the conduct of the public—the course which the directors pursued, and the results, with the principles to be deduced from their conduct and the circumstances of the case—are the animating soul of a history of the bank, while the most important of the other points are at best but the body.

This animating spirit will not be found in the pages of Mr. Francis. It is not that his economical views or his currency doctrines are good, bad, or indifferent: he has none. The currency question scarcely seems to have exercised his thoughts; and when on great occasions—as the suspension of cash payments in 1797, their restoration by Peel in 1819, or the panic of 1825—he cannot well avoid the subject, he either pins his faith to some authority, (mostly the bank directors for the time being,) or takes refuge in the truism "that much may be said on both sides;" or if venturing any view of his own, he arrives at the conclusion of the politician in the farce, "that as near as he can guess he cannot tell." A similar want of financial vocation attends him where facts or regulations are in question. He generally quotes statistics, laws, &c., from others. In what may be termed financial events, he looks less to the externals than to the outside. The anxious crowds demanding their money in a panic, or the equally anxious dupes demanding permission to subscribe theirs in a mania, are the things that attract his first attention; as some personal characteristics are what he chiefly regards in individuals. Mr. Francis is all for the visible and tangible—the spirit of events is beyond his ken.

We need scarcely say that those who look for a scientific or statistical history of the Bank of England will not find it in these volumes. The volumes have, however, a merit of their own: they are readable, and even interesting—more so, indeed, than might be expected. They bear about the same relation to a philosophical history of the bank, as the anecdotical accounts of Mr. Heneage Jesse do to Hume's or Lingard's England. Courtly, or literary, or personal gossips, are numerous enough: Mr. Francis is a bank and business gossip. Had he been born at the Conquest and lived till now, and been disposed (a bolder supposition) to cut his reminiscences very short, he might have told his listeners just such a story as he gives his readers, about the persecutions of the earliest money-dealers, the Jews, and, after their expulsion, of the Lombards; how Gresham borrowed money for the Tudors; how Charles the First seized the deposits in the mint; and Charles the Second shut up the exchequer; the style in which the old goldsmiths did their business; how *the* bank first opened at Grocer's Hall, and what a poor place the then youngish old lady had in Threadneedle street when she first set up there; what a precious squeeze there was in the Rue Quincampoix when Law was distributing the shares in the Mississippi scheme; how "the quality" as well as the citizens thronged to Broker's Alley and jostled each other during the South Sea mania; how the Frenchmen did jabber and gesticulate, when, instead of gold for their notes, they read a decree of the regent "suspending the payment of them till further orders;" how John Bull roared for parliament to pay and punish, when

Digitized by Google

he found himself *done* by the bursting of the South Sea bubble; how cleverly the bank in the '45 managed to stave off stoppage by paying notes in sixpences to their own agents, who took the silver out of one door and then came back again with more notes to repeat the process, so that the public could never get near the counter; and what a sound view that practical man Mr. Thornton took of the war and invasion panic in '97, and the consequent bank restriction, when he declared the demand for gold was caused by the "*want of notes*, and not of guineas," and that if the bank had been more liberal in their discounts and in their issues of paper, people would not have run for gold!

There are better, or at least more statistically informing things in the volume, than mere gossip. The story of the bank so far as charters and accounts go may be found there; not very complete, or simply narrated, but still with facts, and facts of value from being brought together. The author has also dug up many curious particulars of the early state of the bank and its struggles, when goldsmiths presumed to rival it, and could even contemplate its ruin. The following refers to 1715 and the first Jacobite rebellion.

"The feelings of the private bankers towards their great rival do not appear to have been very conciliatory. The same writer (of a pamphlet) says —'I humbly refer to a case recent in memory, of two goldsmiths (knights also, and one of them member of parliament too) in Fleet street, who pushed at the Bank of England at the time of the Pretender's invasion from France. One of them, it was said, had gathered a quantity of bank bills to the value of near 100,000*l.*; and the other a great sum, though not so many; and it was said, resolved to demand them all at once. Let the gentlemen I point at inquire with what difficulty Sir R. Hoare wiped off the imputation of being a favorer of the rebellion, and how often in vain he protested he did it with no such view, and how hard the whigs were to believe him. Sir Francis Child, indeed, carried it with a higher hand; and afterwards pretended to refuse the bills of the bank, but still declared he did it as a goldsmith, and as a piece of justice to himself, on some points in which the bank had, as he alleged, used him ill.' The proposed invasion proved the esteem with which the bank was regarded by those whose good opinion was worth possessing. It was found that the Protestant succession had supporters as ardent as the adherents to the house of Stuart. When the run took place, many, instead of withdrawing their deposits, carried all their cash to assist the establishment. The lord treasurer, Godolphin, who as an astute and able financier felt that the credit of the country was connected with that of the bank, informed the directors that the queen would allow for six months an interest of six per cent. on their sealed bills. Nor was this all: the Dukes of Marlborough, Newcastle, and Somerset, with others of the nobility, offered to advance considerable sums of money to the corporation. A private individual who had but 500*l.* carried it to the bank; and on the story been told to the queen, she sent him 100*l.*, with an obligation on the treasury to repay the whole 500*l.* It is pleasant to read of such chivalrous devotion repaid in so royal a manner. Encouragement such as this gave a firmness to the establishment; and, united with a call of 20 per cent. on the proprietors, enabled the directors to meet their difficulties and preserve their credit."

EPOCHS OF NOTES.

"In 1759, bank-notes to a smaller amount than 20*l.* were first circulated; and the directors commenced issues of 15*l.* and 10*l.*, to meet the necessity experienced by the community. * * * *

"In 1795, the corporation commenced an issue of 5*l.* notes. * * * * * * * *

"The necessity of an issue of notes under 5*l.* being greatly felt by the commercial interest, an act was passed on the 3d of March, 1797, authorizing it; and by the 10th of the same month, notes for 1*l.* and 2*l.* were ready for delivery."

HANGING FOR ONE-POUND NOTES.

"The circulation of 1*l.* notes proved conducive to a melancholy waste of human life. Considering the advances made in the mechanical arts, they were rough and even rude in their execution. Easily imitated, they were also easily circulated; and from 1797 the executions for forgery augmented to an extent which bore no proportion to any other class of crime. During six years prior to their issue there was but one capital conviction: during the four following years eighty-five occurred."

THE TRADE IN "FLIMSIES."

"The odium thrown upon the Bank for the many deaths which have taken place for forgery must necessarily find some palliation in the subtlety of those who entered into the dangerous traffic. It was in truth a trade. The notes were frequently sold at so much in the pound, and, as in the instance about to be related, they were often sent into the foreign market. In 1808, Vincent Alessi, a native of one of the Italian states, went to Birmingham to choose some manufactures likely to return a sufficient profit in Spain. Amongst others he sought a brass-founder who showed him that which he required, and then drew his attention to 'another article,' which he said he could sell cheaper than any other person in the trade. Mr. Alessi declined purchasing this, as it proved to be a forged banknote; upon which he was shown some dollars, as fitter for the Spanish market. These also were declined; although it is not much to the credit of this Italian, that he did not at once denounce the dishonesty of the Birmingham brass-founder. It would seem, however, from what followed, that Mr. Alessi was not quite unprepared; as in the evening he was called on by one John Nicholls, and, after some conversation, he agreed to take a certain quantity of notes, of different value, which were to be paid for at the rate of six shillings in the pound.

"Alessi thought this a very profitable business, while it lasted, as he could always procure as many as he liked, by writing for so many dozen candlesticks, calling them Nos. 5, 2, or 1, according to the amount of the note required. The vigilance of the English police, however, was too much even for the subtlety of an Italian: he was taken by them, and allowed to turn king's evidence; it being thought very desirable to discover the manufactory whence the notes emanated.

"In December, John Nicholls received a letter from Alessi, stating that he was going to America; that he wanted to see Nicholls in London; that he required twenty dozen candlesticks No. 5, twenty-four dozen No. 1, and four dozen No. 2. Mr. Nicholls, unsuspicious of his correspondent's captivity, and consequent frailty, came forthwith to

Digitized by Google

town to fulfil so important an order. Here an interview was planned within hearing of the police-officers. Nicholls came in with the forged notes. Alessi counted up the whole sum he was to pay, at six shillings in the pound, saying, 'Well, Mr. Nicholls, you will take all my money from me.' 'Never mind, sir,' was the reply; 'it will be all returned in the way of business.' Alessi then remarked that it was cold, and put on his hat. This was the signal for the officers. To the dealer's surprise and indignation, he found himself entrapped, with the counterfeit notes in his possession, to the precise amount in number and value that had been ordered in the letter. Thus Mr. Nicholls found his business suddenly brought to a close, and the brisk trade in imaginary candlesticks finished, to the infinite welfare of the public."

The story of the South Sea bubble, though having small relation to the history of the bank, is curious, and even appropriate, for its picture of public mania, without even plausible grounds to rest upon. It has also another aspect of interest, as showing that some of the public writers of the day, as in the case of the late railway mania, distinctly warned the public of the nature of the bubble; but the public then, as now, were not honest speculators, but fraudulent gamesters. To follow this point would lead to greater length than we can afford; but the following is a proof that there is nothing new, in this century, in the way of impudence and gullibility.

"The South Sea Company was a legitimate trade to some of the speculation which arose.

"Schemes were proposed which would have been extravagant in 1825, and which stamped the minds of those who entertained them with what may be truly termed a commercial lunacy. One was for the 'discovery of the perpetual motion.' Another for subscribing two millions and a half to '*a promising design hereafter to be promulgated.*' A third was a 'Company for carrying on an undertaking of great advantage; but *nobody to know what it is;* every subscriber who deposits 2*l.* per share, to be entitled to 100*l.* per annum.' Even this insolent attempt on the credulity of the nation succeeded; and when the arch rogue opened his shop the house was beset with applicants. In five hours 2,000*l.* were deposited in the hands of the projector; and from that day he ceased to be heard of in England. Projects like these enlisted the lowest with the highest. On some sixpence and on others one shilling per cent. was paid; and as no capital was required, the comparative beggar might indulge in the same adventurous gambling, and enjoy the same bright castles in the air, which marked the dreams of the rich and the great. Some came so low as to ask only one shilling deposit on every thousand pounds. Persons of quality, of both sexes, were engaged in these. Avarice triumphed over dignity: gentlemen met their brokers at taverns, ladies at their milliners' shops."

It is said that elderly and very weak-minded people, when suffering under physical pain, often fancy it arises from their position. They cry for change as a relief, and wear out the patience of attendants by incessant alterations of posture, without the slightest benefit. Something like this occurs when rash or desperate speculations infect a community, induce people to embark in adventures without reason and beyond their means, and when they fail, the cause is in anything rather than themselves. Just now the commercial world is suffering from a mania which has embarked an immense amount of capital in railway speculations not likely to yield the promised profit, or any profit, for several years to come. The bank, as usual, has displayed an incapacity to comprehend its position or the principles on which it should act. The corn-trade has engaged in speculations so rash, that it is said dealers have in some cases paid, or rather have undertaken to pay, freights to a higher amount than the commodity is now worth. And in addition to the folly of man, we have just struggled through a dearth, and are suffering from a scarcity of cotton in proportion to the demand. Hence, of course, extensive derangement to commercial men, as well as ruin to gamblers or speculators. People, however, will not admit that *they* are in fault: it used to be the bank—it is now the currency. Yet let us look at some of the results of an issue of paper unchecked but by the necessity of paying in gold. It is a chapter from the panic of 1825.

"The stoppage of the bank of Sir W. Elford, at Plymouth, while it added to the alarm in London, created a melancholy scene on the spot. The people were almost frantic. The holders of notes crossed and jostled each other in all directions. There was literally a whole population, with food in abundance staring them in the face, unable to procure it, as nothing but gold would be taken. Daybreak witnessed the bank surrounded by tumultuous mobs, and the civil power mustered in front. 'A night of fearful omen succeeded to many an unfortunate family.' The run on the Norwich Bank was stopped by the notes of the Bank of England being given in exchange.

"On the 12th of December, the crash which struck terror and alarm throughout London commenced with partners in the banking-house of Sir Peter Pole and Co., which was said to have yielded 40,000*l.* a year for the previous seven years, announcing their incapacity to meet the claims of their creditors. At nine o'clock this stoppage was known, and the exchange was resorted to to ask the cause, and inquire if other houses were in danger. Forty-four country banks were connected with the firm, and the ruin of many was anticipated. The agitation of the city exceeded everything that had been witnessed for a century. The funds fluctuated violently. Rumors of the failures of other firms spread rapidly. On the 13th, an important house, possessed of half a million of undeniable securities, declared, after a most severe pressure, an inability to meet its creditors. On the 14th, a West-end banker advertised that, though compelled to pause for the present in his payments, he hoped to resume on the following Saturday; and in this he was successful. On the same day the distress was increased by the stoppage of two firms, known as Sikes, Snaith, and Co., and Everett, Walker, and Co. The confusion spread; men ran in alarm and dread to draw the balances from the hands of their bankers. Lombard street was crowded with persons waiting in anxious fear or idle curiosity. A few gazers around a door was sufficient to create the destructive rumor that a run was made upon

Digitized by Google

the establishment. But there was no occasion for rumor. The people seemed to anticipate that the bankers kept all their deposits to answer unreasonable demands, and that the expense of a banking-house was maintained for the sole purpose of benefiting the public. Many a firm, of unimpeachable honor and unquestionable solvency, was compelled to bend before the storm. The merchant looked to his banker for support; but all the efforts of the latter were directed to save himself from destruction. The usual channels of credit were stopped, and the circulation of the country completely deranged. Checks came pouring in from all quarters; and it was remarked, that 'the question would soon be, not who goes, but who stands?'

* * * * * * *

"For two or three days the most unquestionable security would not procure money; nor could the public funds be said to have a price. There was no market for bank, there were no buyers of East India stock. It was the opinion of Mr. Huskisson that in forty-eight hours all dealings would have been stopped between man and man except by way of barter. Owing to the difference in the money and account prices of consols, those bankers who were compelled to sell stock to raise cash paid at the rate of 72 per cent. for the necessity."

There is nothing like this now, or any apprehension of it. Numbers of people—large classes of society—are not involved in distress or ruin by men with whom they had no connection, or matters over which they could exercise no control. The trader who has refrained from speculation, or not diverted his capital from his legitimate business to railway schemes, may be straitened, no doubt, in the general pressure; but he is safe Failure is confined to those who have brought it on themselves by their rashness, or to men who have trusted these speculators in the way of business. Solvent and prudent men are secure; upwards of seventy banks are not spreading ruin through the country by their stoppage, involving traders and non-traders in one common misery.

EMIGRANT COLONIZATION AND HOME COLONIZATION.

The population of Ireland is not really redundant—there is land enough for all, if it were properly cultivated; and whether you employ the Irishman in the transmarine colonies or in "home colonies," there is but the one thing wanting—capital. Why not, then, employ him at home, and spare him from exile?

The reason is, that capital is not the only want. England could find the money to cultivate all the lands of Ireland to the highest pitch of scientific culture; but she desiderates the faith, the tranquil order, the very motives of industry. She cannot at a stroke carry those things into Ireland; but it is found by experience that the Irishman can be carried to them, and that he actually finds them in the colonies.

Capital would give the preference to Ireland, for its proximity; but Ireland exhibits the strongest example of that which most deters capital—social disorder, and therefore English capital gives the colonies a preference over Ireland. There are many elements of risk and uncertainty in colonial investments, but colonial chances of profit are proportionate; and, at all events, there is quiet instead of riot—that most certain of dangers to the invester. In Ireland the lands are in the possession of private owners, and of those moreover who cannot abandon a habit of exacting unpayable rents. Speculation in the culture of waste lands at a rackrent would be a joke as wild as the Mississippi bubble. There are exceptions to the rule of grasping landlords in Ireland, and laws might be passed to facilitate the appropriation of waste lands; but meanwhile, lands in the colonies are unowned, or are virtually vacant through the low price of the market. Public works would be ancillary to settlement both in Ireland and the colonies; but in Ireland public works are detested for their uselessness and jobbery; in the colonies they are needed, and are directly conducive to the general wealth. In Ireland labor is weighed down below the point of cheapness—down to listless pauperism, by the overwhelming weight of the two-million-and-a-half destitution; in the colonies labor is at a premium, and the only restriction on its gains is the paying-point of any employment. Many social circumstances conspire to defeat the benefits of home colonization; habit and the force of the general example are overwhelming; whereas emigration wrenches the laborer away from those evil associations, and compels him to "turn over a new leaf:" universal antagonism, the unceasing war of class upon class, breeds distrust, and prevents any faith in anything except class combinations; whereas in the colonies there is no time to get up such antagonism, and what the colonists know of their neighbors is a friendly coöperation in "husking bees" or "building frolics:" in Ireland the past is a history of universal failure; in the colonies, it is a history of unfailing success, attending even on apparent failure; the genius of Ireland is Despair; of every colony we have, it is Hope.

We have not been speculating or theorizing, but rapidly describing the actual experience of the past, and of the present.

But, indeed, emigrant colonization and home colonization are not incompatible; so much the contrary, that systematic emigration would be the best of all auxiliary measures for bringing the waste lands of Ireland into use; it would afford space and air for a new activity; would diminish the turbulence which keeps out capital; would stimulate industry by raising its premium—wages; and would infuse the animation of movement and hope into the Irish breast.—*Spectator*, 2 *Oct.*

PUNCH'S PRIZE NOVELISTS. THE STARS AND STRIPES.

BY THE AUTHOR OF "THE LAST OF THE MULLIGANS," "PILOT," &c.

The King of France was walking on the terrace of Versailles; the fairest, not only of queens, but of women, hung fondly on the royal arm; while the children of France were indulging in their infantile hilarity in the alleys of the magnificent garden of Le Notre, (from which Niblo's garden has been copied, in our own Empire city of New York,) and playing at leap-frog with their uncle, the Count of Provence; gaudy courtiers, emblazoned with orders, glittered in the groves, and murmured frivolous talk in the ears of high-bred beauty.

"Marie, my beloved," said the ruler of France, taking out his watch, "'tis time that the Minister of America should be here."

"Your majesty should know the time," replied

Digitized by Google

Marie Antoinette, archly, and in an Austrian accent; "is not my royal Louis the first watchmaker in his empire!"

The king cast a pleased glance at his repeater, and kissed with courtly grace the fair hand of her who had made him the compliment. "My Lord Bishop of Autun," said he to Monsieur de Talleyrand Perigord, who followed the royal pair, in his quality of arch-chamberlain of the empire, "I pray you look through the gardens, and tell his excellency Doctor Franklin that the king waits." The bishop ran off, with more than youthful agility, to seek the United States minister. "These republicans," he added, confidentially, and with something of a supercilious look, "are but rude courtiers, methinks."

"Nay," interposed the lovely Antoinette, "rude courtiers, sire, they may be; but the world boasts not of more accomplished gentlemen. I have seen no grandee of Versailles that has the noble bearing of this American envoy and his suite. They have the refinement of the old world, with all the simple elegance of the new. Though they have perfect dignity of manner, they have an engaging modesty which I have never seen equalled by the best of the proud English nobles with whom they wage war. I am told they speak their very language with a grace which the haughty islanders who oppress them never attained. They are independent, yet never insolent; elegant, yet always respectful; and brave, but not in the least boastful."

"What! savages and all, Marie?" exclaimed Louis, laughing, and chucking the lovely queen playfully under the royal chin. "But here comes Doctor Franklin, and your friend the cacique, with him." In fact, as the monarch spoke, the minister of the United States made his appearance, followed by a gigantic warrior in the garb of his native woods.

Knowing his place as minister of a sovereign state (yielding even then in dignity to none, as it surpasses all now in dignity, in valor, in honesty, in strength, and civilization,) the doctor nodded to the Queen of France, but kept his hat on as he faced the French monarch, and did not cease whittling the cane he carried in his hand.

"I was waiting for you, sir," the king said peevishly, in spite of the alarmed pressure which the queen gave his royal arm.

"The business of the republic, sire, must take precedence even of your majesty's wishes," replied Dr. Franklin. "When I was a poor printer's boy, and ran errands, no lad could be more punctual than poor Ben Franklin; but all other things must yield to the service of the United States of North America. I have done. What would you, sire?" and the intrepid republican eyed the monarch with a serene and easy dignity which made the descendant of St. Louis feel ill at ease.

"I wished to—to say farewell to Tatua before his departure," said Louis XVI., looking rather awkward. "Approach, Tatua." And the gigantic Indian strode up, and stood undaunted before the first magistrate of the French nation: again the feeble monarch quailed before the terrible simplicity of the glance of the denizen of the primeval forests.

The redoubted chief of the Nose-ring Indians was decorated in his war-paint, and in his top-knot was a peacock's feather, which had been given him out of the head-dress of the beautiful Princess of Lamballe. His nose, from which hung the ornament from which his ferocious tribe took its designation, was painted a light-blue, a circle of green and orange was drawn round each eye, while serpentine stripes of black, white, and vermilion alternately were smeared on his forehead, and descended over his cheek-bones to his chin. His manly chest was similarly tattooed and painted, and round his brawny neck and arms hung innumerable bracelets and necklaces of human teeth, extracted (one only from each skull) from the jaws of those who had fallen by the terrible tomahawk at his girdle. His mocassins, and his blanket, which was draped on his arm, and fell in picturesque folds to his feet, were fringed with tufts of hair—the black, the gray, the auburn, the golden ringlet of beauty, the red lock from the forehead of the Scottish or the northern soldier, the snowy tress of extreme old age, the flaxen down of infancy—all were there, dreadful reminiscences of the chief's triumphs in war. The warrior leaned on his enormous rifle, and faced the king.

"And it was with that carabine that you shot Wolfe in '57?" said Louis, eying the warrior and his weapon. "'T is a clumsy lock, and methinks I could mend it," he added mentally.

"The chief of the French pale faces speaks truth," Tatua said. "Tatua was a boy when he went first on the war path with Montcalm."

"And shot a Wolfe at the first fire!" said the king.

"The English are braves, though their faces are white," replied the Indian. "Tatua shot the raging Wolfe of the English; but the other wolves caused the foxes to go to earth." A smile played round Dr. Franklin's lips, as he whittled his cane with more vigor than ever.

"I believe, your excellency, Tatua has done good service elsewhere than at Quebec," the king said, appealing to the American envoy; "at Bunker's Hill, at Brandywine, at York Island? Now that Lafayette and my brave Frenchmen are among you, your excellency need have no fear but that the war will finish quickly—yes, yes, it will finish quickly. They will teach you discipline, and the way to conquer."

"King Louis of France," said the envoy, clapping his hat down over his head, and putting his arms a-kimbo, "we have learned that from the British, to whom we are superior in everything: and I 'd have your majesty to know, that in the art of whipping the world, we have no need of any French lessons. If your reglars jines General Washington, 't is to larn from *him* how Britishers are licked, for I 'm blest if *yu* know the way yet."

Tatua said, "Ugh," and gave a rattle with the butt of his carabine, which made the timid monarch start; the eyes of the lovely Antoinette flashed fire, but it played round the head of the dauntless American envoy harmless as the lightning which he knew how to conjure away.

The king fumbled in his pocket, and pulled out a Cross of the Order of the Bath. "Your excellency wears no honor," the monarch said; "but Tatua, who is not a subject, only an ally of the United States, may. Noble Tatua, I appoint you Knight Companion of my noble Order of the Bath. Wear this cross upon your breast in memory of Louis of France;" and the king held out the decoration to the chief.

Up to that moment the chief's countenance had been impassible. No look either of admiration or dislike had appeared upon that grim and war-painted visage. But now, as Louis spoke, Tatua's face assumed a glance of ineffable scorn, as, bending his head, he took the bauble.

"I will give it to one of my squaws," he said.

Digitized by Google

"The papooses in my lodge will play with it. Come, Medicine, Tatua will go and drink fire-water;" and, shouldering his carabine, he turned his broad back without ceremony upon the monarch and his train, and disappeared down one of the walks of the garden. Franklin found him when his own interview with the French chief magistrate was over, being attracted to the spot where the chief was, by the crack of his well-known rifle. He was laughing in his quiet way. He had shot the colonel of the Swiss guards through his cockade.

Three days afterwards, as the gallant frigate, the *Repudiator*, was sailing out of Brest harbor, the gigantic form of an Indian might be seen standing on the binnacle in conversation with Commodore Bowie, the commander of the noble ship. It was Tatua, the chief of the Nose-rings.—*Punch.*

Correspondence of the Evening Post.

ROUND TOP, IN THE HIGHLANDS.

MR. EDITOR—Your correspondents have, at various times, called the attention of your readers to the wild scenery of the Catskills, until the view from the Mountain House, the Falls of the Katerskill, and the Clove, are familiar to all. But these writers seem to have neglected entirely the magnificent panorama displayed from the summit of Round Top, and which embraces within its circuit more varied attractions than can elsewhere be seen in the eastern states. To remind the lovers of mountain climbing that there is such a mountain, and that its summit is as accessible as many another whence vastly inferior views are considered as richly repaying the toil of climbing, I have ventured to solicit a little space in your columns.

And here let me remark, that of the two peaks which are observed from the river to tower loftily above their fellows, and which are contiguous, the front one is properly denominated Round Top—the other being High Peak. The former is about two hundred feet the higher, and is 3800 feet above the river. By the country people, High Peak is known as Round Top, and Round Top as the Bluff, from the bold front towards the river. The elevation of the Mountain House is but about 2200 feet.

It was upon Monday, the 4th of this present month, and one of the loveliest days of the season, that two of us were riding up the valley of the Schoharie Kill towards the base of the mountain. A "white-frost" had fallen the preceding night, and, as usual after this visitant, the sky was unclouded, and the sun looked through an atmosphere entirely free from mist and vapor upon the gorgeous covering of these autumnal forests, and upon the delicate frost-work that overspread the valley, coating rock and herb with a garb of diamonds.

By ten o'clock we had arrived at the head of the Plattekill Clove, upon the southern side of the mountain, and here we left our horses under the care of a good-natured Dutch farmer, and girded us to the ascent. We were still a mile from the base, and the summit was perhaps one thousand feet above the road. The western slope of the mountain appeared much the easier of ascent, and we shaped our course thither; but after a half hour's walk through the forest, during which time we had not been able to catch a glimpse of the summit through the dense tree-tops, we found ourselves unexpectedly upon the eastern side, and beneath formidable precipices that almost inclined us to turn back and attempt some other passage. Our walk thus far had not been unattended with exertion, although the ground had been comparatively level, for tangled balsams and low bushes had much impeded our progress.

But as we began to climb the rocks seemed to lose their sternness, and friendly passages opened everywhere. From the first ledge a view far more extensive than that from the Mountain House greeted us, and we could follow the Hudson through a course of more than seventy miles. Continuing on, the climbing became more and more easy, and upon the top of every prominent rock that lay in our course we lingered awhile to delight in the rapidly expanding scene below. Every step opened a wider horizon. Soon we were upon a level with the range of mountains to the south; another climb disclosed a bold range still to the south of these, and at last we stood upon the summit, and looked down, with what emotions may be imagined, upon the great valley of the Hudson, tracing the misty water from Albany to West Point, and noting well the cities and villages that studded its borders, and the silent craft that dotted its surface.

Far to the north, the horizon was confused with the outlines of the Helderberg mountains, which seemed to join hands with the lofty peaks of Vermont. These were lost, in their turn, in the gentle outline of the range of Tahkonic that sweep through Massachusetts and Connecticut, disappearing in the distance of the south. Below, mountain and hill seemed reduced to the same level, and the whole expanse, chequered with wood and field, and threaded by tiny streams, was smiling in the October sun.

The summit covers an extent of two or three acres, and is heavily timbered with tall white spruces. Hence, there is no point from which the whole circular horizon can be seen at once, and for a western view we must look out some other position.

The ground was covered with long green moss, closely enveloping rock and fallen branch. Here and there we noticed the holes of the squirrels, and about them were piled scraps of spruce cones. As no nuts are found upon these mountains, excepting, occasionally, beech-nuts, the red squirrels are forced to look for some other means of subsistence, and in the seeds of these spruce cones evidently find a good substitute. Sometimes we heard the faint whisper of the blue snow-bird, or the lively note of the tomtit, as they were moving hurriedly through the branches; but elsewise, all was still as death.

Upon the western side we found no prominent rock whence we could look above the tree-tops, and for this purpose climbed one of the tall spruces. The scene from this was perhaps more magnificent than that from the bluff, for beneath us lay spread the whole range of the Catskills, ninety distinct peaks, of every conceivable mountain shape. Far to the west they stood in ragged relief against the sky, clothed in intensest blue. Coming eastward, this color varied its shade with every separate peak, until gradually it began to mingle with the painted hues of autumn, and at last we could distinguish the yellow of the beech and the elm, the fiery glare of the soft maple, and the gloomy green of the hemlock.

Down the immediate valley, the Schoharie Kill, one of the loveliest streams that ever wandered from a mountain home, threw towards us its gleam of silver in the declining sun; and towards the north we admired the quiet little lakes that are embowered in the forests near the Mountain House.

If a tower were built upon the summit of Round Top, of such a height as to overlook the trees, a circle of more than one hundred miles diameter would delight the traveller. The expense of such a tower would be trifling, not more than one hundred dollars, for the spruces that grow so luxuriantly in the vicinity would furnish abundant material. The students of Williams' College, a few years since, erected a log building upon the top of Greylock, to the height of thirty feet, and upon this elevated a steeple some thirty more, from which thousands of tourists have enjoyed the most enchanting view in Massachusetts. One man, in less than one week, could cut a path from the summit of Round Top to some one of the numerous roads that lead towards the Mountain House, and such an one, probably, as horses could ascend.

Why will not the enterprising proprietor of the Mountain House see to this, the coming season? The gratitude of thousands that yearly visit the Catskills, and more solid expressions than gratitude, will richly repay him.

I might speak of our descent, and of the wild cascades, and the awful chasm of the Plattekill Clove—the wildest Clove of the Catskills—and I might say a word for the good lady who lives at the head of that Clove, and who delights to welcome the wayfaring and hungry mountain climber—but I have done my errand, and I trust that others will take heed, and learn of these attractions for themselves.

W. H. E.

NEW BOOKS AND REPRINTS.

Mr. Charles H. Peirce has sent us a beautiful volume,—Poetry of Life, by William B. Tappan,—from which we shall be able occasionally to give a page to our readers. We are conscious that our estimate of Mr. Tappan's poetical powers is not impartial—(and should be sorry if it were, after knowing him as a man and as a Christian for many years)—but we always open a volume from his hand with great pleasure. And such is the judgment of the Christian public. Many of his hymns have been incorporated into collections for public worship, and will be sung after all now living voices are silent.

Messrs. Saxton & Kelt are publishing, in monthly numbers, in a quarto form, a very useful work, at three dollars a year, called The American Architect, comprising Original Designs of Country Residences, adapted to the taste and circumstances of the Merchant, the Farmer, and the Mechanic. Each number contains a House; with views, elevations, ground plan, and ornamental work, in several plates; with an estimate of the cost and specifications of the carpenter and mason. And this is so carefully and particularly done as to be of great service to any one who is about to build. He may make his contract with the builder from it, and for the few cents which a No. will cost may save hundreds of dollars. We receive this work with much pleasure.

CONTENTS OF No. 182.

Poetry.—Flight with Louis Philippe, 273.

Scraps.—Short Measure in England, 249; Bank of England, 250; The Bank Act, 280; Emigration and Home Colonization; Stars and Stripes, 285.

The Living Age is published *every Saturday*, by E. Littell & Co., at No. 165 Tremont St., Boston. Price 12½ cents a number, or six dollars a year in advance. Remittances for any period will be thankfully received and promptly attended to. To insure regularity in mailing the work, remittances and orders should be addressed to the office of publication as above.

Twenty dollars will pay for 4 copies for a year.

Complete sets to the end of 1846, making eleven large volumes, are for sale, neatly bound in cloth, for twenty dollars, or two dollars each for separate volumes. Any numbers may be had at 12½ cents.

Agencies.—The publishers are desirous of making arrangements in all parts of North America for increasing the circulation of this work, and for doing this a liberal commission will be allowed to gentlemen who will interest themselves in the business. It must be understood that in all cases payment in advance is expected. The price of the work is so low that we cannot afford to incur either risk or expense in the collection of debts.

From the Christian Observer, [by T. H. Horne.]

HISTORICAL NOTICES OF PSALMODY.

SECTION I.—CHURCH OF ENGLAND PSALMODY.

I. *Bishop* COVERDALE'S *Version of certain Psalms.* —II. *The "Old Version of the Psalms," executed by* STERNHOLD, HOPKINS, *and others.*— III. *The "New Version" of* TATE *and* BRADY. —IV. *Introduction of Hymns into the Services of the Church of England.*—V. *Metrical Versions of the Psalms in the Welsh, Manx, Irish, Mohawk, and Muncey Languages.*

DURING the long and disastrous period emphatically termed "the dark ages," when ignorance and superstition generally prevailed in the west of Europe, the singing of the praises of God was a part of divine worship from which the people were debarred. Not only were the words which were actually sung, composed in a language unknown to the great mass of the people; but the music was so complex that no one could bear a part in it, unless they had studied it scientifically. But at the reformation from the unscriptural and antiscriptural errors and practices of popery in the sixteenth century, the singing of psalms and hymns was revived and revindicated to the people, among the means of grace of which Christendom had been deprived by papal tyranny and usurpation: and metrical translations of the Book of Psalms were composed and printed in the several vernacular languages of Europe.

§ I. *Bishop* COVERDALE'S *Version of certain Psalms.*—The earliest known attempt at rendering the Psalms into English verse, for the purpose of being sung,* is that of the venerable confessor for the gospel, Myles Coverdale, Bishop of Exeter during the reign of King Edward VI.; whose "Goostly Psalmes and Spirituall Songes drawen out of the Holy Scripture," were published, probably in 1538 and certainly before 1539; since they are inserted in a catalogue of books forbidden to be read, which is annexed to injunctions issued by Henry VIII. in 1539.† The first verse of each psalm is accompanied by musical notes, which evidently show that they were designed to be sung: and Coverdale states in his preface, that he had "set out certain comfortable songs grounded on God's word, and taken some out of the Holy Scripture, specially out of the psalms of David," in order to give the "youth of England some occasion to change their foul and corrupt ballads into sweet songs and spiritual hymns of God's honor, and for their own consolation in him."* The psalms thus versified by Bishop Coverdale were 2, 11, 13, 24, 45, 50, 67, 123. 127, 129, (130 of our numeration,) 133, 136, and 147.

§ II. *The "Old Version" of the Psalms.*—The next attempt to versify the psalms in English was made by Thomas Sternhold, Groom of the Robes to King Henry VIII. and to King Edward VI., in whose name nineteen psalms were printed by Edward Whitchurch without date, but most probably in 1549, entitled "Certayne Psalmes chosen out of the Psalter of David and drawen into English Metre by Thomas Sternhold grome of y^e^ Kynges Majesties Roobes."† A second edition, containing thirty-seven "Psalmes of David drawen into English Metre by Thomas Sternhold," with seven additional psalms translated by John Hopkins, was "Imprinted at London by Edward Whitchurche anno Domini 1551." in 16mo.,‡ "Four score and seven Psalmes of David in English metre by Thomas Sternhold and others," were published without date, but most probably in 1561:§ and in 1563 appeared the first complete edition of this version, entitled "The VVhole Boke of Psalmes collected into English Metre by Thomas Sternhold, J. Hopkins, and others: conferred with the Ebrue, with apt Notes to synge them withall. Faithfully perused and alowed according to the order appointed in the Queenes Maiesties Injunctions. . . . Imprinted at London by Iohn Day dwelling over Aldersgate benethe faint. Martins. Cum gratia et privilegio Regie Majestatis, per Septennium an. 1563." 4to.‖

Of the complete version of the hundred and fifty psalms thus published, on weighing the best authorities, we may assign forty-three to Thomas Sternhold; fifty-seven to John Hopkins; twenty-five to Thomas Norton, barrister-at-law, and a coadjutor of Lord Buckhurst in the composition of the tragedy of "Gorboduc;" twelve to William Whittyngham, afterwards Dean of Durham; and as many by William Kethe,¶ both of whom were exiles during the Marian persecution; one by John

* Mr. Wilmot Marsh has printed metrical versions of some ecclesiastical hymns, and of the twenty-third, hundredth, and hundred and twenty-third psalms, in pp. 5—10 of "Biblical Versions of Devout Hymns," (London, 1845, 8vo.,) which were executed in the thirteeth and fourteenth centuries. These versions do not appear to have been made with the design of being sung; but they are valuable, as being specimens of the English language in those centuries.

Pullain, Archdeacon of Colchester,* and one (the second or supplementary version of the hundred and twenty-fifth psalm) by Robert Wisdom.

As it was no difficult task to prevail upon the people of England to prefer plain psalmody, in which they could easily join, to that intricate music which was too refined and scientific for their taste and comprehension, congregational singing gradually found its way into parish churches, although it was not recognized in the rubrics of the editions of the Book of Common Prayer; probably in consequence of the permission given by the statute 2 and 3 Edw. VI., c. i., § 7, "to use openly any psalm or prayer taken out of the Bible, at any due time, not letting or omitting thereby the service, or any part thereof."

On the accession of Queen Elizabeth to the throne in 1558, she found it politic to connive at, if not to permit, the practice of psalmody. One of her injunctions to the clergy, issued in 1559, (which was primarily designed "for the encouragement and continuance of the use of singing" [cathedral music] . . . "in divers collegiat as well as some parish churches" which had endowments "for the maintenance of men and children for singing in the church,") contains a saving clause in favor of "an hymn or such like song . . . in the beginning or in the end of common prayer."† Although this injunction had no legal force after the death of Queen Elizabeth, not having been renewed by any subsequent sovereign, it has generally been considered as a concession in favor of metrical psalmody. It is, however, certain, that metrical psalmody was introduced into the Church of England, either by permission or by tacit connivance; since the accurate ecclesiastical historian, Strype, states that in the month of September, 1559, "began the new morning prayer at St. Antholin's, London, the bell beginning to ring at five; when a psalm was sung after the Geneva fashion, ALL *the congregation, men, women, and boys singing together.*"‡

"1559–60. March the 3d.—Grindal, the new Bishop of London, preached at St. Paul's Cross in his rochet and chimere; the mayor and aldermen present, and a great auditory. And after sermon a psalm was sung, (which was the common practice of the reformed churches abroad,) *wherein the people also joined their voices.*"§

"1559–60. March the 17th.—Mr. Veron, a Frenchman by birth, preached at St. Paul's Cross, before the mayor and aldermen: and after sermon, *they sung*, ALL *in common*, a psalm in metre, as it seems now was frequently done, the custom having been brought from abroad by the exiles."*

The following extract of a letter from Dr. Jewel, Bishop of Salisbury, to Peter Martyr, dated March 5th, 1560, confirms the fact related by Strype—"Religion is now somewhat more established than it was. The people are everywhere exceedingly inclined to the better part. *The practice of joining in church music has very much conduced to this.* For as soon as they had once commenced singing in public, in only one little church in London,† immediately not only the churches in the neighborhood, but even the towns far distant, began to vie with each other in the same practice. You may now sometimes see at Paul's Cross, after the service, six thousand persons old and young of both sexes, ALL singing together and praising God."‡

The version of the psalms by Sternhold and his associates, which had thus been introduced by the royal allowance, was further sanctioned by the convocation of the clergy of the Church of England, at their second session, held Jan. 13, 1562–63, in the Cathedral of St. Paul, before Archbishop Grindal and other bishops; when the hymn, "*Veni Creator*," and the psalm "*Beatus Vir*," were sung.§ As no *prose* translation of that hymn is extant in English, the hymn sung in that convocation must have been the *metrical* version of it, which is found in the "Form of ordering Priests in the first and second liturgies of King Edward VI."‖ And the psalm must have been the first metrical psalm in Sternhold's version, to which the words "*Beatus Vir*" are prefixed in the Latin Vulgate; as they had long before been prefixed to the same psalm in the old prose English translation which is still retained in the Book of Common Prayer.

Although several metrical versions of the Psalms were published with the royal license in the sixteenth and seventeenth centuries,¶ the "Old Ver-

* Pullain "supplied two psalms for some of the earlier impressions; but only one (the hundred and forty-eighth) has been suffered to stand in the general collection."—Drake's Harp of Judah, vol. i., pp. xiii. xiv.

† "Nevertheless, for the comforting of such as delight in musick, it may be permitted, that *in the beginning or at the end of common prayer, either at morning or evening*, there may be *sung a hymn, or such like song*, to the praise of Almighty God, in the best melody and musick that may be devised, *having respect that the sentence of the hymn may be understood and perceived.*"—Bp. ¶ The metrical versions referred to are these:—1. Of Archbishop Parker, published anonymously about the

Digitized by Google

sion" continued to be used in churches until after the restoration; notwithstanding the efforts made during the rebellion, to recommend the introduction and adoption of the metrical versions published by William Barton and Francis Rous; and also of Barton's revision of Rous' version made under the authority of the Presbyterian Church of Scotland. (See a notice of these versions in p. 296, infra.) The best proof, indeed, of the popularity of the "Old Version" among the English nation, is to be found in the fact, that upwards of *thirty* editions of it are known to have been published between the years 1601 and 1650.*

§ III. *The* "NEW VERSION" *of the Psalms.*—The "Old Version" of the Psalms fell gradually into disuse after the publication of "A New Version of the Psalms of David, fitted to the Tunes used in Churches. By Nahum Tate and Nicholas Brady. London, 1696," in duodecimo. It was preceded by a specimen, "printed for the Company of Stationers" in 1695, also in duodecimo, and entitled "An Essay of a New Version of the Psalms of David, consisting of the first Twenty; fitted to the Tunes used in Churches." This "new version" was introduced to the public under the sanction of an order in privy council, by King William III., dated December 3, 1696; which has been printed at length in all succeeding editions, though it has had no legal authority whatever since his decease; and by which his majesty ordered, "that the said new version of the psalms into English metre be, and the same is hereby allowed and permitted to be, used in all such churches, chapels, and congregations, as shall think fit to receive the same."

Although a "second edition, corrected," was printed in 1698, the New Version encountered much severe and (it must now be admitted) not unmerited animadversion: in consequence of which there was published in the same year, "A Breif [brief] and Full Account of Mr. Tate and Mr. Brady's New Version of the Psalms. By a True Son of the Church of England." This (now very rare) tract contains an account of the origin and progress of their work, from which the following particulars are selected.

Though the design of undertaking a new version originated with Messieurs Tate and Brady, who proposed it "between themselves," . . . . . "in a little time it was communicated, and as speedily receiv'd and nourish'd by persons of the highest rank and principal authority in the nation in the Church and State."* . . . . . "When the work was finished, and had passed the censure of his Grace the Archbishop," [Dr. Tillotson,] "and several more of his brethren the Rt. Rev. Prelates, a petition was presented to his Majesty" [William III.] "in council, for allowing the liberty of a public reception of it in all churches, chappels, and congregations;" which petition was accordingly granted.† That no caution might be omitted for bringing this work to maturity and perfection, the translators "invite all their friends, both in city and country, to supervise and correct what was amiss."‡ "After it had thus been corrected by the Bishops, and the Translators' friends," and had "gain'd a publick approbation by his Majesty's Royal Indulgence,"§ it was adopted first in the churches of London and its vicinity, principally through the recommendation of Bishop Compton:‖ and subsequently it was gradually received throughout England, in consequence of the further recommendations of it by the Archbishop of York, and other bishops.¶

One of the most strenuous antagonists of the "New Version of the Psalms of David" was Dr. William Beveridge, afterwards Bishop of St. Asaph, whose "Defence of the Book of Psalms, collected into English Metre by Thomas Sternhold, John Hopkins, and others, with critical observations on the late New Version compared with the Old," appears from internal evidence to have been written between the years 1698 and 1700: though it was not published until the year 1710, nearly, if not quite, three years after Bishop Beveridge's decease.** This tract, however, seems to have produced but little permanent effect, as the "New Version" in no long time was generally adopted in consequence of the royal and episcopal sanctions which it had received.

"The pervading defect" of this version "is that of tameness and monotony of execution, though there are a few beautiful exceptions to this censure;"†† and the fifteenth psalm, the first four verses of the twenty-third, the twenty-fourth, the thirty-fourth, ninety-third, hundredth, (perhaps,) hundred and first, hundred and eighth psalms, verses 69, 72, 168—175 of the hundred and nineteenth psalm, the hundred and twenty-

year 1560;—2. Of Henry Dod, 1603;—3. Of George Wither, 1623;—4. Of King James I., 1631;—and 5. Of George Sandys, 1636. Interesting critical notices of these versions are given by Dr. Drake, in the Introduction to his elegant selection of Versions of the Book of Psalms, entitled "The Harp of Judah, or the Songs of Sion . . . including the choicest Paraphrases, Imitations, and Poetical Illustrations of the Psalms of David;" (London, 1837, 2 vols. 8vo;) and also by Mr. Holland, in his valuable and accurate work, entitled "The Psalmists of Britain. Records, biographical and literary, of upwards of one hundred and fifty authors, who have rendered the whole or parts of the Book of Psalms into English Verse, with specimens of the different versions." (London, 1843. 2 vols. 8vo.)

* Mr. Lea Wilson has enumerated, and concisely described in chronological order, more than thirty editions, printed between 1601 and 1650, in his catalogue of Bibles, Testaments, &c., in his possession.

‖ Bishop Compton's recommendation of the New Version is dated May 23rd, 1698, in which he thus expressed himself.—"I find it a work done with so much judgment and ingenuity, that I am persuaded it may take off that unhappy objection that has hitherto lain against the singing psalms, and dispose that part of divine service to much more devotion. And I do heartily recommend the use of this version to all my brethren within my diocese."—Extract from Bishop Compton's Recommendation prefixed to the folio edition of the New Version, printed at the Pitt Press of the University of Cambridge in 1843.

fifth, hundred and thirty-ninth, (perhaps,) and the hundred and fiftieth psalms, may be indicated as favorable specimens, combining accuracy of rendering with the true spirit of sacred poetry.*

In no long time after the publication of the "New Version of the Psalms," it was found necessary to have a supplement, "containing the usual Hymns, Creed, Lord's Prayer, &c., with the Church Tunes." Accordingly, Messrs. Tate and Brady in 1703 petitioned Queen Anne for "her majesty's allowance of the said Supplement;" whereupon "her majesty, taking the same into her royal consideration," on the 30th of July, 1703, was "pleased to order in council that the said supplement to the said New Version of the Psalms be, and the same is hereby allowed and permitted to be, used in all such churches, chapels, and congregations as shall think fit to receive the same."†

The "Supplement" thus "allowed and permitted," was published accordingly; and a selection of hymns taken from it has received the highest ecclesiastical sanction; having been published for considerably more than a century by the Society for promoting Christian Knowledge, of whose committees all the English bishops are *ex officio* members.‡

The "New Version" of Tate and Brady is now used in most of the churches in England and in Ireland, as well as in the chapels of the Episcopal communion in Scotland, and in the British colonies.§ It has also been adopted by the Protestant Episcopal Church in the United States of America.

As the order in council of King William III., recommending the use of the "New Version" by such congregations as should think fit to receive it, was legally in force only during his reign, the subsequent continued use of it, to the present time, may be accounted for by the two following facts, viz.:

1. The New Version is intelligible throughout. Some portions of it (as already stated) are executed with great felicity, though others are tame, and much inferior to parts of the "Old Version" executed by Sternhold, Hopkins, and others: the style of which last has now become so obsolete, as to be no longer tolerated as a whole. Yet every one who *candidly* examines that version will allow that its "diction has not unfrequently a liquid sweetness and generally a force and grandeur, the effect of which is much increased by its simplicity."*

2. Almost ever since its first publication, the New Version has been (as indeed it still is) bound up with nearly every edition of the Book of Common Prayer, in consequence of its having become the property of the Stationers' Company, by whom —until of late years—it has almost exclusively been published.

By a very long deed, dated December 3d, 1696, (a copious abstract of which is printed in the Gentleman's Magazine for the year 1822,)† Messrs. Tate and Brady "entered into partnership with the Stationers' Company for printing the New Version of the Psalms; the copyright being 'divided into three great allotments of eighty shares each,' and the articles of agreement giving the option of the purchase to one of the three parties." The property has long been in the hands of the Stationers' Company.‡

§ IV. *Modern Introduction of* HYMNS *into the Church of England.*—Highly valuable as the compositions of the sweet Psalmist of Israel confessedly are, as supplying the most considerable as well as most important materials for sacred and ecclesiastical music, and answering purposes which no uninspired compositions can answer; yet it has been long and generally acknowledged that, to a Christian congregation, something is yet wanting in this department of public worship, which (as the present Bishop of Durham§ has truly observed) "in addition to the holy effusions of the Old Testament, may convey that clearer view of God's dispensations, those astonishing hopes and consoling promises, which are supplied by the inspired penmen of the New. For, although, in sublime descriptions of the Almighty, in earnestness of supplication, and in warmth of adoration, the royal psalmist must ever stand unrivalled; yet his knowledge of divine things was necessarily incomplete, because the 'day-spring' had not yet dawned from on high. (Luke i. 78.) Even under the influence of prophetic inspiration, David saw but as *through a glass, darkly*, the saving truths of

* Although the version of Tate and Brady, being designed for the use of members of the Church of England, was not adopted by the dissenters of that day, it may gratify the reader to peruse the following incidental testimony to its value by the learned and pious Matthew Henry. In a postscript to the preface of the third edition of his "Family Hymns gathered mostly out of the Translations of David's Psalms," [by Bishop King, Mr. Barton, Mr. Smith, Dr. Ford, Dr. John Patrick, and Mr. Baxter,] he says:—"I thought it might be acceptable to make large additions, in which I must own myself to have borrowed some lines from *the excellent version* of the psalms done by Mr. Tate, which was not published when this collection was first made."—M. Henry's Miscellaneous Works, p. 706. London, 1830. 8vo.

† Bp. Mant's "History of the Church of Ireland from the revolution to the union of the Churches of England and Ireland in 1801," pp. 260, 261; where the whole of the above cited order in council is printed from the minute-books of the Privy Council.

‡ The "Hymns taken from the Supplement to Tate and Brady's Psalms," form No. 43 of the Religious Tracts dispersed by the Society for promoting Christian Knowledge.

§ In 1831 was published at Barbados in 18mo, "A Selection of Psalms and Hymns from the Authorized Metrical Versions of the Psalms of David, and from the Hymns annexed to the Book of Common Prayer, with appropriate Tunes. Recommended [it is presumed by the Rt. Rev. Dr. W. H. Coleridge, at that time Bishop of Barbados] for the use of the Cathedral and other churches and chapels in the Diocese of Barbados and the Leeward Islands." Among the hymns in this selection, are Bishop Ken's well-known evening hymn, and the beautiful and devotional hymn on the Lord's Supper—"My God! and is thy table spread, &c.," composed by the learned and pious Dr. Doddridge.

redemption and salvation. These truths, therefore, taught as they were by our Lord and his apostles, and illustrated by the great transactions of his life and death, may surely form, in a Christian congregation, as fit subjects for devotional melodies, as the events of Jewish history, and the precepts of the Mosaic law suggested to the Holy Psalmist."

The want of a Collection of Psalms and Hymns, made on this principle, seems to have been felt in the middle and latter part of the eighteenth century, when selections appear to have been first made. One of the earliest, which the writer of these pages has seen, was published at York in 1774. Other selections were introduced about the same time, or perhaps a little earlier, into the chapels of the Magdalen, Foundling, and Lock Hospitals, and of other benevolent institutions in the metropolis: and within the last fifty or sixty years, during which increased attention has been given to the improvement of church psalmody, very numerous collections and selections have been published, which are now used in various churches and chapels throughout England.

The sources, from which most of these selections are derived, are the "Psalms of David imitated in the language of the New Testament," and the "Hymns" composed by the Rev. Dr. Watts, published respectively in 1707 and 1719; the Hymns of the Rev. Dr. Doddridge; the Hymns published at various times by the Rev. Messieurs John and Charles Wesley; the Olney Hymns, composed by William Cowper and the Rev. John Newton; and the sacred compositions dispersed through the works of the British poets of the eighteenth century and of the present time.

Of the very numerous collections and selections of psalms and hymns, now extant, it were invidious to specify any as possessing more than ordinary claims to preference: but the fact may be stated, as showing how much the want of some such selections has been felt, that two collections of psalms and hymns have been published by clergymen who have since been raised to the episcopate, viz., 1. By the Rev. Dr. Maltby, (successively bishop of Chichester and Durham,) while he was vicar of Buckden, in conjunction with the Rev. Messieurs R. Tillard, and J. S. Banks, whose collection was published under the sanction of their diocesan, Bishop Tomline (of Lincoln;) and 2. By the Rev. Samuel Wilberforce, M. A. (now D. D. and Bishop of Oxford,) while he was rector of Brightstone in the Isle of Wight.

In 1835 the necessity of having some authorized and uniform collection of psalms and hymns for the use of members of the Church of England, was brought before the committee of the Society for promoting Christian Knowledge. Accordingly, a collection was prepared by a sub-committee, and printed. It consisted of one hundred and fifty psalms, or portions of psalms, and one hundred and sixty-one hymns: but some impediment arose, so that it was never published.*

* From private information.

§ V. *Metrical Versions of the Psalms in the* WELSH, MANX, IRISH, MOHAWK, *and* MUNCEY *Languages.*

A WELSH version of the psalms, by William Myddleton, a celebrated bard and navigator, was printed at London by Simon Stafford and Thomas Salisbury in 1603, 4to;* and another version was made by a celebrated Welsh poet, the Rev. Edmund Prys, archdeacon of Merioneth, about the commencement of the seventeenth century. This version was subsequently revised by the Rev. Peter Williams, and is now in use throughout the principality of Wales.†

A metrical version of twenty-eight psalms into the MANX language was executed in 1761 by the Rev. Robert Radcliffe and the Rev. Matthias Curgey,‡ two clergymen of the Isle of Man. A translation of the Book of Psalms in the Erse or native IRISH language, made by the Rev. Dr. M'Leod, Mr. Thaddeus Connellan, the Rev. H. H. Beamish, M. A., and Mr. David Murphy, was published at London in 1836.§

In the edition of the American Indian (or Mohawk) version of the Book of Common Prayer, printed at London in 1787, at the expense of the British government, for the use of the Christian Indian tribes, the following portions of the psalms are translated into the MOHAWK language, viz., the twenty-third, sixty-seventh, hundreth, hundred and seventeenth, and the hundred and thirty-fourth psalms, with Gloria Patri, the hymn *Veni Creator*, and two hymns on Baptism and the Lord's Supper: and in 1839, "A Collection of Psalms and Hymns for the use of the Six Indian Nations," was printed at Hamilton, in the Diocese of Toronto, "at the expense of the New England Corporation," as the society for supporting missions to those nations is now termed. It contains the psalms just enumerated in English and Mohawk, and eighty-one hymns; sixty-eight of which are in Mohawk and English, and consist of those most generally approved in this country. The remaining thirteen hymns are in Mohawk only. Among them is Bishop Ken's admirable Evening Hymn, rendered into Mohawk verse, in words of one syllable; which the devoted clerical missionary to the Mohawks, the Rev. Abraham Nelles, in 1844, informed the writer of these "Historical Notices," is sung to Tallis' well known tune, to which the Mohawk verse is eminently adapted. As this "Collection of Psalms and Hymns, for the use of the Six Indian Nations," is by no means a common Book in England, the following stanza in English and Mohawk will perhaps gratify the reader.

Glory to Thee, my God, this night,
For all the blessings of the light;
Keep me, O keep me, King of kings,
Beneath thine own Almighty wings.

Age Ni yoh wa go men ton,
Ken wa son dah de a give gon;
Ni yo men dont ji tyoh swat he
O me ta gwa te we yen ton.

In 1847 the Society for promoting Christian Knowledge, printed in the language of the Munceys, (a tribe of North American Indians,) the twenty-third, thirty-second, thirty-fourth, forty-second, fifty-first, sixty-seventh, and hundredth psalms, with a "Gloria Patri," at the end of the Muncey version of "The Morning and Evening Prayers, the Administration of the Sacraments, and other Rites and Ceremonies of the Church." The psalms are followed by sixty-eight hymns also in the language of the Munceys, all which are translated by the Rev. Richard Flood, missionary to that tribe from the venerable Society for propagating the Gospel in Foreign Parts. The first verse of the hundredth Psalm is annexed, as a specimen of the language.

"La Kitch yoon tah leh au Keeng waim,
Kau kain aum aun Pah tum o waus:
W' la lin dah mo weh nach koo maun,
Naik mah a loo qua peit tah leh."

SECTION II.—PSALMODY OF THE PROTESTANT DISSENTERS FROM THE CHURCH OF ENGLAND.

Of the state of psalmony among the Puritans, at the close of the sixteenth century, and in the former part of the seventeenth century, we have no certain information. Various metrical translations, indeed, were published by private individuals, accounts of which, interspersed with specimens, may be seen in Mr. Holland's "Psalmists of Britain," above cited. In 1644 appeared "The Book of Psalms in Metre, close and appropriate to the Hebrew, smooth and pleasant for the metre, plain and easy for the Tunes, by W. B.," that is, William Barton. This version became exceedingly popular among the Puritans, and was reprinted in 1645, with the license of Oliver Cromwell as Protector. The author's name was then printed at length. A third edition was printed in 1654; and Barton's version appears to have retained its popularity for many years; since an edition was published in 1705, with a notice that it appeared—"as he left it finished in his life-time."*

In 1646 another metrical version of the Psalms was published (but without his name) by Francis Rous, the Presbyterian Provost of Eton College, with the following inprimatur of the House of Commons, facing the title-page:—"*Die Veneris*, 1645. It is this day ordered by the commons assembled in parliament, that this Book of Psalms, set forth by Mr. Rous and perused by the Assembly of Divines, be forthwith printed: And that it be referred to Mr. Rous to take care for the printing thereof; and that none do presume to print it, but such as shall be authorized by him. *H. Elsinge, Cler. Parl. Dom. Com.*" Each psalm is accompanied with the prose translation from the English Bible at that time and now in use. This version, it seems, had been printed in 1641. In 1643, the Assembly of Divines, then sitting at Westminster, having been desired by the House of Commons to consider the subject of Psalmody, caused Rous' version to be "carefully perused;" and after several amendments, they sent it to the House of Commons in 1645, with their approval; humbly conceiving that it "may be useful and profitable to the church, if permitted to be sung."* Rous' version was further revised by William Barton, for the optional use of churches in England: "but neither the Assembly of Divines, nor the care of Barton, nor the license of Cromwell, could wean the people from their attachment to the Old Version, or bid the press discontinue the publication of it."†

Notwithstanding the efforts made during the rebellion to ensure or enforce one uniform system of psalmody, objections were made to the singing of psalms in public worship; and many doubts and scruples respecting its propriety appear to have prevailed among the Puritans about the middle of the seventeenth century. Psalmody, however, was strenuously vindicated and defended by "T. F., minister of the gospel in Exon," as an integral part of public worship, in a duodecimo volume published at London in 1651, containing five "Sermons upon Ephesians, v. 19," entitled "Singing of Psalms the Duty of Christians under the New Testament; or a Vindication of that Gospel ordinance. . . . . Wherein are asserted and cleared, 1. That, 2. What, 3. How, 4. Why, we must sing." In the preface "to the reader," (signature *A*. 3,) he states that his sermons are more especially directed to three sorts of persons; "First, such as deny singing of David's Psalms to be a duty;—Secondly, such as neglect that duty very much, especially in private;—Thirdly, such as do it both in publique and in private, yet know not how to carry themselves in it as becometh Christians."

The third edition of Dr. Francis Roberts' "Clavis Bibliorum, or Key of the Bible," published in 1665, contains a metrical version of the whole Book of Psalms from the Hebrew; which, indeed, claims the merit of fidelity, but which is clothed in the most homely garb of English verse, that can well be conceived. To this portion of his work he prefixed a prolix and labored vindication of psalmody as an essential part of divine worship, in four theses, in which he shows, 1. That "singing of psalmes with voice is an ordinance of Christ and a duty of Christians, now under the New Testament;"—2. That "the subject-matter of Christians singing now under the New Testament should peculiarly be the Scripture-Psalmes, Hymnes, and Spiritual Songs;"—3. That "Christians are so to sing Scripture-Psalmes, Hymnes, and Spiritual Songs, as therein to speak to one another to mutual profit and edification;"—and 4. That "in

singing of Scripture-Psalmes, &c., Christians should be chiefly careful to make melody in their hearts unto the Lord." In the course of these theses Dr. Roberts considers and answers various objections of the opponents of psalmody; and offers satisfactory "Resolutions of certain cases of conscience, or practical doubts about singing Scripture-Psalmes."

In 1673 Mr. Baxter published his "Christian Directory, or a Sum of Practical Theology and Cases of Conscience," in one large volume folio. In Part III., Question 125, he considers the subject of psalmody, and determines that psalms may be "used as prayers, and praises, and thanksgivings;" assigning as his reason for entering into the discussion, that he had "oft been troubled with them that (having no other shift to deny the lawfulness of written and set forms of prayer) do affirm, that psalms are neither to be read or sung at all as prayers, but only as doctrinal scriptures for instruction."*

In the year 1679, Dr. John Patrick, preacher to the Charterhouse, London, published "a century of select psalms," and in 1715 a version of the entire Book of Psalms; which was afterwards reprinted, and was in use among some congregations of Protestant dissenters, principally (it would seem) of the Presbyterian and Independent denominations, for the Baptists were much divided in opinion, on the subject of psalmody. Towards the close of the seventeenth century, a curious controversy arose among the Baptists—Whether singing in public worship had been partially discontinued during the times of persecution to avoid informers, or whether the miserable manner in which it was performed, gave persons a distaste towards it. In this controversy Mr. Benjamin Keach took an active part. In 1691 he published a tract entitled "The Breach repaired in God's worship: or, Psalms, Hymns, &c., proved to be a holy ordinance of Jesus Christ." To us it may appear strange that such a point should be disputed. But Mr. Keach was obliged to "labor earnestly and with great prudence and caution, to obtain the consent of his people to sing a hymn at the conclusion of the Lord's Supper. After six years they agreed to sing on thanksgiving days; but it required fourteen years more, before he could persuade them to sing every Lord's day; and then it was only after the last prayer, that those who chose might withdraw without joining in it. Nor did even this satisfy those scrupulous consciences; for, after all, a separation took place, and the inharmonious seceders formed a new church in May's" (Maze) "Pond," (Southwark,) "where it was above twenty years longer before singing the praises of God could be endured."†

In 1708 were published at London "Practical Discourses on the Duty of Singing in the Worship of God, preached at the Friday Evening Lecture in Little Eastcheap." From the preface to this volume we learn that, "the duty of singing in the public worship of God having been very much neglected and unskilfully performed among us," [that is, the dissenters,] "some attempts have been set on foot to teach the art and encourage the practice." With this design the "Eastcheap Lectures," as they are commonly termed, were composed and delivered, but with what success it is not now known. They treat on the nature and duty of singing, with arguments for it, answers to objections, and directions for performing it aright. Many judicious and pious observations are dispersed through these lectures.

But the greatest improvement of psalmody among dissenters, (and indeed of all modern psalmody,) was effected by the publication, in the year 1707, of Dr. Watts' Hymns, and in 1719 of his "Psalms of David imitated in the language of the New Testament, and applied to the Christian State and Worship." The best compositions of Watts, and of his friend, the learned and pious Dr. Doddridge, (whose hymns were published after his decease in 1751,) are found in every selection of psalms and hymns, which has been published within the last sixty years, whether for the use of the Church of England or of dissenters from her communion. In the course of the present century many exquisite pieces of sacred and devotional poetry have been composed by dissenters, which are deservedly found in various collections and selections printed for use in public worship.

All the great bodies of dissenters now have denominational Hymn-Books, containing the best versions, or imitations, of the Psalms of David, together with hymns selected from our most eminent devotional poets.

SECTION IV.—PSALMODY OF THE CHURCH OF SCOTLAND.

"In Scotland, as elsewhere, the first publication of the Book of Psalms in the vulgar tongue appears to have preceded that of the whole Scriptures. It is certain that, before the year 1546, a number of the Psalms was translated into metre; for George Wishart" [the martyr] "sang one of them in the house of Ormiston, on the night in which he was apprehended."*

The Old Version of Sternhold, Hopkins, and their associates, was early introduced into the public worship of the Kirk of Scotland. Mr. Lea Wilson has bibliographical Notices, in chronological order, of not fewer than fifteen editions printed at Middleburgh and Dort, in Holland, and at Edinburgh and Aberdeen, in Scotland, between the years 1594 and 1640.†

The Presbyterian Church of Scotland has uniformly evinced a remarkably strong indisposition to innovate in the matter of psalmody. This indisposition was most decidedly manifested in 1632,

Digitized by Google

when an attempt was made to supersede the Old English Version of the psalms, which had been in use since 1564, by that of King James I. But while the Scottish divines withstood the introduction of the king's version, they appear at the same time to have taken measures for obtaining a version of which they could entirely approve.* At length, after much deliberation and revision between the years 1647 and 1649, the General Assembly of the Church of Scotland in August, 1649, referred the whole matter to a commission; who on the 23d of November following issued their decision in favor of the revised version of Francis Rous, (noticed in p. 294,) which was adopted in the main, and authorized the same to be the only paraphrase of the psalms to be sung in the Kirk of Scotland.†

In process of time, however, it was the general sentiment of devout persons, that it would be of advantage to enlarge the psalmody of that church, by joining with the Psalms of David some other passages of Holy Scripture, both from the Old and New Testament. Accordingly, a committee was appointed, in consequence of an act of the General Assembly of the kirk, to prepare some paraphrases of sacred writ, in verse: and a collection of such paraphrases was published in 1745, which for thirty years was used in several churches. At length, in 1775, it having been represented to the General Assembly, that it was proper that this collection should be revised and some additions should be made to it, a committee was appointed with instructions to receive and consider corrections or additional materials, which might be laid before them. By that committee a collection, comprising sixty-seven paraphrases of various portions of the Old Testament and five hymns, was published in 1781 under the authority of an act of the General Assembly, dated 1st June, 1781, sess. 8. All the translations and paraphrases, which had been published in 1745, are in substance retained, after a careful revision, and with numerous alterations and improvements: and a considerable number of new paraphrases was added, the whole being arranged in the order in which the several passages of Scripture occur in the Bible.‡ Doctors Watts, Doddridge, and Blacklock, and Mr. Logan, are the authors from whom these paraphrases have chiefly been taken.

In 1781 the psalmody of the Church of Scotland was translated into Gaelic by the Rev. John Smith, by whom it was revised and published in 1783.§ Competent judges have pronounced that this version is faithfully and beautifully executed.

SECTION IV.—PSALMODY IN THE UNITED STATES OF AMERICA.

§I. *Psalmody of the Congregationalists or Independents, and of the Presbyterians.*

The United States of America, especially those which are commonly termed the "New England States," were colonized principally by nonconformists, who probably used the Old Version of Sternhold and his associates. In 1636 a committee of ministers of the Congregational or Independent churches was appointed; who in 1640 completed from the Hebrew a metrical version of the psalms, which was subsequently referred for improvement to the Rev. Henry Dunstar, Principal of Harvard College, Massachusetts; who was aided—as to the poetry—by Mr. Richard Lyon, an English gentleman at that time resident in Harvard College. Between the years 1755 and 1757 this translation received a very careful revision from the Rev. Thomas Prince, M. A., rector of the South Church, Boston; whose revised edition was published in October, 1758, and was introduced into the South Church on the Sunday after his funeral.*

In 1718 Dr. Cotton Mather published at Boston, Massachusetts, "Psalterium Americanum: the Book of Psalms in a translation exactly conformed unto the Original; But all in Blank Verse, fitted unto the tunes commonly used in our Churches. Which pure offering is accompanied with illustrations digging for hidden treasures in it; and Rules to employ it according to the glorious and various intentions of it. Whereto are added some portions of the Sacred Scriptures, to enrich the Cantional. Boston, in N. E. . . . . 1718." 12mo.

In this singular publication, (which is a close translation from the Hebrew,) Dr. Mather has not only disregarded the modern practice of breaking the lines, whether rhymed or not; but he has "run out" (to use a printer's phrase) the whole matter: so that while each psalm looks exactly like *prose*, and may be read as such, it is in fact, modulated so that it may be sung as *lyric verse*. For the latter purpose the syllabic quantities, which (it must be confessed) the reader will not always recognize, are marked by parallels;—Baxter's expedient for lengthening the common measure of a verse, to suit a different tune by the addition of a word or two in a *different* character.† In an "Admonition concerning the Tunes," Dr. Mather states that "The Director of the psalmody need only say—*sing with the* BLACK LETTER, or, sing *without the* BLACK LETTER, and the tune will be sufficiently directed."‡ The following extract from the twenty-third psalm will enable the reader to form some idea of this extraordinary translation of the Book of Psalms.

"PSALM XXIII.

A Psalm of David.

1. My Shepherd is th' ETERNAL God, ‖ I shall not be in [**any**] want:
2. In pastures of a tender grass ‖ He [**ever**] makes me to lie down: ‖ To waters of tranquillities ‖ He gently carries me [**along.**]
3. My *feeble and my wandring* Soul ‖ He [**kindly**] does fetch back again; ‖ In the plain paths of righteousness ‖ He does lead [**and guide**] me along; ‖ Because of the regard He has ‖ [**ever**] unto His *glorious* Name." ‖ *

In 1783, Joel Barlow, an American statesman and poet, published a corrected and enlarged edition of Dr. Watts' Version of the Psalms, and a collection of hymns, with the recommendation of the General Association of the Congregationalist ministers of Connecticut, at whose request the work had been undertaken. Many of the psalms were altered so as to be adapted to the American churches (as all congregations are termed in the United States;) several were written anew; and several, which had been omitted by Dr. Watts, were supplied. Mr. Barlow also supplied some original hymns.† "His collection of psalms and hymns was in general use among the churches of Connecticut, until his bad character brought them into disrepute, when the collection by Dr. Dwight was made and introduced."‡ Though once a preacher of the gospel, Barlow had ceased to regard it of divine authority; and he died without the support of its glorious promises.§

In 1797, the Rev. Timothy Dwight, D. D., an eminent poet and divine, (president of Yale College, Connecticut,) was requested by the General Assembly of ministers in that state to revise the whole of Dr. Watts' version, or rather imitation of the psalms, and "to versify the psalms omitted by Watts." The task was undertaken accordingly; and the whole was published in 1800 with an "Advertisement explanatory of the design and execution of the work, and" [with] "minutes of approval from the General Assembly and General Association of Churches. The additional psalms comprised in the American Edition of Watts are upwards of twenty. The versions are for the most part respectable; but the Independents of this country appear never to have considered the American and the English poets as sufficiently coëqual in merit and authority, to induce them to adopt those contributions of Dr. Dwight, which render the work of Dr. Watts more complete, if not more precious."‖

Many of the leading denominations in the United States of America (as the Lutherans, the Methodist Episcopal Church, &c.) have their own separate psalm and hymn-books. The best and most copious of all the collections which the writer has seen, was published (it is believed for the use of the Congregationalists) by Messrs. Lowell Mason and David Green, at Boston, Massachusetts, in 1832, in 8vo. It is entitled "Church Psalmody; a collection of Psalms and Hymns, adapted to public worship." This well-printed volume has been compiled upon the most rigorous principles of selections, as well with regard to the subject-matter, as to the structure of the psalms and hymns. It would form an admirable basis of a national psalm and hymn-book, if we should ever have one for the use of the United Church of England and Ireland.

§ II. *Psalmody of the Protestant Episcopal Church in the United States of America.*

After the war, which terminated in the recognition of the independence of the United States of America, the members of the Church of England, which had previously existed in different parts of that country, took measures for organizing their ecclesiastical state. Accordingly, having obtained from Great Britain the consecration of the canonical number of bishops, they formed themselves into an episcopal church, under the appellation of "The Protestant Episcopal Church in the United States of America." In 1789, the General Convention of Bishops, and of Clerical and Lay Delegates issued a Book of Common Prayer, for the use of their church; in which, besides modifying certain passages in order to meet their altered political circumstances, they introduced various judicious alterations and improvements, principally those which had been proposed in 1689, by the royal commissioners to the lower house of the English Convocation, but which had been rejected by a majority in that ecclesiastical assembly. The General Convention of the Protestant Episcopal Church also adopted Messrs. Tate and Brady's "New Version of the Psalms;" to which fifty-seven hymns were added. That number being found insufficient for public worship, and also requiring revision, the General Convention, at their triennial meeting held in May, 1823, appointed a committee consisting of three bishops, seven presbyters, and seven lay delegates, to consider what alterations and additions were necessary to be made.* And in 1826, a collection of two hundred and twelve hymns was published under the sanction of the General Convention, and continues to be used in the public worship of that section of the universal church. In consequence of the difficulty experienced by many of the clergy, in selecting suitable portions of the "New Version of the Psalms," the General Convention held in 1829, appointed a committee of the house of bishops and of clerical and lay delegates, to consider and report on a selection which was to be made from the psalms in metre used by the Protestant Episcopal Church. In their report the committee state that "The version of Tate and Brady has been retained, where it appeared to be serviceable; in a few cases, in which it was otherwise, better versions have been substituted. Corrections have been occasionally

made, to render the version more agreeable to the original psalm; and also verbal alterations, to introduce properly, or to connect, the selected portions. The principle of selection has been, to retain every psalm and verse which appeared serviceable, and to omit the rest."* This report was presented to the General Convention held in October, 1832; and, in pursuance of its recommendations, one hundred and twenty-four selections of entire psalms or of portions of psalms were adopted, and are now in use in all the churches of the Protestant Episcopal communion in the United States.

From the Charleston Courier.

THE BEAUTIFUL MANIAC.

"The fire that on my bosom preys
Is lone as some volcanic isle,
No torch is kindled at its blaze—
A funeral pile!"

In the morning train from Petersburgh, there was a lady closely veiled, in the same car with ourselves. She was dressed in the purest white, wore gold bracelets, and evidently belonged to the higher circles of society. Her figure was delicate, though well developed, and exquisitely symmetrical; and when she occasionally drew aside her richly embroidered veil, the glimpse of her features, which the beholder obtained, satisfied him of her extreme loveliness. Beside her sat a gentleman in deep mourning, who watched over her with unusual solicitude, and several times when she attempted to rise, he excited the curiosity of the passengers by detaining her in her seat.

Outside the cars all was confusion; passengers looking to their baggage, porters running, cabmen cursing, and all the usual hurry and bustle attending the departure of a railroad train. One shrill warning whistle from the engine, and we moved slowly away.

At the first motion of the car, the lady in white started to her feet with one heart-piercing scream, and her bonnet falling off, disclosed the most lovely features we ever contemplated. Her raven tresses fell over her shoulders in graceful disorder, and clasping her hands in prayer, she turned her dark eyes to heaven! What agony was in that look!—What beauty, too, what heavenly beauty, had not so much of misery been stamped upon it. Alas! that one glance told a melancholy tale.

"———— she was changed
As by the sickness of the soul; her mind
Had wandered from its dwelling, and her eyes
They had not their own lustre, but the look
Which is not of the earth; she was become
The queen of a fantastic realm; her thoughts
Were combinations of disjointed things
And forms, impalpable and unperceived
Of others' sight, familiar were to hers."

Her brother, the gentleman in black, was unremitting in his efforts to soothe her spirit. He led her back to her seat; but her hair was still unbound, and her beauty unveiled. The cars rattled on, and the passengers in groups resumed their conversation.

Suddenly a wild melody arose; it was the beautiful maniac's voice, rich, full, and inimitable. Her hands were crossed on her heaving bosom, and she waved her body as she sung with touching pathos,

"She is far from the land where her young hero sleeps,
And lovers are around her sighing,
But coldly she turns from their gaze, and weeps,
For her heart in his grave is lying!

"She sings the wild songs of her dear native plains,
Every note which he loved awaking—
Ah! little they think, who delight in her strains
How the heart of the minstrel is breaking!"

Her brother was unmanned, and he wept as only man can weep. The air changed, and she continued—

"Has sorrow thy young days shaded
As clouds o'er the morning fleet?
Too fast have those young days faded,
That even in sorrow were sweet?
If thus the unkind world wither
Each feeling that once was dear;
Come, child of misfortune! come hither,
I'll weep with thee, tear for tear."

She then sung a fragment of the beautiful hymn,

"Jesus, lover of my soul,
Let me to thy bosom fly."

Another attempt to rise up was prevented, and she threw herself on her knees beside her brother, and gave him such a mournful, entreating look, with a plaintive "Save me, my brother! save your sister!" that scarcely a passenger could refrain from weeping. We say scarcely, for there was one man (was he a man!) who called on the conductor to "put her out of the car." He received the open scorn of the company. His insensibility to such a scene of distress almost defies belief; and yet this is, in every particular, an "ow'er true tale."* Should he ever read these lines, may his marble heart be softened by the recollection of his brutality!

Again the poor benighted beauty raised her bewitching voice to one of the most solemn sacred airs;

"Oh where shall rest be found,
Rest for the weary soul?"

And continued her melancholy chant until we reached the steamer Mount Vernon, on board of which we descended the magnificent James river, the unhappy brother and sister occupying the "ladies' cabin." His was a sorrow too profound for ordinary consolation; and no one dared intrude so far upon his grief as to satisfy his curiosity.

We were standing on the promenade deck, admiring the beautiful scenery of the river, when at one of the landings, the small boat pulled away for the shore with the unhappy pair, en route for the asylum at ———. She was standing erect in the stern of the boat, her head still uncovered, and her white dress and raven tresses fluttering in the breeze. The boat returned, and the steamer moved on for Norfolk.—They were gone! that brother with his broken heart, that sister with her melancholy union of beauty and madness. GLENDARLOCH.
